## Saith The Thinking Toiler

By COVINGTON AMI

I am sick of the "rights of nations," of fencing and flagging the Earth,
And I'm asking the "great" and the "mighty" the goodness and value and worth.
I am weary of hearing the preachment that parchment is greater than man,
That "the Lord in his infinite wisdom" did infinite misery plan.
Yea! I question your courts and your congress, your "justice," your "order" and "law,"
And the more that I see and I suffer the less do I hold you in awe;
For I thought you were really the "able," the "masters" you taught me to see,
But the war from my ego has blasted these notions you drilled into me.
You may call us whatever you fancy, "hoboes," "hayseeds," or "bums,"
But dream not we have come from the trenches to wallow forever in slums.
We have weighed and found wanting your "system," your "wisdom," "efficiency," all,
And we mean that the System shall perish, the Kaisers of Usury fall.
Yea! We mean that the child of the Sower shall reap what the Sower has sown,
And none save the Toiler shall harvest and none but the Toiler shall own.
And our march it shall never be ended, and nothing shall silence our songs,
Till the doors of the prisons are open, the World to the Worker belongs.

# Preamble of the Industrial Workers of the World

THE working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few, who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

These conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

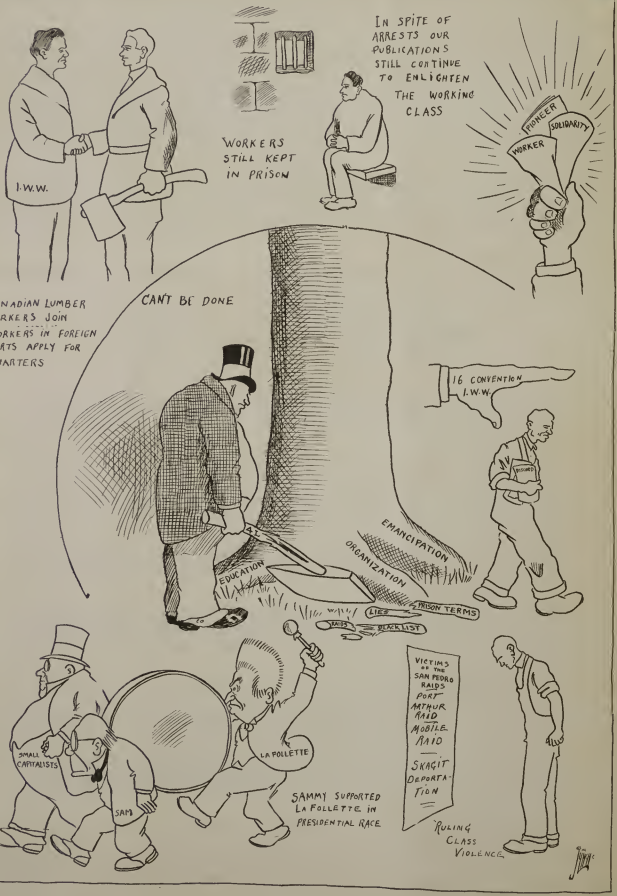
# Civilization's Vanguard

By EDWAR D J. FAHEY

**When We Realize Our Organized Power Nothing Can Hold Us In Slavery**

What civilization owes to the general construction workers is shown by one of these workers. He also describes what society allows them, and demonstrates the means to achieve what is needed above this beggarly precarious allowance.



ANNIHILATION of distances is an ambition of this century approximating realization in the seven-league strides made to perfect means of communication. Rapid transportation sweeps on its way to bring far fields near, uniting rural expanse with urban district, drawing states closer together and linking the nation with the countries of the world.

Flung in myriad profusion over every direction in the land are the roads along whose smooth surfaces spins the thoughtless motorist; thoughtless of the fact that while the roads are avenues of business or pleasure for those now using them, they are the monuments of pain, hardship and often incredible injustice endured by the workers who constructed them.

Comfortably seated in the railroad train traversing marsh, swamp, plain and prairie, rolling through deep valleys, winding over mountains and piercing their rocky fastnesses, the traveler seldom compasses in reveries any thought of the endless thousands of workers who built the right of way, mastering coulee, river, forest and mountain fastness; conquering an untamed wilderness for the needs of man; subduing a continent for the march of civilization.

**Humanity calls for food; waste places abound. Comes the power of construction workers to throw up dams impounding life-giving waters.** The haunt of prairie dog and lizard vanishes; deserts bloom, sweet with the mingled odors of grow-

# Why We Struck at Concrete

By GEO. RAINEY (One of the Strikers)

**That the real forces motivating society are economic is emphasized anew in the following account of a struggle between master and slave in the Northwest. Whenever necessity dictates, the ruling class writes its mandates with working class blood, and thrusts aside all law. At Concrete, Washington, a huge corporation again issued its inhumane proclamation in the most unmistakable terms of violence.**

**CONCRETE is a small town of about 1,500 people. It is situated in the great state of Washington, about 150 miles northeast of Seattle.**

**The town owes its publicity to the Baker River project, where about 700 men have been employed since early last spring by the Stone and Webster corporation. This giant firm, with a directing voice issuing from a Wall Street office, is interested in sixty-four corporations, manages twenty-two important light and power companies, certain of which, as single units, have monopolies that are state-wide in scope. This titan of the Electrical Age has plans under way by which its domain shall connect power lines over more than three states.**

The firm is constructing a hydro-electric plant in Skagit county on the Baker river, and the workers were employed on a high dam project which employed right-of-way, tunnel and coffer dam crews; railroad, dam and powerhouse construction men; steam shovel and quarry workers.

Conditions under which these men were compelled to work beggar description. **Imagine sleeping in blankets that were never washed since the work started nine months ago.** Food unfit for human consumption was served. Wages for heavy work were as low as $3.60 a day, but the company, apparently taking advantage of the unemployment situation, continued to mistreat its workers.

An illustration to the point rests in the **death trap flume** that was erected to carry concrete into the base wall of the dam. **This flume, high over the bodies of workers toiling in the depths, developed a habit of jamming, and the overflow fell upon those below.** There was no protection from it, and it constituted a real menace to life and limb. Although many workers quit rather than risk being struck by the heavy concrete, the company paid no attention to it. After all, what do the bosses care for a few broken heads or a few more graves for the workers? Protests were without avail. Something more than quitting individually was needed to get results.

The fire of resentment against all these injustices was banked, but smouldering, and it flamed high

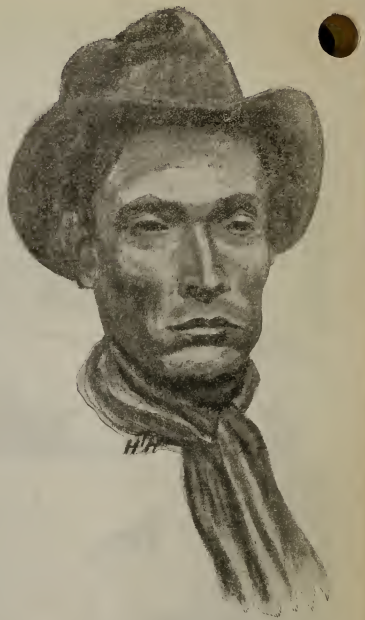
ing things, delightful to the eye; nourishment for millions of human beings.

Humanity cries for light, for heat, for power; these construction workers dam mountain torrents and turbines whirl. There is light to challenge the nightfall, warmth for human comfort, power to turn the giant wheels of industry.

Rivers flowing through the land greedily claim their portion, slowly eating away the land, at flood times fiercely gouging their banks, inundating low places. Construction workers build dikes to cheat the currents, to discipline the streams in their course. The land is saved, navigation secured, a source of human happiness and wealth.

### Trail Blazers

Who are men whose labor makes possible all these wonders, these boons to society? They are the skinners, muckers, shovel runners, teamhands and bridgemen and others performing the manifold labors involved in general construction work. Their work is that of pioneers, blazers of trails, builders of the very foundations of civilization. Without the labor of these advance toilers for industry there could be no industry; should they withdraw their labor civilization would find itself bound, unable to advance. Changes in railroad routes well illustrate the point.



Engineers in earlier times of railroad building often caused the roads to wind in a circuitous manner that the development of electrical motors and an advance in the science of engineering itself with regard to topography have now made unnecessary. New roads will be constructed along different principles. But there are the old lines already in use with their devious twistings that are frequently susceptible to straightening or shortening.

In all corners of this country changes are being made in these railroads. We have learned to know them as "cutoffs." On the New York Central line a project is under way to eliminate many miles from the road, thereby saving immensely in time and adding prodigiously to the wealth of the company. This is called the Albany Cutoff.

### "Cutoff" Labor

In the West we have been hearing a great deal about a Natron Cutoff. The Southern Pacific system has about five thousand workers shaping a rock-bound stretch of forest and mountain into 150 miles of railroad between the towns of Klamath Falls and Oakridge in Oregon.

While tunnel work is performed in much the same manner as mining, it is the construction workers' task to bore through the mountains. The Natron Cutoff has about 22 tunnels. In the old days mucking the dirt and rock with shovels was done by the hand of the shovel stiff. Today steam shovels holding three to four yards of earth have taken their place. Then there are air drills, steam drills and air shovels to do the mucking in the tunnels Farther on we shall describe other details about this immense job.

TYPE OF GENERAL CONSTRUCTION WORKER

Another name that is familiar to those who watch the skirmishes in the class war is Copco. This is the name of a place in the northern part of California where the California-Oregon Power Co. is—vicariously—building a power plant. The actual work is being done by hundreds of workers, and it has been estimated that their labor is needed for two years. This project is going to cost about $4,000,000.

Then there is the Baker River Project of the Stone-Webster Company in Washington where the workers recently struck against intolerable conditions, and were beaten, jailed and deported by the sheriff of the county under orders from his industrial superiors. Here the workers are building a dam for the manufacture of electricity. Light and power, again. Theirs is the power to bless the idlers of the world with all manner of convenience, with every kind of wealth, but they have in-

(Continued on page 41.)

misled into coming turned away. Altogether only teen scabs betrayed the workers.

The masters always have a reliable source upon which to rely in the form of the capitalist press, and this was ordered to manufacture its poison, discrediting the strikers, and dosing its readers with lies. There is another agency that comes to bourgeois aid without fail whenever the workers revolt against the more offensive extremes of slavery, and the Seattle Post-Intelligencer, November 10, quotes Major K. W. Thom of the United States Army, attached to the National Guard of Washington, as saying: "I merely gave the sheriff the benefit of my experiences and advice in organizing his plan of action today."

What was this advice to the sheriff? What did the sheriff do? Well, when scabs could not be induced to pass the picket line, Sheriff Conn of Skagit county appeared on the picket line at 8 o'clock on Monday morning of November 10, with a large force of heavily-armed deputies. Other armed lickspittles of Stone and Webster were hidden in the surrounding hills under orders to shoot the unarmed pickets if they offered resistance.

### Strikers Deported

Sheriff Conn then rounded up the pickets with insulting commands and prods to hurry them along. His gunmen beat up a number of strikers, one man having his head broken open. They were not permitted to get their belongings in the way of food and clothing, but were hustled into motor trucks and over one hundred of them deported. Those with families were not allowed to communicate with them, and all, married and single alike, went the way of violence dictated by the ruling class, shaped by the army officer and executed by a vassal sheriff.

### More Boss Violence

The deported strikers held a meeting where they decided to vote the strike back on the job, realizing that the governor was ready to serve his economic superiors by ordering the troops against the strikers. The meeting also elected a committee of three, whose duty it was to return to Mount Vernon and ask the sheriff to permit shipment of the clothing and personal belongings of the strikers and their families out of Skagit county.

When the brutal sheriff heard their request **he decked his fists with brass knuckles, placed a blackjack in his holster, and then, with his deputies alert to shoot down the three unarmed strikers, if ordered, this fiend beat them up and threw them into jail with other badly beaten strikers.**

### Cause Not Lost

**The strike is not lost, and it is up to every worker there to use job tactics to gain all that we did not secure in the walkout.**

The strike has its lessons, proving once more that the so-called guardians of public order are the exponents of disorder, and that at the behest of their

GUNMAN ACCOSTING STRIKERS

industrial masters they will ignore all constitutional guarantees and deprive the workers of all rights.

When the project is completed it will be a source of profits to its owners amounting to **$60 a minute.** Not bad, eh? During the strike a lot of damage was done to the coffer dam by floods which have set the work back sixty days. **This added to the twenty-four days of striking shows that the company has been retarded eighty-four days at $60 a minute.** Figure that up and you can see that, with the possibility of another strike, it would have been better to settle with the strikers at the outset.

The Concrete struggle shows plainly that if the bosses can succeed in wiping out a picket line by the direct force of a sheriff and deputies, unmindful of the alleged constitutional guarantees, by which the naive worker might expect to be protected against such violence, the workers can answer successfully only by marshaling their economic power and refusing to continue to make profits for the rulers. **The workers have no recourse in law when opposed in the manner exemplified at Concrete. They have no other weapon than that of their organized strength.**

It is up to the workers to show that we have intelligence and that we **remember. All aboard for Concrete and make it safe for the working class.**

when twenty-five men, working on the concrete crew, demanded more pay. This was refused in an insulting way by the Wall Street puppets. Fifty cents more a day was too much for the poor corporation to expend in wages, and the crew walked off the job.

Immediately fifteen men from the bull gang were ordered to fill their places, but these showed their solidarity by refusing to scab, also walking off, leaving the hirelings to pour concrete themselves. None was poured because such brainless lackeys are "all thumbs" and used to loafing, to boot.

An open camp meeting was called to order and a grievance committee of strikers elected to draw up demands to be presented to the company. As ratified by the meeting they follow:

1—**Release of all Class-War Prisoners.**
2—Twenty-five per cent wage increase all around.
3—Sheets and pillows to be furnished and the same to be washed weekly, at least.
4—More and better food.
5—Twelve muckers in the tunnel instead of 6 to a shift.
6—Concrete flumes to be made safe to work under.
7—That all overtime be abolished except where human life is in danger.
8—No discrimination against the workers for taking part in the meeting.
9—All men who worked in concrete and bull gangs to be reinstated.
10—**Boycott California products.**

### Demands Presented

The committee presented these demands to Mr. Jessup, the understudy and slave driver for General Superintendent Shannon. He looked them over and the committee said, "See what you can do about it."

Returning to the meeting they reported, and a strike committee was elected from the body at 11.30 that night. The graveyard shift was notified and many joined the strike. Later 20 more came out. In the morning only one slave showed up for the tunnel gang, and he bowed his head in shame as he walked back through the picket line, never to be seen again while the strike lasted.

### Solidarity Is Shown

This strike was not a craft union fiasco, but an industrial union conflict conducted by the I. W. W. which was twenty-five per cent organized on this job. Many of the engineers and skilled mechanics rallied to the support of their more exploited fellow workers doing ordinary labor. The fight was not for higher wages alone, but for liberty and the protection of human life.

It was a fight for the freedom of the men who are held by the master class in their hellholes for no other crime than that of organizing the workers to effect a peaceful change in society, whereby the slogan "He who does not work, neither shall he eat" must be realized.

CHIEF FINK CONN GIVING ORDER FOR DEPORTATION TO START.

The strike soon enlisted the support of ninety per cent of the working force, and with only ten per cent left to do the scabbing, construction work was badly crippled, and the scabs began to migrate. On the fifth day the work came to a standstill for lack of workers. All attempts to bring in scabs failed. In an orderly way the pickets explained the situation and those who came to scab or were

GENERAL STRIKE PROTEST IN TAMPICO AGAINST OIL WORKERS' MURDER BY TROOPS. ARROW POINTS TO I. W. W. BANNER.

# Tampico

## A Class War Skirmish

By MARINO

**REACTIONARY papers in the United States view Mexico's recent administrations as "Red"; liberal journals describe them as progressive regimes, dedicated to the well-being of the working class. Perhaps both divergent camps regard the speeches and constitutional compositions of Mexico as a just basis for their findings. We in the United States should not be "taken in" by fair words of politicians or the libertarian rhetoric of democratic constitutions; having found through bitter experience that economic reality has no knowledge of either, and owes no tribute to their shining promises.**

**Tampico is famous for its oil production and infamous for the outrages inflicted upon the workers of this industry. Readers of INDUSTRIAL SOLIDARITY will remember accounts of the strike against the El Aguila Oil Company by 2,000 workers, and how they won a sweeping victory with the aid of their fellow workers in other lines. They were out about four months. These workers secured unconditional recognition of their union and shop control. They held firm in spite of the machinations of the yellow C. R. O. M. (Regional Federation of Labor of Mexico) leaders whose philosophy and practises are counterparts of A. F. of L. activities in this country. Bribes, intimidation and treachery failed. The strike was won.**

Conspicuous in assistance to the strikers were the railroad workers, who served the company with an ultimatum allowing it forty-eight hours to settle the strike on penalty of forfeiture of transportation of its products on trains manned by these railroaders.

This victory had a most beneficial effect upon the workers of La Transcontinental and Pierce Oil Companies, in which the owners capitulated almost immediately. It seems evident that they were not looking for a repetition of the defeat sustained by El Aguila.

Workers of the La Huasteca Oil Company duplicated these successes after a struggle of one month. Inspired by this example employees of the Mexican Gulf Oil Company declared a strike. Then those working for the La Corona Oil Company walked out. A brief outline of these later developments, which are not meeting with success, is timely, because we learn not only from triumph but also through defeat.

Recognizing the tremendous importance of the success of the workers at El Aguila, La Huasteca, La Transcontinental and the Pierce Oil Companies, all that it forebode to their profits, the oil magnates sent representatives to Mexico City on a mission to the government. It is noteworthy that these companies dropped all pretense of nationalist isolation and united solidly when holy profits were threatened. **They joined in a $50,000,000 loan to the government.**

We are hardly so unsophisticated as to be blind to the probable contract by which the loan was negotiated. Subsequent events proved that in consideration of the huge sum loaned the government promised a fair field for the proper exploitation of the Mexican oil workers. **Troops were sent into the strike district.**

The bayonets were not received with open arms. Immense protest meetings were held and Obregon was notified that the presence of soldiers was obnoxious to the Tampico unions. Replying to this Obregon declared that the troops were to be entirely neutral. Their orders, he asserted, were to prevent violence and to protect both parties to the dispute.

The workers elected a committee to serve notice to the troops of the Obregon neutrality message, and also of the similar orders of their military superiors in the capital. **This committee went unarmed towards the barracks and was met by a detachment of soldiers who immediately opened fire upon them. One member of the workers' committee was killed on the spot, eleven more were wounded and another died later of injuries.**

# What Ails California?

By ROBERT WHITAKER

**CALIFORNIA is sick. Physically the State may be everything that the Chambers of Commerce claim, a Mecca for the comfort-seekers and the health chasers of the world. But as the man said who was called upon to speak at the funeral of the most unpopular man in a certain western mining community and who accepted the service very unwillingly,**

**"Well, neighbors, all I can say is that we all hopes brother Jones has gone where we know he hasn't."**

So, even from the viewpoint of physical well-being California is not all the Wallingfords and the Babbits of business would have you believe. Three years ago, about this time, an Eastern judge of national reputation who was visiting Los Angeles was quoted as saying that there were fifty thousand cases of flu in this city just then. How he got his data was not said, nor whether his figures were anything more than a rough estimate. But there is no lack of proof that the flu is prevalent here this winter, and that the bubonic plague has just taken a startling total of lives within a few days. The triple troubles of the Buddha, old age, sickness and death, are with us in Los Angeles, as they were with him centuries ago in another land where the sun shines and the days are warm most of the year.

But it is not only so that California is sick, with the diseases of physical decrepitude and decadence such as flesh is heir to everywhere and in all ages. It is on the side of law and order, another thing of which our Chambers of Commerce boast, that California is sick. That ours is the most lawless land on the face of the earth there are many who are high up in the councils of court and government ready to admit today. And **California is the most lawless state, and Los Angeles the most lawless city in this, the most lawless land.**

Here is an item from the daily press of Los Angeles, published just a few days ago, as the month of November ended and the month of "Christmas peace" began. "'SHOOT TO KILL' IS ORDER GIVEN BY CHIEF." And here is the item itself, the very words peddled out on our own streets: "Realizing drastic steps must be taken to curb lawlessness in the city following 11 murders and 250 holdups in November, Captain of Detectives George K. Hone ordered his men to 'shoot to kill' Tuesday, after representatives of the district attorney and sheriff's offices had promised full cooperation in the war to suppress crime."

In another paper the eleven murders are catalogued together, and after most of them stands the telltale word, "Unsolved." But even this does not tell all the story of the sickness here, nor the full tale of the lawlessness in which we so excel. The lawlessness that is outside the law is here in surpassing abundance. Former Chief of Police Vollmer, in answer to a question asked him when he spoke before an Open Forum in San Diego last summer, said that the sorry pre-eminence of Los Angeles in respect to the prevalence of common crime here, murder, assault and robbery of all kinds, could be in part accounted for because the mildness of the California climate and the **vigor of our advertising campaigns** attracted to the Southland a large number of the "undesirables" of the earth as well as a lot of decent people. This may be granted as having some force. But it does not explain even the prevalence of ordinary crime here as much as California officialism and conventionalism would like to have us believe. And it does not explain at all the surpassing abundance here of what may be called the "higher lawlessness," the lawlessness of the law officers and the courts themselves, and the mass of the "respectable" people who stand behind them.

"How can you keep a man in jail day after day and week after week without any charge being made against him," a group of us asked this same Chief of Police, August Vollmer, in his own office last July, just before he closed his work here.

"It cannot be done," he said.

"But it is done," we replied, and we cited the fact that at that very moment Moffitt, who had been arrested at San Pedro, Sunday afternoon, July 6th, when he was quietly presenting the cause of the children who had been scalded almost to death in the raid on the I. W. W. meeting, June 14th, was lying in jail without any charge having been made against him. Moffitt was actually kept in jail nine days without an indictment, and then, when an indictment was trumped up against him of having said that the police were stool-pigeons of the Hammond Lumber Company, it took a jury only two minutes to acquit him. Moffitt was not himself a member of the I. W. W. and he did not call upon any lawyer to defend him.

Yes, "it is done," over and over again here. That is, men are arrested at the whim of any policeman who wants to make a record for zeal in service, or whose dinner happens to have disagreed with him, and are thrown into jail and kept there, sometimes for weeks, in utter contempt of the Constitutions, both of nation and state. Here is the official record

(Continued on page 44)

# The Way to Freedom

By P. J. WELINDER

RECENTLY we have been suffering from a deluge of words threatening to completely submerge every voice raised in behalf of organization on the industrial field. It has been one continued cry of "Vote for Coolidge," "Vote for La-Follette," for Foster, for Davis and for a dozen or so would-be saviors of the working class.

It would be amusing, were it not so tragic, to watch those thousands of disfranchised, hungry and ragged slaves stay for hours at the time cheering themselves hoarse for something they can not define, know nothing about, or for somebody whom they never knew and never will know whether elected or not. And those starving masses will accept as a foregone conclusion that there are, so far as they are concerned, really two fields upon which we, the workers, must exert our energies in order to gain a little more of the good things of life: the political and the industrial field. Yet none of them have ever entered any other than the industrial field, and then in the capacity of a wage slave seeking a master, and few, if any of them, will ever enter another field with the exception of potter's field when they are finished as objects of exploitation.

### "Political Field" Reflex

Is there really such a thing as a "political field" so far as we, the wage workers, are concerned? If so, what part does political action play in our every-day life? What is its origin and what is its nature?

That we at the present time have in our society a certain form of activity undertaken on a large scale, that properly can be termed a "political field" is certain, but whether our participation in such activities in the nature of organized wage workers will benefit us and our class is another question.

What is the origin of politics? No one has even attempted to prove that there was such an animal as a "politician" in ancient society, much less a "field" of them. In the time of primitive communism there were neither politics nor politicians. When the means of production, if individually used, were individually owned and the result of their operation was the property of their owner and operator, or socially used, and the fruits of such labor socially enjoyed equally by all participants in the work, no political government existed. But that day the principle of private ownership was applied to socially used means of production and the fruits of the toil reverted to the owner of these means, a government became necessary, not, as often claimed, for the protection of the exploited slaves, but for a somewhat suitable arrangement of the right to exploit.

At no time can it be claimed that the exploited subject has had either need of or assistance from a political government. All subjects of exploitation, no matter under what form they have been exploited, have this in common: that they are dispossessed. They own nothing and control less. Consequently, there can be no question of governing the affairs of those who have no affairs to be governed. The only question before the politicians is how to keep the slaves in submission; whether they should resort to militant methods or appease them with some reforms; whether it is more beneficial to the existing order of ownership to kill treacherous elements or to bring them to peace by means of bread lines. Both forms have been applied in a mixture considered suitable for the occasion at hand, and those politicians who have been the best judges as to how to blend in proper proportions their decoction of coercion and persuasion called "politics" are heralded as "great statesmen."

### Rulers' Revolutions

Ever since the inauguration of production for profit, or ever since private ownership of social wealth was established, every revolution and every rebellion has had as its aim to admit new layers into the group of exploiters and not to abolish exploitation. Every revolution in historical times has had as its object to rearrange the affairs of the exploiters; has concerned itself with the possessing class and its interest and not with the interest of the dispossessed class, except insofar as it has been necessary in order to gain their consent for continued exploitation.

The great revolutions of the eighteenth century in which Liberty, Equality and Fraternity were proclaimed as the guiding stars for human progress are in no way any exceptions to earlier revolutions in historic times. The American revolution, although ostensibly aiming towards the liberation of mankind, meant only an enlargement of the number of the exploiting class. At the very best half of the population was dispossessed and their only gain in society was a hope of some day becoming members of the possessing class. All the new "rights" established were rights concerning franchises, as well as the safeguarding of the spoils of exploitation. The dispossessed class came into consideration only insofar as it was feared that they might attack the sacred institution of private ownership of socially produced commodities.

### The "Cockroach" Wail

Since those days the employing class has decreased very rapidly in number and as a consequence discontent becomes more pronounced. The outcrowded petty bourgeois cries about lost ideals, about democracy being thrown overboard, and demands reforms. He is kicking on the politicians, and he has a just cause for his kick, for failing to protect him. Did he not possess a certain limited field in which

For forty-eight hours after this barbarous act a general protest strike was maintained, with street cars and lighting service, factories, shops and mills entirely tied up. The streets were filled with protesting workers, parading with banners aloft to denounce the murdering of their fellow workers.

STRIKERS EMBARKING AT LA AGUILA DOCKS FOR TAMPICO DEMONSTRATION.

### Causes of Failure

When the troops were drawn up in battle formation to continue the murderous program on a larger scale the government, evidently fearing to overplay its hand, ordered them back to their barracks, and further bloodshed was averted.

But the $50,000,000 and lack of real working class unionism outside of the limited number who showed such splendid solidarity, have done their evil work. Instead of a solid front in labor's ranks there are the quarrels between leaders of the reformist C. R. O. M. and the revolutionary Confederación General de Trabajadores, which confuse the workers, and result in many autonomous unions in the oil fields. These in turn fight the other two factions who are striving to control them.

The strikers against the Mexican Gulf Company are affiliated with the C. G. T.; those opposing La Corona are connected with the C. R. O. M. The owners of these companies, English, American, Mexican or whatever they may be are ONE against these workers, are ONE in their $50,000,000 loan bribe to the government.

No amount of spontaneous solidarity can hope to defeat these powerfully agreed capitalists. Mass strikes cannot endure long. The way to sound victory is less spectacular. It requires a steady upbuilding of a new form of economic organization by which the workers organize industrially **and know their strength.**

The solidarity of the Mexican workers has been very heartening in and around Tampico. Presently they will learn the lesson of solidarity and industrial unionism; grasp the weapon of industrial organization, which means a cessation of work by all workers within the industry struck or surrounding industries if required.

### Must Lead Themselves

To the Mexican workers must be given the commendation of all class-conscious workers on their struggle against the monstrous appetite of the Oil Kings. Our Mexican fellow workers have paid a price in blood and misery that is worthy of a better return than factional animosity and jurisdictional dissension.

We can hope that they will learn that capitalism is the productive system of Mexico and that its governments are alert to do the will of the capitalists. Learning this they will not be deluded by faith in political leaders, or parliamentary eloquence. **They must learn to have faith in themselves alone, to be their own leaders, and to find their freedom along the red road of direct economic action.**

OIL STRIKERS MARCHING WITH RED BANNERS TO DOCK TO JOIN TAMPICO DEMONSTRATION. LA HUASTECA REFINERY IN BACKGROUND.

Though the I. W. W. in the district is not numerically powerful it exerts an educational influence that is sorely needed, and may be counted on to take its prominent part in every manifestation of solidarity.

The present situation furnishes many concrete examples to which our fellow workers can point in illustrating the industrial union argument with hopes of greater success, as bare theorizing does not impress workers.

we are wandering highways and by-ways begging someone to accept it. Our only wealth is our misery, and there is no politician and no parasite that intends to grab that from us. **Organize on the only field that concerns us as producers of the world's wealth: the industrial field.** Give the politicians and the parasites a couple of hours of our working day to exercise their managing ability directly at the point of production.

Abolish the army of unemployed through a suitable curtailment of our working day and secure for ourselves and our class the full product of our toil directly on the field where we are engaged in production, and all the worries of the politicians will have come to an end, all social dualism in the form of "political action" and "industrial action" will cease. Put the politicians and their masters, the present day capitalists, to useful work alongside us on the industrial field and our social question is solved for all time to come.

# Four Proletarian Poems

By LAURA TANE

## Vigil

The moonrays scrawl across the sky
And here, as dead, entombed we lie;
I heard the rumble of a lightning blast
And watched blue flames come near us
fast.

So here we wait for the sound of pick;
The shadows of men to come three-quick
And lift us up to see on high
The moonrays scrawled across the sky.

They've worked all day and the night as
well
To free us from our airtight hell.
My mule is dead; my pal doesn't speak,
And I alone the death-watch keep
(Before I go the way of sleep?)

## Strike

Men of the woods
Tired . . . hungry . . .
Facing a wall of knitted wind and ice
To reach the next camp.

These are our **men**—Wobblies,
Intent upon the salvation of the scab soul;
Intent upon a little more time to rest
And a little cleaner rest
Before they face their daily battle
With the forest.

## Mine Disaster

In Blackstone town the shades are down,
The night has fallen fast.
The crowds are rushing to the mine
Where the earth has heaved a blast.

Close to the shaft the women moan
And curse the raging soil
Which has wound around their living men
As a snake its prey would coil.

The sun shines down on Blackstone town,
The wind sings high and low
For the long black file of silent men
Who wait for their fate below.

## Version

A prostitute stands on the quiet hill
Admiring a yellow skyline,
And a little child holds her hand.

I know a man with millions
Of dollars and hours to spend,
Who occupies a front pew in a stylish
church . . .
Yet I have never seen him
Looking at a skyline or at a flower . . .
I saw him driving young boys and women
Into his factory where sausages
Form a skyline of profit for him.

he could operate in "the good old days," a field that is now being taken away from him? Do not the various trusts crowd him out of the exploiting class and force him down among the wage earners of this nation? Are not the beef trust, the chain stores, the manufacturing establishments with their branch houses all over the country, crowding out the local butcher, blacksmith, tailor, shoemaker and corner grocer—men who formerly had the privilege to exploit perhaps half a dozen slaves? Were not this group of "citizens" the fundamental base for our democracy? Certainly they were. And now they are on the verge of being forced into the great mass of exploited subjects.

The great howl for "democracy," in which the voice of a Woodrow Wilson sounded above all the others, meant nothing but a preservation of the right of the petty bourgeoisie to continue their existence as exploiters. When they demanded certain limitations of the fields where the big trust operates they never intended a limitation in degree of exploitation, only a limitation as to the scope of operation. It never was their intention to demand that outside the limit of the operations of the steel trust the exploitation in the steel industry should cease, only that outside this limit the right for the small fry to exploit was to begin. So far as the workers are concerned, their program means only a change of exploiter, from one big one to many small ones. As to the degree of exploitation it goes without saying that if any change under such a program could take place it would be a change from bad to worse.

### Division of Wealth

We are told by the politicians themselves through their government, that more than 70 per cent of the people in the U. S. A. own less than 3 per cent of the wealth of the nation. It is reasonable to presume that, so far as governing goes, although less trained in this noble art, these 70 per cent ought to be able to govern that amount of wealth satisfactorily to themselves, without the assistance of especially paid and trained "governors." As a matter of fact, the wealth of the working class does not count a bit in the plans of government advanced by the politicians. What does count, however, is how to prevent the slaves from seizing wealth produced by these slaves; how to safeguard it for its present non-producing owners.

### Industry Makes Wealth

All wealth possessed by one class or another, by one individual or another, is created on the industrial field. In the creation of such wealth politicians take no part whatsoever. Their sole function lies in the disposal of such wealth—not in the disposal of the wealth returned to its creator in the form of wages, but of the wealth stolen from him in the form of surplus values created on the industrial field. Abolish this surplus value and there will be nothing for the politicians to govern.

The politicians have only one function: to govern the wealth robbed from the producers. Theirs is the task of dividing satisfactorily among the exploiters the licenses to exploit. Their task is also to guard the wealth thus obtained from any attack that may be attempted upon it on the part of those who are robbed. As to us, they have absolutely no function to fulfill as we have nothing that needs governing except the marketing of our power to labor, and that never has, nor can be, governed by any political action. It is a commodity on sale in the public market and subject to the same economic laws as govern every other marketable product.

### Knell for Politicians

Should the workers cease to produce for profit and confine themselves to producing for their own use only, what would become of the politicians? Suppose that no surplus value was created by labor, that all who work received the full product of their toil in return for their labor, what would become of the "political field"? Would it still exist? What would be left for the statesmen and the political governments to govern? There would be as much use for them as there is use for them in the negro tribal regions of Australia and Africa, or as there was among Indian tribes prior to the appearance of the white men on this continent.

While the "political field" is conditioned upon the presence of a system of exploitation of those who toil, of legalized robbery, the industrial field, on the contrary, is indispensable to the whole human race. Without the concerted action on the part of all useful members in society on the industrial field, mankind would cease to exist, while the expiration of the "political field" will only mean the elimination of an unnecessary burden on the body social. No matter what stand is taken by the workers, they will always be forced to operate on the industrial field. It is in this respect not a question of opinion, as it is in regard to politics; it is a question of sheer necessity, of action forced upon us whether it runs concurrently or contrary to our avowed opinions and principles. Hence, so far as we the wage workers are concerned, there is no such field as a political one. There is a question of doing away with exploitation, of robbery in one form or another, legalized or illegal, and that can only be done by the ones who are robbed and at the point where they are robbed, and not by a group of administrators of the wealth robbed from us.

### "Political Action" Bunk

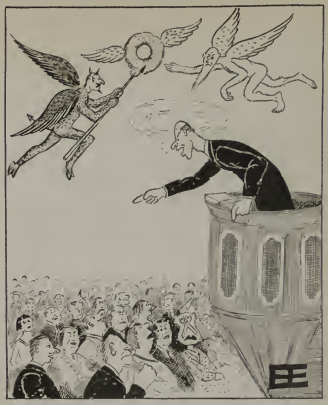
Fellow workers, forget all the flowery talk about the "need of political action." Don't worry about being robbed of social wealth. Don't be afraid that anyone is going to steal our "Tea Pot Domes" or other oil deposits, our ore deposits, our forests or our land. We have nothing of the kind in our possession. We have not even enough oil to grease a wheelbarrow, far less any rich gushers to be taken away from us. If Sinclair or Doheny fail to grab the oil, Rockefeller will not fail. If Gary can't manipulate all the iron ore deposits of the world, you will never get them so long as you are a wage slave. All we possess is our power to labor and

# The Story of a Soul

By E. H. H.

A FRIED onion or a stewed prune does not resemble a soul. Nor can it be compared unto anything that you can see, taste, feel or smell. There is something indescribably intangible about the soul, more to be likened unto the hole in the elusive doughnut. The hole is there, yet it isn't there! You can see it all the time, but at the same time you don't see it. When the doughnut is gone the hole still remains. You didn't eat it. The quickness of the eye deceives the hand—'tis even so with the merry old soul. Nothing is incomprehensible about the soul, brother. This argument's won without a struggle.

We may linger around this old U. S. A. for quite a spell with everyone calling us a good old soul excepting a few bosses and some of our hooktender friends, but some day it is ordained that the soul part of you is going through the balmy ozone "hell bent" or it may whizz skyward like a sky rocket.



But far be it from me, the illustrious Plymouth Rock Whitey, to liken my spotless soul unto the hole of a greasy doughnut. No, my soul is going to be saved by fair means or foul. Money can't do it, but it helps a little—yea! it helps a leetle bit!

Had it not been for the interference of my asinine pardner, the notorious dumbbell "Rhode Island Red," it is possible that the salvation of my soul would have come to a head last week with all of the finer touches and formalities that go with soul saving. But now, here I am, gallivanting around the country with a soul, that is pronounced by good authority as black as a thundercloud.

I had no business coaxing Red into the holy place, but the night air was frosty and he 'lowed he'd come in an' take off the chill. Our clothes being rather shabby, we were escorted towards the rear end of the gathering.

I don't remember this particular brand of saviors but I think they all used the low even roll and always came out on a point or a pair of boxcars.* Various formulas are pronounced good. Some submerge the patient four times in the icy drink and drag him half strangled onto the bank, while others merely spray the water on, Chinese laundry fashion. Some can get you out of old Purg. for only a few dollars and others might want you to handle a Christ-like 100% tar-pot to swab and whitewash all sinners with. Also, you donate ten bucks for the snowy ascension robe. Oh! Kum Kou Kum, get in the regalia and Kioodle about your pure 100 percent Hertford strain.

The minister was all that could be desired. His text was: "The Soul and All Its Mysteries Dissolved," and he put up an airtight 120-proof argumentation upon it. The more he discoursed the more enthusiastic he got. Work! will not be necessary in the Great Beyont! and there will be lots of eats. All the steaks will be either T-bones or Porterhouses, and none will be used of'n the neck or from 'twixt the horns. As the boulevards and stairs are golden, there will also be plenty of coin for those who have been generous here. The armies of the Holy Smoke were said to be all-powerful. Nothing was ever mentioned about the navy, and once when I was young and tender I came near joining it! And the recruiting agent told me it was as near heaven as anything could be.—Nothing was said about whom the Heavenly Army intended to fight, but it might have been the Japs as he mumbled something about the Yellow Peril threatening our gates. He wound up with giving both Calvin and Davis a boost and a bless you my lambs —Amen etc., etc.

It was then that Red arose. I ought to have yanked him back into his seat, but I didn't think he would bore and disrupt the meeting the way he did.

He first asked the reverend if he might ask a question or two for his own enlightenment, and the Rev. informed him that he could come around to his studio directly after the services, and he would be glad to answer any question. But Red claimed he had to catch a train and would be forced to depart in ignorance were the questions not answered "right now."

He first wanted to know if the supposed being known as "God" was all powerful and did he really love the human race.

# While Riding Through Canada

By LEWIS STONE

WHEN a person has traveled from east to west and west to east through the United States a number of times, to say nothing of trips in other directions within the same country, it is natural, and perhaps profitable, to desire a journey across the Dominion just north. So I had the agent at the Tacoma station route me through Canada.

Nothing unusual happened en route. If any bootleggers were aboard they were not molested. No bandits held up the express cars. It was summer and we had nothing to fear from avalanches. Altogether a tame trip.

Everybody knows all about Canada's natural wonders and beauties. Railroads and other boosters have set forth these marvels in an effort to win tourists and colonists. What need then at this time and place to attempt description of her fairest features?

Although it has often been my luck, or misfortune, as you please, to get about the world "under, over, within and between" the rolling stock of railroads, it so happened that my first trip across Canada was contracted for through a duly authorized agent, and I sported a Pullman reservation, as well.

Tiring of admiring, appraising or deploring the shifting panorama without, I read a while. Then, to stretch my legs, went into the compartment set aside as a washroom and for smoking. The air was blue with smoke—and other things, to use a figure.

Do men traveling or traveling men ever fail on such occasions to compete for the blue ribbon as raconteurs of tales not usually welcome in polite society? They excuse themselves from the women and get together to smoke and talk.

A lame old Scot had just finished his bit of risque narrative. It was well received. Then a man from British Columbia horned in to cap him. Great applause; great success.

Several wore lodge emblems; three were Rotarians.

Presently a man in black came in, and at sight of his inverted collar you should have seen their faces smooth out. However, he was away from his flock, and these seemed like good fellows. He had his own store of smut and in a few minutes all was going just as joyfully as ever.

Later, in their appointed places with wives and children, they sat straight-laced enough. This is a public gesture.

The man in black advertised his calling without speech. I wondered what the B. C. man did to keep the wolf from the door. We had just passed Mt. Robson, the highest peak of the Canadian Rockies. Night was falling.

The B. C. man had invited the preacher over and these rotarians were boosting for their respective communities. They were going to a convention. I thought some of their conversation interesting.

A blind man about thirty years old was led through the train.

"Nice chap," said the B. C. man.

"How did he lose his sight?" asked the sympathetic parson.

"In the war. He is fortunate in having a companion to take him about."

"Well, that is what all should be ready to sacrifice, and more, for our country," declared the preacher.

"Exactly," agreed the B. C. man.

Both of them were not eligible for military service when the war was on.

"HE doesn't say much, but did you hear that man who lost his son? Went on against war and the government. Why he got radical!"

The clerical tongue clucked disapprovingly.

"Yes, he lost his only son; boy about nineteen. The lad was a violinist. Too bad. Still, he should not go on like that."

"Of course not. Civilization had to be saved."

They kept at it for a while longer. Sad, indeed, to lose one's only talented son, but not too much to give to one's country.

What had they given, was my thought.

Not much; they were not givers, but takers.

The wife of the B. C. man purred approvingly. His twelve-year-old daughter looked at her father and the minister adoringly.

What did the B. C. man do, what profession, what graft?

After a while he was telling all about it. Kept a school for feeble-minded children.

"Yes, we keep them until they grow up. Try to teach them a trade so that they'll be able to support themselves. . . . . No, we take them of different races. But, no matter of what nationality they are our aim is to make them grow up to be good, useful citizens of Canada."

**Good, useful, feeble-minded citizens. What a field for patriotism!**

The porter was making up the berths.

Soon these nice, clean, well-fed upholders of law an' order stretched out comfortably and slept the sleep of the just.

**MORAL: Riding in Pullman trains is a good place to be gassed.**

# The South's Wild Animal Show

BY JACK METTE

**WIND howls around the house, filling the crannies and eaves and sills with its white burden. It sweeps the dry snow over the frozen earth with a hissing sound.**

**The house is a small frame structure, and though the short winter twilight has caught the deeper gloom of night no lights are burning. At a window a woman stands motionless, face pressed against the cold glass, looking out at the desolate night. An agony of anxiety is breaking her heart; she is wondering where Frank is on this cold night. Frank is her son. Is he working? Has he food and shelter? An overcoat?**

These, and a host of other thoughts torture the mother. Perhaps her doubts are really merciful. We leave her with their gray, heart-stabbing shapes surrounding her, and travel south to the land of romance—for some.

## Reality

We could, with just as good cause, have chosen any of the southern states. North Carolina is singled out because it was in this uncivilized region that Frank was "resting" after a fifteen-hour workday on the public roads.

Back in the woods, a short distance from the highway, are the headquarters of the Fayetteville chain-gang. A few tents raise dirty peaks around the clearing; in the center three large cages on wheels. Never having seen a chain-gang camp before one thinks it a small wild animal circus.

The animals crowded into the small cages are men. They are not wild; not only are they domesticated, but utterly crushed. If you could look in the cages at the forms of men sleeping, tired as death itself, or squirming in a restlessness common to fatigue, your body would recoil from shock. You would never forget the scene.

The place is jammed full—a railroad strike is on, and all hoboes who will not scab are thrown into the chain-gang. Also: The Atlantic Coast Line has a two-dollar reward for hoboes, and others. But still they pack the victims into the foul-smelling cages.

Frank's mother couldn't recognize her boy confined with that flotsam. His face is dark with unshaven beard; his skin has boils covering it—the effect of eating garbage; nature trying to throw off the poison. His eyes are bloodshot for want of sleep. Moreover, they hold murder in their depths. His treatment has been the usual kind. It is enough to make the sufferer feel like murdering.

The authorities do not wait to test the pliancy of the new arrival; he is beaten at the start, lashed until blood runs. Apparently the sadists in charge proceed on the assumption that a preventive is bet-

"Of course he is all powerful, and sure he loves every one of us!"

"Then there was no other Supreme Being that had a hand in this creation business besides him, was there?" queried Red.

"No absolutely, no! God created everything, my child."

"Well, if he created everything, why, then, did he create a HELL and the DEVIL, if he thought such a lot of us, and why did he create SIN? Did he want to sabotage on the human race?"

The only reason why Red is alive but crippled is that the congregation was composed of law-abiding citizens. I remained inside the church after Red's exit as it was my fixed intention to save my soul if possible.

The pipe organ started playing "Merrily We Roll Along, Roll Along." The lights grew dimmer and dimmer. Together the lost ones ambled up towards the altar and commenced to roll on the floor. The strains that floated down from the pipe organ and the groans of the saved souls were harmoniously mingled together. I felt a strange feeling creep over me. Evidently my soul was working up steam and getting ready for salvation! Yes, that must be it! Getting a fair start I rolled nearly out into the center of the gang. Two ponderous old widows rolled over me and close on their heels followed the deacon and the sky-pilot. Then some old villain pinched my leg and I kicked the old fossil in the jaw. There was such an uproar that the lights were turned on and I was discovered in their midst.

Imagine that old ding calling me a lousy bum! Imagine it! Said it was all O. K. for his wife to roll around in polite society, but the proper place for me was out on some dirt-moving job. Let us pray, brothers—Amen, and Peace be with you.

* NOTE—Only crap-shooters will get the low even roll and the box cars.

# Capitalism Made Him Nervous

## LOS ANGELES SLAVEMARKET SNAPSHOTS

By JIM SEYMOUR

HE wore a lean and haggard look and a three-days' growth of stubble that glowed with the radiant tint of a new boxcar.

"Got a pencil?" he asked. "I want to drop this bundle of laundry." Although the sketching pencil I loaned him was of the softest graphite he wrote his name only after considerable difficulty, with fingers that trembled. I noticed that the name was a reminder of early American history.

"You must be expecting to stick around a while," I remarked. "Can you make it all right?"

"Yes," he replied, "I get by, but I'm nervous." I encouraged him to explain.

"I made $2 today on a swamping job, but I'm paying four-six bits a week for a room and it's hard to get that much together. I get nervous thinking about it. It's due again day after tomorrow and maybe I won't strike a thing; you never can tell.

"I can manage to eat all right and get myself a box of snus now and then, but that roomrent always makes me nervous. Going down this way?"

We crossed Main street and eddied our leisurely way east on Second, jostling and being jostled by the other eggshells on the waves of a rallentando prosperity.

"I got to take a walk once in a while," he said. "I get nervous."

We soon had left the cheap restaurants and "cheap" high-priced second hand stores and my companion breathed a sigh of relief.

"It ain't right," he said. "This is my country and I got a right to have a place to sleep without worrying about it. Before the war I used to get the same kind of a room for two bits by the night, and lots of the lodging-house keepers was getting pretty well-fixed—could sell out at any time and take life easy. The war is over now but we still have to pay more than two prices. And it's hard to pay—it makes me nervous.

"Something ought to be done about this room business. It hurts the town. Men come here from the East that don't know what it is to be without a room, and they have to pay 40 or 50 cents to sleep on a cot where there are anywhere from a dozen to a hundred cots in the same room. When they get back East they knock the town.

"I've lived here most of my life and I don't like it. It makes me nervous.

"It ain't right for any man to have to depend on odd jobs at four bits an hour and then pay the most of it for roomrent. And especially it ain't right for me. I'm an old-time American and ought to have some rights.

"Yes, sir, man, I'm a descendant of Henry Hudson and it makes me nervous."

I left him at the entrance to a cheap lodging-house on San Pedro street. As he walked upstairs he reminded me of a mouse in a warehouse where a big cat sleeps.

# The Social Forces

By JOHN CANNAVAN

## CHAPTER IV.

### "The centering of the management of industries into fewer and fewer hands . . . ." I. W. W. PREAMBLE.

WITH the development of machinery, the productivity of labor increased progressively, and though the market expanded it could not absorb the rapidly increasing volume of commodities which industry forced upon it.

In a society where the intention of industrial enterprise is only realized in exchange, a congested condition of the market spells defeat to those who depend upon it to furnish them opportunity for undelayed sales—quick realization of profit. Wherever variable capital did not suffice to tide manufacturers over a period of depression, they were forced either into bankruptcy or combination. The bankruptcy of some meant the consolidation of their businesses with other solvent concerns. The process of centralization was a natural one.

The increased productivity of the workers made for an increased volume of surplus products. An expanding volume of surplus products made blind competition among the manufacturers a form of commercial suicide.

#### "Cutthroat Competition"

Reorganization was necessary if collapse was to be avoided. Business is not undertaken in a sense of social obligation, but with a view to realizing profit. That the products of industry serve social purposes is only incidental to their production. It is not the motive that inspires production. The manufacture of patent medicines, having a deleterious effect upon the users, is as cheerfully undertaken as the manufacture of clothing; capitalists will as readily engage in the production of whiskey or narcotics as in the production of foodstuffs. They will as cheerfully undertake to supply short dresses to a bawdy house as vestments for the priesthood or prayer shawls for the Jews.

That which determines the launching of an enterprise is the prospective profit rate. Profit being the guiding star of capitalist enterprise and the machine enabling the employers to wring more surplus value out of the wage workers, it became an object with the capitalists to so arrange their working forces that the greatest amount of profit would accrue to them. If the machine, as a means of exploitation, was to be taken full advantage of, they felt compelled to obey its dictates.

So we find ownership and management changing to conform with machine progress. The higher forms of modern property ownership were not solely manifestations of greed by the capitalists. They were forced to adopt them. These forms were not established until the machine basis was first laid for them. When the development of machinery modified the commercial environment, this environment reacted upon the old forms of property ownership and the old systems of business management, and compelled them to adapt themselves to the new environment or perish. The forces of progress thus placed means for the greater exploitation of wage labor in the hands of capitalists, provided they could learn to use them. To do so demanded the new ownership forms and the scrapping of old systems. The capitalists were equal to the occasion.

#### The Unwelcome Trusts

Corporations, trusts, mergers, etc., testify to the adaptability of the capitalists. The process of centralization was forced upon them if they would preserve their advantage in society and continue to dominate it. This explains the fact that industry tends to center into fewer and fewer hands, until, at the present time, it is alleged that less than 100 capitalists control the industrial life of the United States and hold the working class of the nation in subjection. That control is economic.

In an earlier stage of capitalist development, before the present degree of centralization was attained, side by side with centralization of control went centralization of production. But, as holdings and power tended to include diverse manufacturers in a contracting area of control, decentralization of production became the rule. Where the cotton of the Southern United States and India formerly was transported to the northern states and to England to be manufactured, factories and mills are now located close to the raw cotton supply and there the cotton is worked up into textiles. The refineries of Standard Oil are within easy reaching distance of every oil deposit on the globe. This feature of modern production is not without significance to the great army of wage-working wealth-producers who depend upon industry for a chance to live. A cotton factory in the South, in India, or in China, has a direct bearing upon, and is of interest to the textile workers of the New England states. Nor can the oil worker in California regard the development in Baku or Persia with indifference. He, like the Georgian or Persian oil worker, is a subject of that power which sits enthroned at 26 Broadway, New York.

#### We Must Observe

But, without going overseas, this centralization of control in industry compels attention, if the wage workers would not permit their living standards to deteriorate until a level is reached where degradation will engulf them.

The progress that enabled the bourgeois to entrench themselves behind the barriers of power and privilege provided opportunity to the workers to

ter than a cure, anticipating insolence, disobedience, and so forth, and nipping it in the bud, the bud being invisible.

A new head guard was told that his first duty was to whip a prisoner. The shackled and manacled man was ordered down the road to the post. Looking back the guard saw most of the subordinate guards following.

"What are you coming for?" he called out.

"Gwine see th' whippin'," they rejoined happily.

The superior was not as low in the scale as most of his caste.

"Go back!" he commanded. "This is no show."

Reluctantly they retreated. Some were so disappointed that they quit their jobs on the spot. All grumbled. Their lives are uninteresting. Think of a superior so stingy as to keep the sight of the bleeding back, the screams of the prisoner all for himself!

The whippings are common, it being almost impossible to keep from additions to the initial brutality. In southern prison camps and prisons even women are whipped unmercifully. Sometimes a leather strap soaked in salt grease and attached to a club is used. Other geniuses hit on a perforated water hose, a clever thing, at once raising a blister and bursting it. Presto!

One investigator discovered a relationship between the lashes and the nicties of language. To illustrate: For "impudence" a penalty of ten to twelve lashes with a strap was inflicted, whereas for mere "insolence" only eight to ten were given. And the investigator says:

"I beg the reader to observe that the exact difference between impudence and insolence is four lashes. This method might well be copied by dictionaries, and we should be spared the uncertainty of words."

The men in chain-gangs are not segregated, the blacks and whites are herded together. No matter; but so are the sound and the syphilitic, the healthy and the tubercular. All eat the same rotten food, the same cornbread and molasses. All eat from the same pots and dishes. When they wash their bodies it is in a tub of water filled once for ever so many men. Clean enough, perhaps, for the first; microbe soup for the last.

North Carolina practises other economies. The prisoners are given one pair of pants and an old coat; no underwear. If they work in the rain they sleep in drenched garments. There is no change of sleeping clothes. Tuberculosis sufferers shiver with the others, no exceptions. Such is the democracy of the damned.

The water boy comes 'round. A negro afflicted with tertiary pox takes a drink. Next, a healthy inmate drinks from the same cup. So goes the water, so the cup, so the infection. What does North Carolina care? No business to be in prison.

Under such conditions of overwork, malnutrition, want of sufficient and proper rest, the whippings and tongue-lashings, many fall sick. This is a real misfortune. Sick? Get out! Bluffing; go to work.

The victim knows the alternative, he calls on heroic will to dominate his weak, fevered flesh. A while he keeps the pace. Too much; slackens. Looks at the guard in despair. This monster sees the halt; whacks him with a club over the head. Then the "cure" is administered—twenty, thirty, fifty lashes. As the guard wishes. Often they make the prisoner count. Under the agony he miscounts. No matter, he must start over again:

Swish, crack!

"Count, you bastard!" snarls the guard.

"One", sobs the outcast.

Swish, crack!

"Two," he groans.

And so on.

Yes, it is 1924.

In such a fearful plight Frank found himself. He wasn't up for murder. They pulled him from a freight train, five railroad "bulls," the chief wearing a gun nearly as large as himself, strapped to his side. A scarecrow of a man, jaundiced and bullying. They asked the boy if he wanted a job at Rocky Mount.

"Strike on there, no," he declined.

Next day he and a half-dozen more 'boes are hailed before a pig-faced justice of the peace. This legal light shines in the office of the Atlantic Coast Line office at Fayetteville. On the door a legend informs: "A. C. L. Chief of Police." How well the private corporation dovetails with the civil officers.

All migratory workers who have made Fayetteville know this "justice." He denies all chance for defense. Reads the charges perfunctorily. There must be no dismissals—the A. C. Line is paying a two-dollar bounty for each conviction.

"Sixty days on the public works."

The Law has spoken. The prisoners are taken to the county jail to await transfer to the county gang.

North Carolina calls this a fair trial. The great state sees nothing incongruous in this farce on justice conducted in a railroad stool's office. North Carolina belongs to the A. C. Line and other corporations. All is well.

Last year a young lad caught in this sort of a trap managed to get word to his people. The case was appealed to a higher court. A grand jury investigation resulted in the release of all men and boys convicted as hoboes. The justice swore that he had advised all those coming before him that they could appeal their cases. He perjured himself. The superior court reprimanded him. So ended that incident.

If your boy is on the road tonight, you can pray to whatever God you may worship that he is not on a North Carolina chain-gang.

We send missionaries to other lands to civilize the savages. North Carolina needs civilization. Judg-

(Continued on page 30.)

far-off days still dominate the working class. The fancied differences and imaginary distinctions that divided the workers then, still keep them divided. Then, these ideas sought a foothold. Today, they are entrenched. At that time they defeated consolidation, but today they have organized the dismemberment of the working class.

In the face of capitalist centralization, we are finding it difficult to come together. Laboriously and painfully, we have created barriers which we must demolish before we can unite the forces of labor. The craft system of unionism binds us in a straight-jacket and renders us helpless before the attack of a relentless and implacable enemy. The power of centralized wealth engages and defeats us piecemeal because we are organized piecemeal. The solidified capitalist power finds us divided, weak and powerless. "The centering of the management of industry into fewer and fewer hands," strengthens, and the craft union system "aids the employing class." **How? Why?**

# Physiological Reaction and the Class Struggle

By PASQUALE RUSSO

**THIS is an age of wonders; man is conquering and overcoming the mysteries of Nature. He is now able to cross the oceans in airplanes, and with the aid of the radio converses directly with all parts of the world.**

**Every day we are witnesses to new inventions; new machines mean new victories over Nature. And these, in the last analysis, are products of an invisible power, the human mind.**

**In spite of his progress man is not satisfied. Either its rate or amount gives him cause for greater effort. He meets with success and straightway plans new campaigns in the mechanical conquest of the world.**

Yet man is not happy, possibly because he is a slave. His freedom has not been attained because he is a victim of an economic system of exploitation.

Since economics and happiness are so closely related, progress in its study can only be had by serious application to the acquisition of scientific knowledge. Every worker should acquaint himself with physiology in order that he maintain good health, which is a factor in happiness.

Most persons are of the opinion that happiness consists in eating and drinking. Their logic, if it may be dignified by such a name, is that by eating and drinking an abundance everything will be all right. This, of course, is a very serious error. Most of the sickness among workers is caused by a wanton disregard of the capabilities of the stomach. A good stomach is the basis of good health and to maintain it in good condition requires attention.

Despite warnings from medical men, the majority of the working class pay no heed and criminally neglect the body and its needs.

The stomach is the principal organ of digestion and its task is to convert inorganic and organic substances into assimilable matter for the blood, thus giving energy to the tissues of the body.

No species of animal can exist unless it receives its means from the surrounding environment and in this work of gathering and assimilating the material, both mechanical and chemical changes are necessary. In this work the stomach performs the essentials of the digestive process. Passing from the cardiac orifice to the oesophagus it is the first organ to receive the food and is the most dilated portion of the alimentary canal.

The stomach is that muscular pouch forming the connection between the oesophagus and the intestines. The knowledge that it occupies such a position in the body is valuable, but owing to lack of space we shall hasten on, allowing the thinking reader to seek out more elaborate and detailed information.

The worker, as guardian of the body, should exercise great care in seeing that the stomach is kept in prime condition. In most cases he abuses it, treats it as one might a slave, forcing it to receive an oversupply of food. Frequently the stomach rebels, protests against such tyranny, rises in revolt and expels the food.

An old adage informs us: "You may lead a horse to water but you can't make him drink." This truth applies equally well to the stomach. The stomach cannot be forced to retain bad or unpalatable food, and, should the eater insist, he usually suffers the penalty of a reaction.

This action is revolutionary and in common parlance is known as vomiting. It is somewhat similar to the winding of a clock tightly. The spring weakens, then breaks, creating disorder in the whole mechanism.

From this, all of us engaged in the revolutionary class struggle may learn a lesson. Nature has made it possible for the stomach to fight the oppressions of a foolish guardian. By vomiting a warning is given to the owner to discontinue the abuses or take the inevitable consequences. If the warning is not heeded the individual always loses. Studying

(Continued on page 31.)

dispute every inch of ground with them. But that clearness of vision, which the capitalist class possesses, appears to have been denied the workers. The capitalists realized that their interest was served only by preventing the coming together of the workers. Pronouncements of the early capitalists, in this and other countries, show that fear of this contretemps obsessed them. Labor solidarity is the only weapon with which to counter the effects of the capitalist centralization of industrial control.

The transition from the early forms of capitalism in America to modern capitalist centralization, control and dangerous power, was so gradual that it did not at all alarm the proletarians, although there is not lacking evidence to show that some of the wage workers saw the trend and feared the possibilities which now weigh so heavily upon the wage working element.

### False Ideals

From the inception of a labor movement in the United States, it has been cursed and diverted from its proper course by capitalist conceptions. In the very earliest attempts of the workers to fashion an organization weapon for themselves, they had no labor philosophy to guide them. Capitalist production was a mysterious arrangement that victimized them. They felt the victimization, but they could not explain the process.

It is recognized by every student of the American labor movement that the political state is the instrument of the capitalist class; that the state from its advent appeared as an institution to legalize and justify the exploitation of one class by another. They are aware that the so-called political revolutions of the past were merely changes to enable a ruling class more completely to subjugate and exploit the slave class, within the society of the period. They realize that the present capitalist system is the most complete and heartless form of slavery the world has ever known. They expose the fact that the American capitalist class made use of the government to endow themselves with dominion over the immense resources of the United States by methods that offend even the professed moral conceptions of capitalism and contravene the laws laid down for the government of the land. The capitalist class, like the kings of old, can do no wrong. The state is the capitalists' state. It is their instrument and cannot be turned against them. A capitalist combination can command legislative and legal privileges. Such combinations have in fact commanded empires from the government. But a combination of workers is met with the Lever Act and with a Coronado decision and other hostile manifestations that should have served to disillusion the working people.

The state is the guardian of capitalist property. It is its concern to foster capitalist property and to defend it even with its life as a state. Every function of every branch of government is capitalistic. This cannot be otherwise. Legislation is not social. It is capitalistic. The police power exercised by the state, vested in the chief executive, who is commander in chief of the military and naval establishments, is not used socially and disinterestedly, but is wielded to serve the interests of capitalist property. The state is the guarantee of property interests, and the guardian of the slave relationship which exists between the classes. In the absence of that relationship, there is no function which the state could perform to serve society. The needs of society are material needs.

### Towards One Big Union

The evolution toward centralization in the capitalist control of industry forced from the masses of the proletariat a demand for a consolidation of the wage working class, to resist the encroachments by which the capitalist class was advancing to the complete subjugation of labor. Several attempts were made to bring about such unification.

From the very earliest attempts to unite all the workers in a locality (1828), the idea of craft advantage proved a point of division in every attempt to bring about working class unity. The group idea dominated every council of labor, and the caste feeling of the "skilled workers," which held the unskilled in contempt, prevented the formation of a united front of labor. This happened even after there was general recognition of the need of economic unity by the workers.

The American workers, in earlier capitalist times, were drudges and extremely ignorant. This was more their misfortune than their fault, but it left them largely dependent for information, impressions and direction upon non-wage working elements. Such a condition was bound to reflect itself in an influence untempered by the experiences of a working class life. Friendly "smart" men, and sometimes women, often favorite employers, furnished the guides upon whom the proletariat relied. The outcome was always disappointment and often disgust. Yet it is only what was to be expected in the first stages of organization experimentation by the workers. There then obtained a stage of development where small employers and journeymen were constantly changing industrial positions and sides in the economic relationship, so that the class divisions were not clearly discernible. The workers could easily be misled under the circumstances by which they were beset at that time. "Friendly" employers were enabled through their influence to use the early organizations against their trade rivals, an evil which at one time grew into a dangerous practice.

### No Ideology

At this time no labor philosophy had been developed. The capitalist system of wealth production was not understood at all. The mistakes of the time were natural mistakes. But experience consists in learning from our mistakes. And how slowly the workers learn!

The capitalist ideas that prevented unity in those

## WISHING AWAY LIFE

EVEN when in wretched circumstances human beings usually cling to life with a tenacity not always easy to understand. On the other hand we find a universal working class wishing of our lives away. If we are employed, we begin the day's work with a hope that it will soon end, and when it is Monday we want it to be Saturday. But we are not anxious to have Sunday or a holiday pass quickly.

When we are out of a job we want the time to rush by until the day is reached that finds us once more engaged in gainful occupation. When we suffer the hardships of winter we wish for the spring. In all this fervent desire for time to fly we do not think of the end of the road, the terminal none can dodge.

However, it seems clear that we want time to hurry along because we are miserable when working and equally as much and more unhappy when deprived of the chance to get wages. In the former case the unpleasant emotions are aroused because of the conditions of employment, chiefly. In the latter, simply because it costs money to buy life's necessities and we derive this money from our work, having no other income.

A fair conclusion may be stated: If the exploitation were not a part of the conditions of labor, the working time shortened, sanitation and safeguards perfected, it is very likely that we should not be constantly alert for the quitting time whistle. And with surplus value extractions taboo, there would be no unemployment as we now know it. There would be work for all and leisure for all. The holiday hours would grow.

In that case it is reasonable to believe that there should be an end to this wishing for time to pass on wings.

## RESOLUTION

THE new year dawns. At this time we are accustomed to hearing a great deal about making resolutions to do certain salutary things and to refrain from the reverse.

Entering another year we know that whatever progress or lack of advance may characterize our movement, it is a fact that the capitalist class is coining all the precious hours and days and months into a golden stream upon whose crest it rides to its own satiation and our degradation.

On every side we see advances made by machine invention. One comes into real contact with this phenomenon on the job, but the knowledge may be just as forcefully impressed by the simple expedient of glancing over advertisements of labor-saving devices in a host of trade journals that burden the shelves of any public library.

The whole current of industrial development sweeps steadily toward the ideal of a super-machine power minus our labor in the creation of commodities. It is inevitable that periods of acute unemployment tend to grow chronic. Most workers take their ugly turn in feeling the effects of the jobless estate; few analyze what forces have thrown them into the grasp of misery.

The I. W. W. has consistently taught the need of scientific organization of the workers for the purpose of realizing their wants and ambitions. But it emphasizes as indispensable to such organization the education of the workers to an understanding of their class position in society.

Against the evils of unemployment we must urge a shorter working day, thereby insuring the existence of the erstwhile jobless, and at the same blow destroying the effect of a cutthroat competition on the labor market. Reduction of the hours of labor being held reprehensible to the boss, it follows that success of such a drive can not be achieved except by powerful industrial organization.

## EDUCATION BEHIND BARS

RULING classes learn nothing from the lessons of the past. The recklessness of their acts when dealing with subject social classes leads one to believe that they echo a fervent amen to the rash king who silenced his more cautious advisers with "After me the deluge."

True, he died in bed, but another Bourbon Louis presently paid for the wrongs of his lineage under the sharp edge of the guillotine.

Crimes perpetrated against the workers of this country, aside from the ordinary criminal scheme of surplus value robbery, are without number. Systematic terrorism against more militant, advanced sections of the working class has been rife with a marked bearing on labor history of recent years.

That the answer of the I. W. W. to this bourgeois brutality is renewed emphasis upon our educational efforts has never been more clearly demonstrated than by the action of the imprisoned M. T. W. members at Mobile, where they are battling the shipowners for the life of their organization on the Gulf. **The jailed fellow workers in the Mobile county jail decided to hold educational meetings every day that they are behind the bars.**

This is a spirit that cannot be broken. It is a spirit that must grow and grow until the united forces of oppression and greed wither to nothingness before the gigantic power of an industrially organized working class.

# "When Winter Comes"

By JOSEPHINE ELLSWORTH

THEY were resting in a park. Te be exact, Fairmont Park in Philadelphia. The husband and wife and five children. These tots ranged in age from one to eight, and their father had built a sort of wagon to push the tiniest in, whose little legs hadn't learned how to get over the road. This wagon first attracted my attention. This, and something else.

The little group were possessing a bench near which a drinking fountain gurgled upward in the morning sunlight. They were eating a loaf of bread, and washing it down with water. Really a case of bread and water diet out in the beautiful morning? The day was warm, and dew sparkled on the grass like ever so many diamonds. If bread was all they had—and it presently became plain that such was the case—at least they were not cold.

My observation point was another bench close by, and when the bread was gone the children ran down to inspect me with their solemnly curious faces. I was reading the want ads. Unable to find work as a stenographer I was scanning the lists of other trades.

When the children seemed intent upon bettering our acquaintance their father came along to round them up. Soon we were conversing. I learned that they were not residents of the city; that they had been traveling a long distance.

"How far have you come?" I wanted to know.

"Over two hundred miles now . . . Pretty tired; some of the roads were rough."

"Out of work there, I suppose."

"Yes. The shop closed down. We waited to see if it was going to start up again, but it didn't. Then we thought of trying other towns. Things are tight. I found a day's work on the way. That's all . . . But I might land something here."

This hopefully. Then he looked out across the sun-drenched park commons. But he wasn't seeing it. His mouth pressed to a thin, grim line.

**"I've got to get work, we're broke now!"**

While we were speaking the mother had been tidying up the children. She would wet a cloth in the fountain and summon her brood, one by one, for the unwelcome ablutions. I watched her carefully.

With all her homelessness she did not seem bitter, just very tired and very worried.

"How have you been sleeping?" I inquired.

"Well, we have a few covers folded under the wagon. It doesn't get very cold. We manage somehow . . ."

It was summer time.

Still, their bread was gone, and no cash to buy more. I had a dollar or two in my purse. At first they refused. Then I gave them an address.

"When you are able you can repay it."

A dollar among so many!

The man marked some places on the "Male Help Wanted" column of the paper I handed him. I had counted these advertisements. Fifty-nine in all.

And what is the population of Philadelphia?

A wife and five youngsters to think of. Homeless wanderers on the face of the earth. This is civilization.

Before he walked away on his desperate quest, leaving his family to wait in fearful suspense, a boy of four clung to him and refused to be left behind.

"Stay with Mamma, Bob, and Daddy'll be back soon. Then we'll have some cakes to eat, if you're a good boy," promised his father.

A lad of eight and a lass of seven said nothing. Theirs was the wisdom that comes early to the poor; they understood.

Two babies slept in the wagon, untroubled.

My own room rent was due. I said good bye and wishing them luck went the other way.

Could I feel rested on my bed knowing that these outcasts were bivouacked on a park bench, on cold grass with the stars over their heads and Hunger a lone sentinel?

I was powerless.

Would the charities rescue them? These poor wayfarers were afraid of the "authorities;" they might separate them from their children. How I hoped that he should find work! Hopes, hopes, where food and clothing and a roof are needed!

My own search must be pressed. Through factories, in shops, and in restaurants I passed looking for the chance to earn wages. I am only one. I am alone. But the seven . . .

Once, while resting in a library, I read a book about poor people being forced away from their cottages so that the wool manufacturers could use the land for sheep raising. The book said there had been thousands made homeless; that the roads had been full of them.

And I was glad for one thing; that summer was with us.

Another day, in a museum, I saw a mummy all doubled up.

The card said it had been laid away in the "Embryonic Posture." Leaving the world it had been wrapped with limbs arranged just as they had been while resting within the womb . . .

Now, with this family on the road, homeless factory folk . . .

Is it a symbol? Is it a promise of change?

The sunshine was bright that day in the park; the air a caress. Seasons have passed, the days are short, hard times stay on, and the wind that used to kiss our cheeks becomes a knife to pierce the heart.

## *Don't Mourn, Organize!*

The picture above shows a Joe Hill memorial meeting of the Stockholm Branch, Marine Transport Workers' Industrial Union No. 510 of the Industrial Workers of the World.

Joe Hillstrom was a Swede by birth, but that is merely incidental. By choice he belonged to that larger race that is rising to sweep slavery from the world. He belonged to the world of revolutionary labor, and this world sings his songs.

Beneath the top line on the right wall, partly covered by the post, the words translated read: Joe Hill's last will "Don't mourn, Organize."

Our Swedish fellow workers are heeding those words, as can be seen by this meeting, with a speaker on the platform carrying on the educational work that must always precede and accompany organization.

The American master class tried to stifle the revolutionary spirit of Joe Hill's songs when their hired assassins blew out his singing heart. The songs are on the lips of workers of all races; the message of industrial freedom is circling the globe.

## DISCUSSION ON WASTE

By CALIFORNIA PUBLICITY MAN

"ELIMINATION of national waste" is the keynote of Secretary Hoover's annual report, published by the Department of Commerce on November 26th. In it he states: "The road to national progress lies in increasing real wages through proportionally lowered prices. The only way is to improve methods and processes and to eliminate waste."

To reduce real wages through lowered prices is to increase the profits of general manufacturers at the expense of the food producers, which is perhaps what Hoover means; to raise real wages without lowering real profits. George Wheeler Hinman, a syndicated writer on alleged economics, whose stuff is always given space on the financial pages of the Hearst papers, thinks Hoover is "filling men's minds with impossible ideas" when he writes of eliminating waste.

To this brilliant writer the national waste is all the result of reckless expenditure, mostly on the part of the workers, in this "land of plenty." Says he: "Two paperhangers came to the writer's home. They came in a handsome little roadster. How are they to be prevented from "wasting" their money on such a car, and be reduced to a flivver, or to the ordeal of walking to work Or how are the roof shinglers in the next block to be kept from wasting their money upon the flivvers parked along the curb during their eight hours of labor?"

He wants to know: "Where is the power . . . to compel them to hoard their labor and its wages etc." and says there is no such power, so "it can't be did" and we'll have to go on wasting even if the country goes to the merry bow-wows. Hinman's wires are crossed. The waste in consumption, the extravagant expenditures of the bulk of the American people is a myth. They cannot spend wastefully for they do not get it to spend. The national waste is in production and is due to, and inherent in, the system. Mr. Hinman is a living proof of this.

His photo, featured with his article, shows him to be well fed, well clothed, and presumably well housed, and the energy consumed in the production of his food, clothing and shelter returns to society nothing of more value than the syndicated slush with which he attempts to mislead his readers. This is an item of waste which may be multiplied by the number of such writers. But that is only a trifle.

There are in all probability six million willing workers now vainly seeking employment. Estimating the productive value of the labor power of the average worker at $15 per day, every day of their unemployment equals a waste of $90,000,000. That isn't all. It is a perfectly safe estimate that one-half of the physical and mental energy expended by those employed in modern business is wasted. The labor spent in the advertising and selling of useless and even harmful commodities; the making, counting and housing of money; the recording and safeguarding, to say nothing of the quarrels over, private property; the building of war ships, war planes and production of munitions, and the feeding and equipping of armies, navies, air and police forces to protect the properties of the different groups of capitalists is all wasted as far as human society is concerned.

And that's only a part of it. The feeding, clothing and sheltering of missionaries, priests, preachers and other peddlers of bunk; of nine-tenths of the doctors, all of the lawyers and politicians, and most of the so-called teachers is all effort wasted. Like all the rest of the bourgeoisie, Hinman and Hoover both are unable to "see the woods for the trees." They see the leak at the spigot but can't see that the barrelhead is stove in.

**The national waste can only be stopped by an organized working class** and by them only when they take possession of the earth and the machinery of production and produce for use instead of for profit. In the meantime it is worth while for the workers to turn some attention to this question of waste. We are wasting our lives, spending our whole term, and our only term of life, piling up needless wealth for a bunch of useless parasites who haven't even the decency to appreciate the good time we are giving them.

To prevent the growth of the I.W.W. they will do anything in their power, and their power is great. They set their lawsmiths to making laws which they vainly hope will delay the day of reckoning. They establish a legal "reign of terror" with their criminal syndicalism laws and injunctions, deportations by sheriffs, hall raids by masked police, all with the intent to terrify the workers. But the workers don't terrify "worth a damn;" they go on organizing and the day is steadily approaching when the Industrial Workers of the World will tell the masters to watch their step.

On with the work, fellow workers! Educate yourselves that you may be able to enlighten your fellows and cause them to organize with you and us in a union with which we can effect our emancipation from wage slavery, free our fellow workers from the master's prisons, and by producing for our own use, eliminate not only national but international waste. In the carrying on of this work you will be making the best use of, and therefore saving the waste of, your own life.

ils." . . . "No sailors who know anything ship on ter." Here is a situation that is tragic, pitiful, owerful and altogether most realistic.

"In the Zone" is a scene laid in the war zone. The shipmates of Smitty the Duke suspect him of being a German spy, because he acts suspiciously about a certain black box which he keeps hidden under his bunk mattress. (The ship is carrying ammunition.) They then decide to find out for themselves. One can imagine the reactions of these hairy apes when they discover that the box contains love letters of a girl that has thrown over Smitty. This scene ends with a silence most heart-rending, broken only by Driscoll, who out of forced bravado bellows: "Got stiffen us, are we never goin' to turn in for a wink av sleep?"

"Bound East for Cardiff" is the tragic story of a man dying, suffering from a crushed chest as a result of a fall; and his last words with his best pal, Driscoll, seemingly hard-boiled, but in this situation revealed as a typical Irishman turned sentimental.

After seeing "S. S. Glencairn" one is convinced that here is the product of a master painter of sea characters. O'Neill, since these one-act plays were written, has managed to recapture the realistic spirit for his recent plays; he has retained the cunning for giving us colorful (not colored) studies on a canvas as extensive as is his own genius. Look to O'Neill!

SCENE FROM "S. S. GLENCAIRN". YANK, SMITTY AND JEANNE BEGG, WEST INDIAN NEGRESS.

# Problem of Distribution

By J. E. WIGGINS

PRODUCTION and distribution, twin foes of hunger, make possible the continuity of the human race.

Production coming first has won an incalculably greater expression of brain power for its efficient play than has been expended by the human race on the problem of apportioning the wealth produced.

Patent offices are crammed with all manner of devices to assist production; how scant the store of thought mankind spends on better modes of distribution. How little, indeed, he thinks of working out a system just to the whole race.

Increasing production under social operation of tools, we find workers in a more subjugated state than previously, with unemployment and all manner of misery abounding, and with the few controlling life's necessities in a savage, criminal way.

Under a just arrangement of distribution increase of production would mean a better life in every way for all. So long as a corrupt system of distribution exists we shall have a world of miserable poor and criminal rich, while development of science is retarded in the unhealthful air of slavery, ignorance flourishing.

Discovering and practising just distribution means a quickening of all branches of knowledge, giving humankind opportunities for advancing hitherto undreamed; approximated only by the seers of all ages. Lacking this opportunity we live in a state of ignorance, which entails destruction of those things finest for man. Crime, wretchedness, want—these are ours while ignorance prevails on every side, the parent of degradation. Intelligence manifested for construction enters when ignorance making for destruction goes out. Ignorance breeds evil offspring fast; to tear down and to stifle is easier than to build. Mankind's unhampered creative intelligence can bloom only in the sunflood of economic emancipation.

# The Emperor O'Neill

By BOB ROBBINS

(An Appreciation)

**The writer of "The Hairy Ape" creates real characters. This, in an age when drama reeks of sham and counterfeit, is enough to recommend his work to our attention.**

EXTOLLING the genius of Eugene O'Neill has become a common practice here in the East. If you in the West have witnessed "The Hairy Ape" and "Anna Christie" you can easily understand why.

And now comes along another O'Neill production of four of his first one-act plays, grouped together, the action of which is well-sequenced and made into a full-length play. Under the title of "S. S. Glencairn" are produced four powerful episodes depicting the lives and actions of those who sail the sea.

These early contributions to the scarce and uninspired American drama were undoubtedly the forerunner of O'Neill's genius as affecting the theatre today. What is more interesting to relate, the works of O'Neill are successful from a financial standpoint. Theatrical managers are eager to produce his plays now, where before, in his early days when inspiration was coupled with hunger, he was not to be favored.

The first part of this review was taken up for the most part with the person of O'Neill. The following must not be forgotten: the organization responsible for first introducing to the public the works of O'Neill must come in for a bit of praise. It is hard to make a fair distinction as to which most credit should be given: the Provincetown Players, or O'Neill himself. Honors are about evenly divided: the Provincetown Players made O'Neill; O'Neill made the Provincetown Players.

The little Provincetown Playhouse in the heart of Greenwich Village, New York, is conducted as a repertory theatre. Those attending the plays given here are known as subscribers.

The "S. S. Glencairn" cycle consists of "The Moon of the Carribees," "The Long Voyage Home," "In the Zone," and "Bound East for Cardiff." The first shows the reactions of these "sailor fellers" to drink and women, West Indian negresses in this case. It concerns also Smitty the Duke, as he is called by the men. He accepts drink but draws the line on the women, drinking, as he says, "to stop thinking," but never thinking to stop drinking. Smitty is troubled with "memories." He is disturbed by music. A donkeyman suspects that Smitty is brooding over a girl, and lets him know that the best way to treat women is to give them a "whack on the ear that will learn 'em." Gentlemen don't hit women, Smitty replies to that. "No, that's why they has mem'ries when they hears music," the donkeyman very sagely remarks.

"The Long Voyage Home" is a true picture of the old sailing-days, when crimps were thicker than flies on fly-paper. The action takes place in an old-time (hurrah for Prohibition!) low type saloon, into which place comes Olson the Swede, although pledged not to drink. He has saved money enough to go home. When he drinks heavily, he says, it all goes. Not this time though—he's going home! Olson is inveigled into taking just one drink, by one of the harlots attached to the saloon, into which are mixed some knockout drops. After which Olson is carried off unconscious, a victim of crimps, and destined to become a part of a ship which is notorious for "rotten grub, where dey make you work all time—and the Captain and Mate was Bluenose Dev-

there are men who are not honest? Who should know better than the mayor? His instruction leaves us no other inference to draw.

O'Banion was the most powerful gang leader in Chicago, yet he never served a day in prison for anything more serious than petty larceny.

**Contrast: In 1923, members of the Marine Transport Workers' Union No. 510 of the I. W. W. were arrested for holding a street meeting in South Chicago.**

At one time O'Banion and five others were caught red-handed standing beside a safe in the offices of the Chicago Typographical Union. The safe held $30,000 and a charge of nitro-glycerine was in its door. The six yeggs were standing in a corner with guns in their hands. One of the six was Charles Reiser, who has won the sobriquet, "King of Safe-Blowers."

**They were not convicted.**

"Be sure the men you pick are honest."

Once, so the police say, there were four active beer distributing agencies in Chicago, all controlled by gunmen. Also, that twenty-nine breweries were in constant operation. Pitched battles would be fought; bodies would be found on the outskirts of the city.

"Beer runners' battle," the police would say, and forget all about it.

In California men are railroaded to jail for being members of a labor union.

O'Banion and twenty-eight others were once trapped in a raid on a brewery. None were ever convicted, although motor trucks valued at $100,000 were loaded with real beer at a platform and ready to be driven off.

The trucks were seized.

"Be sure the men you pick are honest."

### Innocent Men Jailed

In the penitentiary at Walla Walla, Washington, eight men are serving what amounts practically to a life sentence. Beer runners? Gunmen? Safe-crackers? Murderers? None of these. They are held for defending their union hall against an attack of organized hoodlums, intent on doing the work of the lumber trust.

"For ways that are dark . . ."

The Mayor of Chicago orders the Chief of Police to clean up the city. But what else is the chief paid for?

"Be sure the men you pick are honest."

Dean O'Banion is dead, slain by an unknown (?) hand for some unknown (?) reasons.

### A Similar Incident.

The case is not unparalleled. Memory goes back a few years to a similar case occurring in New York City. Herman Rosenthal was shot dead in a public thoroughfare. Four men were electrocuted, including a "Lefty Louis," a "Gyp the Blood" and Police Lieutenant Becker of the New York police force.

Herman Rosenthal was ready to "squeal." Was Dion O'Banion?

"Be sure the men you pick are honest."

### Lynching Union Men

Frank Little, member of the Mine Workers' Union of the I. W. W., was dragged behind an automobile, although a cripple, and lynched. But not by "heathen Chinee," either, but by the blood-stained lackeys of King Copper in Butte, Montana.

Wesley Everest was lynched by hanging from a railroad trestle in the U. S. A., to be exact, at Centralia, Washington. He was a union man defending his union hall. He belonged to the I. W. W. Before he was hanged a doctor unsexed him. This was done in an automobile filled with the elite of Main Street.

Mooney and Billings, both active union men, are serving life sentences for their alleged part in dynamiting during a "Preparedness Day" parade at San Francisco in 1916, in spite of the fact that witnesses against them have been proved perjurers, and in spite of a photograph showing Mooney in another part of the town at the time of the explosion. The photograph caught a large clock in its focus. Still these men stay in prison.

"For ways that are dark . . . "

### "Heathen Chinee" Maligned

No, dear reader, I don't think the "heathen Chinee" is unbeatable. The forces of darkness, exploitation, greed and administration have him beaten to a frazzle.

Captain Walter Bryant, night police captain of the Minneapolis headquarters is suspended for ten days "for conduct unbecoming a police officer." He is connected with Detective Fattico in the selling of Liberty Bonds amounting to $950. Furthermore, he is accused of "burying a telegram" and making an unnecessary trip to Los Angeles at public expense.

"Be sure the men you pick are honest . . ."

At Fargo, North Dakota, when the harvest season opened, men were allowed to stay in town only two days, or be arrested for vagrancy.

In the workhouse at Minneapolis nine-tenths of the inmates are making "moon."

"For ways that are dark . . ."

During strikes the I. W. W. "dried" several towns.

Draw your own conclusions.

---

## SOME TIMBER!

A kauri tree has recently been discovered in the New Zealand bush which rises to a height of seventy-five feet to the first branch and measures twenty-two feet in diameter or about sixty-six feet in girth. It is estimated to contain more than 195,000 superficial feet of timber.

# Heathen "Chinee" and Christian American

BY EDWARD LLOYD

**Note: All references to Dean O'Banion are taken from the Chicago Herald and Examiner, of Sunday, November 23rd, 1924.**

**THERE is an old adage—the exact wording of which I forget—having reference to the customs and manners of the Chinamen. It starts something like this: "For ways that are dark, etc.," and winds up by saying that no one can beat the "Heathen Chinee."**

**Perhaps they do seem inscrutable to occidental intelligence; they evince fewer tale-bearing traits; they display a finer racial solidarity. So we have viewed them in the light of the strange, the mysterious.**

Perhaps, too, they are hard to beat; their knowledge has been passing through centuries, slowly, seemingly changeless, yet accumulating. It may be that they are more canny than the whites.

However, while it is fresh in the public mind, let us take a case in point to prove that by recent exposures here in America, one is led to believe that the Chinamen are beatable "for ways that are dark."

**Kings of Crime.**

Dean (Dion) O'Banion, slain "Bootleg King" of Chicago, had an amazing career that furnishes an uncomplimentary, not to say damning, commentary on the enforcement of local, state and federal liquor laws in every village, town and city of this country since the passage of the Eighteenth Amendment.

Three days before he was murdered, O'Banion gave a party at one of the leading Chicago hotels. This soiree is now known as "The Bootleggers' Ball." A photograph of this affair shows O'Banion surrounded by his satellites, who are described as "gunmen and labor leaders."

**Wanted: Honest Police**

This man's murder caused Mayor Dever to order the Chief Collins drive. "Drive them out, or put them behind bars . . . What I want you to do is to pick a select squad of twelve, fifteen, or twenty men . . . **Be sure the men you pick are honest.**"

Is it possible that among "Chicago's Finest"

# How Negro Soldiers Saved Teddy

(A LETTER)

VERN Smith, Editor, Industrial Pioneer: Your very interesting and instructive article on the present day negro slavery causes me to relate an incident in the career of the late Teddy Roosevelt.

Great praise and credit have been given Roosevelt for the spectacular dash he ordered at San Juan Hill during the Spanish American War. However, were it not for the negro regiment rushing across a dangerous field to his rescue the result, we are told, would have been different.

A regular soldier from this town by the name of Larson, whom we have known for many years, said to the writer that he stood near his officer who was engaged in the conflict and heard him exclaim on viewing his position: "He got in where he had no business to get in. Now, damn him, let him get out!"

The information received from Larson, whom I consider very reliable, is that the negro soldiers rescued Roosevelt's position at great risk and some loss of life.

Yes, the black man makes a good comrade in war time as we have found on other occasions. **The I. W. W. is right in considering him as a comrade in the labor struggle. It is evident we capitalists will make good use of him as a scab if you throw him aside and fail to educate him along class conscious lines.**

We find the Farmers' Union movement is entirely concerned with the farmers' prosperity in Kansas, and has failed to realize the problem is a social labor problem for all industry. We read the Kansas Union, farmer paper, and have written a couple of small articles for it, and I find they are concerned only for "Us farmers".

They do not realize that industrial and farm labor must rise and fall together. Should either field become much more favorable for the worker it will draw from the other until they equalize. Then, too, we have the rich farmer and the poor farmer, or the capitalist farmer and the labor or renter farmer, with opposite interests to a certain extent. No sooner does a farmer reach the point that he hires one assistant than he complains of high wages. We recall that shortly after ex-Governor Allen secured the famous Kansas Industrial Law, making it a crime for miners or others engaged in so-called "essential industries" to strike and interfere with production, the wheat growers called a convention to establish a price on wheat and refuse to sell unless they received two dollars a bushel.

In other words it was a crime to raise the price of coal in cold weather by refusing to work for a low wage, but perfectly all right to join together and raise the price of bread. "Consistency, thou art a jewel!"

But I have digressed. I wanted to finish by telling of Roosevelt and the late Senator J. R. Burton of Kansas. Shortly after the Spanish American War it was proposed in Congress that the tariff on raw sugar be set aside between Cuba and this country in order to aid the depleted sugar plantations of Cuba. Senator Burton refused to support the measure on the ground that it would not help the planters of Cuba but the sugar trust of America. Also, that it would lower the price of sugar beets in Western Kansas.

Roosevelt secured the conviction of Burton in St. Louis, Mo. of the crime of using his official power in preventing justice being done to a get-rich-quick grain concern called the Rialto Grain Company. However, the government case against the company failed, and Burton openly charged Roosevelt with bribing the court by securing the release of the trial judge's son from a charge of embezzlement. Burton also claimed that Douglas Robinson, Roosevelt's brother-in-law, was made vice president of the sugar trust and that the sugar trust cleaned up forty million dollars in the deal.

But this is muckraking, and both Roosevelt and Burton have gone to the happy hunting ground where bribery can not influence the judge.

W. H. Sikes, Leonardville, Kansas.

## PHYSIOLOGICAL REACTION AND THE CLASS WAR

(Continued from page 21.)

it in this light it can be applied to the class struggle in dealing with the masters of industry.

Nature has furnished the stomach with means of revolution to combat abuses, and in another way she has given man a means of fighting the oppressions of an industrial master. This weapon is the mind, and when **used** is most effective.

The working class is now suffering under the tyranny of a capitalist regime. The worker produces everything, not for himself but for a master; he leads a life of hellish poverty; he is exploited for the benefit of a few; he is overworked, thus bringing on ill-health and premature death.

The stomach is a natural fighter, but in the case of man as an individual there are many exceptions to this. He does not resent the oppression of a master but submits to his will. The worker in the industrial world should follow the example of nature and crush the enemy, i. e., the capitalist class.

This world of ours can only be improved when man will use the power of his mind and sweep the world with the lava of social revolution. Doing this he can convert the earth into a paradise for the working class.

# The South's Wild Animal Show

(Continued from page 18.)

ing from past performances of missionaries we do not think the sadist-system of prison procedure is to be reformed by messengers of peace. Like the whole chain of evils inherent in this capitalism, more is needed to cause a change. It will come, not white and stainless, nor with soft purrings of the goody-goodies, nor with protests of comfortable reformers. No, the ulcer is too deep for that kind of salve. The change is promised by Giovannitti's "Red-winged archangel of the devil."

## Conclusion

Last year Frank Tannenbaum made a survey of southern prison camps. In the above account little enough is said of the women prisoners. Tannenbaum learned that some wardens forced the women to stand before them stripped of all clothing; to bathe in the same filthy water, one after another. He found that babies are born in prisons. Their natural fathers are the guards, "and others." The women, like the men, are driven to exhaustion under the lashes of cat-o'-nine-tails, water hose and vile oaths.

The male prisoners are shackled by the ankles on being received. Later they are again chained to a cross chain that holds a number of prisoners in a line. A kind of hellish centipede. Even at night this common chain is secured, and the men lie in their pallets as best they can. Usually the roof leaks. In summer they are nearly roasted.

There is a mainspring for all of this brutality. Convict labor is exploited by private concerns; the cheaper a prisoner can be kept, the more profits are derived. If he dies it is of no consequence—the system keeps a steady supply flowing in.

In one place where weevils swarmed in the peas the men were forced to eat them, or starve outright, so collards were introduced instead. Complaints were heard.

"You ought not complain," said the guards. "You are getting more meat (worms) in the collards."

Humor will have its little jest.

Tannenbaum found twelve men sleeping in a caged space 8x8x15. In another cage twenty-two were held in a cage 8x8x20. The bunks were two feet wide. As there were only eighteen of them it follows that eight men were obliged to double up. What fraternity of flesh and chains!

How many die from exposure, improper food, the whipping post and clubs of guards? Who knows? How many go mad? Martin Tabert was one who died, beaten to death. Without doubt there have been others. Some prisoners have no relatives, no friends. They die and are buried in the woods. Nothing more simple.

Where prisoners are worked in the coal mines, as in Alabama, there is a death rate from accidents that fairly takes one's breath away. It does take the victim's breath, summarily.

The first treatment of this chain-gang horror should aim at the abolition of the private contract features by which the degradation and dehumanization of prisoners is a source of private wealth. The next must recognize the necessity of segregation. At this time sick and healthy of body and mind are herded together. The murderer, a vicious product of the system, is shackled next to a boy convicted of riding freight trains.

Of course I do not expect to see any widespread reform of prisons, or the rehabilitation of prisoners who really need it, so long as the present industrial disorder holds sway. The future belongs to the workers, and in the future they will be obliged to clean up more than one mess of capitalistic vomit.

In a territory that has its thousands of little children slaving in cotton mills, and where the most relished outdoor sport seems to be "nigger-baiting" with no closed seasons, it is not reasonable to look for any reforms of the prison system except by one force. This is the same force that can save humanity from the industrial chaos into which it is rushing full speed.

Industrial organization of the workers alone can halt the rapacity of the ruling class. The profits sweated from chain-gang slaves and the surplus value extracted from wage labor are one and the same thing. There is simply a difference of degree. Big business gets the cream. The workers take skim milk.

---

### A NEW GOLD RUSH?

There are times of the day when it is an heroic act to board New York subway trains. During a rush hour a young man sprinted across the platform only to have the doors shut in his face. He was not to be left, however, and with much agility swung onto the rear end of the departing train.

It is unlawful to ride outside in such hobo fashion. At the next station a policeman was on hand to arrest him. The young man told the judge that he was so impetuous because missing that particular train meant being late for work.

"I might get fired," he lamented.

I was wondering what sort of sinecure could impel risk of life or arrest by such a bit of daring. The judge was wondering also.

"What do you work at?" asked Hizzoner.

"I'm a dishwasher in Childs," was the eager reply.

under the domination of Granville, who took to himself the title of Baron, and defended them from Tuttle, as the knights of the middle ages defended the peasants from robbers, in order to rob them themselves.

Tuttle rediscovered the art of making synthetic food, and the serfs of Granville were suffering indigestion from eating exclusively canned goods. So capitalism started with Tuttle as capitalist. The bargain by which Tuttle and Granville divided the power is a wonderful materialistic interpretation of modern capitalism:

"What price?" asked Granville, promptly.

"Now you people have got to understand," said Tuttle, "that you've got to have these tablets, or you die. Most of your cans will bust when freezing-time comes, and then where will you be?"

"Tell me your price," said Granville.

"You can go on for awhile," continued Tuttle, implacably. "You'll fight me off, but you'll get sicker and sicker, and in the end, to save your lives you'll have to come across."

"It is really a wonderful work that you have done, Mr. Tuttle," said the Baron, tactfully. "You may be sure that the word 'Mr.' was not overlooked by the Head-butler, who never before had been thus addressed.

"I know it's a wonderful work," he said, complacently. "You have conferred a benefit upon humanity, one which will forever make your name illustrious. That must be a source of gratification to you."

"I'm gratified, all right," said the Head-butler, his little pig's eyes twinkling.

"And surely you will not be too hard in your requirements—will not wish to withhold from your fellow men the benefit of such vital knowledge. You will be generous . . . ."

Said Tuttle: "Now look-a-here, Mr. Granville . . . ."

"Baron," corrected the other.

"Now look-a-here, don't you try to come any such game as that over me! I'm a business man! You see?"

"A business man?" said Granville, taken aback for a moment.

"A business man, and I ain't in business for my health. We ain't goin' to have no philanthropy talk in this deal—and you might just as well save your breath, for it won't do no good."

"Ahem," said the other, controlling his anger—as one must when dealing with business men. "State your terms, Mr. Tuttle."

The other edged a lot nearer, and turned to see that the door was closed. "Now listen," he said, "there's no reason why you and me should quarrel. We are the only people in this crowd that are fit for anything. Why shouldn't we stand together, and make the rest work for us?"

"I am sure, Mr. Tuttle, I am perfectly willing to consider a proposition. I have no hard feelings towards you."

"All right," said Tuttle—"then let's get down to business. I started to make these people work for me, and they wouldn't do it. Maybe I was a little harsh about it. I'm willing to admit that—I was drunk at the time, and a man isn't exactly what he ought to be when he's drunk. You understand?"

"Perfectly," said Granville, with a smile.

"Well, they got away from me, and I ain't tried to get them back. I saw it would mean a fight, and maybe I'd get hurt, and what was the use? But now you've got them to obeyin' you, an' everything goin' nice. You've got a government—a sort of . . . ."

"A feudal society," put in the other.

"I don't know anything about about feudal society, but I know what business is, and this looks to me like a good thing. Now you go in with me, and we'll sell these here tablets to the rest of 'em and we'll make 'em pay. See?"

Granville had become more cordial. "An excellent scheme, Mr. Tuttle. But understand, of course, I have to have some of the tablets also."

"Sure!" said Tuttle. "That's what I'm talkin' about." He drew his chair closer, and began to tap with his finger upon Granville's knee. "This is the way I figure it out. These people have to have a tablet every two hours. That's eight of 'em every day, allowing for eight hours' sleep. I don't see that there's any need of their sleeping that long, but we'll let it go for the present. The point is, we'll give 'em eight tablets for sixteen hours' work, and that'll be their wages."

"I see," said Granville.

"That'll keep 'em goin', and there's no reason why they shouldn't get along and be contented. They don't need anything but food; they can go out and get their clothes for nothing . . . ."

"They won't have much time to go out," suggested the Baron—"if they have to work sixteen hours a day."

"Well," said Tuttle, "they can wear the clothes what they've got for the present, and we'll consider the rest bye and bye. The point is, we'll make them the proposition to give them a tablet every time they work two hours—whatever kind of work we tell 'em to do."

"But where do I come in?" asked Granville.

"You?" said Tuttle. "Why, you'll be the boss . . . ."

"Baron," corrected Granville.

"Well, Baron. Naturally, being a nobleman, you wouldn't be expected to work. My idea is that you and I ought to be able to get along comfortable on the work of the other four, and if you'll manage 'em, and see that they do what they're told—why, that's an important service, and naturally I'd expect to pay you for it."

"And the pay will be?" inquired Granville.

"Why, you'll get your eight tablets a day for the job of bossing . . . ."

"Governing, we call it," corrected the baron.

"Well, governing. You'll get your eight tablets every day, and you'll be able to live like a gentleman, the same as me."

There was a pause while Granville considered the proposition. The other was watching him anxiously. "It seems to me that's a fair offer," Tuttle argued. "It's really exactly the same as it used to be in the old world. You're the politician, the man that governs—and I'm the business man, the one that owns things. The rest of 'em, they're the ones that do the work. We'll be able to live fairly decent—we can have the place kept clean and comfortable, and somebody to wait on us when we're tired; and if any of 'em make a fuss, or don't do their work right, why all we have to do is to fire 'em, and they don't get their tablets, and then they get sick. From all I can see, it's a proposition you can't get away from."

And Granville rose, with his most genial smile, and stretched out his hand to the Head-butler. "Mr. Tuttle," he said, "you're a genius! You are what, in the old days, we used to call a man of affairs, a great industrial pioneer. I congratulate you upon the plan which you have evolved, and upon the lucidity with which you have stated it. After listening to you, I feel myself many centuries more advanced in the school of human progress. I become a new kind of nobleman, a modern nobleman. The days of Capitalism have begun!"

So capitalism was duly established, and they gave the Lord Bishop of Harlem eight food tablets free on Sunday in return for his preaching a sermon to the rest of the population on the texts: "To order myself humbly and lowly toward all my betters," and "Servants, obey your masters," and "To be respectful to those to whom God in his infinite wisdom has entrusted the care of the property interests of the country."

Mrs. Lumley-Gotham discovered that once capitalism is functioning, inventors get cheated out of their labors. She discovered a way to make the food tablets by machinery and was served with an injunction, had a law suit filed against her and was forced to sell her invention to the capitalist for a song.

After this Mrs. Lumley-Gotham was accused of stealing food tablets, and de Puyster, the former society reporter, was created a labor spy to catch her.

Shortly after this the I. W. W. is reborn. (Presumably all the Wobs but Billy had been killed in the atomic explosion.) To quote again:

> The former social leader, Mrs. Viviana Athelstan de Smithkins Lumley-Gotham, brought forward a new idea—that of revolutionary industrial unionism.
>
> "We have worked for the capitalist," said the speaker, "and we have produced wealth—much wealth. But this wealth belongs to him, and not to us. We produced it—but now we are turned out to starve, while he riots in luxury and fattens in slothful ease. Let us put an end to this diabolical system, whereby we are deprived of the products of our labor! Let us organize, fellow workers; let us make a common cause against this enemy! No matter what may be the nature of our work, whether we have charge of the fuel supply, whether we stir the kettles, or transport the raw materials of the food-tablets, let the whole labor-force which has to do with this work, organize itself into one big union! Let us vote together and strike together, let us proclaim the supremacy of the working class and the end of exploitation!"
>
> Mrs. Lumley-Gotham had risen to a great height of eloquence. "Workingmen of all countries unite!" she

# The Millennium

BOOK REVIEW By CARD No. 794514

IT IS with the greatest satisfaction that we pick up one of Upton Sinclair's latest books which is too good and too merry for us to disagree much with. Sinclair has been so friendly and well disposed towards the I. W. W., and has understood the I. W. W. so badly, on the whole, that a good Wob naturally regards each new production of his with mingled feelings of glee and shame.

But "The Millennium" is not like "Singing Jailbirds." It is as light and happy as "Singing Jailbirds" is grim and confused. It is not quite a play though it sounds like one, and not quite a novel, though it is written like one. And it is not about any Utopia, though it is called "The Millennium."

In this connection, the author's foreword is very illuminating:

> This little farce comedy of the future was originally a four-act drama. It was written seventeen years ago, immediately after the Helicon Hall fire, as a means of diverting the writer's mind from thoughts of that tragic event. The play was accepted for production by David Belasco, but years of delay took place, and finally the manuscript was submitted to other managers, and in the course of time all copies were lost. If this should come to the eye of anyone having a copy, the writer will be glad to hear from him.
>
> The present version had been sketched out for an editor friend who wanted to publish the story as a serial. Readers of an observant turn of mind will detect the outlines of the play. Act I was laid in the Roof Garden of the Pleasure Palace; Act II in the Entrance Hall at the foot of the ninety-nine flights of stairs; Act III in the kitchen of the Consolidated Hotel; Act IV at the Country Estate of the Lumley-Gothams. New material, not in the play, was supplied between the last two acts

In the first act there were few workers present, and in the last act there is nothing else but. In between, what is left of mankind goes through the various stages of primitive communism, slavery, feudalism and capitalism.

We say "what is left of mankind," for Sinclair makes his problem simpler and achieves some of the dramatic unities by having a desperate inventor wipe out all humanity with an atomic explosion—all but a small group who are in an aeroplane above the range of the destructive atomic rays.

This group comprised the captain of the aeroplane, whose name is Billy Kingdon and who is a revolutionist and also is in love with Helen the wife of the secretary of state; Helen, herself, quite a sensible person; Granville, the secretary of state, a heartless, decadent sort of a fellow, but very able and now the real ruler of capitalism; Mr. Lumley-Gotham, the chief capitalist, a John D. Rockefeller like man, tired, scared, and dyspeptic; Mrs. Lumley Gotham, a sort of ladylike Mrs. Jiggs; Eloise, her daughter; de Puyster, society reporter; Reggie, the poet of the Lumley-Gothams; His Grace, the Lord Bishop of Harlem, very well connected with the official bootleggers; Sarita, an heiress, very ugly; Tuttle, the head butler, a straw boss in the Lumley-Gotham establishment.

When they came back to earth they found themselves 100 stories above its surface on the top of

the Lumley-Gotham pleasure palace, with everybody else in the world dead, and nothing to do but walk down the stairs, the first real work any of them but Billy had ever performed.

Having arrived at the bottom, and realized the full extent of the catastrophe, Tuttle and Granville got drunk; Billy seized Helen and declared she was his wife hereafter, and the whole gang went to live in the Consolidated Hotel "which occupies Broadway from 34th to 42nd streets."

The parasites were in a pitiful plight:

> Some of them were cold and wanted blankets; but they realized that there were three flights of stairs to be ascended to the nearest bedrooms. The Lord Bishop wanted a drink; but the automatic bootlegging apparatus would no longer work, and it was a quarter of a mile to the nearest drug store. The pantries of the hotel were far in the basement, and it took quite a search on Billy's part before the simple meal could be got ready. This once, he said, he and Helen would carry the food for the rest; but thereafter they would have to do their own foraging.
>
> So, after a few days of agonizing and lamenting, one might have seen these fastidious members of the best society camping out in the servants' rooms below stairs, handy to the storerooms and the kitchen. In the last-named place the wonderful electric cooking apparatus was useless; but Billy found an old stove in an antique shop, and this he set up so that they need no longer live upon cold food. Fortunately there was still running water, and food enough in the store-rooms of the Amalgamated Groceries company to have fed them for thousands of years. There were inexhaustible supplies of clothing; the only drawback was that whatever one wanted, one had to go and hunt for it.
>
> The dishes, for instance: when a dozen people sat down to a meal, it was incredible how many soiled dishes were left! They tried the plan of throwing them away; but the mere labor of throwing them was a burden, and pretty soon all the passages about the kitchen were filled up with piles of broken dishes. And there was Helen Granville, going about everywhere lynx-eyed and tireless, making rules and insisting that everyone should obey them; and Billy Kingdon, backing her up with the threat that anyone who refused to obey would be driven out into the cold world to shift for himself!

Soon there was a violent split. The Bishop, the husband of Helen, Granville, Mrs. Lumley-Gotham and Eloise still opposed the transfer of husbands by Helen. So Billy and Helen and Sarita went away to another part of the State of New York and started a cooperative commonwealth.

Those that were left quarreled horribly, and finally became slaves to Tuttle, all but Granville who became a hermit.

> All his life Tuttle had been a menial, cringing and obeying the orders of others. Now he was the strongest man in the crowd, and everybody else was afraid of him. From the time he made this discovery he became a brutal tyrant, and the rest were helpless.

Finally Reggie and Eloise escaped and took to farming somewhere in the country. The rest fell

# California

AS SEEN BY A WORKER

**CALIFORNIA, the land of sunshine, sunflowers and native sons; described by its boosters as the land of heavily laden grape vines, golden orange groves, sunny bathing beaches and Hollywood bathing beauties, has other claims to fame that its boosters sing not of. Recently it has gained some undesirable celebrity as the home of the hoof-and-mouth disease, and pneumonic—or bubonic—plague, while black small-pox even now stalks widely within its borders. Its cities are filled with stranded tourists while on its roads may be seen human derelicts sunk to the most pitiful state of destitution possible of conception.**

**As the boosters tell it, California is one immense garden, seven hundred miles long and two hundred wide. A glance at a topographical map will show it to be a vast sea of mountains with less than one third of its area amenable to intensive cultivation. When one reads the glowing advertisements put out by the real-estate sharks one visions a rose bordered paradise, flowing with milk and honey, where all enjoy health and wealth unlimited, and a happiness unmarred by a single sordid thought. "Far-away fields look green," but a closeup reveals that while health, wealth and happiness can be found in this land of earthquakes they are so swamped in the flood of poverty, misery, and degradation as to cause a shock upon their discovery.**

Yet, 'tis a paradise—a bourgeois paradise—where purse-proud parvenus—"beggars on horseback"—brazenly flaunt their wealth in the faces of the starving horde of cringing slaves from whom they stole it; where the "best people" can point proudly back to a long line of ancestry, to the founders of their family, who came in covered wagons to this state nearly three generations ago and who, after the manner of all wagon-tramps, annexed everything that lay around unattached. They are descendants of the first band of land-pirates who looted the public domains and grabbed all the natural resources of this much advertised "golden" state.

## "Living" on Climate

Pioneers, they call them, those wagon tramps, and many are the eulogies that have been written and unloaded on a long-suffering public, telling of their far-sightedness, ability and business acumen. Their keenness of foresight showed them that thousands would flock into this state when the mildness of its climate became generally known, and their greed inspired them to appropriate and monopolize all land, water, mineral and forest wealth, so that later comers who would enjoy this salubrious climate, could do so only on condition of paying tribute to them. Their foresight has been rewarded. They, or their progeny, now wallow in luxury and dissipation while the great bulk of California's population starve and sweat to fill their coffers.

It is the business of every worker to know that this wealth was stolen; to rid himself of all foolish notions that it was acquired by honest effort; and to devise ways and means to recover the stolen property is the problem that confronts him. To give a detailed account of the wholesale theft of California land and resources would require a book of encyclopedic proportions. One single instance of a timber steal, and of the system of peonage that has been built upon it will be all that space will allow.

California, it must be remembered, possessed wonderful forests of white pine, sugar pine and redwood; the last named, a product peculiar to the state, is found on the Coast range of mountains in a narrow strip a couple of hundred miles in length and comprising some two thousand square miles, estimated to contain some eighty billion board feet of lumber. The white and sugar pines, with other marketable woods, are found on the western slopes of the Sierra Nevadas from the edge of the southern deserts to the point where the state line leaves the mountains and runs due north to the Oregon line.

## Timber Monopoly

North of this point the timber is found on both sides of the Sierras—a fact which was not overlooked when the state boundaries were mapped out. In the northern counties the Sierras, the Coast range and the Siskiyous meet together in a perfect jumble of mountains all more or less timber-covered, some heavily so. Altogether there are about 260,000,000,000 feet, board measure, of timber in the state, **200 billions of which are privately owned by about thirty-nine corporations dominated by eight families.**

The most powerful of these families is that of T. B. Walker and his five sons—the baronial lords of Lassen county—who own 400,000 acres of land in that county alone and whose timber holdings stretch over five other counties in California, not to mention their properties in Minnesota and other states. In Lassen county the Walker family reigns supreme. Its officials are their paid servants, its road, bridge, and other funds are expended only as suits the Walker interests. The fish, game and sanitary laws of the state are complied with or ignored as suits those same interests, while the

proclaimed. "You have nothing to lose but your chains, you have a world to gain!"

Needless to say, the report of this meeting brought consternation to the propertied classes. The government set on foot an investigation at once; but the action was too late, for already the agitators had succeeded in inflaming the workers beyond the point where they could be controlled. The work of organizing the union was quickly completed, and the leaders proceeded at once to declare a strike. To the consternation of the Governor-general the announcement was made that they refused to have anything to do with him, but would treat only with the president of the Amalgamated Food-Tablets Companies, Ltd. Their demand was for an eight-hour day and a minimum wage of eight food tablets for every twenty-four hours, including Sundays. They declared that their strike would continue until these demands were granted; and to the amazement of the authorities they proceeded up and down the corridors of the Consolidated Hotel, cheering madly and singing the Internationale, the Marseillaise and other revolutionary songs of the old era. Also—a still more dreadful sign—they were waving aloft a blood-red banner, bearing three letters which brought terror to the hearts of all defenders of law and order—I. W. W.

The first strike was broken by Lumley-Gotham who acted as scab, and by organized violence on the part of the ruling caste. The next strike was in the nature of an attempt to seize the means of subsistence, and hold and operate them in common. The particular part of the world these rebels tried to seize happened to be that part already dedicated to the co-operative commonwealth by Billy Kingdon, Helen and Sarita, so both factions joined forces and settled down to enjoy life. Eloise and Reggie came in too, and the second generation began to grow up. Eventually Granville was induced to throw in his lot with them. As for Tuttle, an exploration party from the co-operative commonwealth—

> . . . found the president of the Amalgamated Food-Tablets Companies, Ltd., lying in the hallway in front of the entrance to the food-machinery room. They saw his form stretched out, and stood some distance off and hailed him, but he did not answer. At last, Billy made a cautious approach and bent over him; one glance at his form—reduced almost to the conditions of a skeleton—told the dreadful story. The last capitalist had starved to death. He had been too lazy to work, so he had perished; and with him perished his system—and the Co-Operative Commonwealth reigned forever after!

* * *

Of course the co-operative commonwealth isn't going to be achieved in this manner. But as a sarcastic, farcical burlesque of capitalism, "The Millennium" can't be beat. Every rebel ought to read it. As far as that goes, every revolutionist ought to read everything that Upton Sinclair writes. Even when he's wrong, he's good.

* * *

# North Plymouth

By MARY HOPE

THE words pop from them like hot chestnuts leaping from a fire. . . .

Dark women whose garments will not shed the flaming colors of a foreign sun and fields of red and gold.

Pepino and Rosa run by their side to the fish market, a little walk from their houses, set like white birds in a climbing hill nest.

"You know Vanzetti?" I ask.

Who doesn't know saints and martyrs?

There is an entanglement of sorrow and anger in the coarse spinning of their words, the "Engleesh" which seems to be a verbal conspiracy against the easy music of their Italian. But they have something to say which will not remain silent.

So they told me that before his arrest Vanzetti was a fisherman. On December 24, 1919, he came to their houses with a special allotment of eels. Always on Christmas the Italians include eels in their motley of delicacies. . . . The women remember, for there was only one fisherman and that was Vanzetti, and eels form a specially relished portion of their Christmas feast.

Yet this was the time of day Vanzetti was supposed to have robbed a certain individual at the point of a dangerous weapon on December 24, 1919, at Bridgewater, Mass.

One after another they had filed into the courthouse and told the jury that the truth was that when Vanzetti was supposed to be robbing a man he was actually selling them eels for their Christmas meal. . . .

In spite of which a verdict of guilty was rendered. . . . . A 15-year sentence. . . . . One of the unjust weights which, perhaps, balanced the verdict of his second trial with Nicola Sacco. . . .

Their story told to me on the way to the fish market, they search my face for astonishment, and listen for the accent of protest in my voice.

"I know," I say, "that is why men and women all over the world are working for Vanzetti's liberation. There are still people living to whom justice is not a mere word."

Climbing the hill to their homes these women, who can scarcely write their names, ponder over the lesson America has given them in elementary justice.

services are appreciated at their true value.

The I. W. W. has made great gains in California and many men are now in prison whose activities made possible those gains. To hold what we have we must still further enlarge and strengthen our organization. The northern lumber camps are the enemy's strongholds. Unorganized they supply the master with the means to oppress and imprison us. Organized they become the means by which we shall free the prisoners and further our own freedom. Let us then concentrate on these strongholds, break down this peon system, and organize and educate our fellow workers so that they, with us, may be able to effect our emancipation from wage slavery. Then we shall be able to make of California the land of health, wealth, and happiness for the workers, instead of what it is now—a paradise for the shirkers.

# The Messenger at the Gate

By VERA MÖLLER

My friend, oh my friend, whom they
falsely condemned . . .
Come, let me forget that his fate
Shall be death by the lions . . . What
is it you say?
A messenger cries at the gate?
Oh, let him cry on, I would feast, I
would drink,
I would drug all my senses to rest.
Then leave me in peace as I sit at the
board
Till my head forward sinks on my
breast.

Oh, the lamplight is drowned in the
splendor of day,
And I rouse from my stupor too late,
For I could have saved him, my friend,
had I harked
To the messenger there at the gate!
For I could have proven him guiltless
of crime,
How the stain lay upon other hands...
But it is too late for already his form
Lies mangled upon the red sands.

Oh, let us forget all the woes of the
world,
Though its pain and its sorrow are
great,
Let us drown pity's anguish in laugh-
ter and song . . .
And the messenger calls at the gate.
'Tis the voice of the worker that cries
"Ho, come forth!
Come fight with us, here is the way
To banish oppression, to break the
slave's chains,
Come on, and we'll bring a new day!"

But they sit and lament all the wrongs
of the world
At the hands of a grim, ruthless fate,
And they strive to forget all its suffer-
ing and pain
**While the messenger calls at the gate.**

county treasury is bilked out of three-fourths of the amount due to it as taxes from the logs and manufactured products of the Walker outfit.

On their Lassen county domain, the Walkers, under the name of the Red River Lumber Company, have built up a system of peonage which enables them to produce lumber and by-products for less than the factory cost of the food, clothing and knicknacks consumed by the workers while actually engaged in the production. All the surplus value created goes to the Walker family. No competitive concern is allowed to exist within the boundaries of the company's property. **Traveling salesmen and canvassers are given the run.**

The center of this system is at Westwood, from where the logging railroad radiates into the woods to some thirty or more logging camps scattered over a wide territory. In Westwood there are about 3,700 people. Besides the big saw-mill there are—a paper mill, veneer-mill, a box factory and a sash and door factory, where men and women work for wages ranging from $2.50 to $4.00 per day **payable in the private currency of the company.**

Except for a highway which runs through the town, the right-of-way and depot of the Southern Pacific R. R., the company owns all. Streets, houses, department store, bank, garage and auto salesroom, bowling alleys, poolrooms, soft drink stands, barber shop, motion picture theatre, ball park, church, schools and a weekly paper are all company owned, and the doctor and preacher are on the payroll. In this place one cannot be born, live, marry, become sick, die, or be buried without adding to the profit of the Walker family.

## Grafting Par Excellence

An efficiency expert is paid $5,000 per year to see that all the above named institutions yield dividends. Last year the profits from the barber shop, bowling alleys and ball park amounted to $29,000. Rent for the houses of the married, and rooms of the single workers must bring in a considerable pile. A house which cost not more than $1,000 to build brings in $240 per year, while the rooming houses bring in a much higher percentage. and the rentals of cabins in the logging camps in one year are at least double their worth. Then, too, there is a cafeteria which is a gold mine in itself, where an indifferent meal costs from 60 to 80 cents. Gambling and prostitution are flourishing businesses and, there is no doubt, help to swell the stream of profit. This stream of profits ever returning to the company's treasury to replace wages paid out, spells lowered production costs, giving a great advantage to the company in its struggle for markets, thereby tending to strengthen and extend the peonage system.

As this system is permitted to extend it becomes more difficult to organize the workers. It must be stopped. It can be stopped by arousing and shaping the discontent of these peons into a force that can be used not only to do away with peonage, but with all the other institutions of capitalism. **It is a challenge to the revolutionary industrial unionists which we cannot afford not to accept.** Westwood is a good place to start in on.

## Workers Ripe For Organization

Let it be understood that the workers here are in ripe condition for the acceptance of the idea of industrial unionism. They are rebellious, but their fear of losing employment and being stranded in the wilderness holds their rebellion in suppression. Spies are plentiful and the stay of a known agitator is short. The company fears the union and jealously guards the camp from the organizer.

Two fellow workers have been sent to San Quentin from this county on C. S. charges for their activities in organizing, but the publicity given by their trials has done much to make easier the work of those who come after. The sympathies of all were with the victims and the number of red cards in the camps was increased after each trial. However, company vigilance is such as to make necessary the adoption of methods peculiarly suited to the occasion. Brass band tactics will result in nothing but more C. S. cases—more men for the prisons.

## "Peaceful Penetration"

We must adopt the capitalist policy of peaceful penetration. It is easy to get work in Westwood and though it is a ten-hour camp the workers are not rushed. Fellow workers possessed of a knowledge of the I. W. W., who can carry the theory and practice of the industrial union under their wigs, must get into this camp. Go to work; say nothing, but keep ears and eyes open and study those with whom they work. Get a line on the spies and stool-pigeons. Be good mixers, make friends and, when they are sure of their ground, spread the doctrine of industrial unionism without displaying the label.

In this manner the "wheat can be sifted from the chaff" the rebels from the stools and finks. A few such fellow workers, quietly feeling their way could, in the course of a winter, lay the foundation for an organized drive for membership, and when the opportune moment arrives, rouse the workers of Westwood in a strike to break the back of peonage and make the Walker camps safe for the Industrial Workers of the World.

## Intelligent Tactics

It will seem a hard and thankless task. There will be no "big reports" for the delegate to point proudly to, and the more tactful ones may even hear themselves called "fink" by their less judicious fellow workers. But remember that the most effective fighters in war are the spies in the camp of the enemy, who, unknown and often abused by men of their own side, so weaken the enemy's forces as to make victory easy for their own. Their satisfaction comes when the fight is won and their

And Jean Barrais' own bayonet lay beside him in the mud!
[illegible] poured a sip in the German's mouth, and was met by a fever-blank
And burning gaze . . . Where had he seen—? In Basel!—It was Doctor Frank!

There lay two men one September night when the cannons' voices were still,
And talked to each other in anguish and pain in a field at Lunéville;
Two comrades who stood 'neath the crimson flag when the war of the classes burned high,
Two fighters for freedom and right—and doomed by each other's hand to die!

There was no one to hear the words that were said 'neath the moon through that fearful night
Ere the corpses were piled in the ambulance in the early morning's light,
And were buried regardless of nation or faith, side by side in the very same earth,
With no prattle and talk about Vaterland, or Patrie, or language, or birth.
But could they have had but a single thought, or have had but one thing to say,
Jean Barrais with the bullet from Frank in his knee, Frank with the bayonet of Barrais?
I have visioned full many a sleepless night as I've twisted 'round in my bed
That field in France, and two socialists who died ere the dawn broke red;
I have seen their arms stretched out to a home and a hearth's bright flames;
I have heard them whisper as death drew near two beloved women's names;
I have felt the dark woe of those millions of men in my blood, the hateful cry
They have fought and bled, that they lived and died for a **lie**, yes, comrade, a **lie.**

For, O mother from Prussia and Normandie, and from Belgium's ruined domains,
And you, young wife from the Balkan hills, from Vienna and Russia's plains,
And you, pale and wan little working girls in the alleys of London's slums,
And all of you who sorrow and weep for the one who never comes,
You who loved a husband, a father, a son, and now sob your evening prayer,
And you who beseech the Madonna that death and danger your darling may spare:
Is there one among you who still believes in the lie that snatched from your breast
What most precious your longing ever gave name, what life gave dearest and best?
Is there one who believes in the lie that he whom the war has torn from your side
Has fought for **you**, has **fallen for you** when "for his country" he died?

A world war was lit by a schoolboy's shot, and straightway books were penned,
White and yellow and blue and gray, that lied and lied without end;
Where the diplomats gallantly washed their hands of the blame, as they're wont to do,
And each government became white as snow till they thought their own lies were true.

You millions of sobbing women, for a lie have they died, your men,
For a lie, the **Lie of the Fatherland,** they shall never return again.
But the crimson book that they wrote with their blood has not been written in vain,
For that book shall kindle a world-wide flame through the widow-cloak of pain.
But for us who endured oppression's whip and killed at the masters' command,
And for us who went out for a lie to die in judgment that book shall stand:
It's the judgment over an age when kings and diplomacy's pirate band
Could treat free men like soulless beasts in the name of **"The Fatherland"—**
But you mothers, who read the tale of that book with anguish and tears untold,
A stronger International you will bear in place of the old;
A stronger and greater army you'll bear, a tremendous, invincible host
That knows its place when they cry "To arms," that knows and will pay the cost.
You will bear an army that stands as one man—proletarians in every land—
That gives more than words for its socialism, that gives to it blood and hand;
An army that dares to choose its death, and dares when the drum-beats ring,
To go forth and prepare the waking world for Humanity's glorious spring.
Then will the anemones bloom on the graves where, awaiting the judgment day,
Tommy and Jean and Fritz and Ivan and Hassan were laid away,
And the glorious new generation that has chosen and dared and done
Shall build **Our International** in earnest under the sun.

# THE LIE

By TURE NERMAN
(Translated from the original Swedish by L. H. Landen)

Hushed was the roar of the cannons—at last the
machine guns were still,
The autumn night had descended o'er the horror
at Lunéville;
The French with the Germans close at their heels
toward St. Nicholas sped,
And a full moon over the corpse-strewn field
a ghostly brilliance shed.
A lonely hussar-horse neighed around where the
poplars stood tall and gray,
And a bomb-shattered armored auto lay upturned
on the chausée.

He gripped his throbbing temples in pain and
groaned, young Jean Barrais,
As he woke from his swoon with his shattered knee
on the battlefield where he lay;
He raised himself by the side of the trench, saw
the field by the pale moon lit,
Then back he sank on the ground again
and whispered: "Marguerite. . . . "

Like a dream he could see the little room back home
in La Rochelle,
Marguerite, old Mother, the children, as the evening
shadows fell;
When at last the dark hour had sounded for the
war lords and diplomats all,
**La Patrie** demanded his strength, and with song
with the others he answered the call.
Marguerite, old Mother, the children, Jean
Christophe and little Babette—
How droll! As he lay it came back to him—
how clearly he saw it yet—
In July, when last the union met, and how he arose
to tell
Of militarism, and Labor's hope, The International,
How he had shouted: "Comrades all, when they
place steel in our hand
And mobilize us, each other to kill for the masters'
fatherland,
Then we will let our broken guns be our answer
to the call,
For, comrades, 'The International brings happiness
to all'."

How strange! How quickly it all had changed!
A few weeks only had passed,
The war was a gory, hideous fact, at the border
the Germans were massed;
Guesde and Sembat were ministers—the order
went forth to kill—
They were Frenchmen now, not Socialists—
and then there was Lunéville!

How gruesome to lie and gaze around—he was
hungry and cold, Jean Barrais,
And then the damned pain in his poor, shattered
knee that nothing could ease or allay.
**Diable!** Like fire it burned, his throat, but his
flask held some water still. . . .
How his feverish, painracked body rejoiced as he
eagerly drank his fill!
Then at once—what was it? A voice he heard,
a faintly gurgling groan,
Like the prayer of one who is dying, a plaintive,
beseeching moan.
He looked to the south where the town still burned,
o'er the ruins a somber glow . . .
"Wasser . . . Wasser . . . " he heard the wail—
oho, it was one of the foe!
A German, one of the Kaiser's Huns—ah, now
he remembered all:
How they rose like specters out of the ground—
there was naught but to flee or to fall . . . .
A German gave Jean his shattered knee, and
Jean with a snarling yell
Straight through the other's stomach sent his
bayonet ere he fell.

Ugh! Now he shuddered in dread and disgust; it
was murder. . . What, murder? Oh, no!
It was self defense: **La Patrie,** you see, must be
guarded from the foe.
So said the leaders everywhere, and the phrases
flew thick and fast:
"We are soldiers and patriots first of all—yes, first
—and socialists last."

"Water!" Faintly it came again, the German's
despairing call;
Well, there was little left in the flask, though
sorely he needed it all.
The man was a German—well and good, but a
human being first,
A husband, a father for all he knew—Well, then
should he slake his thirst?
A German, one of the Kaiser's Huns—but of hatred
no more could he think;
He dragged himself to the German's side: "You
are thirsty, comrade, drink!"

There lay the German on his back, and his coat
was ripped and rent,
His helmet had rolled off in the clay, and his knees
in cramp were bent;
A broad, clear forehead with dark, wavy hair, but
his belt was wet with blood,

# Civilization's Vanguard

(Continued from page 4.)

sufficient organized power to compel their masters to give them treatment at least as good as is accorded mules and cattle.

These are a few typical projects involving the labor of general construction workers.

To touch on another kind of work performed by the construction worker we shall mention bridge building. This is begun by the men who drive piling in river and coulee beds and place thereon a temporary structure across river or creek. Later come workers in iron and steel. The bridgeman's work is very hazardous, a misstep or a swinging timber striking him and he falls, to be crippled or killed.

### "Riprapping"

Another line of work that employs thousands of construction workers is known as "riprapping" on the Mississippi river. Every year the United States Government appropriates about $50,000,000 to be expended in preventing the powerful current of the river from washing away the banks, and thereby closing the river for navigation. From this point on we shall consider the conditions under which the workers on this and the other lines of construction work are compelled to labor.

In the case of these "riprappers", as is common to all construction work, they keep going and coming constantly. Their average wage last summer was $2.25 and board. "Riprappers" have better sleeping conditions than are usual to their fellows in other construction jobs, as they sleep on the boats that move from place to place and they also have "bullcooks" whose duty it is to keep the boats clean. They do their duty, too. Teamsters are always in demand, where they use mules, and they are mostly two up working on slips and stone boats, and occasionally on dump wagons where the haul is long.

A peculiarity about these "riprapping" camps is that a man is always good for a night's lodging, supper and breakfast. The boss keeps his eye on the one receiving this bounty and if he needs men in the morning he will say so, and it is advisable that the "stiff" go to work for at least an hour or so, as there are usually several straw bosses around to see that board and bed are paid for by working it out. However, should no men be needed, everything is all right and the boss simply tells the applicant to call again.

### Conditions for Bridgemen

These jobs are not considered hard work. They have none of what the "dirts" (construction workers) call rushing or "heavy bulling." Men seeking these jobs in Minnesota and Wisconsin go from St. Paul on the Milwaukee, stopping at Hastings, Winona, Red Wing and Wabasha. The man who has charge of the work is Captain Thompson and work under his direction continues from May until freezing-up time, unless sooner by reason of the funds running out.

Bridgemen enjoy the advantage of floors and tables in their bunkhouses. If the boss refuses to allow them to put in these floors and tables on company time, the bridgemen do it on their own and are usually stopped by the boss's ordering a couple of men to do it for them. He knows that he is saving lumber in this way, by eliminating waste. Bridge carpenters receive from 57 1-2 to 72 cents an hour in wages, and their food is usually a little better than the food of the average construction worker, but they are charged a higher rate.

These bridgemen are very docile and along with this quality goes their lack of any feeling of solidarity with their fellow workers. This is true perhaps by reason of their higher wage rate and lack of organization. They are clannish to an extreme point, differing greatly from the form carpenters who work on concrete bridges and culverts. Perhaps the latter are less self-centered because they are nearer to the muckers and concrete workers, being beside them constantly. But another factor is at work; many of these form carpenters are organized in the I. W. W.

### With "Dirt" Outfits

In the case of dirt outfits my experiences of the summer just past should be interesting. Conditions among them are deplorable, the hours being long and the pace fast. In Illinois conditions in the camps were almost unbearable, sleeping quarters being filthy, with two-high bunks and no floors in the bunkhouses or tents. Whenever it rained very promising creeks flowed through these "shelters."

To keep the provisions in good shape cookhouses were elevated, and so were the corrals for the mules, which shows that the boss thought more of them than for the slaves who drove them.

The work was on state roads, dirt being generally moved by wagons, as there were very few fresno outfits in Illinois at that time. (A "fresno" consists of a number of scoop-like scrapers that gouge out the earth and are drawn by mules.) Now and then I ran into "dinkey" outfits (where the hauling is done with the aid of a donkey engine) and found conditions even worse than elsewhere; greater congestion in bunkhouses and the food sloppy and dirty. In these places the men were boiling up (washing thoroughly) nightly but they failed to rid themselves of the lice that had come to these camps to stay.

These workers were from large cities, afraid of the boss, and when organization was mentioned to them they whispered about the camps being full of stoolpigeons, and related how many of the Wobblies had been sent down the line for agitating. Thus they stay unorganized and suffer in consequence.

# The San Pedro Outrage

By HENRY GEORGE WEISS

Gather round me, fellow workers,
Make a circle, mark me well,
While I tell you of San Pedro
And the tyrants' work of hell.

You have heard of ruthless Nero,
Bloody Jeffreys, Cath'lic Spain;
You have heard of Bruno burning,
John Huss praying down his pain.

You have heard—God knows how many—
Ancient tales of cruelty,
—But have you heard of children scalded
In the land of liberty?

God! had I a tongue of fire
To lick heaven as a flame
That would draw the eyes of horror
On a city's deathless shame!

Christ! had I a voice to thunder
Of the vileness of a state
That stands silent when the masters
Visit children with such fate!

Jesus! had I but the power
To wake souls of supine men,
Never would this land of plenty
Witness such a deed again!

In their halls the toilers gathered,
Songs of labor children sang,
When upon the peaceful workers,
Screaming oaths, the cowards sprang.

Sprang, as spring the wolves in winter
When their quarry helpless stands;
Sprang, as springs the mob on niggers,
Rending, tearing with their hands.

Crash! the door went down before them,
Smash! the window splintered in,
"Hell! the bastards! let me at them!"
Women's screams above the din.

Over goes the table, over
Goes the cauldron, boiling hot . . .
God! what words can tell you further
Of the fiendish deeds they wrought!

For they took the little children,—
Aye, your eyes had better flash! —
Little tots of six or seven,
In the boiling urns to dash.

"Damn you! you will never mumble
Traitor songs again," they said.
"Red's your color? Red your flag is?
—Blister, damn you! blister red!"

Little children, little babies,
Screaming, sobbing, dashed in steam
By the monsters who repaid them
Oath and blow for every scream;

By the loyal, patriotic
Legion men and Ku Klux Klan;
By the banker and the butcher—
Every inch American!

Little children raw and bleeding,
Burned and tortured—God! the sight
Flings a crimson nightmare over
Everything I see tonight!

Aye, you clench your teeth in hatred . . .
Listen! there is more to tell
Of the vile deeds perpetrated
By this coward spawn of hell:

For around the dauntless workers
(As the wolves hem in the deer)
Thronged the cravens, strong in numbers,
Lips curled back, hands hooked to tear.

"Lynch the bastards! Tar and feather!
Damn the traitors! Where's the string?
We'll protect our institutions!
Beat 'em! hang 'em! let 'em swing!"

Naked, stript of all their clothing,
Still undaunted, heads held high,
Stood the six brave fellow workers
Ready for the cause to die.

Laughed the painted harlots looking
Without pity, without shame;
Laughed their coward lovers spitting
Through their teeth a vulgar name.

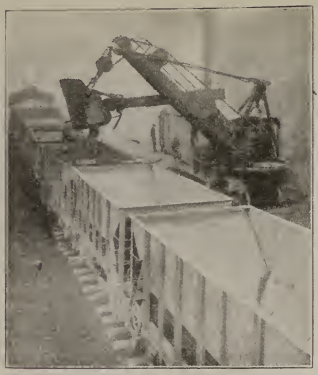
Not a worker gave before them
Though the hangman's knot was jammed:
"Recant? Never! Cowards, curs!
We stand pat—hang and be damned!"

Jesus! had I but the power
To wake souls of supine men,
Never would this land of plenty
Witness such a deed again!

**The introduction of motor trucks for hauling dirt is displacing a constantly growing number of "skinners," just as the steam shovel is responsible for driving thousands of muckers into the unemployed ranks. General construction workers are everywhere coming up against this sort of mechanical power, and without effective organization find themselves unable to successfully cope with it. The I. W. W. organizes these workers into a compact industrial union and the extent of general construction workers' economic security can be gauged by their response to the call of I. U. 310.**

branches contributed generously. The picket line at the strike zone was drawn so well that out of four coach loads sent up to break the strike only three men went up the hill to scab.

Such self-sacrificing as was necessary on the part of the construction workers in this conflict and in many other battles against the boss entitles them to the cooperation of all workers who follow any of the callings grouped together in Industrial Union No. 310. At this moment, it is hardly necessary to go into lengthy argument showing why the general construction workers must organize industrially as the only means to secure living standards compatible with the status of physical well-being.



Divided into the many crafts by whose group expression is erected so much that is indispensable to human progress, the workers are easy prey for their rapacious masters, and fall victims to low wages, bad shelter, long hours and general wretchedness. **Organized as a single, solidified power in the union of their common industry they present a force that cannot be defeated.**

It is worth while to consider the matter. Feeling the miseries of the bad conditions under which unorganized general construction workers are obliged to toil, it is but a step away from those evils to unite to abolish them. It is only a step, but a mighty one in the right direction.

From this step we proceed upward and onward to a goal of human freedom, which is based on the emancipation of the working class.

We have suffered the heat and cold of the seasons, the hazards and hardships of toil, the effects of lack of nutrition, lack of education, and lack of the more refining attributes of civilization. And yet we have built a civilization, going before it into the wilderness and preparing the way. On our backs it has crossed to safety; on our backs it is resting today. If we fold our arms the world must feel the pinch of hunger; without us there is famine and death.

If we are so essential to society we are surely worth a better standard of living than has been our portion. But there is no other class going to commend us for our labors, or offer us the lives that we desire and want. No one but ourselves is going to free us from wage slavery, and we can not achieve this self-emancipation without the instrument of scientific unionism. We are builders, the world sees our labors everywhere. **Let us build one more edifice that shall guarantee us recognition as human beings who know their worth and demand their share. Let us build up a powerful industrial union to take what belongs to us by the force of organized strength.**

GIANT STEAM SHOVEL LOADING DIRT.

### How "Skinners" Live

A glimpse into the life of the skinner (driver of mules and horses) may not be amiss at this juncture. The skinner is certainly a queer character; he has his unique parts, rising about 5 a. m., going to the corral where he cuffs and harnesses the employer's horses, and is then ready for breakfast which is served at 6.

When this is bolted he has his cigarette and begins at 6:30 his day's work **for pay**, which continues until 6 in the evening, with a half-hour off for lunch. Supper is devoured at 6:30 and in another half-hour the skinner is ready to play poker for several hours.

Saturday night is a "gala" one for the skinner, as that is pay night and unless he has lost his wages in advance, playing poker, he sets off for town where he hunts for whisky and "a girl". This is what most of them do.

On Sunday he is sick as a result of dissipation, but on Monday and through the following week, unless checked, he relates about the "good time" he enjoyed the previous Saturday night. If you tell him he was drunk he will plead that he took only two drinks. However, he is broke, and that settles the argument against him.

With all his faults he has a good heart and a peculiar solidarity with other skinners, with whom he will gladly share whatever he has. This is a trait that deserves favorable comment. I have seen these men help their unemployed fellow skinner by taking up collections in the camps, quietly and wholeheartedly. I have never heard of one of them leaving camp without a "road stake," which often amounts to fifteen or twenty dollars.

### Organization Work

Here, then, is worthy stuff. Worthy of better working conditions, better wages, worthy to be with us in the fight for emancipation.

Strenuous efforts to organize these workers into General Construction Workers' Industrial Union No. 310 of the I. W. W. are being made. In the past considerable success attended these efforts. When the construction workers of this Industrial Union on the Great Northern Railroad struck at Wenatchee, Washington, in 1922, against the Grant-Smith Company, they were joined by the men who had not lined up in the I. W. W., and a picket line extending through all the important towns and division points from Chicago to Seattle was established. This strike was won, demonstrating that with solidarity the workers must win their demands.

Incidentally, the Grant-Smith outfit is really a part of the Great Northern Railroad, and it is set up as an ostensibly independent concern merely to divert earnings from the railroad's small stockholders, the large hogs getting into the Grant-Smith trough with snout and jowl, and both feet.

In another part of this magazine the I. W. W. strike at Concrete, Washington is described in detail, so we can pass on to a consideration of the strike of 310 at the Natron Cutoff, and show some of the difficulties under which our fellow workers labored to bring a better state of living for the slaves on that tremendous undertaking.

### Mountain Fastness Strike

The work at Natron Cutoff is done at an altitude of from 5,000 to 6,000 feet. When both working and living conditions reached an extremely deplorable condition, the wages averaging $3.60 for nine hours, with a dollar a day being charged for board that consisted of beans, bread and coffee, except the addition of eggs or meat once a week as a luxury, workers at one of the camps struck. Directly precipitating their action was the discharge of two men who had refused to work overtime. The workers thought that nine hours in mud up to their knees was plenty, and then some, of labor. But the boss has no limitations.

Strike meetings were held, committees elected to go over the entire cutoff, (a matter of traversing a wilderness seventy miles in extent, with snow four feet deep) and notify the workers at all other camps of the strike. The response was so general that within two days the strike had become general. A week after the initial walkout there was an efficient Central Strike Committee functioning in Portland, posting sub-committees at strategic points, with thousands of handbills being distributed showing the strikers' demands. In addition to this kitchens and sleeping quarters were set up in Bend and Oakridge.

Seattle, Spokane, Sacramento and San Francisco were notified by wire and cooperation enlisted. The I. W. W. gave wide publicity to the strike, and its

# The Almsgiving Institution

By GEORGE CHANNING

**ALMSGIVING, or charity, as it is usually called, has become the profession of a large group of people, which tends to add to its numbers, to say nothing of another horde entering the field for diversion. Their presence presupposes the existence of a numerous "clientele" that has drunk the cup of poverty to the bitter dregs of pauperism. Of course, we must remember that the insolvency may be of a temporary character; but while we are remembering this, no matter of what duration the penniless condition may be, its victim is technically a pauper and undoubtedly feels that way about it.**

But this unhappy estate has its turnover; the pauper of today is the wage earner of tomorrow. We do not look for darkest clouds, presenting first destitution's redeeming peculiarity. There is an almost imperceptible line between the poverty that holds millions of workers and the pauperism into which some of them are recurrently sinking. This is a cheerful view. If you are an object of charity now there is no reason to feel disheartened; on the morrow you may find a master to pay you wages. Who knows?

### Part of Capitalism

Pauperism, like its first cousin poverty, is an inevitable product of the wage system, which first rose prominently in England, where early wool manufacturers gave it a very proper "send-off" when they drove peasants from the land so that sheep could graze thereon. Firmly established, the new factory system did not abolish pauperism. It proved not an ugly phenomenon due to industrial revolution and disappearing with transition completed but a natural part of this system, quite as enduring. Novelists have fixed the picture in deathless infamy; recall the stories of imprisonment for debt, and the history of indentured servants sold to drudgery for colonial masters in America.

**Today, with all our vaunted prosperity and wealth, America has not a city, town or village unmarked by the shameful blot of pauperism and extreme want.** Rulers, making pretension to civilization, nay more, benevolence, must do something about it. Result: organized charity and philanthropy woven into the social fabric.

In addition to this we have alleged charitable societies propagating religious teachings. Around the Christmas season they are busy ringing the bells on street corners and taking offerings in black pots. All of these groups can furnish abundant reasons to justify their activities. The needy are numerous; they stand naked, starving, unsheltered. Enter the social workers, and all's well.

### Charity Unscientific

It is not my purpose to waste very much printer's ink and good paper condemning social work, even though we all know that the lion's share of its finances is expended in maintenance of the institution itself, office costs, investigation fees, staff salaries. Who for a minute could expect the emaciated paupers to fall heir to the lion's share with only the meek lamb's appetite?

Better to see if these almsgivers aim at eradicating destitution or have no other purpose than mitigating its pangs. With the disease on the increase they keep to their salves and palliatives for the very good reason that they are respectably employed and intend to preserve their calling. Do they ever grasp a scalpel of economic truth to probe beneath the ulcer down to its rotten core? In ante-prohibition days they blamed drunkenness for most of the poverty prevailing. Volsteadism came—pretty much so—with the saloon's passing, but not that of indigence. **No grass grew on the beaten trail to the poorhouse.**

Anyone on an intellectual plane beyond that of a Neanderthal atavism must agree that humanity has solved production's problems. In this country no additional proof is needed than that most of the people exist without acute starvation in spite of the fact that approximately **seventy per cent of them possess only three per cent of the national wealth.** It is to distribution that one must look for poverty's causes, this distribution being controlled by private ownership of production's instruments.

Workers have nothing to sell but their labor power, a commodity subject to the same laws that govern the sale of all other commodities. While employed, which means while the worker has a buyer for his labor power, he is able to maintain himself according to prevailing standards of his kind. Capitalism's history, however, is one of periodic industrial crises when markets are glutted and commodities pile up. Unemployment follows.

### Surplus Value Means Panics

The worker, producing a surplus value over the cost of his subsistence, receives only a wage equivalent to his maintenance. He can not buy back all that he has produced. Employers have no primary service motive; they are animated by the desire for profits, which are surplus values, unpaid labor. **Even in the best of times there is unemployment,** with labor-saving machinery being constantly introduced. These unemployed have no income, and when they fall objects of charity we can but speculate on the vast number hiding their misery, since it is well known that workers will appeal for aid or accept the same only when in most desperate straits. Unemployment can then be regarded as a fluctuating but ever present source of pauper-manufacture.

If the workers are unable to remain self-supporting in times of business depression they are certainly incapable of independence when struck down by diseases and accidents. Occupational diseases receive the scantiest treatment by compensation laws, and accidents are inadequately dealt with. Modern machinery breaks men, women and children, and society makes no provision for the wrecks. Worn out

# What Ails California?

(Continued from page 8.)

for the period from November, 1922, to the present time, a little more than two years. Bear in mind that "innumerable fellow-workers have been held in jail for from one to seven days without being **recorded** either on the jail or court docket." So writes the present secretary of the I. W. W. organization here, and his statement is borne out by the facts. But these which follow are the "recorded" cases. There have been the following **acknowledged arrests** within this period, on which, **sooner or later,** the charges booked here have been made. Of those arrested, three were women, and three were **children between the ages of four and twelve years.**

| | |
|---|---|
| "Vagrancy cases" | 293 |
| "Criminal syndicalism" cases | 118 |
| "Illegal entries" | 11 |
| "Mutiny" | 1 |
| "Contributing to delinquency of minors" | 2 |
| "Talking to prisoners" | 1 |
| ? Children | 3 |

Altogether since November, 1922, there have been 1353 arrests recorded, the others being for "violating city ordinances" such as picketing, interfering with police, blocking traffic, littering the streets, and such like camouflage of petty officialism. **One man, Pete Lustica, was arrested over eighteen times in the course of a few months, and as a result his mind became unbalanced and he is now confined in the Insane Asylum at Norwalk.** The physician there, an interesting and intelligent and apparently fair-minded man generally, undertook to argue with us when we called at the Asylum in the interests of Lustica, that the stress of social radicalism was too much for such minds as Lustica's, and his insanity was a natural result of the preachment of social dissent. **But Lustica's preachments did not disturb him half so much as they disturbed the grafters and profiteers and parasites** in whom this section of the earth abounds, and his alleged insanity is a manifest sequence of persecution and not of advanced social conviction. Somewhat the same excuse is made in the case of Anna Hartman, who is now serving sentence of ninety days on a Busick Injunction charge, and has another charge coming up against her in a few days. Most people could be charged, with some semblance of reality, of being "unbalanced" if they were subjected to the kind of treatment Anna Hartman and Pete Lustica have had here in California, not to dwell upon the treatment given to the victims of the mob in San Pedro. The Grand Jury there (what irony "grand" is in that connection!) could find no fault on which to base indictment when the I. W. W. hall there was violently broken into, furniture smashed and publicly burned in the streets, **children thrown into scalding hot coffee and burned so as to be maimed for months, if not for life, and men carried by force many miles into the country and tarred and feathered and then left to find their way back to "civilization" as best they could.** This is California, Southern California in particular, in 1924.

And what is the meaning of it? Why is California the worst state in the Union at the present time with respect to lawless violence toward the nonconformists in the labor world, and as regards the "vindictive insanity" of the police and the courts in their treatment of labor agitators here?

Well, I have stated the situation here, modified a little for the better just now. For the first time in five years we have lately had a breathing spell of a few days without any overt act of official violence toward the I. W. W. or other radicals here. And a considerable company of those who had been held in jail for sixty days or more were recently released on "their own recognizance." But yesterday's papers flared forth in big head-lines about the "reds" "raiding the schools" of California, and told of twenty-one persons being arrested for "vagrancy" in San Francisco because of their activity in opposing the American Legion's domination of Education Week in California.

Officialism in California reminds one of the Frenchman concerning whom an opponent said that he had "occasional lucid intervals when he was only stupid." The "lucid intervals" of officialism here are brief. But as to why it is, and what lies back of this sickness of California, let me tell you in another article.

**You cannot afford to miss the FEBRUARY NUMBER of the INDUSTRIAL PIONEER in which Dr. Whitaker will continue his examination of the causes of California's rottenness.**

**In addition to this feature there are promised many other articles of timely interest by the best minds in the industrial revolutionary movement, new poems breathing the soul of the workers, short stories realistically written, cartoons that can not be excelled for making proletarians think, and all the splendid features that are making this magazine the dean of working class journals. BE SURE TO SUBSCRIBE NOW so as not to miss a single issue!**

# Choice Fruits of Trade Journal Orchard

By W. A.

## An Ethical Awakening in California

**The California Lumber Merchant,** constructive organ of those who hawk lumber in the Golden State, presents this gem of thought uttered by C. W. Pinkerton, president of the California Retail Lumbermen's Association. "It behooves us to wake up and get out of the rut of thirty years ago and take an active interest in civic affairs pertaining to our communities and establish the retail lumber business on a foundation of confidence and square dealing."

## Pacifism Rampant in The Steel Trust

**The Iron Age,** dean of trade journals and organ of the steel interests, reports questionable words uttered by Judge Elbert H. Gary, titular head of the steel barony. Mr. Gary is alleged to have said, "I have no hesitancy in saying today that if the leaders of the steel industry had been permitted to come together year after year, had grown to know each other in friendly business relationship, they could have done much to bring men to reason. Munitions are made out of steel and they could have refused to manufacture them. It need never come to that. They could have convinced the political leaders of the country that harmony could be maintained through friendly intercourse. Even in October, 1924, if the question had been left to the steel people, there would have been no further continuance of the war."

## Dirt Movers Utter Paean of Thanksgiving

**The Steam Shovel and Dredge Magazine,** official organ of the International Brotherhood of Steam Shovel and Dredge Men, is moved to express its thankfulness in the following terms:

"The fruits of the orchard have been plentiful, the harvests have responded generously to the needs of mankind, and the amicable relations of the American people toward the rest of the world are as permanently established as are the rock-ribbed mountains. Why, then, should we be slow and reluctant to give thanks to the Great Power for these uncounted blessings?"

## Efficiency In Pittsburgh

As reported by the **Pittsburgh Builders' Bulletin,** the labor drivers of that community are living up to their honorable reputation:

On a certain building job in the East End, one of the hod carriers was caught by the foreman making a trip with only a half load of bricks. The foreman bawled him out and told him that the hod would hold so many bricks and that he must take a full load up the ladder each trip. That afternoon the supply of bricks ran out and Mike, after gathering up every one in sight, found he was still short of the proper number. He yelled up to a workman on the third story, "What do you want?" asked the foreman. "Throw me down wan brick," shouted Mike, "to make good me load."

## The Happy Nordics Of Alabam'

A full page advertisement by the **Alabama Power Company,** whose motto is "The Power That Lights and Moves Alabama," moves us also. This ad puts the amiable qualities of southern labor on the block and proceeds with the auction somewhat after this fashion:

IN ALABAMA COTTON MILLS THERE ARE:

11,949 wage earners employed in cotton goods manufacturing industries where prevailing hours of labor are between..... 54 and 60

5,202 wage earners where the hours are 60

292 wage earners where the hours are OVER ..... 60

242 wage earners where the hours are 54

ALABAMA LABOR GIVES

**A FULL DAY'S WORK FOR A DAY'S WAGE**

Preponderantly native born—of Anglo-Saxon stock—intelligent, tractable, industrious, Alabama's textile mill operatives are not susceptible to those disturbing influences which are so frequent in foreign labor centers.

For further information, etc.

## Horrible Heresies Among The Sky Pilots

As set forth in a leading editorial of the Manufacturer's Record, a staunch journal devoted to the technique of maintaining the full work day and the empty pay envelope.

"Scarcely a week passes in which ministers of the Gospel do not receive suggestions from one organization and another to preach on this, that and the other, forgetting the work to which the minister is pre-eminently called, and many of them, in the slang of the day, "fall for it." Sometimes they are asked to preach in favor of painting and cleaning up houses and yards on the ground that "cleanliness is next to godliness." Sometimes, as was lately done in Brooklyn, they are asked to preach on the necessity of more subways, so people could travel with greater comfort. Sometimes they are asked to preach on election questions, and recently a so-called religious paper offered a premium of a Bible to the winning church which would discuss in one way and another for a week before the election the duty of citizens to vote.

"And now if by any manner of means Catholic and Protestant organizations should undertake to follow the aggressive efforts of the Typographical Union and urge that all printing done by these organizations be given to union printing shops, one more hard blow would be delivered at the work for which priests and preachers alike are called in their divine mission."

workers are flung on the scrap pile—more clients for social workers. Bad housing, improper and insufficient nourishment, lack of adequate clothing and want of wholesome amusement, all proceeding from low standards of living, intensified during jobless "interludes," cull workers for the pit of disease, premature old age and death.

Social workers can only alleviate a very small part of this wretchedness. In large measure their funds come from better paid workers, and no credit is owed the capitalist who donates, since he is simply returning to the more conspicuous victims of the system a few crusts while he holds his stolen treasure out of reach. Generally, he makes the most of the charitable gesture; he is blessed by the beggar and honored by society. He has a large heart, God bless him!

"All wealth is produced by labor; all wealth must go to labor". When that ideal is realized profit-taking ends and all its poverty, its waste and wars. Consider for a moment the immense number of people now living on the labor of others, or the millions devoting their lives to pursuits that are non-productive, necessary now, to be sure, but capable of being given productive work that shall add to the store of mankind's wealth and happiness. Think of our swarm of physicians made necessary only because this scheme of ownership sweeps an endless backwash of disease and wreckage. How many are engaged in social work? When society no longer produces destitution all of these can act in creative capacities. What genius and labor now combine to make engines of destruction! How easy to direct this effort into channels from which flow objects conducing to our well-being!

### Holding Their Jobs

That the more penetrating social worker can fail to catch a glimmering of the truth is unbelievable. That they grope in an earnest but blind state endlessly, taxes credulity too far. Some do see the obvious, how superficial their method, and because few abandon the calling for that reason, we can ascribe pressure of economic determinism which makes it convenient for them to mould their ethics consistently with bourgeois compulsion. They keep their skirts clear of radical contamination to cling to their precious jobs.

What have we to offer professional dole dispensers? They are happy to be thought respectable. We are not so regarded and rejoice in the exclusion. Their way is safe; it does not disturb private property rights. It does not say to the industrial monarchs: "Your extraction of surplus value is responsible for the misery we attend on all sides. It is ridiculous to attempt relief and impossible to effect a cure so long as the producers are denied their product."

Our movement is no temptation to weak vessels. Few can face tempests of persecution, withstand biting winds of social ostracism. The old highroad is pretty comfortable going, while blazing trails is perilous and hard.

Meanwhile social work must be continued with no ambition save that of temporary relief, and this, as admitted by the charities themselves, applicable to only a small number of those who are in desperate circumstances. This social work is a profession, one that is so firmly established in the scheme of things we may look upon it as a vested interest. Viewing its service, its practices in this light, one does not expect to hear anything of a revolutionary nature coming from this direction as a cure for poverty and pauperism.

### Revolution the Cure

**Social revolution is the only way for the working class out of poverty and subjection, and such a revolution can not be achieved by any class except the workers.** With goal defined it becomes simply a matter of method by which to arrive successfully. The I. W. W. strives to organize the workers into industrial unions for the purpose of resisting encroachments, advancing demands and perfecting a proletarian power strong enough to assume ownership of the tools of production.

In the hour of success we do not suppose that disabled and defective sufferers of the wage system are going to vanish into thin air. Ample provision shall be made for them in the spirit of mutual aid, with a feeling that it is the least they are entitled to.

Humanity in coming generations of industrial freedom shall have ceased to produce such victims and we see in that time Ingersoll's dream come true: **"A race without disease of flesh or brain."**

Nothing can stop poverty but justice, and there can be no justice without revolution. If the revolutionary is an enemy, consider the enemy within the gates. He is the foe of an anti-social process of wealth making. He is growing stronger all the time. In thousands of strikes he is testing his strength. Reverses do not sap his courage, he falls back only to advance again and again, uncrushed, uncrushable. Revile him; he laughs. Jail him and his power multiplies in the sunlight. Kill him; he rises again. This is the figure of militant labor.

**Presently he is going to upset his masters, and keep them upset.**

**YOU CAN SELL the Industrial Solidarity and the Industrial Pioneer and in addition to earning handsome commissions you have the opportunity to win cash prizes as described in detail elsewhere in this magazine. Become a Sub Agent. Boost the Press of Industrial Unionism. Change your idle hours without income into well paid hours. Write for Sub Book NOW!**

# *What Is Your Answer?*

The master class holds over one hundred of our fellow workers in prison. It's not too late to contribute to the Christmas Fund for these Class-War Prisoners. Last year each prisoner received $25 from the General Defense Committee. We must, at least, duplicate last year's effort. It is up to the members to raise funds and show that we do not intend to let freedom die; that we shall relieve those jailed as much as possible, and carry on the fight for their freedom from prison and freedom for all workers from wage slavery.

All together, let's go!

Send funds to the General Defense Committee, 1001 West Madison Street, Chicago, Illinois.

# *The Future of the I.W.W. Depends on ITS PRESS*

If we cannot build up a big and powerful press, how can we build up a big and powerful Union?

We Must Double the circulation of Pioneer and Solidarity within the next two months. We can no longer tolerate the deplorable weakness of our Press.

Every member of the I.W.W. must get behind this circulation campaign and push it to a success. Let us stick to the task of building up our Press until we achieve success.

As a means of making it worth while for members to become sub agents we are offering the following Cash Prizes:

## CASH PRIZES FOR SUB AGENTS

| | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|
| 150 | yearly | subs | ..... | $120.00 | plus | 20 | per | cent | Commission |

| 15 | " | " | ..... | 10.00 | " | " | " | " | " |

## RULES GOVERNING CONTEST

**Contest ends February 1, 1925. To the Sub-Agents Turning In the Highest Number of Subscriptions Over 150 an Additional Prize of $25.00 Will Be Paid.**

**In case of a tie for the highest number of subscriptions among one or more contestants, each one will receive the prize of $25.00.**

Only subscriptions accompanied by payment will be credited to Sub-Agents. Sub-Agents will not be credited with subs from books that are carried by other agents.

New subs must be turned in from week to week.

Subs put in the mails on or before February 1st that do not reach this office before the closing date will be credited to Sub-Agent. Subs will be counted four days after contest closes and winners notified by first mail and in publications.

Six months subs count one-half. Three months subs count one quarter.

**Special prizes of $35.00 will be paid to everyone turning in 50 subs before December 20th. All those who turn in 50 before this date will be credited 15 subs for contest closing February 1, 1925.**

**LET'S GO!** **WRITE IN FOR A SUB BOOK!**

# *Forging Freedom's Weapons*

**Together, Man and Woman, forging the instrument by which to reach a free destiny. Side by side, helpful, sympathetic, determined; happy to labor together in a common cause. Today woman is in the industries; industrial freedom means her freedom as well as the freedom of man. United for this goal let them forge the weapon of organization, shape the sledge to beat down the walls of this economic prison.**

## *Preamble of the Industrial Workers of the World*

The working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few, who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

These conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

Only

## The Spirit of Freedom

By VERA MÖLLER

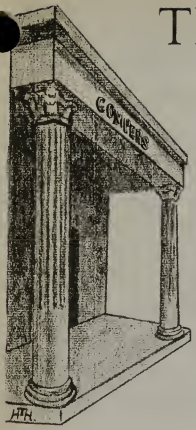
I was born when the race was born,
I shall die when the race shall die.
For the spirit that creeps from out men's souls,
For justice and truth am I.
I was born of glory that's brighter than flame,
Or the blaze of the eastern sky.
There's nothing can slay me or crush me down,
And there's nothing can hold me fast,
And I shall come into my own
When the reign of the tyrants is past;
When the last fetter and whip and crown
Into the furnace are cast.
'Tis I who give man a strength divine
That nothing can daunt or kill;
'Tis I who steel him to bear the pain
And the strain to the heart and will.
When the thrones shall fall and the tyrants go
I shall be living still!

# Latest Photographs from Our I.W.W. College

## GROUP STUDYING IN THE LIBRARY.

The library has a good set of reference books, and an excellent selection of volumes of interest to class conscious workers. But more can always be used. Gifts to the library are acknowledged in I. W. W. papers.

## IN THE KITCHEN

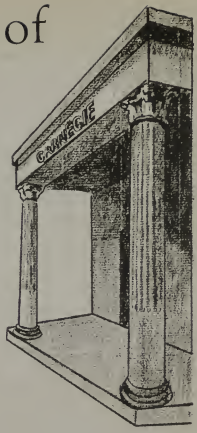


This room and the dining hall can accommodate 200 students. Boiler and cook house are under the kitchen. There is a "homey" atmosphere throughout the college, and the rooms are steam heated, assuring comfort to students.

## NOT SKATING ON THIN ICE

Spirit Lake is frozen solid and our fellow worker students are making the most of it. While the college exists first to develop brain power, its gymnasium and outdoor sports keep the students "fit."

For Story see page 47.



# The Legend of Sleepy Hollow

## A Criticism of the Creed of Samuel Gompers

By JOHN A. GAHAN

**SEVENTY-FOUR years of it—a life that began in poverty, developed ambition, struggled with bull-dog pugnacity through years of intrigue and treachery, finding wealth, triumph and a kingly end.**

**That was the personal history of Samuel Gompers, whose inauspicious childhood was laid in Whitechapel's squalid slums, and whose last resting place was not Westminster Abbey because we do not bury our kings there.**

**Last December, beneath bold streamer headlines, newspapers carried graphic accounts of the passing of this yellow leader of America's largest official labor-dividing movement. We read how the body was raised in its flag-draped casket on an artillery caisson; how cavalry from Fort Sam Houston preceded the cortege to the railway station, while Chopin's funeral march sounded San Antonio's last farewell. At the Missouri, Kansas and Texas Railway station the private car of the road's vice-president waited for the body, and the final journey started northeast, stopping frequently en route for those who wished to pay their respects to the dead, halting at last at Tarrytown, which is near Sleepy Hollow Cemetery.**

Historic names, these last, renowned in American letters, thanks to the genius of that excellent story-teller, Washington Irving. You remember the tale of Ichabod Crane fleeing from the district in terror of the Headless Horseman. Sam Gompers rode his enemies down roughshod and frightened off the weak, but no headless horseman was this doughty English Jew who bargained with the despoilers of his kind, selling the hopes of his people and the dreams of his class for the purple mantle of self-gratification crystallized practically of riches and influence. Thus was well earned his grave beside such sterling friends of the poor as Andrew Carnegie, William Rockefeller and John D. Archbold. Boon comrades in life for the monstrous spoliation of the workers, it was Gompers' wish to be their kindred in the dust, and now they lie in silent fraternity, cronies to the last.

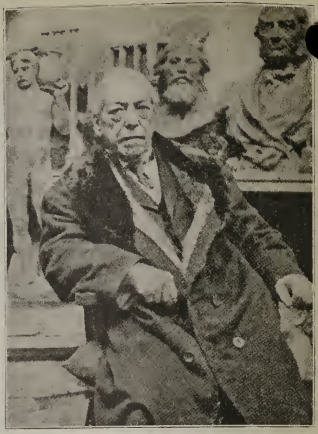
Incredible as it may appear, there have been altogether too many post-mortem sketches of the man drawn by ostensible radicals in which he is limned with sympathetic strokes as a valiant paladin, eager to don helmet and greaves to tilt against all comers in the interest of a downtrodden proletariat. One of these charlatans sees Sam's defection in 1917 when, in the imaginings of the verbose quack, he was lifted up and away from his lowly and militant routine to the seats of the mighty. But any perversion of fact may suitably serve the purposes of rhetoric. Examination of Gompers' life shows no such new departure, but rather an extraordinary consistency in its vigorous antagonism to every gesture of the working class toward emancipation.

That he grew more smug, self-centered and irritable as age crept upon him is merely a sign of the intensification of lifelong prejudices running to seed, of an arrogance wholly cocksure because of his opportunism's many victories. That his intolerance of opposition accumulated with dotage, and that participation of this country in the war pro-

vided him and his machine the patriotic pretexts to piously assist Department of Justice inquisitors in heretic hunting are no reason for us to forget that long previous service to the masters of industry admirably qualified him for the gentle pursuit of handing over radicals in and out of his organization to the tender mercies of the secular arm.

Mr. Gompers once wrote a book condemning Soviet Russia which he triumphantly called "Out of Their Own Mouths," and whatever the merits of his case may be, I have thought that out of Gompers' own mouth has flowed abundant evidence for us to competently estimate his character, and what is more important, to judge the organization of which he was so long the mainspring. I have examined his published opinions of the past thirty years and despite this flowery effusion in his pamphlet "The Trade Union" (1894):

> **In no organization on earth is there such toleration, so great a scope, and so free a forum as inside the ranks of the American Federation of Labor, and nowhere is there such a fair opportunity for the advocacy of a new or brighter thought**



find that the policy that has expelled all incorrigible non-conformists in this last decade is essentially the same that welcomed the "new and brighter thought" of, say, the American Railway Union by promptly destroying it at the time of the liberal spirit quoted. Preambles of many central bodies of the Federation are quite forward things, but rituals are frequently worded to bind the initiated to the faith of an indestructibly immutable A. F. of L. "As it was in the beginning, is now and ever shall be," and the "Gates of hell (new and brighter thoughts) shall not prevail against it."

### Stagnation of A. F. of L. Ideas

Though the world moves, the Federation pronouncements of any given year might just as well have served at any other. Regarding the ridiculous craft autonomy, now obsolete as a weapon against financial hegemony, but still maintained, the following perfectly good A. F. of L. philosophy of thirty years ago is next presented. You will immediately recognize it as the unchangeable Federation policy:

> **It is true that single trades have been often beaten in pitched battles against the superior forces of (sic) united capital, but such defeats are by no means disastrous. On the contrary, they are useful in calling the attention of the workers to the necessity of thorough organization, of the inevitable obligation of bringing the yet unorganized workers into the union, of uniting the hitherto disconnected local unions into national unions, and of effecting a yet higher unity by the affiliation of all national and international (meaning trade unions with locals in Canada as well as in this country) unions in one grand federation, in which each and all trade organizations would be as distinct as the billows, yet one as the sea.**

Such a contradictory authority has been diligent to show us the practical workings of this unity. We could fill volumes merely with lists of cases in point, but cite only such well-known examples as good

**Sculptors have modelled workers as TYPES, but Gompers posed as an INDIVIDUAL and a personage as do the rulers of earth.**

union stevedores working beside strikebreaking teamsters and first-rate card men on the railroads hauling scab coal and scabs while union miners bravely strike and uniformly lose.

Before the Gompers machine was thoroughly effective it suited Sam's designs to exhibit a broad-mindedness conspicuous by its absence when no longer needed. In the American Federationist in 1896 he wrote:

> **I have ever believed that the trade union platform was the broadest in existence. There is room enough for the most radical as well as the ultra-conservative—in fact, I have always regarded the existence of both these elements as essential to the success of our movement.**

He never meant it, though, and kept assiduously engaged in perfecting his machine, the while choking the life out of any head popping up with even a faint pink complexion. As time went on he began to boast about a large membership, which, to be sure, is a most welcome sign in the light of per capita taxes, but is not securing any betterment for the rank and file unless results can be shown to that effect. How little advance has been made with all the large membership may be seen by considering the Federation's "Equal pay for equal work regardless of sex" slogan, which has been echoing down the years since 1897 to the present, still a slogan, and the 1898 opposition to child labor platform of the president's report to the St. Louis convention, which is still a live issue, even though Massachusetts

thinks otherwise. Narrow reformism in the Federation has sought to justify itself by its effectiveness—"If we cannot have the whole loaf, and of course we can't, then we can get a few slices." Yet one wonders why such moderate appeals find a deaf ear. Failure in all of these things does not suggest to the craft unionist leaders that a change of action is needed, and that such action must be predicated upon another form of economic association.

That Gompers was not ignorant of the rise of big business is made perfectly patent when he says in 1900 to the Louisville convention:

**Industry has become so developed and wealth so concentrated that we are confronted with the associated interests of employers.**

Again, he shows that no manifestation of unfolding capitalism escaped his notice and he solemnly tells the Buffalo gathering of his outfit in 1903 that:

**Organized labor understands that there is organization in capital among capitalists . . .**

But his remarks immediately pressing on this evidence of percipience show us that he had nothing to fear from such consolidation of bourgeois activity. He says:

**As a matter of fact, as I see it, as organized labor sees it, we welcome the organization of the employers.**

No matter that such boss class cohesion means more widespread starvation, more ready manipulation of violent agents favoring employers in industrial disputes, more efficient blacklists and more abject obeisance of workers to the gods of their bread and rags, Sam is for it. Why not? He had nothing to lose but the itinerant task of rapping at many doors of small retainers and he gained larger commissions at less effort from centralized capital.

### Radical Utterances Used

The man's cunning, by which he easily duped many really progressive workers, is seen at play in occasional "radical" outbursts, and though he was ready to fall on the organized employers' neck in loving welcome in 1903 he exploded at Dayton, Ohio, two years later when facing a working class audience:

**I was told that an organization of manufacturers held a convention at Atlanta and denounced the trade unions. A convention of what? A convention of manufacturers.**

**Just think of it! Denounced us, why? Because, as they say, the trade unions deprive the workingman of his liberty. When in the history of the world did the masters fight and make sacrifices for the liberty of their slaves?**

It is claimed that sincerity to working class interests prompted his tactics, the methods of craft and sectional autonomy, but how can he be justified as either wise or honest when he displayed so keen a knowledge of capitalist systematizing but advocated no new means to combat it and fought with every bit of his strength any and all who proposed innovations, who saw that the old weapon could no longer function in modern industrial conflict and wished to devise instruments that would work? Several quotations have been presented showing that he knew the way capitalists were massing their forces. As early as 1897 he said:

**With the invention of new machines and the application of new forces, the division and subdivision of labor, many workers who have been employed at skilled trades find themselves with their occupations gone, which they have devoted long terms of service to acquire. Thus we see the artisan of yesterday the unskilled laborer of today.**

Yet he and his machine went merrily on organizing skill and letting unskill go to hell, for all they cared. Even when migratory labor assumed proportions of great size he gave it only perfunctory mention at the Atlanta convention of the Federation in 1911, admitting that

**The lot of the migratory laborer in the United States today is in some points worse than slavery. The slave was at least sufficiently well nourished to enable him to perform his allotted tasks.**

### "It Might Be Well"

Because these sufferers compared favorably in a numerical sense with the entire membership of the A. F. of L. at that time is probably why they were considered at all. In addition to which may be mentioned as a spur to his fatherly concern the militant presence of some of these migratory workers who were making I. W. W. history. Still, it is characteristic of the man's self-satisfaction that after enumerating in detail the miseries surrounding these workers he arrives at the naive conclusion:

**It might be well to establish a Department of the American Federation of Labor in which trade union migratory labor should be enrolled.**

With industrial growth positively dynamic the Federation remained static. For purposes of direct comparison scan the next two statements. On April 18, 1899, Gompers testified before an Industrial Commission at Washington in these terms:

**For the present it is our purpose to secure better conditions and to instill a larger amount of manhood and independence into the hearts and minds of the workers, and to broaden their mental sphere and the sphere of their affections.**

So much of his energy was spent castigating those radical workers he preferred to see as breeders of class hatred that we assume, in the absence of specific objects to the contrary, that he meant broadening the sphere of the workers' affections to include the dear boss. However, in the first part of the remarks we are spared all ambiguity, better conditions being the Holy Grail that he and his tin-armored crusaders were after. Twenty-one years later—in 1920—Gompers in his pamphlet: "Collective Bargaining: Labor's Proposal to Insure Industrial Peace" is still anxious to disavow any revolutionary penchant in his Federation, so he tells us that:

**Collective bargaining in industry does not imply that wage earners shall assume control of industry, or responsibility for financial man-**

(Continued on page 41.)

# The Left Wing in Science

By VERN SMITH

**SCIENCE is normally revolutionary; that is why master classes from the beginning of time have been so careful to control it. All the older sciences are pretty well blinded and bridled—even such apparently harmless branches of learning as physics and chemistry are now surrounded by safeguards, and high tuition fees for those who would learn them. The reason, or at least one reason, is that chemists and physicists are likely to be useful both in war and in civil war, and the employing class state wishes to have thoroughly dependable poison gas experts, etc.**

**The capitalist class itself came into existence with a great flourish of rationalism, with arguments based on astronomy and geology, and directed against the power of religion, because religion was one of the forces that the old landowning feudalism made use of to hold down and subdue peasants, merchants and other such canaille. When capitalism got control of things, religion itself was changed, so as to be no longer in the line of fire. Only the moss-back fundamentalist still insists on the verity of Genesis, taken literally, and that is a reaction from revolution, which other forces are bringing about. So astronomy and geology are no longer dangerous to capitalism. They are controlled, by a capitalistic retreat, a sort of spiritual "Hindenburg Line."**

Biology, also used by rationalists to attack such notions as the sudden creation of man, and the virgin birth of Christ, had to be handled differently. Part of the biologists were put to work making better plants and animals. They became cogs and wheels in the capitalist machine—it might not be unfair to say that some of them became cranks. At any rate, a good many did spend a lot of time reconciling science and religion, and some of them spent a lot of time building up arguments, like houses of cards, cheap and showy, but unsubstantial, about the superior germ plasm of the merchant class (the leaders of human society) and the superiority of the white race, and especially of Nordic blood, and its god-given right to rule over all inferior races, including the Celtic, the Italian, the Jewish, and other groups ordinarily called "white" themselves. Capitalism tamed the biologist, and made him an inventor of the materials of commerce and an advocate of imperialism.

### "Fixing" the Sciences

So it goes with all the sciences: it requires no long argument to show what happened to economics in capitalistic centers of learning; anthropology is at present in the process of devitalization; mathematics, the most removed from all contact with life of any science, is either harnessed for the engineer, or is hissed into pursuit of shadowy fourth dimensions; geography abandons the human element, and becomes **commercial** geography, the art of extracting rubber and coral from primitive peoples, etc., etc.

Only the youngest of the sciences retain much of the revolutionary punch. Psychology and sociology are making strides ahead, and seem to be veering towards the left, even though capitalism is right ready to be the controlling factor of each. A review of a book of one modern psychologist (ALLPORT: **Social Psychology**) in the November Industrial Pioneer shows how the "suppressed desire" theory of the Freudian school and the "intelligence test" theory of the Behaviorist school have been used as capitalist propaganda. (There may be a good deal of truth in each of these theories, when methods of investigation based on them are properly applied to the facts in the case, but that is not what the masters want.) But still, modern psychology does so much harm, as a whole, to all conservative ideals and master class religious doctrines, that the only reason that can be given for its present comparative freedom from suppression (as Marxian economics have been suppressed) is the newness of the thing—intelligence stole a march on reaction. Capitalism is not yet sufficiently alarmed to discharge the Scott Nearings of psychology, and they can talk for a while yet.

They can even do more. If you turn a real scientist loose in his chosen field, without oversight from those who pay his salary, you never can tell where he will stray away to. Some stray further than others, they form a "left wing."

### Where Some Truth Leaked Out

This has happened. The American Sociological Society held a conference in Chicago, from Dec. 29 to 31, and the left wing was there. It got a chance on the last day of the conference. All the other days were well taken up by safe and sane papers on immigration, income tax, cultural trends, etc. They were well, though sometimes humorously, reported by the capitalist dailies of Chicago. But the last day dealt with race mixture, and with nationalism: i. e., with patriotism either of skin color or local habitat, and this day's discussion was not reported very well by the Chicago dailies. Their silence was actually remarkable. If the sociologists aren't hog tied yet, the Chicago capitalist newspaper editors certainly are.

So it is necessary for the Industrial Pioneer to pay some little attention to this last day's proceedings. If capitalism found it necessary to suppress all mention of it, revolutionists have at least that reason for investigating it a little.

One of the most interesting features to observe was the extent to which sociology had become a refuge for the exiles of other sciences. The discussion was rather more about biology and psychol-

ogy than it was about what we ordinarily understand as sociology. The left wing of the older sciences felt much at home under the protection of the loose and inclusive new science of sociology.

### A Wallop at the K. K. K.

The K. K. K., which seemed to have attended in some numbers, sat toward the back and muttered while one scientist after another smashed into the doctrines of "pure" races, "white" supremacy, etc.

L. C. Dunn, of Storrs Agricultural Experiment Station, read a paper on "Race Crossing in the Light of Modern Genetics." Dunn lamented the abundance of mis-information on the subject, most of which had its origin in pride and prejudice, and not in scientific investigation. The facts, as far as they are known, seem to indicate that there are no real races, in the sense of something permanent and fixed. What are called races are themselves highly mixed. There was in prehistoric times, skeletons show, a strong infusion of negroid blood into Europe. There is also Mongolian blood in the "white" race. A "white" man, then, is a man with a certain mixture of characteristics, more or less similar to the mixture in other "white" men, and when this white man is crossed with an individual of another race, the hybrid thus produced carries some of these characteristics which show, and some which do not show. His descendants exhibit great variability, greater variability than existed in either of the parent races. The more races there are mixed together, the more possible combinations are there of the characteristics of the parents and the greater the variety among the offspring. The result may be better, or it may be worse, and that all depends on the individuals. That is all there is to that, and it knocks the bottom out of all theories of civilizations collapsing, because the "pure" race which founded them was deteriorated by race mixture. **You have to look to economic conditions to find out why civilizations die.**

E. B. Reuter, of the University of Iowa, who read a paper on "Human Hybrids as A Sociological Type," seemed to be rather of the opinion that hybrids, such as the mulatto in America, were rather better and more able than either of the parents. He pointed out that it was almost the lowest types mentally of each race that mixed, because the others were restrained by conscience and pride, etc. (Nearly all mixed breeds are illegitimate, because of legal restrictions to intermarriage.) Yet, in spite of this, and in spite of the terrible social handicap (the mixed breeds being regarded as inferior, and outcast) the percentage of great men among mulattoes is far higher than among the purer negroes, and compares very favorably with that of the Southern whites. Anyway, race mixture continues, and we might as well make the best of it.

### Difficulty Social, not Racial

Ralph Linton, of the Field Museum, Chicago, emphasized the impossibility of saying which race was least evolved. Older anthropologists and biologists considered it to be the negro, but they argued from the evidence of skeletons only. The Negro teeth are most like the apes, but the Negro lips are least like the apes of all the human races. Furthermore, in some features, such as hairiness, the white race is most like the ape, etc.; you can't tell which race has evolved most. Culturally, sometimes one race and sometimes another has been superior, and besides, culture or civilization is far more controlled by physical environment than it is by race. What advance could a savage white man have made in a swampy jungle, or on a South Sea island where there was no metal to make use of?

The general consensus of opinion among these sociologists was that (K. K. K. mutterers in the back of the room to the contrary notwithstanding) the so-called racial difficulty was a social difficulty. There are, at certain times and places, master races and slave races, and the masters always claim that they have control because their race is better, essentially more intelligent, etc., though whenever members of the slave race free themselves, or are freed, they begin in a few generations to absorb the civilization of their former masters, and to compete with them on even terms.

### "Over-Correction" and Patriotism

It was Handman, of the University of Texas, who closed the discussion and marked the climax. In his paper, "On a Method for the Study of the Phenomenon of Nationalism," he said very little about the method, and presented instead an extraordinarily damaging set of facts against the nationalists. (He could have just as well called them "patriots".)

According to Handman, and based on his preliminary survey of the field, most of the super-nationalists, the noisy ones, the big patriots, are men of a distinct class. They are by profession, before they become politicians, devoted to some artistic or emotional trade. "They are literary men, writers, poets, painters, preachers, or in some other calling where intelligence does not count." In Europe, a number of the chauvinists are lawyers and architects. But in Europe, a large number of the legal lights devote themselves to pleading before juries, not to framing up the cases. They are orators, and not, as in America, the clever practical men who bribe the witnesses, and their gifts are emotional, dramatic, and not intellectual. The same is true of the architects. In America they are something like civil engineers, sometimes they are contractors, but in Europe they are dreamers and painters, artistic and not scientific.

Furthermore, most professional jingoes are of a peculiar physical type, or at least have certain common traits, physically, different from those of most other men. They are usually small in stature, though sometimes thick-set. A short, thick-set man smarts under the indignity of his mediocre height, but is not actually weak or lacking in energy, and frequently sets out to be a leader, just to get even. Most rabid nationalists have eye, ear, nose or throat defects, which they ordinarily hide—and are very sensitive about. Their determination to occupy a

prominent position is then what is called by the psychologists, "over-correction."

This same "over-correction" pervades all their writings and speeches. Some lingering feeling of inferiority causes them, in rebellion against it, to exalt their race, their family, their nation; causes them to praise the group to which they belong, and to conceal all its defects, and causes them at the same time to belittle, condemn and abuse all other races, groups and especially nations. According to Handman the nationalist attitude is represented by the vicious anti-negro prejudice in the "poor white trash." Men who feel themselves inferior absolutely must, for their own mental satisfaction, have some dog to kick—have some other men around to whom they can feel superior.

A certain famous French nationalist was selected by Handman as an illustration. He is extremely nearsighted, weak and irritable. He lived his early years in a boy's boarding school, where he was ill treated by the other lads, and where his whole sensitive nature, which desired love and glory, was thwarted. He shows in his writing that he delights in "fortunate young men," whom he almost worships, that he has a poetic and sentimental longing for love, voluptuousness, blood and death, this longing amounting almost to a psychopathic degree at times.

With all his social ambitions and his affectionate nature suppressed, this unfortunate individual had to become some kind of a leader, had to espouse some sort of a cause, and the cause, which in the beginning, perhaps, might have been any cause, or several in succession, was finally set for him by his environment. He was born in French Lorraine, near the German border, and shared the prevailing desire for revenge against the Germans. He became the leader of the anti-Teutonic crusade, and did his share to whip up national feeling for the great war.

Handman's theory may not be proved, but it is, at least on casual investigation, confirmed by facts. Think of Mussolini—short, wild eyed (astigmatism?), a leader of any old cause that lets him be leader: first, Socialist; then, army officer; then, Fascist. Think of Lloyd George. Think of Roosevelt, the weak, helpless boy, not expected to live.

### Reversing Inferiority Complex Guns

The beauty (to a radical) of Handman's argument is that it is the complete reversal of the gibe so often thrown up to the Reds—"You are inferior, you are failures, so you want to be leaders of some cause. Your radicalism comes from a sense of your own shortcomings, which makes you not quite sane." Let those who have been firing this hot shot at us, dodge it for a while themselves now. Handman has swung their big gun right around on its base and pointed it back at the gun crew.

I think that we will some day have to acknowledge that the truth is about like this: There are these emotional, "inferiority complex" radicals. These are sentimental leaders of causes, whose main driving force is toothache, or nearsightedness, or deafness, or something like that. The emotional nature of these people makes them able and convincing propagandists, whatever cause they espouse. They are prone to change the cause. They have the martyr attitude towards everything, but they also have the will to rule. Most of them, when they cannot rule, and do not find some other phase of work where they can attract attention, will gladly destroy the very organization they would have died for, a short time before. They take a desperately personal and intense attitude towards everything. They are cruel and unreasonable—they are the fanatics. You will find them in every sort of movement, but most of them are on the side of some conservative force, necessarily, because there they find the most followers with the least effort. They lead the Ku Klux Klan, and the Fascisti, and all these Red-hunting societies, wherever the latter are not purely stoolpigeon, private detective organizations. Of course they stand to the front in churches, vice clean-ups, and every sort of puritanical crusade. During war time they are four-minute-speakers, and Liberty bond salesmen.

Capitalism is clever enough to use these people. When they get off the track, they are ruthlessly suppressed, but usually a little tact, a little praise and a little guidance by the man with money who stays behind the scenes, keeps them traveling in ways that please employers.

When they appear in radical organizations, they are a problem almost never understood by the rank and file with whom they deal, and they usually end by being pitched out, to the great loss of the movement, for they have their place, though it is not that of leaders. In both cases, such "inferiority complex" persons are attached to the movement, and are not the movement. Handman will be as unable to prove that nationalism is the product of nearsightedness, as Parker was unable to prove that the I. W. W. is the result of bad teeth. Social organizations are the result of economic forces and of inventions of a purely material nature.

But what you or I think about Handman's theory, has nothing to do with the fact that it is going to be a very disagreeable surprise to some of these masters of industry and their great statesmen, one of these times. Sociology is going to have some trouble with the authorities if it goes on in the direction it is now headed.

# Centralia — In 1925

By GEORGE MORESBY

**FIVE years have passed since the Armistice Day tragedy of 1919 in Washington State, and the Centralia defendants are still in prison. Life behind the bars breaks men; it is no secret that some of the Centralia victims in Walla Walla have been broken by the long years of cage and routine and isolation from their families and the world of men. There is no question that the weight of prison existence presses down harder upon the innocent than upon him who is guilty of crime. The guilty man may become resigned to his fate, may become philosophic, viewing his penitentiary sentence as compensation to society for his offense; but the innocent prisoner can never become resigned; each day his resentment against the injustice done him multiplies within his being, tearing at his heart.**

**Onlookers in the Northwest who are familiar with the history of the Centralia case are speculating as to what Governor-elect Roland H. Hartley will do about it. Only to the governor's office can one look for liberation of the seven who are serving 25 to 40 years; the courts are through with the affair, the supreme tribunal having affirmed the procedure of the trial court. The governor has power to act also in the case of Loren Roberts, who was found "insane and irresponsible" by the jury in the same case, but who, after a short while in Steilacoom insane hospital, was transferred to the prison at Walla Walla. It is understood that friends of Roberts have asked that his mental faculties be re-examined, in the belief that his sanity has been restored; and that if this belief be founded on fact, the liberation of Roberts would not be a danger to himself nor to anyone else.**

Undeniably this case is a live social issue in Washington State, a delicate matter. Hartley's attitude toward the I. W. W. **as an employer** is well known; he doesn't like the Wobblies, and has never taken any pains to conceal it. But his attitude toward the Centralia case **as governor** is not known. It has never been tested; and there are persons who have been close to the new executive who say that conceivably the two attitudes may be quite at variance.

### What Will the Governor Do?

As an employer Hartley had only his own background as an employer and private citizen to guide him in considering the "problem" presented by the Industrial Workers of the World. As governor, when the Centralia case looms before him, it is fair to presume that he must take a broader view of the situation, must look at it from many angles.

Logically, it was vain ever to hope that Louis Hart, who has just retired as governor, would commute the sentences of the industrial unionists who were acused of conspiring to murder Lieut. Warren Grimm and who were found guilty of **unpremeditated** murder. For Hart played an active and conscious part in railroading those men to prison. He sent the troops into an orderly trial town when the prosecution's case was weakening, sent those troops at the prosecution's request without consulting either the trial judge or the sheriff, neither of whom knew of that request; both judge and sheriff declared there was no need for soldiers, but the soldiers remained on the ground until the end of the trial, drilling within sight of the jury. And the jurors were led to believe, according to an affidavit from one of their number, that the soldiers had been brought in to protect them from a thousand or more I. W. W.'s alleged to be in hiding in the woods near Montesano, where the case was tried. It is clear from this and other jurors' affidavits that the jury was terrorized into returning a verdict of guilty.

Afterward, Governor Hart sent a letter to the **Atlantic Monthly** in which he misrepresented the facts in the case. This was in reply to an article by a soldier who declared that he had visited the Centralia territory and had become convinced that there were two sides to the story of the Armistice Day affair.

So no matter how much evidence might have been presented to Hart—and ample documentary proof of the innocence of the Centralia defendants was offered to him—he could steadfastly stand on the verdict of the court, and let the unionists stay behind the bars. He could parole actual murderers with wealthy relatives in the final month of his incumbency, and let the newspapers say what they liked. But for Hart to have freed the Centralia victims would have been too much of an admission

The Troops Were Brought to Courthouse to Help Convict Our Men, by Creating "Atmosphere."

that a social wrong had been done by the executive and judicial machinery of the state.

Hartley, however, has had no connection with this case. During his campaign for the governorship (his third) he declared in numerous speeches his friendship for labor, and that he believed in a "square deal for labor." Now that he has achieved his ambition of years, the eyes of the people of Washington are upon him, and the great bulk of those people are wage-workers. Thousands of them know that the trial of the Centralia defendants at Montesano in 1920 was not just an ordinary murder trial, but was a labor case, a turning point in the social struggle. And thousands of them know of the jurors' affidavits, and of the other affidavits from eye-witnesses who swear that they saw uniformed marchers from the Armistice Day parade attack the I. W. W. hall in Centralia before any shots were fired, and that Lieut. Warren Grimm was in the forefront of that attack, and was one of those who battered in the double front door.

### Evidence to Prove I. W. W.'s Innocent

There is reason to except that in the near future new and vital evidence in favor of these defendants will be forthcoming, in addition to the mass of evidence already uncovered to prove that they were entirely innocent, and that the killing of Warren Grimm was provoked by a deliberately planned attack upon the Wobbly hall.

Seven jurors have already made affidavits expressing their belief that all of the men they convicted at Montesano ought to be let out of prison. These affidavits show clearly that the verdict was a compromise; that some of the jurors were in fear of their lives; that some believed that if they acquitted the accused defendants lynching would follow, and if they disagreed, another jury might hang innocent men; that it was understood that a second-degree murder verdict would mean imprisonment for from five to fifteen years; that some of the jurors were surprised and shocked when Judge John M. Wilson ignored the jury's unanimous plea for leniency and gave the convicted men the maximum sentence.

Thirteen important affidavits favoring the defense have been obtained since June 1, 1924. Each has its own special significance. One is that of Juror Samuel Johnson, one of the seven mentioned above. Johnson declared that he would be glad to join in any petition to the governor for the commutation of the sentences of the men in Walla Walla. He says that "in signing the jury's plea for leniency I acted upon the conviction, gained from hearing all the evidence in the trial, (and it is still my conviction), that there was a definite plan among certain business men in Centralia to raid the I. W. W. hall on Armistice Day, 1919, and to drive the 'Wobblies' out of town. It was clear to me that the I. W. W. members, in arming themselves on that day, were actuated by the well-grounded belief that their hall was to be raided."

The other twelve affidavits are summarized as follows:

**1. P. M. CRINION,** retired property owner, Centralia, stood about 160 feet from I. W. W. hall doorway. Saw two soldiers run toward that door; first was Lieut. Warren Grimm, whom Crinion knew well by sight. Grimm battered at door with feet and elbows. The other smashed a window with elbows. As soon as Grimm and the other had broken in the door and window respectively, numerous shots sounded. Crinion saw Grimm clutch at his stomach and stagger southwards. Had good view of Grimm's face as he came along Tower avenue; Grimm turned corner of Co-operative Store, and went down in a heap a few feet further on. Crinion told these facts to Special Prosecutor C. D. Cunningham two days after tragedy, but was never put on witness stand by prosecution.

**2. CECIL DE WITTE,** high school student, Centralia. Dismissed early from school on Armistice Day, 1919, he went with other students to City Park, where parade was forming. Here he heard boys saying there was going to be a raid on I. W. W. hall. With others, he hurried to vicinity of hall. When parade came along, Cecil De Witte was standing in front of I. W. W. hall, about five feet north of doorway and close to north window. Centralia division of soldiers stopped in front of hall on return trip. Lieut. Cormier, in command, blew whistle. Four or five soldiers ran toward hall. Three were close to door, and kicked door. While they were doing this, shooting started. Cecil saw Lieut. Grimm back out of doorway, wounded, holding hands over abdomen.

**3. CLYDE DE WITTE,** grammar school student, Centralia, brother of Cecil. Clyde stood on sidewalk at northwest corner of Second and Tower avenue, about 90 feet from I. W. W. hall, while parade passed. Centralia soldiers stopped. Man on horse blew whistle. Several soldiers ran toward hall, and pounded against front of building. Then Clyde heard a lot of shots and went around the corner into Second street, out of danger. Clyde had seen Grimm many times; swears he is certain that Grimm was not near the corner of Tower avenue and Second street, when hall was attacked and when first shots were fired.

**4. R. F. HARE,** of Skykomish, Washington, member of Officers' Reserve Corps of U. S. Army, and for 22 years in active service in regular army. Former quartermaster at Camp

McClellan, Ala. Went to Vancouver, Wash., early in November, 1919, to be mustered out. On or about November 3, 1919, Hare and Charles Krick, another quartermaster, were in lobby of the local hotel in Vancouver. They talked with two men, middle-aged, who evidently had lately come from Centralia.

Discussed lumber strike, Legion activities, I. W. W., law and order, and kindred topics. One of the strangers said that Centralia was going to get rid of the Wobblies, that they would be driven out on Armistice Day. The other stranger disagreed, saying the I. W. W. had a right to hold meetings so long as it didn't violate law. Animated discussion. Krick and Hare contended the matter was up to the authorities, that the laws were clear, and that order and legal methods should prevail. Then the first stranger switched to other topics.

**5. FLORENCE CASAGRANDA MAHAR,** widow of Ben Casagranda, slain Legionnaire. Resides in Centralia. On Armistice Day, 1919, while Casagranda was putting on uniform to march in parade, he asked his wife to put on his belt for him, saying: "This may be the last time you will do this for me." She said she wasn't going to watch the parade, that she didn't feel well. He urged her to go, saying: "This may be the last time you will see me." Afterward, she became worried, and finally decided to go downtown and ask her husband not to march in the parade. But when she got downtown it was too late. He was in the march.

**6. ALLEN MAYNARD,** former member of the Engineers' Force of the U. S. Navy. Resides in Chehalis. In November, 1919, was a student at Centralia high school. Followed procession northward on Tower avenue to Avalon hotel. There he met a friend, Bob Gavin, who was rooming at the Avalon, and stopped to talk with him. Saw paraders march northward to Third street, and turn back. One of the Centralia ex-service men carried small coil of rope.

Shortly after Centralia division halted in front of I. W. W. hall on return trip, Maynard heard whistle, somebody yelled, and then some of the Centralia soldiers left the lines and rushed the hall. It was after this that shots were fired. Maynard heard no shots fired in vicinity of Avalon hotel. His hearing has always been good. Several seconds after the shooting began Maynard saw Lieut. Grimm coming from the direction of the I. W. W. hall. He was about 25 feet north of the corner of the Co-operative Store, and was holding his stomach as if sufferin~ great pain. He came southward, staggered, and turned westward into Second street. Maynard knew Grimm well.

**7. FLOYD BOND,** resident of Napavine, Washington. Worked in Moore Brothers' cafe in Centralia for three months previous to November 9, 1919. Declares that John Moore, one of the Moore brothers, almost daily criticized Industrial Workers of the World, and on several occasions contended that the I. W. W.'s ought to be and would be driven from Centralia. About two weeks before Armistice Day, 1919, Bond heard John Moore say that trouble was brewing, and that the I. W. W.'s were going to be driven out of Centralia.

**8. ELSIE HORNBACK SHERLIE,** witness for the prosecution. Resides at Lebam, Washington. She was bookkeeper in garage across

**I. W. W. HALL WRECKED BY PARADERS**
**In the Vicinity of This Doorway Grimm, Casagranda and McElfresh Were Killed While Trying to Rush the Doors**

the street from Avalon hotel. Her "identification" of Eugene Barnett as man she saw with a gun in Avalon window during the rioting was the principal factor in convicting Barnett. She declares that she never intended to identify Barnett **positively** as the man with the gun.

At one point in her testimony, after she had faced a long cross-examination, she was asked: "Will you say on your oath, knowing the importance of this thing, that your oath means life or death, that in your opinion this is the man?" To this question she answered "Yes." But she explains that she thought that the words **"in your opinion"** saved her from making a positive identification, and that her answer was simply an expression of opinion. And she points out (a copy of her testimony being before her when she made the affidavit) that repeatedly during her testimony she had declared she could not positively identify Barnett as the gunman, but could only say that the general appearance of the two was the same.

"If it is a fact that my testimony was the principal factor in sending Barnett to prison," she says in her statement, "I feel that his imprisonment was a grave injustice."

**9. E. E. SWEITZER,** juror in the trial of the Centralia defendants. Resides at Oakville, Washington. Declares that Elsie Hornback Sherlie's testimony was the main argument of those jurors who sought to convict Barnett. (Two defense witnesses swore that Barnett was in the lobby of the Roderick hotel all during the shooting, and was unarmed. These witnesses were Mr. and Mrs. J. T. McAllister, proprietors of the Roderick). Time after time those jurors said: "But Elsie Hornback said she saw Barnett with a gun in the Avalon window."

**10. PERCY DRAPER,** member of army for four years. Resides in Centralia. On afternoon of November 11, 1919, he and A. L. Shawver were crating furniture in a house a few blocks west of I. W. W. hall. Some time after 2 p. m. he observed several ex-service men running in the street outside. One by one, four of them shouted to him, asking if he had a gun. The first was Attorney C. D. Cunning-

COURTROOM WHERE JUDICIAL MURDER WAS ATTEMPTED

Here was enacted a mockery on justice that did not succeed in hanging eight innocent men, but that did railroad them to the Walla Walla Penitentiary to serve from 25 to 40 years.

ham (later special prosecutor in this case); the second a man Draper cannot identify; the third, Hobart Whitford, and the fourth Harold Genge. To each Draper said no, he had no gun, and of each he asked: "What is the trouble?" The first three did not answer. But Genge answered: "Why, we raided the Wobbly hall and they killed Grimm and McElfresh!" Genge was a member of the same company with Percy Draper during the last several months of the latter's army service.

**11. CECIL DRAPER,** (brother of Percy), member of army five years; was ten months in France. On evening of November 11, 1919, he talked with Eldon Roberts in front of Prigmore and Sears' drugstore in Centralia. Roberts was a marcher in the parade that day; is now a dentist in Olympia, Wash. They discussed the tragedy. Roberts said that McElfresh started toward the I. W. W. hall with a message (an oral one, evidently) when the parade had halted. He got half-way there, and somebody yelled: "Let's go!" Then Roberts ran toward hall, and reached doorway about the same time as McElfresh. The two pushed the door and got it open about three inches. Roberts looked through the opening and saw men lined up with guns inside. They started to shoot. Roberts ran to the corner of the One-Cent-One-Dollar store, adjacent to the I. W. W. hall on the north, and was just turning the corner when McElfresh fell into his arms.

Cecil Draper also takes oath that about a week before Armistice Day, 1919, he was in the Northern Pacific switchmen's shack in Centralia railroad yards, and was present when Archie Jones, switchman, declared that he had attended a meeting in Elks Hall on the night of October 20, that at that meeting a committee was formed to get the names of all I. W. W. members in Centralia, so that they could be rounded up; that Jones was appointed to serve on that committee, but refused, whereupon F. B. Hubbard, lumber magnate, who had instigated the movement to drive the I. W. W. out of town, got up and told Jones he was yellow.

**12. PETER McCARTIN,** entered U. S. Army as volunteer on April 9, 1917. Disabled veteran. Honorably discharged. On November 8, 1919, he was in Spokane, Washington, jobless, and with the soles of his shoes worn through. Had only 25 cents; stepped into Nims' Cafe on Main street to spend it. Saw an army captain sitting at a table. The captain hailed him. Talked about army service. Finally asked McCartin to go to Centralia and march on Armistice Day; explained that "We're going to raise hell down there—going to run the Wobblies out and make America safe for the boys. I've got a big car outside and I'll take you down and pay all your expenses." But McCartin refused to go, saying he thought it was a poor idea to hide behind the American flag and the uniform when such work was done.

In a recent letter to the General Defense Committee, Mrs. Eugene Barnett complains that not enough emphasis has been placed upon the fact that her husband took no part in the defense of the I. W. W. hall in Centralia. This point was made clear in many news stories during and since the trial, and in the pamphlets "Was It Murder?" and "Eight Men Buried Alive." But it is worth repeating that two witnesses, Mr. and Mrs. John McAllister, proprietors of the Roderick hotel, took oath that he was in the lobby of that hotel all during the rioting and was unarmed.

The jury's first verdict found Barnett guilty and John Lamb guilty of "third degree murder," and the other five guilty of second degree murder. But inasmuch as no such crime as murder in the third degree was defined in the statutes, the judge sent the jurors out to reconsider; and presently they returned, finding all seven men guilty of murder in the second degree. This verdict was a direct contradiction of the conspiracy-to-murder charge, since second degree murder means **unpremeditated** murder, and if there was no premeditation there couldn't have been any conspiracy.

# What Freedom Means to Us

By PETRUS

**Hardly any of us believe that the prison gates will swing open for our fellow workers simply because a small group of the toilers in this land lay down their tools for a few days or weeks. But no one who has closely studied industrial conditions in the United States doubts that by repeated attacks on the industrial field we will succeed in gaining liberty for our men in prison as well as for ourselves. We do not fool ourselves by imagining that we possess more strength than we really have. We know that numerically we are only a pitifully small minority of the American working class and that many millions must be added to our numbers before we become the commanding factor in the social life of America and the world. But we also know that, being aware of our actual strength and using this power wisely, we can still accomplish much and only through action can we gain that greater strength we need.**

**Few of us really comprehend the greatness of the task before us. Most of us are generally apt to look upon the I. W. W. as a labor union pure and simple whose main function is to secure a better existence for the toiling masses under the present form of society. And perhaps it is well that such is the case. If we neglected our everyday struggle and concentrated on our ultimate aim—the abolishment of the wage system—there is danger that we should become nothing but a lot of speculating philosophers and lose the great strength our practical activity on the job gives us. Nevertheless, in order to understand somewhat the gigantic task before us and the responsibility resting upon each and every one of our members if we are to live up to the principles and ideals embodied in our Preamble, it might be well at least to make an attempt to sketch out broadly the work before us. This is so much the more important as, if understood correctly, it can not but stimulate our activity on the job.**

There are two main factors to note in the world labor movement of today. The first is, "That we stand at the beginning of a world-wide revolution, the greatest yet experienced by mankind." The second, "That only through Revolutionary Industrial Unionism can Labor accomplish its emancipation."

Many revolutions have shaken the world in historic times and probably as many, or more, before the art of writing existed to record the facts. We have seen the exploitation of the toiling masses change form many times since the day when the gens or the tribes owned the necessities of life in common. This time is referred to as primitive communism. Chattel slavery prevailed for at least a thousand years, during which time the builders of society, the manual laborers, were chained to the fields and even the mental progress of these generations was dependent almost entirely upon slave labor.

Through tireless struggles, strikes and revolts, the rebels of that time finally succeeded in gaining some small amount of freedom. Chattel slavery

was abolished and on its ruins grew up the feudal system under which the slave of yesterday at least grined that much that he was considered a human being.

Feudalism, under which the toiler, the serf, was half slave and half free, gave way to the capitalist system of this era, under which the worker is entirely a slave and entirely a free man; slave in so far as he is absolutely compelled to find a master who is willing to buy his laboring power; free in so far as he can refuse to sell his laboring power and become either a beggar, a thief, or starve to death.

During all these centuries, at least three thousand years, and during all the various forms of society that have existed, one principle has governed them all; the principle of private ownership of the means of production. All the revolutions that have taken place, yes, even included the late Russian Revolution, have proven themselves to be nothing but a change of form in the process of exploitation; a new set of rulers applying a more efficient form of carrying on production and establishing a form of government corresponding to this new mode of production and allowing for a more rational method of exploitation. To end this age-long process of slavery in one form or another, to secure the earth and all the means of production for its users, the workers, is the task before us, and through industrial unionism as taught by the Industrial Workers of the World we can do it and through that method alone.

### Industry Shakes Government

Governments have always shaped themselves according to existing economic and industrial conditions. The slave, whether chattel slave, serf slave, or wage slave, has never concerned himself with the government except in so far as it has had a direct bearing upon his material welfare. And the ruling class has never governed for any other reason, either. Even today, although we have had centuries of lectures, writings and campaigning in politics, one never notices a worker whose first interest is in regard to the government. When you hear a workingman inquire about a state or a city, be it even Barbaric California, you don't begin to answer him with a lot of information as to the state laws, the city ordinances or the personality of the officials. On the contrary, you begin to tell him about the jobs available, the opportunity to secure employment, the wages paid, and the cost of living, and that is exactly what he wants to know. Yes, even the many millions of toilers from foreign countries who have entered the United States came here not on account of the liberties presumed to exist here, but because "wages are high and employment easily obtainable." The foreigners' "Statue of Liberty" is built in their imagination on this side of the Castle Garden of New York and based upon "high wages, plenty of jobs." To ninety-nine per cent of the immigrants the Declaration of Independence is as strange as a Latin mass and it is almost as unknown to the native born wage slave also.

The industrial form of government which the I. W. W. predicts and advocates will come whether we want it or not. In fact it is almost here already. American financiers through the Standard Oil and the French and United States governments and the British financiers through the Royal Dutch Shell Oil Company and the British government are playing world politics in oil, dividing up nations and enacting laws for millions of people living thousands of miles distant. When the boards of directors of the Standard Oil, the Shell Company, the steel trust, the beef trust, etc., meet and decide to make a 10 per cent cut in wages for their employes they govern people under every flag on the face of the globe. They compel millions of people in Asia Minor, Mexico, China, Europe and the United States to sink down to a lower standard of living. When the Big Five packers in Chicago advance the price of meat a few cents they levy a tax upon every man, woman and child in the whole civilized world. And the governments stand helpless because the governments are their governments, organized for the specific purpose of facilitating an expedient and rational form of exploitation. When the sugar trust of the United States manipulates the price of sugar so as to place it out of reach of the working people the government has no other remedy to offer than boycott. **Boycott the necessities of life! Good God! Our masters are forcing such boycotts on us every day and have done so for ages.**

### Efficiency of Exploitation

But industrial form of government is one thing; "The Commonwealth of Toil" another. The former comes to us as a natural product due to development on the industrial field, the changing mode of production, while the latter must be won by the workers through their organized power. And because our real government, that power which rules and dictates to us, is industrial in its nature although yet to some extent camouflaged under the name of politics, Industrial Unionism naturally appears. Although the government changes form, becomes industrial instead of political, that does not signify that exploitation ceases. On the contrary, the only reason why the political government of Washington is giving way to the industrial government of Wall Street is because the latter is a more efficient form of exploitation. Just as chattel slavery had to give way to feudalism and feudalism to wage slavery for economic reasons and no others, so must today's political governments, handicapped as they are by the many imaginary national boundary lines, give way to the industrial government of the World Trust and World Financiers. Unless we organize ourselves sufficiently strongly to take possession of the trust, become the rulers in this new form of society, we will enter into a worse slavery than we have endured under our present form of society, because industrial government is a far more efficient form of exploitation.

The strike which began on April 26, 1923, is significant because it is probably the first strike in

# Mission Soup

By
JAMES A. MacDONALD

**In view of the universality of that incomparable bourgeois first aid—soup—it is a stinging rebuke to society's rulers that they have allowed all the soupy years to save them without even thinking of recording their debt to that matchless solvent of social ills—strong H2-O and flesh or vegetable flavoring. At last the crusade for tardily expiating this ingratitude has started, and the thought, even as all material products, comes from the workers.**

JUST a moment while I scratch myself reminiscent ly. Now to guard the reader. The subject of this article is not mission soap but soup. A great mistake can be made by not noticing small things. The "U" is of the utmost importance, because there does not seem to be any such thing as mission soap, while mission soup is a great social institution, the value of which is not sufficiently recognized. Soap may be valuable as a civilizer, but now that we are civilized, what we need is more soup, not soap.

The value of mission soup to society is not appreciated at the present time. Writers have neglected it, poets have passed it by. Yet the proud edifice of our civilization, the palladium of our liberties, the noble culture which mankind has achieved, the high dignity of our houses of prostitution, of our bread lines, and all our other blessed institutions would not long endure were it not for the lubrication of mission soup. Even the machinery of so perfect a system as capitalism must be oiled to keep running, and mission soup furnishes the all important grease.

Writers and poets have been recreant to their duties. As the result our society is not sufficiently aware of the debt of gratitude it owes to the great master mind who first designed mission soup as the cure for unemployment, who first mixed a great deal of weak religion with a small number of cabbages, small quantities of flour and vast volumes of water as a solution for all the evils of our present inequalities, for all the crimes and vices which afflict humanity. Writers and poets have dealt with the civilizing influences of bombs, poison gases and explosives. This is now generally recognized by our leaders of thought. But they have forgotten that peace also has its victories, its heroes and benefactors. Then why not alongside the killers shown in inartistic marble in our city square a monument to

that great hero who first recognized in soup the cure for all social ills? Society will never have recognized its really great benefactors until there is such a monument. There is a crying need for such a monument. I have ambitions that this article should lead to such a great reform, that our present society be not accused of partiality and ingratitude. I hope our government, our civic organizations, our K. K. K.'s and other upholders and leaders of human thought will cooperate and help to point the way to a recognition of soup as one of the underlying forces that make for a continuation of things as they are in this best of all worlds.

I am certain that the monuments to the great soup benefactors of humanity would have been erected long ago were it not for difficulties that lay in the way. The material that would be suitably used in such monuments had not been thought of.

Soup was in no way the fitting material. It was so thin that it got cowardly and ran when an endeavor was made to make a monument out of it. Then there was the objection—a great one—that it caused such a stench that it would nauseate our patrician lords and lordesses, dukes and duchesses, and pukes and pukesses. Even antiseptic would be of no avail, and of course all smells should be kept in the working class sections where they belong. Soup was out of the question as a material for the monument.

### Stale Bread Symbolism

But I claim as an original discovery the finding of the proper material. I am not claiming a monument, although as the politician would say, "I leave this matter in the hands of my fellow citizens." The material is stale bread, which will always suggest mission soup, just as coffee an' suggests doughnuts. This material is symbolic, and symbolism has a great appeal. Here is a material with the hardness of marble, that could be moulded into the required shape under extreme hydraulic pressure. Those who are continually taking the joy out of life might object that there are so many hungry that they would eat the monument. They do not know the tensile strain which this material is able to withstand. One cannot deny that hunger exists—our noble civilization could not endure without it—but eating such a monument would be out of the question. Some might endeavor such an act of vandalism but they would leave their teeth in the monument, and the enamel of the human teeth is extremely hard and durable. Here is an advantage. After the city fathers had arranged with the city grandmothers to treat the monument with pepsodent (advertisement not paid for) and for a daily brushing of its teeth, it would glisten in the sunlight to prove to the world that our present social system is not so ungrateful to those who perpetuate it.

Another great advantage would be that those subversive forces in our present society which are ungrateful for what has been done for them, would not be in a position to attack our great and noble system, without being accused of insanity. For instance, in most of the cities there are cenotaphs in honor of those who gave their lives to make the world as safe for democracy as it is at the present time. In spite of the honors that have been paid them, I have heard radical ex-soldiers of the great war say that they had asked for bread and been given a stone. Such carping critics, who would rather eat than have democracy, would be silenced if alongside their stone there would be a monument of bread in the city square. The way to deal with such ingrates is as they have been dealt with in the past, make them think they are getting something, but give them nothing. We might even have walks and fences around the monument made of doughnuts and snails, such as one occasionally finds at missions. Here is a method of getting more teeth for decorative purposes. So many persons have teeth who have no need for them. When this is done, with a monument in honor of the dead in the war that ended war, and another monument of bread for the inventor of soup, every city square would be an argument against discontent, and open the eyes of those who are blinded by radicalism to the wonders of the present system.

### The Great Soup Civilization

The great social reform in which all the hundred percenters, the great modern crusaders in night gowns, and the various fraternities should cooperate would have been carried through long ago and the monuments would now decorate the square of every city on this continent were it not that they do not know the social value of soup and the need for the monument which it is the purpose of this article to emphasize. They live in another world, and either they should be brought to the mission, and the soup lines, or the missions and the soup lines should be brought to them.

If our politicians, our great capitalists, our fraternal organizations to continue our noble system, would patronize the missions for one week, and learn the value of soup, they would recognize the need for the reform and monument I advocate. It is true that their wives might object—the clothes I wore in my study for the preservation of the present system, are still in the woodshed, and I had a narrow escape from having to sleep there myself. But great social reforms demand sacrifices. I believe that all those who give lip-and-mouth service to our present order, should be willing to give their hides to a sane social advancement, especialy as it is necessary to the preservation of our glorious democracy and liberties. My experiences are given because it may lead a sufficient number of the preservers of things as they are to follow in my footsteps. What is a kick from an outraged stomach, or a few vermin, or a dental bill in comparison with the perpetuation of our great system—"the grandest in all the history of the world"?

The continuation of the present system must be the work of the beneficiaries of the present system. I know all of us object to work, but we must do our duty. The rulers of society must lead in the glorification of charity—we must be willing to make sac-

rifices. It must not be left to the workers; if soup s not made a topic of eulogy, and monuments are ot built to it, the workers might decide to destroy the present system so they could eat. I call the rulers of the world to a great crusade not to ennoble charity, not to increase charity, but to make it seem noble and to make the rabble think they are eating when they are merely irrigating their stomachs. He who does not follow is recreant to his trust, a foe to society.

### How I Missed the War

When through one of those researches which I am continually making of the present system, I discovered that three hundred or more were being given what we are pleased to call **refreshments** because the word is less vulgar than **meal**, at the city mission in Vancouver, I said, here is our present system functioning nobly. I had missed the world war because a beneficent government would not permit me to be a spectator—many capitalists were in the same position. They were anxious to wipe Germany off the map, but the government needed them at home so much that they could not go, although of course that was their wish. I was denied seeing a war for democracy, but I decided that I would not miss seeing that democracy, which had been won, in operation. I was billed to speak on Freedom, but secured a substitute that I might see freedom in operation.

It is proper that one should dress fittingly on great occasions. I put on clothing which had been furnished to me by the great government of the United States for distinguished service in the face of the enemy, at the same time that I was given a certificate with a great seal on it showing six years' service for democracy, signed by no less than the great president of the United States who was later vanquished in a conflict with a crab. I decided that I would leave my medals at home, although there is one of them to which I am extremely partial, which shows three mystic letters representing human liberty over a world. But I did not wish to be conspicuous. For one night at least I was to be part of the greatest army in America, and the most necessary to our present system, the army of the unemployed.

I arrived at the mission at eight, and found it packed, which shows the wonderful pulling power of religion on certain of the unemployed. They were singing "Where is my wandering boy tonight?", a song of which I did not approve because it puts bad thoughts into the minds of men, of why those boys were wandering—thoughts that might lead to radicalism. Then there were other songs. Songs which could be thoroughly approved for there was lots of blood in them, as was fitting, considering that those present were part of an army of eight million on this continent—an army that society must keep satisfied with soup, or it is doomed.

### Instructing the Almighty

Then a man on the rostrum got up and told God how he should run the world, and the things that he had been remiss in attending to, and things that he had evidently forgotten, or did not know, as the man in the mission had been too busy to tell him about them. Evidently God had to be told a great many things and the world would go to wreck and ruin if the man with his eyes closed had not told God about them, and what should be done in the emergency. He talked loud, because it was not a private conversation and his voice had to reach such a long way, and long, because he had so many instructions to give God. In fact, there was a wailing reproof in his voice when he told God of other things that were wrong in the world, but he did not suggest remedies for them. This is to be approved. It would not do to tell God that the I. W. W. had the cure for them, with others listening to the man on the rostrum give God orders. Then when he had told God everything that could not wait for a private conversation, and when I expected him to ask God for a raise in wages as one of his secret service, he stopped.

But the refreshments were further delayed. This was a good idea, because the longer they were postponed the more those present would appreciate them. There were more songs.

### Singing for Soup

During the prayer I kept my eyes partly open to what was happening. I saw a man immediately in front of me, who was looking at me as if he thought he knew me, but was not certain. He had been attending some of my speeches on freedom and democracy and of course I knew him. A few weeks before he had told me that he could take care of himself, that no organization was necessary for him, and I wondered what he was doing here, unless he was here as a man of money, seeing how well charity served his purpose of deadening the bodies and stultifying the brains of those who could not get along without organization, and who yet had none. He could not be there for the "refreshments." He did not look prosperous, his cheeks were lined, in his face and in his eyes was the look that comes of low wages and low living. But then one can hide a million dollars in his vest pocket, but not a patch on the seat of his trousers. When he got up to sing "Nearer my God to Thee," I saw that he did not have the patch. But I also saw that he needed the patch and soap for the portions of skin that were visible. I could see that and more. Wonderful is the deceit which our system is able to use on the workers to avoid organization, but our system justifies the lies that have to be told to maintain it, for here was a worker and his lack of organization was bringing him rapidly nearer to God. I do not think that he was long for this world.

Then a newspaper man, the speaker for the evening, got up. He writes a column in one of the Vancouver papers. It is not a very brilliant column, but the spirit behind it is good—he wants to continue the present system. I am sure that he would approve one of my advocated monuments for Vancouver. The man beside me whispered to the man next to him, "I hope he does not talk too long." I hoped this also, and that his subject would be the ethics of Christianity as applied to the newspaper

# Sudan Cotton

By MAURICE BARYE

**The story of fibrous industries fills more than one chapter in the book of history, and their economic interpretation explains many of the workings of national and world diplomacy. The writer of the accompanying article has sketched the significance of Sudanese events that are prominent in world relations.**

SIR LEE STACK, the Sudan's Governor General and Commander-in-Chief of Egypt's army, was assassinated last November in the Egyptian capital. His friend, Lord Allenby, British High Commissioner in Egypt, immediately issued an ultimatum worded quite insultingly to the Egyptian Government demanding, among other things, a reparation of £500,000 and evacuation of the Sudan by Egyptian troops.

This action was pursued regardless of Anglo-Egyptian treaties by which the Sudan was governed jointly. Allenby's conduct violated the condominium by which both Egyptian and British flags flew over Khartum's citadel, and not only British ascendency in the Sudan has been confirmed but British governmental monopoly.

Students of imperialism are not astounded by this succession of tragedies from the murder of a foreign ruler, admittedly benevolent, to the baring of the Lion's fangs. That is a way of imperialism. We should rather be amazed were the conditions of the condominium adhered to by the stronger party to the compact. To properly analyze Egypt's present situation one must look with fixed attention to a statement of Allenby's ultimatum fraught with profound meaning to the Nile country. This provision is that henceforth the Gezira district, formerly limited to 300,000 feddans (acres) under irrigation, shall be thrown open to unlimited watering by its owners, the Sudan Plantations Syndicate, Ltd. Just what does this portend?

The Gezira district is a vast tract of land in the Sudan just below Khartum between the White and Blue Niles. Its soil depends upon the Nile's diverted waters for cultivation, as the rainfall which is eight inches at Alexandria, and only one inch at Cairo dwindles to practically nothing in Upper Egypt, where the Gezira is located. While this aridity compels irrigation projects, it is specially desirable to cotton production as rainfall on the open bolls is bad for the plants. With irrigation all watering is willed by man and he can avoid this deleterious effect. Not only the Gezira is supported by the Nile waters but the very life of Egypt, its long, narrow agricultural area from Khartum clear to the rich alluvial delta lands where the great mother of Egypt fans in many directions but loses itself at last on the broad bosom of the Mediterranean.

GEZIRA: WORLD'S LARGEST SINGLE COTTON RAISING ENTERPRISE

**Control of the Nile nearer its sources means control of Egypt. It means the life or death of its agricultural population.** When the Egyptian Government insisted that not over 300,000 feddans of the Gezira should be irrigated its insistence was based on nothing less than the will of a people to live. In the Gezira a syndicate of immense resources has been operating for many years. It is composed of British cotton capitalists who are intent upon supplying Lancashire with the cotton that now nets American speculators approximately $5,000,000 a week. The British company has erected a vast dam to store Nile waters and use as wanted in the cultivation of 500,000 acres in cotton. So titanic an undertaking dwarfs the largest single cotton growing enterprise of the States, which is said to have been 15,000 acres.

This Plantations Syndicate was waiting for a pretext to set aside limitations of irrigation acreage and Stack's assassination furnished it. With alacrity Allenby heard his master's voice and tore up the treaty with its restrictions on the unfolding of syndicate desire.

PICKING COTTON ON SOUTHERN PLANTATION IN AMERICA

Amalgamation of wealth is shown here in startling contrast on the field of agriculture. One company has pooled its resources to develop cotton growing on a scale of half a million acres, while ninety per cent of Egyptian landowners have each five or fewer acres in cotton and fifty per cent of these possess less than one acre.

**Importance of Cotton**

If I were asked what single product of agriculture contributed most powerfully to shape American history I should say cotton. In the United States about three-fifths of the world's cotton crop is raised. Cotton production in this country early made negro slavery profitable and this was intensified by the invention of Whitney's cotton gin. When the cotton gin was invented the civil war was made inevitable. But there is no space just now to expatiate on that statement.

Let me note here the climatic and soil conditions favorable to the growth of cotton. Extensive production is found only in regions having a frostless season of 200 days or more. Ninety-five per cent of the world's crop is grown south of the 37th parallel of latitude, and the greatest yields per acre are taken in the fertile alluvial delta lands of the Mississippi, Colorado and Nile rivers.

The Gezira has the necessary frostless season, being just south of the 16th parallel, and irrigation will go a long way towards making up its lack of the other characteristic of high yield lands. In the last twenty-five years cotton crops have more than doubled not only in the United States and India, which ranks second with about thirteen per cent of the world's crop, but also in Egypt. The action of the Plantations Syndicate shows the most determined purpose of augmenting its importance in the cotton industry no matter what becomes of the small planters of Egypt. By such gigantic production it intends to make a vigorous start to change a world cotton situation which finds the United States exporting over ten million bales annually against the combined cotton export of Egypt and India which is less than four million.

Cotton is grown in many countries other than those mentioned. China and Russian Turkestan produce some, but export practically none. Brazil, Peru, Mexico and Asiatic Turkey also grow some. South America and Africa have vast areas climatically adapted to cotton production but the difficulties of obtaining labor and of transporting the product have been felt to be almost insuperable obstacles in a number of sites, while in others, such as Brazil, the development has not been extensive for these reasons. It was on the labor problem itself that much thought was expended by the supercapitalists of Gezira. However they are now assured that sufficient Egyptian wage slaves will be drafted, in addition to which they can count on the exploitation of members of the Fellata, Hansa and other tribes of Nigeria to raise all the cotton required.

**Egypt's Effect on U. S. Production**

This will have its bearing on the United States labor market. Increase of production by the labor of culturally backward peoples in this world commodity is not going to react favorably on the wage relation in the States. With juvenile labor widely exploited in America this Sudanese cotton project threatens to reduce the prevailing standards of wages still further, and this certainly accounts for some part of the agitation against the establishment of an amendment to the American Constitution to prohibit employment of children in gainful occupations.

Whether the cotton comes from Egypt or America is of no concern to the mill slaves of Lancashire—their continued exploitation is assured. If their status changes in any way it is not to be expected beneficially where their masters grasp greater power in their increased wealth. The result from such concentration is always a more servile rank for the workers. There is a greater disparity between the unified resources of the employers and the incoherent, non-revolutionary and divided strata of the working class.

It is to the capitalist class that we must look for our organizational technique. At every point

COTTON MILL CHILD SLAVES OF SOUTHERN UNITED STATES

members of this class set the pace and sharply define the process. Where they are busy with consolidation of forces we should watch for our hints. If a single unit of corporate wealth manifests the desirability of a 500,000-acre agricultural project and demonstrates its superiority over development by many parties in the same territory, the workers have no chance whatever to advance with anything short of the industrial organization of all employes of the dominant entity.

I wish to make a few remarks about that queer court of appeals, the League of Nations. To this absurd body Egyptian nationalists and the Egyptian Government are directed in the Sudanese exigency for redress. Progressive persons and their journals in different countries see in the League a suitable arbitrator for the dispute. Anyone understanding society's economic nature and the logical expansion of business empire must smile at this simplicity. Not so deep a penetration is needed to simply catalog instances of imperialist aggression against weaker states just as sovereign as Egypt ever was on paper.

Have these gentle souls forgotten the American Marines in Mexico? The same efficient conquerors of custom houses in Nicaragua and Haiti? The French troops in the Ruhr? The Italians in Corfu? Do they suppose that the interests of Egypt's teeming cotton growing population along the Nile with their endless one-to-five acre holdings are going to win against the wishes of the syndicate that owns the Gezira and operates on a 500,000-acre scale? The League of Nations is supposed to be morally efficacious, but the only morality capitalist governments know is force. If the Egyptians had the force to kick the British out they would do it. The British have the strength to stay there and do as they jolly well please, and they're doing it. We may deplore this as much as we wish, the facts remain. It is a law of life and capitalism is a living, growing thing. What the lion wants he takes if he can. Small fish find graveyards in the entrails of large fish.

### Intelligence In the Making

By some queer twist of reasoning well meaning liberals impute to intelligence a mysterious power over the determination of questions rising out of business conquest and imperialism, but there is nothing mysterious about it at all. The intelligence is there, all right, and it acts properly, always on the side of the strong against the weak. Sentimental theorizing will not stand up in opposition to this statement when we consider what intelligence really is. It is not a thing apart and independent of the material facts of existence, but is closely bound to them and has its rise in them. Man has gained his superiority over the lower animals because he uses tools and has articulate speech. The use of tools and the use of speech develop together, and an interesting psychological consideration in this connection is observable in the English language. Out of its

ONE OF THE TIRED SLAVES IN A LANCASHIRE COTTON MILL

six hundred thousand words half of them are technical and scientific terms, and that is largely saying technical because scientific research and discovery are more connected with industrial development than any other.

The bourgeoisie use their intelligence to dominate society just as man has employed it to domesticate tractable lower animals and exterminate or isolate the fiercer species not proving amenable to subjugation. This goes on in the class struggle where every country has its executions of those who refuse to be docile and contented in a subject state, and where prisons immure human souls that dare to point a way to freedom.

Egypt's wage slaves in the Gezira, Lancashire's mill slaves and those on the land and in the mills of America are domesticated burden-beasts. Every interest of their lives conflicts sharply with those of the class that enslaves them. Together these workers have common necessities and a common destiny, if they but realized it. What they lack is a common purpose, the class will to be free, to rise from this universal slavery to the commanding position of emancipated creators. To do this they must use their intelligence, banding together just as their masters band together. They must solidify their numbers and throw themselves into their great fight against functioning longer in debasing domestication to any ruling class.

Leagues of Nations and World Courts have no inherent force to compel obedience. Should the League dissatisfy any of its sovereign members when the latter are engaged in the state art of colonial penetration or foreign assimilation, the Power threatens to withdraw from the League. So what can the poor League do? It can hold its tongue and its member states, which is precisely what it does.

Nothing can drive out the despoilers of the people but the people themselves, whether it be in Egypt, Ireland, India, America or anywhere else, and when I say the people I mean the working people, the people who produce the wealth of nations and all the good things of the world. It is going to take very effective industrial organization to throw off the yoke of slavery but this organization builded to the needed size will be one so great, so overwhelming that nothing can ever destroy it.

### Freedom A World Goal

The way to power for the bourgeoisie is by the concentration of its resources; the way to power for the proletariat is also by the massing of its energies and the unity of its purpose. The ruling class has power now. We want power. There is, however, a parting of the ways: the ruling class of this era and all the ages that have receded in the dust and shadows of the past have sought power and used it to subjugate a majority of the human race. The working class seeks power to make an end of class distinctions, class privileges, class hatreds and class conflicts by embracing the entire race in the industrial process on terms of industrial communism.

Until we have the necessary organized power weak states will fall before strong ones, and the workers must bow in slavery over all the wide world to the capitalists of the nations and of the world. Egyptian nationalists stir their countrymen by saying that fifty centuries call out from the past for them to be a free nation. Yet that past spent the brawn and blood of millions of slaves to build its pyramids and to make the glories of the Pharoahs. Today British Pharoahs are enthroned on a wealth beside which that of the ancient kings is as nothing. Today these rulers of cotton enslave the workers and threaten the existence of the agricultural population not directly in their employ.

It is the way of imperialism. Not fifty centuries, but all the past and the more potent voice of present day necessity call upon the workers of Egypt, of Europe, of America and of the world to strike the great blow for freedom, and shake from their limbs the shackles of slavery forever.

# Longview—An Experiment

By BOOMER

**SIXTY miles west of Portland, Oregon, on the north side of the Columbia river, where all was semi-waste land five years ago, today stands the feudal city of Longview. Approximately three thousand persons reside there.**

**The little city is complete, there being two banks, several real estate offices, hotels, restaurants and mercantile establishments. A section of some two hundred modern little cottages serves as place of abode for those fortunate enough to command wages sufficient to live like human beings. There is also a boarding house for employees of the Long-Bell Lumber Company. It is almost like a miracle, the change from semi-waste land to a modern little city in such a short time. Labor power has wrought this change; labor power applied to the tools of construction. And labor did this because of economic determinism.**

Lumber is a commodity necessary to civilization. Without lumber, construction would stop. At least, until man discovered something else to take its place.

The Long-Bell Company made a fortune manufacturing lumber in the South; or rather, they made a fortune from the sale of lumber manufactured in the South. Their timber exhausted, to continue in the lumber business it was necessary for them to seek another locality. Hence they hired labor which was eager to sell that most essential commodity, and cleared land, graded streets, built houses, and erected a large sawmill. Their mill site was chosen with an eye to facilitating the shipping of lumber both by rail and water. Competition is so keen in the lumber industry today that for a company to remain in business, the labor cost of production must be reduced to a minimum, in order to pay satisfactory dividends to the nonproducing stockholders. And so, because of these things, Longview came into existence.

In 1620 when the white men came to America and began to erect shelters from the timber of the forests, it was a very laborious process. All the work was performed with the aid of hand tools. The combined labor of a dozen men could not produce as much building material from the forests in a month as a dozen men today working with improved machinery can produce in an hour. **The mill at Longview has a quarter-million feet of cutting capacity in eight hours; from the time the log leaves the cutting pond until it comes onto the sorting chains as lumber, less than a dozen men operate the machines** that have transformed it into lumber. There are many more workers employed than a dozen, but the greatest number are occupied at the work of sorting, storing and converting the rough lumber into a complete finished product such as our forefathers never dreamed of.

The Long-Bell plant has a yard storage capacity of over a hundred million board feet of lumber. They have a log cutting pond covering twenty-five

acres, and a log storage pond of one hundred and twenty-five acres. In addition there is a railroad yard capable of holding seven hundred cars loaded with logs, or lumber. As they operate their own logging camps, and the railroad over which the logs are hauled (the railroad being thirty-two miles long), this gives them a complete storage capacity, if needed, that is practically unlimited. **This means that the Long-Bell Company can operate their mills and logging camp during industrial depressions when labor is cheap and store their products until the price assures them a large profit before selling.** Long-Bell did not spend millions building their mill and the adjoining city because they wished to improve the state of Washington; they did it because there is money in producing lumber and selling it—if modern machinery is used. There is also money in running their own town. They can completely regulate the social and political life of the company-owned lumber barony.

### Economic Significance

Those who control the industrial life of a given community also control the social and political life of that community, and as Gary controls the social and political life of the company-owned town of Gary, Indiana, so does the Long-Bell Company control the social and political life of Longview, Washington.

To secure a job at Longview the applicant must fill out a personal record blank, about twice the size of this magazine page. The birthplace, age and nationality of the applicant come first. Then follow about sixty-two more questions; and none of them have anything to do with the applicant's ability to handle the job he is applying for. **"Do you belong to a labor union?"** appears three times on the application blank. **"If so, what union?"** appears, to be followed with "Have you ever held office in a labor union? Name office."

To answer these questions "Yes" means that the applicant does not get on Long-Bell's payroll. All of the various companies doing business at Longview are owned and controlled by Long-Bell. The Columbia Mercantile Company, conducting a large department store, is only a different way of spelling Long-Bell. The Portland, Longview and Northern Railroad is of course Long-Bell. The daily paper, "Longview News," is their propaganda sheet. Employees are earnestly requested to support "Our Paper," and on the time statement blanks is put very conveniently "Subscription to Longview News."

With a hand-picked population there is not much chance of any social affairs being held in honor of anyone not in accord with the policy of exploitation advocated by Long-Bell. A reception given in honor of Gene Debs, La Follette, or anyone even proposing reforms, would not be permitted; and for a theatrical company to put on a play like Shaw's "Major Barbara" is an impossibility.

The Long-Bell Company with its immense capital is attempting the impossible—it is attempting to kill an idea. Newcomers are spied upon, mail is censored, **more than one newspaper goes into the place all company-owned postmasters have at hand.** This is not hearsay; it is a demonstrated fact. Even school teachers are governed by the company, being compelled to sign contracts giving the school board the right to dismiss any of the teachers WITHOUT CAUSE. As most of the school board members are employees of Long-Bell, or in business with the consent of Long-Bell, the result is obvious. When Long-Bell speaks they act. They are bound by the chain of economic serfdom, whether they know it or not. **Even the sheriff of the county goes to Long-Bell for his orders. As a result gambling is running wide open in the town of Kelso, which adjoins Longview.** Of course the other vices are there, too. The sheriff's deputies can't see the games running, although any newcomer can't dodge them; but the "law and order" gang knows when another exponent of a new social order hits town.

### The Experiment

Long-Bell is the first company to institute industrial feudalism in the Northwest; while there are plenty of company towns, yet there are none where the operating company completely owns the town.

The cottages visitors see at Longview are not occupied by the average paid sawmill workers. They are occupied by the families of boss-men, office managers, department superintendents, and business men. **West of Longview, close to the Cowlitz river, is shanty town.**

Here live the families of the married employees. Perhaps the pictured advertisement of Longview, its modern little cottages, its paved streets, and other comforts, was the lure, but the cottages were all occupied before the mill turned a wheel. The children living in shanty town ask, "Why don't we live in a nice town too?" They are thinking, and that is the first step. Why can't they live in nice houses too?

In spite of their owned newspaper, in spite of their controlled schools, in spite of their espionage, the workers employed by the Long-Bell Company are questioning the economic system of today. As feudalism gave way to capitalism, so will capitalism be forced to give way to another system.

Long-Bell with its company-owned town is influenced by economic determinism. No man, nor combinations of men, can stop evolution. When the workers in sufficient numbers begin to ask the question, "Why can't we live in nice houses?" the dawn of the new day will be at hand, and Long-Bell's experiment at Longview to perpetuate capitalism will be proved a failure. The duty of the workers is to prepare for that day, and the more earnest is the preparation so much the sooner will the day dawn.

# The Sonnets of M. C. S.

Reviewed by ROBERT GRAYSON

TO sign a literary production with initials may mark the happy discretion, timidity, of a novice in letters, or the absence or curbing of egoistic impulses. After reading some of the work that is signed not only with full names, but impressively weighted with titles as well, one often thinks that great assurance and small gifts are not strangers.

It would be hard, however, to say this of one whose work has merit and whose advertising is assured by an enterprising husband. M. C. S. has not chosen to act in the simple role of cook and chambermaid to an artistic pamphleteer, as wives of such celebrities often do, and for very good reasons. Mrs. Sinclair has struck out on her own, and has at least successfully breasted the currents of magazine journalism by getting paid for a number of poems, some thoughtful, some rebellious, others musical and several lacking these adjectives of commendation. But why she tried sonnets, whose difficulties of construction can not be dwelled upon here, is suggested in her own words when she expresses a naive faith concerning qualifications for poets. She says that: "Anybody with a good mind can be a poet—anybody who is willing to take the time to put words together into patterns."

Don't take that too literally! Years ago I flattered myself about having this poetic mind, but the stuff sweated out of it was queer. Floyd Dell saved me by criticizing one of my gems as "too profound for publication." Still, for herself M. C. S. has gone fairly well to a successful proof of her contention, as may be judged from the following lines that have an appeal to us not so much for their rhyme as for their reason.

### WAR FOR DEMOCRACY

**You did not mention patience yesterday,**
**But called for men of might to fling the Hun**
**Into eternity! The deed was done—**
**But not till men had learned to hate and slay.**
**No sweet and patient word had power to move**
**The Hun to reason, who knew naught but Might.**
**No sacred thing had meaning in his sight—**
**And so, death to him! Waste no breath on love!**

**But now, you masters, hard and blind as those**
**Whom you called Huns, are full of harsh surprise**
**That we who call you Huns should dare propose**
**A war of your own kind. Well, we advise**
**No further patience with a heedless foe—**
**Get off our backs, or else to hell you go!**

There is still room for another which should hold our attention because we are all deeply interested in our

### DAILY BREAD

**I match my will to live against the will**
**Of the entire community of men—**
**For every man conspires against me when**
**He must compete with me for bread. The swill**
**Is none the cleaner for its shallow crust**
**Of evolution's pastry, nor can be**
**Until the mind of every man is free.**
**Who trusts his loaf to swine shall feed on dust.**

**Cannot the bread be set apart from shame—**
**A sacred, true communion beyond trade?**
**Toss all other things into the game—**
**Compete for fame, for love, for gems, for jade—**
**But leave each man enough of bread to live,**
**So that at last his soul may dare to give.**

That, to my mind, is her best. A number of these sonnets have been collected and printed by her husband, and I suppose the only way you can get them all is to come to terms with this hard-fisted person who is offering the little volume as a premium to those who buy his new book, MAMMONART. As he didn't send this latest work along, I can not say anything about its worth. Yet, if the sonnets are a fair advertising sample as to standards, the literary goods to come should be worth while.

## ANNOUNCEMENT

**In the March Industrial Pioneer Robert Grayson will review two great works—G. Bernard Shaw's latest drama, "Saint Joan," and Robert Herrick's latest novel, "Waste."**

**These reviews have added interest in that Grayson weighs not only their literary and dramatic merit but their sociological value as well. The opinions of an industrial revolutionist on these prominent productions are sure to be worthy of attention.**

# EDITORIALS

## SILENT CAL SPEAKS

THE dumbbell who is otherwise known as the First Citizen of this country has sent his message to congress, in which Pollyanna phraseology is once more served up piping hot. Someone wisely said that the man who has just eaten his dinner thinks the whole world has a bellyful, and we are reminded of this by the hypocrisy and conceit blended in the following glorious paragraph from our erstwhile mute campaigner:

"It is gratifying to report that the progress of industry, the enormous increase in individual productivity through labor-saving devices, and the high rate of wages have all combined to furnish our people in general with such an abundance not only of the necessaries but of the conveniences of life that we are by a natural evolution solving our problems of economic and social justice."

Touching upon this ingenious solution of social and economic problems by natural evolution, which seems largely deduced from alleged prevalence of high wages, we wish to say that advertisements for workers are scarce and the wages offered are typified in these reprinted below from a capitalist morning paper:

"Wanted—Laborers; none but first class excavators considered; wages, 40c an hour."

"Wanted—Man to drive ash wagon; $2.75 a day; ten hours."

"Wanted—Experienced shipping clerk; willing to work; $75 a month."

You can find such advertisements at random in the help wanted columns of any metropolitan newspaper. The United States Department of Labor has compiled statistics of living costs over a period including last year in which, basing 1913 costs at 100, those prevailing in 1924 were 152, with the important item of rent far in excess of the average rise.

Examination of general wages will show that no such corresponding rise has taken place, which simply discloses that the workers have suffered a reduction of living standards, and had we nothing more than the president's words to inspirit us we should feel considerable trepidation about this jolly natural evolution going to usher in a millennium of justice.

Parenthetically, it should be noted that problems of social and economic justice are exclusively **ours**. Mr. Coolidge has no such matters pressing for solution, and like the rest of his kind, he is intensely desirous that no solution be reached because he knows such liquefaction will forever dissolve those dominating attributes reserved for his class.

While the president indulges in cant to nourish those who hang on to his homilies like dogfish at the mouth of a sewer, we continue to forward a workable program to cut the Gordian knot of labor's exploitation. There is nothing fatalistic about this program. It embodies neither presidential hallucinations nor comforting illusions of workers idly waiting for the revolution.

We recognize that industrial organization on the part of economic dictators holds us in subjection, guaranteeing luxury to parasites and misery to workers, and it is going to take industrial unionism to lift us from the welter of poverty. This job leaves nothing to fatalism, but demands unremitting, conscious activity that is not to be deflected by any agency, of which there are a numerous assortment, the one in the mantle of Wall Street's choice mannequin being typical.

## SYMBOLS OF REVOLUTION

OUR cover design for this issue is an exceptionally fine expression of artistic symbolism. Its efficacy depends on what force it owns to provoke thought, raise hope and impel action. Commercial evaluations, concerned with its advertising worth, are conditioned on its appeal to the eye, and may be the one or the other, intellectual magnetism or emotional attraction, or perhaps a little of both.

We think the artist's personifications of three great ideals a pleasing technique to serve the purposes of propaganda. Ideals is said deliberately, knowing that some may not be willing to concede that our educational and organizational influence is still very largely idealistic. But it is, in the sense that every Wobbly sees in our limited numbers, and consequent lack of effect, a promise, a purpose, a framework, of an education for workers so widespread and sound that is is readily transmuted into action through industrial organization so universal and revolutionary that all obstacles must fall before its onrush as surely and swiftly as the leaves of autumn before the sweep of the winds.

The personification of Education holds aloft a torch, not to conflagrate a physical world and bring ruin as our enemies are so fond of reiterating, but to kindle a glow of thought in the worker's mind by which he will awaken to his social position of degrading slavery and realize his true worth. Education is given a central position because knowledge of his class position will show him the need of a power to overcome his bonds, the form this power must assume to succeed, and the objective when this power has been set in motion.

Organization is represented by a military figure. Needless to say we don't believe that organization can be accomplished by methods of a 15th Century Amazon with a broadsword. But the symbol is one of strength: determination founded on conscious purpose. We have a conscious purpose that is going ahead by a determination unsurpassed in history. Her shield is a strong defense to fend off

(Continued on Page 36)

# Chappo

By RICHARD HARRISON.

PART I

I ALWAYS liked Chappo, from the first time I set eyes on him, coming down a desert trail to the highroad, with the strides of a man who has walked much but who seems to be able to keep going to the ends of the earth. He was a wiry, little fellow, brown as the hills of Sonora in the summer twilight, and with the softest eyes you ever saw.

It turned out that he was on his way to the Victory Mine to rustle for a job, and so was I. Lucky for me, too, because I was green while Chappo was an old timer. We waited on the porch of the timekeeper's office until the mine foreman came along—about twenty of us, Americans, Mexicans and a few Apaches. So far have the formerly irrepressible followers of Geronimo fallen!

After a while the foreman slouched across the road from the shaft, and we were given a careful inspection with his gimlet eyes. Then he pointed to the lucky ones with a quick:

"You!" and "You!" and "You!"

Chappo and I made it, and were told to report for the graveyard shift that night, so we hiked back to camp and separated.

Seems like a long time since that first ride in the big bus that carried about forty miners each trip from camp to mine. It is only a few years, though. Twisting through the hills in the warm air of that Arizona night, with cigarette smoke and bits of conversation softly floating back from the seats ahead, while away up in dark sky shone a billion stars, red and green and blue. Some folks think that stars don't sport these colors, but out on the desert's the place to watch them change like the facets of a diamond turning in the sunlight.

Only a few short years since then, but I'll remember that mine sump if I live to be a thousand. Between the two of us I'll admit that I didn't know what the shift boss was talking about when he said: "Go down and muck in the sump." That sump has me stumped, but Chappo stepped on my foot and drew me near the cage. Pretty soon it popped up out of the dark, unloaded its human freight, and we packed in. Down, down in the dark . . . Lights of the levels flashing by. Stops to discharge miners at their stations, and when I was beginning to wonder if that sump was next door to hell we stopped and piled off—four of us, Chappo, two others and I.

Through experience I defined what a sump was. All night we mucked in water up to our chests, dumping the ore into a bucket. When this was filled one of us would pull the cable and a donkey engine hauled it out. No chill in that warm water, and a funny incident to relieve the monotony. I forgot to take my can of carbide from my hip pocket and when the water got to it I felt a sharp stinging pain. Centipedes, scorpions, tarantulas! The others looked at me in amazement. Then I recalled that blamed carbide and pulled out the steaming can to the great glee of my partners in the soup—sump.

Once the shift boss stuck his head through a hole in the roof and demanded:

"What the hell's the matter with the muck?"

Discreet silence.

He repeated the query, and we the silence, whereupon authority's head disappeared, and we kept on our leisurely course.

As time passed I liked Chappo better. When a fellow is green it's a nervous business, that mining, and he showed me lots of tricks to save my skin and my brawn. Like when we were mucking from a stope to the one-ton cars on the little track. We filled the cars and trammed them out to the station. I started to muck off the mine floor. Ore is hard stuff to deal with, anyhow. Not like chat, or sand, or shale, or even gumbo—all that stuff takes the shovel. Ore fights it and you win only by pushing for all that's in you. But off the rough ground! Don't try it. Chappo watched me, his dark eyes brilliant with mirth in the yellow light of our little lamps.

"What the hell you laughing at?" I wanted to know.

"Me no laugh, pardner," he lied soothingly. "Only muck off rock too hard. Too damn hard. We get some lagging, heh?"

Off we went down the drift to get the laggings. Rats scurried out of the way. Back to the stope to lay the floor, and then what a difference! Now the muck fell on the boards and the work seemed easy by comparison. Things like that made me like that little Mex.

As the days passed I learned a little of his personal history. He had fought at his father's side with the revolting peons, who have a way of rising periodically and who keep the rulers of Mexico wondering just when to expect these blows against oppression. The land hung to their necks like a chain, heavier and heavier as years passed. Chappo's father fell in the fighting. The boy had turned his back on slave agriculture to accept slave industry.

Time passed.

Chappo and I still together, gasping in a hot hole. What a sweatbox was that Victory! Sweat dropping from my eyebrows, running down my legs in rivulets, oozing from my heavy boots. Hot stuff! I squeezed the valve to the last notch trying for more air, when already it was rushing out of the hose with a roar.

Donovan came along after lunch. He was the push and he proved it by immediately reversing the valve-gate until the air issued feebly, with a low, hissing sound. Air costs money in mines. After that

he took our report and swung down the track. We took five, watching his grotesque, jerking shadow retreat on rocky walls and roof. Now the light was far off and Chappo sprang at the valve. Each energetic twist was punctuated by the most expressive of explosive oaths. Then he stood before the onrush of air and I was treated to a beautiful flow of epithets specially coined in his liquid tongue for drivers. Not that I savvy Espanol, but anyone could have understood wrath like that. Donovan was only trying to save the company a little expense. With chins and noses dripping sweat we cared a lot about expense!

Another night—it is always night in the mines, and when your lamp blows out from the shots you learn what dark really means. We were in a bad place, ups and downs and crawling to a raise that followed a vein. Wiggletail and plugger busy drilling holes. Then I brought powder in and we tamped six sticks into each hole. Six sticks and a fuse. These we spit and started out. Chappo waited to see me leave first. He put himself between me and the shots. Just a little thing, that, but it showed what he was like.

Then one night we helped to get the rocks off the bodies of two miners who had been timbering in a raise entrance when the whole thing caved in. That was the hardest work we ever did, I'm sure. It affected Chappo even more than it did me.

To make matters worse for him his brother-in-law was killed right after this with four other machine men sinking a shaft. Something went wrong with the cable that was used to lift them up after they had set off their fuses. The law called for two such chains for emergencies; if one failed, the other could be used. But chains, too, cost money and mine superintendents are judged efficient in proportion to their ability to curtail expenses. In this case the extra chain existed but it was at the blacksmith shop for repairs. The four men spit their fuses and signaled the engineer. He tried to lift them but something stuck somewhere. When they found the bodies the palms of one man's hands were burned as though he had attempted to climb up the cable and had been jerked back, sliding down with the concussion of the explosion.

Chappo did what he could for his widowed sister, but she had five children and they were having a hard struggle.

"It never rains but it pours," is a quaint way the poor have of saying that hardships do not come singly. We were laid off one day. Existence would now be harder for Chappo with his sister and her brood.

After that he avoided me. When I saw him he seemed restless, and I told him that perhaps the mines would open again soon. Soon. Every day and many times five children crowded up to the table for food in his sister's little shack.

## PART II

It is a lazy afternoon for the clerks in the Gil[illegible] River Bank, for all that an adding machine brea[illegible] the stillness. A dragon fly is droning on the warm air. The clerks are watching the clock. Two minutes to three. At three the shades are to be drawn, then their undisturbed work is to begin.

A man rides up on a bay horse. He rides well and stops before the bank. Quite usual. He hitches his horse and enters the bank. He is small but he means business. The kind banks do not solicit. With two very earnest looking guns he backs cashier and clerks into a corner while he swiftly sweeps some twenty thousand dollars into a bag. He backs out and they hear his horse pounding the road like mad. Then the bank employees rush out and shoot wildly up the street. But he is gone for the foothills.

A posse is recruited and all the blood-thirsty guardians of law and order volunteer. Out to the hills to search for a little, swarthy man with a white shirt, and twenty thousand dollars. Up Red Gulch they thunder and into the hills. Hue and cry everywhere, a man hunt is on!

Towards night his horse is shot. Now these brave hunters cheer and press on. One has a sudden thought and swerves from the trail to cut across the hills red with eternal manzanita in the gathering gloom. This hunter has a keen nose; his eyes are like the eagle's. He is a bird of prey, for all this daring in the name of law. Law. Bosh! He is out for blood, to boost his own stock with his fellows. Seeing a form dart behind a huge rock this Texan comes on slowly, inexorably.

"Don't come near!" rings out from behind the rock. A hand and arm appear. The hunter raises his gun to shoot.

Crack!

His gun falls; his fingers are mangled.

"You son of a bitch!" he cries in agony.

"Don't come near. I can hit you. I don't want hurt you".

One is behind a rock, armed, but not wanting to kill. The other makes a bold silhouette against the evening sky, murder in his heart, withal an easy target.

They call forth and back. Then others ride up. They have heard the shot, and found the scent. It is blood. Twenty thousand dollars is all they are charged to retrieve. All. But they will have more. So much more.

The bandit is surrounded. He has fired but one shot. Then he surrenders. Too easy, that, and the hunters make the darkening hills echo with their shots and cries. The bandit falls. They see him prostrate. The shots crack out. When one empties his gun he reloads and starts over again. They draw nearer the form on the ground. How it bleeds! They want to see it bleed, these broad-shouldered he-men. The hunt is over, the quarry is down.

Strangely, no shots struck his head. The slight,

limp, bleeding corpse is thrown across a horse, and this cavalcade rides back. I was in camp when they came, but I looked away when I saw the dripping body. I went down the street.

Soon the curious are permitted to view the corpse in the undertaker's place. Identification is their pretext. But they, too, like blood, like to prowl as ghouls. The hue and the cry that sickened O. Henry was not exhausted by the posse on the dark, blood-soaked hills, where the manzanita flames. The camp is alive with its whole population turned sightseers; morbid throngs push their way in.

Gossip drifts to me. A Texan of the posse has been treated by a surgeon. His fingers were so badly shot up that amputation of three digits was made necessary. His story of the bandit is everywhere; how the fugitive hit his mark, and said he did not want to hurt him. How he fell and was killed for his mercy.

A good shot, anyhow. Just then a young woman in black came up to me. I recognized Chappo's sister, the widow.

She had been pretty. Now she looked tired and very nervous. Had I seen Chappo? No. Well, he had been very quiet for several days. That morning he had called for his brown shirt. He had been wearing it for a week and it was in the pile of wash. Chappo wanted it whether it was clean or not. But she had ironed him a nice, white shirt and she told him to put it on. For some reason he did not want that white shirt. She seemed hurt, and he put it on to please her. After that he had given her some money, and told her to wait for more. She had been unable to elicit further explanation from him and he had gone out just after lunch. Would I please look for him?

A horrible thought came to mind.

"Go home," I said, "and wait."

Then I went along the street to the undertaker's window where I took my place in line.

One glance at the quiet face and I recognized Chappo, calm in death, his soft, dark eyes closed forever. The shirt that had been so white in the morning was red with the deep red of his own blood. I turned away.

# The Social Forces

By JOHN CANNAVAN

## CHAPTER V

THE trend toward centralization was marked by the bringing together of a number of establishments, engaged in producing the same commodities, under one head, and directing their operation from one center. Later this central form drew under its control other plants in contributing and dependent industries, thus gaining increased influence and power.

The superiority of this higher development over the preceding forms was manifold. It had an advantage over them in competition for the market because it was in position to lower the cost of production to a point ruinous to them. Its plants could run in competition with their establishments, and would likewise run in competition with one another. The competition between its own plants would redound materially to its benefit. The most productive of its plants would set a standard for all the others. The larger opportunities it afforded for its capable employees would act as a spur to drive its managers and their staffs to the capacity limit of the establishments entrusted to their management. Moreover, the contiguous industries supplying the raw material to the original undertaking at one end, and what was formerly the finished product, as raw material for other processes, made it a giant in comparison with its former status.

### Strength of Large Capital

An invention, in one of its shops, would be available to all of them, while its competitors would be deprived of it. Again, the competition between its own plants would enable it to develop the best in each and apply it to all. Besides a comparison would enable it to determine what plants were least profitable, and if it was deemed advisable, these could be shut down without interfering with its ability to hold its share of the market.

In every way, the higher property form was prepared to command a higher tribute from its working force than was its weaker competitor. This was not because it was greedier, but because its means for so doing were more ample and more highly developed. No experience was lost to it because it had established a network through which experience could not escape. And every experience that turns to the advantage of capitalist property, proves a disadvantage to the wage labor it employs. When its plants enter into competition with one another, and, in the madness of such hysteria, we have seen shifts in the same plant compete with each other in a reckless frenzy of production, the management become slave drivers. Where they do not meet with a united show of resistance, industrial life for the working forces becomes a veritable hell.

### Insecurity For Workers

Uncertainty for the workers becomes more and more certain. Speed-up systems are developed and the unorganized workers stand in awe of the thing that encompasses, shadows and embitters their lives. The worker is dominated by fear. He is conscious of his inability to cope with this monstrous thing that eats up his life and denies him opportunity to realize the ambitions with which he faced life at the outset. There is the continual grind and denial, or unemployment with still greater denial and hardship. He is between the devil of exacting toil and poor recompense, and the deep sea of misery. He has not collective vision. His view is personal. He is an individualist, and every individualist is more or less of a fatalist. The consciousness is with him of job insecurity; of a world in which an ever-increasing number of wage earners must each attach him or herself to one of a constantly diminishing number of jobs, and he is neither speculative, imaginative nor adventurous. "Right", "liberty" and "freedom" appeal to him in a conventional way. He approves these sentiments when uttered by "proper" persons, on appropriate occasions, but, given expression by his fellow workers, they are "dangerous" and "radical" terms, which betoken a desire to change a system that taps him dry of energy, deadening limb and brain, until he is too tired to think; and which permits him nothing to enjoy, even if it left him the capacity for enjoyment.

A change! To him a change could only mean some relief from drudgery, some leisure to enjoy, some opportunity to develop culture, some knowledge to acquire, a touch of humanism to relieve the sordid wretchedness of a life that is darkened with the gloom of insecurity, and peopled with the gaunt spectres of want and hunger. Such is the conservative workman, who shouts himself hoarse, from habit, on the Fourth of July, and begs his keep, or a job, on Thanksgiving Day. Ignorant, helpless, slavish, wretched, and withal contented in his wretchedness! Is he hopeless?

The centralization of industry he has met with the division and dispersion of the forces of labor—his own forces. Where necessity dictated strength, he has painstakingly developed weakness. Industrial evolution found him a poor scholar, dull to impression and superlatively reactionary.

### Labor Organization Slow

As early as 1814 his fellows were warning him in stentorian tones of the division and sub-division of labor in industry and of the trend, then already marked, toward simplification of industrial processes. The farsighted among the workers urged organization, but always an influence, that was not a labor influence, interfered to prevent the building up of an effective combination. It matters not whether that influence was exerted consciously to defeat organization or that defeat was unintentional. What does matter is that every undertaking, to bring about this end, failed to accomplish its purpose. The interest

of the capitalist class has been served and that of the working class has been neglected, until, at the present time, the position of the working class is as precarious, if not more so, than at any previous time since the advent of capitalism. There has never been a time in previous labor history when the obstacles were as formidable as those that confront those who now undertake to bring about the unity of the working class.

### Craft Unionism Defined

Chief among these obstacles is the craft union system, which we shall attempt to analyze. The craft union system is a scheme whereby it is aimed to perpetuate each union as a separate economic entity, functioning independently, governed only by its own laws, claiming, as its undisputed and indisputable right, jurisdiction over organized workmen performing specific operations in industry. The lines of jurisdiction are rigidly established in organized employments. This form of organization is predicated upon the possession of skill, and has not proved equal to the needs of the workers, even when competition among the employers was keen. Since the rise of large contracting firms in the building industry, where this form of unionism has achieved its greatest measure of success, there has been little or no progress made by the workers. What has been secured by the building trades is only a fraction of what was possible.

### Living Standards The Test

In the larger industries, the craft unions had been unable to maintain organization even after what is now only a comparatively backward stage of centralization had been reached. They have failed to gain a foothold in large industries or to influence them. No corporation, of even proportionately smaller magnitude and power than those of the present day, has ever been compelled to surrender to the craft union system. It will be pointed out that the basic eight-hour day was forced upon railroad employers by this system in 1917, and legalized by the Adamson Act. But it is well to remember also that **the Big Four Brotherhoods arranged to act as a unit,** if their demands were not conceded. The advances gained in wages, hours and conditions under favoring circumstances, which accrued as well to unorganized bodies of workmen, and, sometimes, even in greater measure than to the members of craft unions in the organized employments, **are to be regarded as achievements of these unions, only insofar as they have mustered power enough to retain them.** Now scan the list, and count the number of those that have been successful in so doing.

Yet inability to do this is a confession of inability to maintain the parity between wages and living expenses—powerlessness to uphold the established standard of living. When a system of unionism cannot prevent retrogression to bygone standards, and the relinquishment of established working standards, it is not of advantage to the workers who depend upon it. It is a disadvantage.

### Union Fakirs Serve Bosses

When after the world war, the capitalists launched an aggressive campaign, with the avowed intention of deflating wages and restoring old hours and conditions in industry, how did the craft unions meet the issue? The employing interests made no attempt to conceal the purpose or the scope of their campaign—it was nationwide and undiscriminating. It was an attack upon the working class, organized and unorganized. Its aim was to lower the standard of living of the entire working class of the United States. It was resented by the workers—the unorganized had no means of defense, for which responsiblity lies largely with the craft union system, as we shall show later, and the craft-organized workmen found their organizations inadequate and incompetent. For the first time, many of them, and these altogether too few, discovered that they had no national labor movement which would or could unite them for resistance. Even the international unions permitted their members to be attacked piecemeal and deprived of the conditions they had imagined secure.

In every instance of which we have knowledge, the machinery of the international unions was used to discourage resistance to the employers and they put as much restraint as they dared upon the discontent of the rank and file. The result was disastrous. Such resistance as was offered was initiated by rank and file members of the craft unions and was generally unsupported by those who should have encouraged resistance and arranged for it upon a national scale. The workers were not only beaten; it is not overstating the case to pronounce the opinion that they were betrayed into defeat. The open shop drive is only the most recent of many defeats.

(TO BE CONTINUED)

"COOL WITH COOLIDGE"

# Mission Soup

(Continued from Page 17)

game. But just when the audience were in high expectancy that he would hook them up with the soup, he announced his subject, "Hooking up with the Almighty." I could give the speech until I went to sleep.

### A Prayer Answered

Then when this talk was over and he told of how God had got him a job at one dollar a day, there was more singing, and further instructions were again given to the Almighty. It was again a one-sided conversation, but I felt before the end of it that God must have felt:

"You presumptuous worms, you. I have given you a world and look at what you have made of it. You murder millions with wars and other millions with hunger. You can't even make decent soup and yet you spend hours telling me how to run the world. If I had not long ago become disgusted with the world and with you, I should create another bug to replace you, and hand the world over to it, and abolish man, the crowning failure of my creative work. You want men hungry that they may worship me. Away with you and a worship bought with soup! You are not creating men but hypocrites, forcing men through hunger to lie to you, and to try to lie to me. One man facing the world clear-eyed and unafraid is worth a million such. Oh, for men instead of things that would crawl on their bellies through life, and even try to whine their ways into Heaven!"

After the prayers there was more singing. Then the refreshments were announced. A two-hour grace calls for a good meal, was the general feeling. Those present were told that they should go downstairs without crowding, and that after the refreshments were served they would be permitted to sleep on the floor of the basement, but they must be careful not to go outside or the officers would get them and put them into jail for being hungry and without a place to sleep.

### A Full Belly Is Insidious

After the monument is erected to the great benefactor of humanity, the first concocter of soup, the next reform should be a mission for judges, lawmakers, officers and the general public, for they evidently do not understand the necessity of hunger to our glorious system, that it is a part of the palladium of our liberties, and that anyone who interferes with hunger is sapping the manhood of the nation, destroying one of the fundamentals of democracy, resting as it does on starvation, and the government ownership of social necessities such as jails and penitentiaries. But this reform must wait. The monument is an immediate need.

When the refreshments were announced everyone got up. There was a rush for the door leading to the basement. I finally got into the line. I passed through an iron door that brought back memories, and down the stairs of sighs. I found my right hand going instinctively to the right side of my body. I would warn crusaders who would follow me not to resist this characteristic movement—it is not a meaningless gesture—it is the high sign of mission fraternalism. When in the soup line do as the soup line does, is a good motto. It is not ethical for the crusader to saturate himself with oil of cedar before going to a mission. Someone might mistake the smell of it for that of the soup, and be incited to cannibalism. Our glorious civilization will bring back that institution without such aids.

The man beside me answered my signal, and said: "That's all right, partner; turn him over. He is one of the missionaries. He has one of the ten commandments on his back, and they operate in groups of ten." But he would not turn over. He also wanted his refreshments, and was persistent.

### All Comes to Him Who Wants

Finally we got to the bottom of the stair. Those who were with me were expressing sorrow that they had not been at the head of the line. Those who came first got more soup. The head of the mission yelled to an assistant: "How many more are there?" The assistant answered: "I cannot see the end of them." The ration was decreased. I found a soup cup in my left hand which was not employed. Then I had to exhume the right to take a slice of bread, and an apple. This was a delicacy for that one night, because it was Sunday.

I have been asked by the uninitiated if I ate the soup. One does not eat mission soup; he drinks it, if he can. I have tasted worse. I had seventy-four days of typhoid fever and castor oil once. But I did not eat the bread. I have one hundred and twenty-five dollars' worth of bridges in my mouth—I do not mean worth, that is what the dentist charged—and I did not think eating that bread would have a sociological value of over one hundred dollars. I would have made the sacrifice, were it merely a matter of money, being Scotch-Canadian a little thing like that would not deter me, but I know that great crimes have small beginnings, and I did not want to get a criminal habit. It would be too dangerous in Vancouver where the streets are paved with wooden blocks, because there are so many of them. I did not want to be arrested for eating the pavements.

When I left, the unemployed, or the part of them that will patronize missions—a small percentage—were squirming on the concrete pavement, which was their bed. There were thousands of beds vacant in Vancouver that night. In the mission itself there were many vacant beds, little cubbyholes that are rented, but while the mission officials had advised God to bring them to Heaven, and to furnish them with all the comforts of the streets of gold, the bread of life, and the waters of life—more bread

and water—the mission officials thought they were too disreputable to sleep in mission beds. It suggested to my mind that perhaps St. Peter and the angels may feel the same antipathy to lousing up the premises that the mission officials have when they are not telling God what to do.

### How to Appreciate Missions

But the missions are noble institutions. They throw such a bright light on the wonders, the magnificence, the grandeur of our institutions. They also brighten many passages of the Bible for the workers. For instance, there is the man who has been a skeptic, who refuses to believe in the miracles. He does not believe that Christ fed five thousand with three loaves and five small fishes until he is brought within the beneficent influences of a mission. Then he knows that this was not of necessity a miracle. He knows that any properly equipped mission could feed five thousand with three loaves and five fishes: they would make soup of them, and feed five thousand easily if the city water works could stand the strain.

I wonder whether if Christ came back again to be crucified, he would recognize the two hours of grace and the soup which they serve as the thing for which he died twenty centuries ago at the behest of the orthodox church of his day, and under the sentence of the organized government of his age. I wondered if he would remain inside that basement, or if the carpenter of Nazareth who had not where to lay his head, would have ventured outside, and been arrested and jailed for vagrancy. "Inasmuch as ye have done it to the least of these, ye have done it unto me." If he meant it, then the provision of the missions, weak religion and weak soup, and a contempt too great to be given a bed in a mission cubbyhole is what the missions are offering to Christ, this is their tribute to their avowed master. This is our Christian civilization.

But this is by the way. The present system must be maintained. Its democracy and industrial freedom are sacred. Society does not know the great social service that is performed for it by its soup houses. They must know. The monuments I have advocated must be erected on every city square, and a civilization based on soup must have its monument to the benefactor who first conceived this great social cure for a sick society and a hungry world. Our civilization may not be Christian, but it must be grateful. Ingratitude is the greatest of crimes. WE MUST BUILD THAT MONUMENT.

# Hard Coal Outlaws

By INDUSTRIAL PIONEER CORRESPONDENT

**IT'S cold and bleak in the anthracite counties of northeastern Pennsylvania, where 12,000 miners went on strike last November. There is no fun in striking there in the hard wintertime. But men do not go on strike for the fun of it very often. They strike because they have to fight, and bear the sufferings of the fight, if the yoke on their necks is to be lighter in the future.**

**That's the way Sam Pace put it a few days before cowardly assassins stretched him out with 14 steel jacketed bullets one night early this year. Pace didn't quit his job in the Ewen Colliery near Pittston because he was looking for a thrill.**

"We have to fight," he told a friend, "or things will get worse".

Sam Pace was a quiet, stocky young fellow, with a wife and three children. He was secretary of the Ewen Colliery local of Pennsylvania-Hillside coal company and a member of the local union's grievance committee. When the walkout occurred he became a member of the general grievance committee for the ten striking locals of the Pennsylvania-Hillside workers.

He was a very active striker and could be counted on in a pinch. That's the kind of fellow gunmen mark down. He was always on hand. At every meeting of the strikers' committee he was on hand, there in St. Aloysius' hall in Pittston. But he didn't have much to say there. Pace was not a loquacious fellow. He talked only when talking had to be done. One speech he made in the Underwood Colliery local at Throop was considered to be the cause of his slaying. I'll tell about this as I heard it from miners who were there.

### Stool Pigeons Call Meeting

The Underwood Colliery is several miles out from Scranton and perhaps 20 miles from Pittston, where Pace lived. But the little distance didn't bother him. There was work for a class conscious man at Underwood. The company stool pigeons had called a meeting quietly. They had buzzed the word around that there was to be a union meeting at the local's hall. It was a fake call, of course, but about 125 miners, or ten percent of the total employed at this mine, were deceived or wanted to be deceived, and attended. Pace got wind of the scheme, to get a back-to-work vote through the meeting, something for the newspapers to emblazon in their headlines.

The meeting came to order, with a stool pigeon in the chair. The brothers were told that the Pennsylvania Hillside Company was very kind and fair and would remedy their grievances no doubt. They were told that they were very very foolish to defy their own international union. Just go back to work and your grievances will be fixed up, was the word.

Pace is usually slow of speech but the words came fast as he took the floor and exposed the trick. The stool pigeons tried to shout him down but he was not the kind that could be downed readily. He told the men their only hope was in fighting, that the company had refused to redress grievances, even after the official conciliation board had decided against it. He told them that the district officials and the international union had broken promises before: two strikers had been called off on the district president's promise to have the grievances adjusted and the grievances were not adjusted. Now the men must keep up the fight until they win.

Pace left, taking a group of men with him. A back-to-work resolution was jammed through those that remained but it was robbed of its punch. The opposition was angry. They showed it as Pace left. **Six state policemen stationed outside the hall seized Pace. You have heard of the Pennsylvania constabulary, the "cossacks" of ill fame. They held the striker and frisked him and then let him go with ill grace, threatening him if he should ever come back that way.** But Pace got out and went before the real men of the Underwood local. There was another meeting in the hall with 800 men present and a unanimous vote to keep up the fight. The newspapers played up the story of the stool pigeon back-to-work resolution and ran company officials' stories that 450 men were working again, but these lies didn't go over with the local men. The strikers had pickets on the job and the total number of scabs was only 26, with few coal diggers among them.

### Union Striker Murdered

**Soon after, one dark night, Sam Pace was riddled with bullets as he was coming home to his little cottage on the outskirts of Pittston.** Who killed him? The police are supposed to be making an investigation but it is a safe bet that no one will ever be put on trial for the murder. How different it would be if a coal operator had been slain?

Last reports are that another striker has been slain.

It's an "outlaw" strike the Pennsylvania-Hillside miners are having. District President Rinaldo Cappellini and his executive board refused to recognize it. International President John L. Lewis sent a commission of five old U. M. W. of A. machine men and they reported against the strikers. So the charters of ten locals were taken away and their funds tied up.

You see the strike was called during the term of a time agreement. The Pennsylvania-Hillside company had broken this agreement in several places, the strikers claimed, but the U. M. W. of A. hierarchy is disposed to be tolerant towards such infractions. What it will not tolerate is a rank and file strike.

District President Cappellini admits that the men have some real grievances but he argues for regular and constitutional methods of adjusting them. It was not long ago that Cappellini was the arch outlaw striker of them all. In fact until shortly before his election as district president two years ago Cappellini was the foe of conservative officialdom in the entire anthracite field. Four years ago he was the most talked of figure in an unofficial strike of 20,000 men. But something happened to Cappellini. Anyhow, he has changed his tactics and now condemns unauthorized strikes and argues for constitutional methods.

### Conciliation Machinery Worthless

The strikers have tried the conciliation machinery Cappellini talks of and without success, as far as concerns the ten-months'-old grievances for which they have been striking. W. W. Iglis, chairman of the conciliation board, the machinery representing labor and capital set up in the anthracite fields, has decided against the company in several cases but Manager Morris goes his own sweet way without making any alterations.

Cappellini has been belittling some of the grievances, though admitting others. **But they can't be belittled to the miners who see their bi-weekly pay envelope reduced in consequence.** The grievances relate to working conditions. The miners work under the piece work system—that is, most of them do—and bad working conditions mean bad wages.

For instance, if the men get cheap powder for the price of good powder, and they have to use more of it, thus spending a larger percentage of their money for powder, their pay is actually reduced. That is one thing that has happened.

Again if men, paid by the ton for the coal they dig, are put on rock tunnelling for a long period of time at a low day wage, with the result that the bi-weekly envelope shows a big drop, that is another serious matter to the head of a household of hungry mouths. And that is another grievance that crops up. What makes it harder to bear is that the company will promise these men that they will make it up for them later on by giving them high paying work in the coal—and then, when the tunnelling is done, lay them off.

Laying off of men without consent of the union is a fundamental grievance. In the Ewen Colliery, where Sam Pace worked, 120 men had been laid off when a particular mining job was over. The union is supposed under the agreement to have something to say about such things but the union was not consulted. The grievance committee demanded that the men be given other jobs. The company was shown that the idle men could be absorbed if the company would take three men into a working place instead of two. And the conciliation board, the regular "constitutional" machinery, decided that the com-

pany must comply. General Manager Morris paid no attention. To hell with the agreement.

**General Strike Sentiment Strong**

The Pennsylvania-Hillside miners are not the only ones with grievances. There are 48,000 other miners in District 1 of the United Mine Workers and a total of about 150,000 in the entire anthracite field. The 48,000 are divided up among several companies and their troubles are very similar to those of the Pennsylvania-Hillside men. A general unofficial strike of the entire district seemed on the point of breaking out at the end of the year. It was halted by representatives of the strikers themselves, while an appeal was made to the district officials for a special convention. They are not getting the convention.

The opportunity for a vastly bigger rank-and-file strike may have been lost but it is significant that the rank and file has developed an unofficial organization that can function. This organization consists of the united grievance committees of the respective locals. The grievance committees of the ten striking locals constitute a strikers' committee and the grievance committee of all the locals of the district, representing 60,000 workers, recently held a conference at which they discussed what action should be taken. District President Cappellini opposed this conference but could not stop it.

**This rank-and-file movement may gain or not gain but it is a very important phenomenon which readers of Industrial Pioneer should watch.** The outhlaw anthracite strike may end in out and out defeat or the strikers may go back on promises that are made, perhaps to be broken. Or again the strike may spread before the next issue of the Industrial Pioneer is out. **The writer of this is not a prophet, but he regards the movement now going on in the hard coal fields as something that every class conscious worker should watch keenly. Those strikers are our fellow workers and we are theirs.**

* * *

Sam Pace is buried. So have been many other victims of the bullet and the rope in the hard coal fields from the days of the Molly McGuires down. But he will not be forgotten by those who knew him and his work as an earnest union fighter against oppression.

# An Appeal

By HAL BROMMELS.

Life is too brief to utter blund'rous words—
One misplaced word can wreck a mortal mind,
One evil hint can end a bright career—
We should be prudent when we judge, and kind.

We should inspire, cheer, encourage, help
Brothers who struggle Freedom's rocky way.
We disagree, at times, and then call names;
Our enemy, he laughs—and holds the sway.

Brothers unite, go hide the ancient grudge;
Dig under earth the groundless hate you bear.
We shall achieve the goal we all aspire
When we have learned to treat each other fair.

This is the field where 2,300 workers were camped in pup tents on the Durst ranch in 1913. Note outhouses.

## The Bloody Hop Field

By ED DELANEY

**California's Criminal Syndicalism bill, which became a legal stain in 1919, had its foul roots in the soil of oppression for many years. Persecution of our members in that state by both legal and extra-legal means under the statutory sanction and its moral approbation has been so bitterly concentrated that too little thought is given to the long line of brutalities preparing the way for such a law. In this historical resume is vividly pictured just one scene of the long tragedy enacted there. Read this story and help in the struggle of the California Defense to liberate Fellow Worker Herman Suhr, who was sentenced for life and has been imprisoned for eleven years at Folsom for his loyalty to the working class.**

**THE announcement made recently by the Califonia Branch of the General Defense Committee that it is attempting to secure a pardon for Fellow Worker Herman Suhr, now in Folsom Prison serving a life sentence, recalls the Wheatland hop fields strike and the subsequent murder trial in which Herman Suhr and Richard Ford were convicted. The Defense Committee states that it has secured signatures of seven out of the eight surviving jurors who convicted these two men. Judge McDaniels who sentenced them, and Attorney Carlin, the special prosecutor who acted for the state in the case, refused to sign a petition asking for a pardon for Suhr. They refuse in spite of the fact that the men were innocent. This may seem somewhat incongruous to one not familiar with the causes leading up to the riot and the trial itself. To relate those incidents is now in order.**

The industrial depression of 1913 is one that will live long in the memory of the workers. It was the old story of overproduction (really underconsumption) which necessarily resulted in a large army of unemployed, drifting from place to place pursuing the necessaries of life—food, clothing and shelter. Daily, one could see hundreds, yes, thousands of workers trudging along the county roads of California seeking employment. Their bodies were so emaciated that they seemed like skeletons; eyes bulging from sockets like marbles fixed in their skulls. Their skin was dry and parched from a merciless sun that sent thermometers up to 120 degrees. Their clothing was pieced together from old rags and burlap. It partly covered them, but here and there reddened skin showed through. When economic conditions are like that one can readily understand why the workers toiled for a bare subsistence when fortunate enough to obtain the jobs so many needed.

There were some 2300 such workers—men, women and children—speaking 27 different tongues, gathered together on the Durst ranch, which is adjacent to the village of Wheatland, California. These workers were picking hops. Conditions under which they were forced to live were such that the lowest of mammals would have rebelled.

Picture a field of 600 acres dotted with small pup tents wedged one against another, and at their ends old irrigation ditches filled with reeking garbage. To the north stands a huge barn. At its side, extending half the width of the field is thrown a manure pile, which sends up its stenching fumes while millions of flies and gnats swarm over it. At long intervals old wooden pumps are located. Around each can be seen mud puddles, the mud seeping down between the warped planking which covers the wells. Off at a distance of seventy-five or a hundred feet stands an open toilet. The floor of this within a ten-foot radius on all sides is covered with human dung. Five such toilets exist, and their filthy condition is due to the appalling

fact that they are the only such receptacles for the entire population of 2300 workers. Being in close proximity to the wells whose water is used for all purposes, one cannot guard very well against the danger of typhoid and other contagious diseases contracted by drinking impure water and bathing in it.

With that ugly picture in mind, visualize these 2300 human beings bustling around in the early morning preparing for their day's toil. In front of each lavatory a long line of these unfortunates await their turn. Men, women and children all using the same toilets, forced to throw all modesty to the four winds and frequently to use the open fields. After snatching a hasty breakfast they rush to the adjoining hop fields to put in fourteen or sixteen hours at hard labor in a pitiful attempt to eke out this sub-swinish existence.

They are paid at the rate of fifty cents for a hundred pounds of hops picked. Their picking must be done very carefully to avoid getting leaves and grasses in with the hops as their employer demands that they be absolutely clean or else they shall be docked so much a hundred pounds. Women are struggling with the tall hop vines as no high pole men are employed. The heat is intense and no drinking water is at hand. If they want a drink of water they are obliged to walk back a mile to the wells. It is true that lemonade is sold on the fields, and this keeps the water off because a cousin of the employers has the "lemonade concession" and an order was issued to stop the menace to profits of free water. The lemonade sells at five cents a glass. The "lemonade" is made of acid that is so strong that drinking it causes sickness. Did I say no water was allowed to be brought to the fields? Well, not exactly, as the lemonade wagon carried some water but the workers could not get any of it to drink unless they first purchased lemonade.

That, in brief, is a very truthful and conservative picture of what those workers were forced to put up with. Finally one ex-member of the I. W. W., Richard Ford, came along and talked to these workers. He explained to them the power of industrial organization. A meeting was held on August 3, 1913, and it was decided that they would ask Durst for better conditions or else strike for them. Durst asked for an hour to consider, which time was granted by the workers. Then they assembled around a platform in Wheatland to await his reply. **Durst called up the sheriff and prosecuting attorney in Marysville. This was how he was using the hour. The official appealed to responded with two cars loaded with armed men.**

**Upon driving up where the strikers were assembled the officers opened fire on the crowd, which resulted in the death of four men, two officers, District Attorney Ed Manwell and Deputy Sheriff Reardon, and two hop pickers, an unknown Porto Rican and an unknown Englishman.**

Later Richard Ford and Herman Suhr were indicted on the charge of murder. Another complaint was lodged against Walter Bagan and William Beck. On January 31, 1914, the jury acquitted Bagan and Beck and convicted Ford and Suhr of murder in the second degree. On February 5th Judge McDaniels sentenced the men to life imprisonment.

The evidence which was submitted during the trial absolutely vindicated these two men. But justice was not what was wanted. Marysville wanted blood, and not being able to intimidate the jurors to the extent that would bring in the death penalty, they took the next best thing to satisfy their vengeful desires—life for two innocent men in an earthly hell!

**On the witness stand Durst, the owner of the hop ranch, testified that there were only eight toilets for all these 2300 people.** He further testified that he would not allow the workers to buy food from outside stores, forcing them to buy food in his own store. He admitted that he owned an interest in the lemonade wagon which robbed the workers in his fields. Others testified that the women and children were forced to wait in line at the toilets, sometimes for a quarter of an hour; that the irrigation ditches which ran between the tent rows were filled with refuse and that they were foul places in which diseases might breed. Durst provided no place for garbage to be dumped. Dysentery was common and typhoid fever also developed as a result of these vile conditions.

### Deputy Sheriff Starts Riot

Witnesses also testified as to the riot itself. It was proven that when the two cars drove up and after Sheriff Voss had ordered the crowd to disperse that **Deputy Sheriff Reardon clubbed his way through the crowd and raised his gun to fire at Ford.** Then a Swedish girl leaped at Reardon and he turned his gun on the girl, but the unknown Porto Rican interceded, grappling with Reardon, and tearing the gun from his hands he shot Reardon dead, then fired at Manwell, killing him as well. Sheriff Dakens fired a charge of buckshot at the Porto Rican, killing him instantly. There were but few shots fired after that. When the smoke had cleared away the unknown English lad was dead, making the fourth to be killed.

Ford and Suhr were indicted shortly after this. The hop pickers had scattered in every direction and no others but Beck and Bagan were apprehended. Detectives were employed and placed in the cells with Ford and Suhr. They tried in every conceivable way to force the men to incriminate themselves. Dictaphones were used to take down every word that the men spoke. They were forced to remain awake and driven nearly insane by their brutal treatment.

Witnesses for the defense were coerced; one committed suicide, and another attempted to destroy himself. A small boy was kidnaped and held for

weeks. The newspapers carried scathing denunciations of the men and of the I. W. W. These were wild, hair-raising stories that were not true and never could have been proved. But these stories found their way into the hands of the jurymen. This was a case where no one was arrested for attempting to intimidate the jurors.

**The two officers who had been killed were natives of Marysville. Judge McDaniels and all the jurors were personal friends of them, as was E. S. Manwell, the assistant prosecutor, who was also the son of the dead district attorney.** It is obvious that a change of venue was very necessary to prevent prejudice from foredooming the defendants. But this was denied. Marysville wanted blood and knew that the men would be freed if the case was tried before another judge and a strange jury.

Another queer feature of the case was that Marysville knew hours, yes days, before the trial was over that two of the men were to be convicted and two acquitted. It could be heard on all sides and it was true.

### Getting the Verdict

Attorney Carlin in making his argument to the jury stated: **"I knew Ed. Manwell, I taught him when he was a child. I taught the lovely girl who became his wife. Many of you knew him. The blood of Ed. Manwell calls from the ground for vengeance."** He clung to that theme through his entire argument, dismissing entirely the points in evidence. It was his remarks that caused the jury to bring in a verdict of guilty which placed two men in prison, even though they knew that the men were innocent.

As a result of that verdict two men have since been confined in Folsom Prison. For nearly eleven years they have been buried behind those high, cold gray walls of the Fruit Growers' Association's catacomb on the banks of the American River. They are there today while you read this, paying with their lives the penalty that a corrupt judiciary has imposed. They are immured that the hop growers' profits might not be decreased, and that the same hop growers might go on enslaving workers for all time to come. They are paying that penalty because the ruling class of this nation fears the power of organization on the part of the workers, and knows only one way to allay their fears and gnawing conscience—persecution.

Comes now the California Defense Office with this petition signed by the jurors themselves admitting that the men were innocent. Another petition will be circulated among the people at large asking for their signatures. In the end this will all be taken to the Governor of California and a request made that he grant Herman Suhr a pardon. We cannot predict what the outcome will be. But should this fail to free our imprisoned fellow worker then the matter will lie in your hands—the powerful hands of labor.

Will you pick it up and force the masters of this state to free him by using your economic power? Or will you cast it to the winds in the same apathetic way that labor has cast the freedom of other members of the working class in the past?

NOTE: We have been informed that Richard Ford is seeking a parole independently.—Editor.

## SYMBOLS OF REVOLUTION

(Continued from Page 24)

the enemy's blows and darts and to enable her to advance. It stands for our scientific unionism by which we expect to repulse attack and with whose protection we can carry all before us to the victory.

What is the victory? The last is a smiling friend of all mankind, offering the fruits of common effort to a common humanity. This is the victory for which we struggle: that all men may live on a better plane of effort and leisure; that one small non-producing class may not have the power to bind another immense producing class in wage slavery; that industrial justice may be brought into the world and on its foundations industrial communism be raised.

A very dangerous symbolism, indeed, to enthrone education, lifting it on high like a beacon light to dispel the gloom of ignorance and demand that the workers embrace it or remain slaves forever. An unpardonable symbolism to show this advancing form, Organization, grim with intent and invincible in its choice of weapons, the weapons of solidarity and courage born of the light of intelligence. An upsetting vision, that woman with an abundance of life's good things for every man, woman and child in the world. So upsetting to those who feast while others starve, who wear soft raiment and revel in luxuries while those who do the world's work are in shoddy and drink to the dregs the bitterness of poverty.

Plenty for all the race depends on the freedom of the working class. Slowly, but with a sure tread that is disconcerting to the parasites of capitalism, the working class is fighting its way to freedom. Do not doubt it. Look to the prisons and the tortures by which a dying economic oligarchy desperately strives to stop the advance. This plan of industrial unionism for proletarian emancipation is here to stay and to grow in spite of the dungeon, the rope, the chair, the firing squad. It is leavening the world with the spirit of industrial freedom and does not stop because courts persecute and mobs murder its exponents.

Let us, then, go forward with a will, educating the working class with renewed vigor and building up our industrial unions as never before. On them depends whether or not the future is to be slave or free, and if we are to be thrust ever lower in the mire of poverty and subjection. Educate, organize and conquer! Then we shall be free. Then begins the true civilization of man.

# What Freedom Means to Us

(Continued from page 14)

American history in which the revolutionary aspect entirely overshadowed the immediate demands for improvements in our living conditions which were attached to it. **Demand number one, "Release of all Class War Prisoners," became practically the only demand.** And, knowingly or unknowingly, it is very logical that this should have been the case. With that demand won all the others and a lot more would have fallen to our lot like ripe apples falling from the tree.

The liberation of our fellow workers in prison can be brought about together with our own liberation, or at least a far greater amount of liberty and social comfort than we enjoy at present. The question is not only to get our fellow workers out of prison but also to secure sufficient guarantee that they and we may voice our opinions unmolested and carry on our organization work. It is far more our right to existence as a revolutionary industrial union that is at stake than the liberation of our fellow workers in prison. Were it merely the question of securing their release they could all be out among us if they would promise to cease their organization activity, and none of us would need to jeopardize our small amount of liberty if we would only be good, contented slaves.

But our fellow workers in prison know that such conditional release as is offered them by a Palmer or a Daugherty or by the California Parole Board is no release, no freedom to them. Nothing less than the same right to speak, to write and to organize which they exercised before their imprisonment will satisfy them. To accept the humiliating release offered them by the authorities would only mean that they, at the best, would only have to exchange the federal prison for a state prison or one state institution for another, as none of them have conceded one iota of their revolutionary ideals which brought them into prison and all insist upon voicing their opinions as they see fit.

### The Struggle's Real Meaning

And even should they accept such release—which they never will—what would that mean to us? Would not the same forces which brought them behind prison walls on account of their principles also land each and every one of us there if we displayed manhood enough to voice our opinions as they did? Surely it would. So, unless we can, through our organized might, force the prison doors open, we have gained nothing, neither their liberty nor ours. In the last analysis it is not a fight for the liberation of the Class War Prisoners—it is a fight for our own liberation.

It is well for us to remember this, that it is our own liberation that is at stake. Never for a moment let us wrap ourselves up in some kind of a martyr's gloria thinking that we are sacrificing something for our fellow workers in prison. We have nothing to sacrifice for them but our slavery; they are the ones who are sacrificing their very lives for us and we can never, never repay them. The greatest service we can render them is to open the prison gates for them, and that we can do only when we are strong enough to force at least very great concessions from our masters for ourselves, and at the same time feel secure that we don't have to fill their places in the prison cells. And this alone should be well worth fighting for and richly repay us for our efforts.

So, it should be clear to all of us that our demand, "Release of all Class War Prisoners," is in reality the only demand worth while fighting for, and that its realization means far more concessions to us than we have enumerated along with it. This demand has a real revolutionary aspect because it directly challenges our masters' right and our masters' power to govern our expressions and to determine our conduct as to our organizations. And on the day we can muster sufficient strength to successfully combat our masters in this respect, on that day the eight-hour day, uncensored mail, clean bedding and housing facilities, etc., are ours without even asking for them.

This the master class knows very well, and therefore resists with all its might the release of our fellow workers from prison. It requires an enormous amount of organization work on our part, of propaganda, and of education among the unorganized before we will succeed, but the task is by no means hopeless and, what is more, it must be done. And while we are concentrating on this work we build up our organization. Organization work and defense work are really the same thing. The distinction is only imaginary. The only defense we have and will ever get is our organization and all defense activity that does not tend to develop our organization is no defense work at all.

### Why Not Try This?

We have engaged upon a propaganda of a universal boycott of all American-made goods, and California products especially. What effect will such a propaganda and such a boycott have on our organization? If this boycott is to be effective,—and we can and must make it effective—it requires that each and every one of us "ignorant" foreigners in our organization write at least one letter a week to some of our relatives and friends back in the old country and explain to them the boycott and the reason for it. But how are we going to explain this action without giving the details of the persecution sustained by us and also explaining the nature of our organization in order to show our innocence and that the victims in prison should be released? So we will send about a million letters across the seas explaining what the I. W. W. is and so we will receive a million answers with further inquiries, and by the time our boycott is fully developed we will have a million new members in other countries.

Or let us take some particular product upon which we specialize, for an example, say the mov-

ing picture industry. In order to make our action intelligible to them we must show how the silent drama has degenerated to nothing but prostituted capitalistic propaganda instead of what it should be, art. We must show them how the works of such a genius as Ibsen, for instance, such a defiant, rebellious spirit, have been torn to pieces and made over so as to suit the purpose of the very forces which Ibsen attacked. And we must show them the terrible conditions, the starvation and misery under which the workers in this industry live, and last but not least, we must show up the degenerate mental calibre and the surprisingly great ignorance manifested among the stars and heroes and the great producers of this kind of so-called artistry.

And this again brings us another step forward. It shows us that the I. W. W. is something more than a Labor Union. It brings home to us that we are an organic social force, that we are the New Society who must rely upon ourselves to develop our own art, our own literature, and to form and shape our own social life. And with this added understanding of our organization comes a still keener sense of responsibility and still more enthusiasm for our cause.

Is there anyone who thinks that such international solidarity as a world-wide boycott of one country's product really is will be used for this occasion only? Certainly not. The same weapon that can be used now to assist workers in America can and will be used repeatedly the world over, and from such unified universal action to the real International Industrial Union as taught by the I. W. W. is but one little step. So even our fellow workers in foreign countries, by rallying to our call for a boycott, are, in the last analysis, only taking another step forward towards their own emancipation and furthering that international organization which alone can make us free.

As the class war increases in intensity so also is the patriotic feeling played up among the unreflecting masses. The United States is a country where practically all nationalities are to be found, and the master class is very anxious to keep the national antagonisms between workers alive. In so far as they are successful in this respect they are also successful in keeping us divided. To bring about unity and a feeling of fellowship among all the toilers is one of our tasks, and by far not the smallest one.

### The Real Division of Toilers

So far as the producers are concerned, there are only two nationalities; the class conscious, intelligent workers and the ignorant, slave-minded workers. These two nationalities are the only ones who play any part in the production of commodities. The parasites are of no concern whatsoever on the field of production; all they do is to see that both the nations are kept fighting each other so as to enable them, the parasites, to steal the product of their toil.

As yet the ignorant and slave-minded nation is numerically far superior to the nation of class conscious, intelligent workers. This condition must be radically changed before we can succeed in establishing our "Commonwealth of Toil". We have in this country at least 25 million unorganized workers, the great majority of whom have no conception even of the kind of society we are living under, far less of anything new or better. There are seven million colored workers, most of them illiterate and ignorant and all of them unorganized. There are millions of white laborers equally unfortunate in this respect, living under conditions far worse than we endure. All these millions of slaves are a burden on our back and the greatest obstacle on our road to freedom.

Many fellow workers are inclined to believe that to secure for our organization the skilled workers or the ones holding more important positions in the leading industries, such as engineers, mechanics, etc., is far more vital than to secure those uncultivated, downtrodden people; that one member of the former group is equal to several of the latter. I am inclined to believe that we miscalculate in this respect, and that they are equally important at least. We must remember that whatever standard of living we enjoy, can only be determined by a comparison with those who compose the lowest strata of society. Our so very much praised and glorified civilization is in fact resting upon the slum element, the pariahs. Only when these elements succeed in elevating themselves does society as a whole rise to a higher level. By organizing these elements we are gaining control of the very foundation of modern society.

In modern industry there are very few indeed who cannot easily be replaced should they withhold their service from their masters. The sources from which our masters recruit the new elements with which to replace their rebellious slaves is from these underfed and uneducated masses. So long as our standard of living is in any way superior to theirs there is always the fear that they will enter into our places should a vacancy appear. And a strike causes just such a vacancy. And can we blame them for wanting all the good things in life they can possibly get? Or can we blame them for using such tactics when they don't know anything better? Hardly. It is rather fortunate to note that they aspire to something more and better in life than they have even if they try to secure it through strikebreaking tactics. It shows us that the desire is there and all we have to do is to show them how to gain their ends and gain them permanently and honorably.

### Favorable Factors

Before we can feel secure in what little we have already gained and hope to gain some more, we must manage to educate and to organize these unorganized masses. The task might seem almost impossible but it is really not so great as it looks. The boss will help us a lot. At the same time he does all in his power to prevent us from entering into their domains, he ships thousands of them into the industries where we are employed, as he hopes to weaken our strength. That gives us a chance to develop organizers among them. At the same time it lessens the congestion on the labor

market in their home territory and makes the remaining forces more willing to listen to our propaganda and to take steps towards improving their own conditions.

The question before us is really to assimilate with us all forces participating in industry. The program of the I. W. W. is not a program of securing ruling power for a few; it is a program of assimilation of all. We are not bent upon getting control over the means of production only in order to rule and govern a mass of subjugated people. We intend to secure the means of production for all the people. We don't simply want a change from the subjugated class to the ruling class; we want to abolish classes. For that reason the slogan, "Put the boss in overalls" is the most beautiful slogan of all. If the "Overalls" are the uniform of the producer, the useful member in society, then it should be the highest honor to don that uniform.

It is very vital that we grasp this clearly, that our object is to abolish classes by means of absorbing all members in society for useful and productive pursuits. That explains why we in the I. W. W. must "all be leaders". Only when men are able to lead and direct their own destiny can leadership and a ruling class be abolished permanently. On that account we must train and educate ourselves sufficiently to be fit members of such a society. But, furthermore, with the immensely great task before us it is necessary that each and every one of our members be so trained and educated that he can lead a group of uneducated and unorganized slaves towards that form of society we are about to establish. It is true that mere membership in the I. W. W. does not qualify for leadership. But that member who does not aspire to be a leader in this respect is no good. His aim and constant endeavor should be to educate and to train himself so as to fill this function in one capacity or another. It must be remembered that all of us are good for something and in that particular line for which we are most adapted we must try to be the best, the leader, be it even in what is considered the least important task.

**What A New Society Requires**

It is obvious that the gigantic task before us requires great means by which to be brought about. And these means, or tools, we must develop ourselves, the ones used by our enemy cannot be useful for us. We must develop our own press, our own literature, speakers, propaganda mediums, moral code, philosophy, in fact, everything mental and physical that constitutes a society. Again we see how the I. W. W. is a distinct form of society in itself, growing up from already existing conditions. For that reason we must, in particular, increase our press and our publications many times as they are the strongest weapons in our offensive, and we must cultivate libraries and meetings and discussions among the toiling masses for their education. A large daily press, permanent meeting halls, libraries and study courses should be established as fast as we possibly can.

I have dealt with the subject in such a broad manner and with such a wide scope merely because I hope thereby to impress upon our members in particular and all thinking workers in general the immensely great responsibility resting upon us. This is not merely a fight for a little shorter working day or a few more crumbs from our master's table or for the privilege of our fellow workers in prison to walk out to the same drudgery under which we suffer. This is a struggle that makes history; a struggle upon whose success or failure countless millions of toilers and many future generations' happiness and liberty depend. This is a fight not to be taken frivolously but seriously, indeed. And if we do seriously consider our moves and our every action there is no doubt as to our victory in a near future.

---

# Frigid California

ONE plague after another has been the lot of California, romantically called God's country by people too dull to know what an insult it is to any self-respecting deity to be credited with suzerainty over a demesne alternately reeking with hoof and mouth disease, typhoid and smallpox epidemics and the bubonic scourge, to say nothing of its blackest curse, the criminal syndicalism statute.

Obstreperous real estate sharks have held up the Earthquake State's balmy winter climate to entice buyers from afar, concealing, of course, its summertime heat records. Their advertisements might have seemed very tempting to many last week when Easterners experienced the first cold wave of the winter. But not so alluring was this legendary Golden State seen in the light of fact and not through the smoked glasses of land speculation propaganda. The entire state was gripped by freezing weather, including even such southernmost points as San Diego and the Imperial Valley.

Following is a clipping from a Chicago daily:

**And In Los Angeles**

LOS ANGELES, Calif., Dec. 27.—(Special.) —So many orange growers in the Los Angeles county hinterland have been burning smudge pots to protect their fruit from temperatures ranging from 27 above down to 19 during the last three nights and days that the resultant pall of oily black smoke today tied up shipping in Los Angeles harbor.

If this sort of thing keeps up pious folks will be calling California not God's country but God's curse. It is beyond the power of the workers, perhaps, to restore the old climate, but fully within their ability to wipe out the plagues, because these plagues breed in the filth of poverty. Let the workers organize and sweep this pestilence into the sea along with the medieval torture of union men that continues to disgrace California.

# Literary and Artistic Contest

## Substantial Prizes for the Best Manuscript and for the Best Cartoon

INDUSTRIAL PIONEER and INDUSTRIAL SOLIDARITY have combined to offer a prize of $75 for the best piece of literature submitted, and a prize of $50 for the best cartoon submitted. April 15, 1925, is the date for closing the contest, when all manuscripts and drawings must be in the hands of the manager of the two publications.

The best article or fiction work and the best cartoon will be published in the May Day editions of both publications. The other material submitted in the contest is to become the property of the I. W. W. press, to be published either in English or translation by the various editors at their discretion.

All material submitted for the contest should be sent unsigned, but with some identifying mark, to the manager of the Industrial Pioneer and Industrial Solidarity, and should be marked "For Solidarity-Pioneer Contest." A separate letter should be mailed at the same time as the manuscript or drawing and should contain the identifying mark inside a sealed envelope on the outside of which is written the contestant's name and address. When the judges have announced their decision these envelopes will be opened. The contest is open to both members of the I. W. W. and non-members.

Several prominent writers and artists are under consideration as judges. Their names will be announced soon, and the men chosen to pass on the merits of the articles, stories and cartoons will be such as to leave no doubt as to their competency and fairness.

Nothing sent in competition for these prizes shall advocate parliamentarianism, religion, class collaboration, co-operative projects, or utopian colonization schemes. Such articles or cartoons will not be considered for the prize.

Manuscripts for the literary prize may be fiction or non-fiction, but not poetry, and must not exceed 5,000 words.

Fiction should embrace some phase of the workers' lives involving the class struggle. Non-fiction may deal with the whole or any part of the field of labor and industry—including organization, history, present tendencies, and future possibilities. The articles may be either general and theoretical or as highly specialized as the author may desire.

Cartoons may be drawn in any medium, but must be dead black on dead white. This does not mean the exclusion of shadings or the use of Chinese white, but it does bar the use of colored inks or crayons. These cartoons should tell the story by means of the drawing and should require little or no lettering on them to make them intelligible.

Cartoons should be of a general propaganda nature and not illustrative of current events, as it may be some time before they are actually printed.

# Criticism of Samuel Gompers' Creed

(Continued from page 5.)

**agement. It proposes that the employees shall have the right to organize and to deal with the employer through selected representatives as to wages and working conditions. . . There is no belief held in trades unions that their members shall control the plant or usurp the rights of the owners.**

There you have it, a yellow that endures, fit credo for any whey-faced bootlicker, and the whine by which he wanted to placate the Open Shoppers. It had been a bad year for Sam. After the steel strike of 1919 the industrial peace council met in which the bosses were represented. Sam's crowd were on hand, and others presented themselves to stand for that fetish known as the Public. When the war-profits-fattened bosses refused to agree even to Sam's mild collective bargaining sugar-teat the old fellow got angry and told the body that such refusal placed them in the same category with the I. W. W. because, he warned them, the I. W. W. Preamble starts out with the words "The working class and the employing class have nothing in common." Sam's cry was like this in substance: "After all I've done for you, you've turned me down. You won't even agree that the workers and bosses have collective bargaining in common, so you're proving that the Wobs are right!"

### Betrayal of Steel Strike

Poor Gompers! He never forgot his masters. But he should have known better, because in 1912 he wrote about the implacable enmity of the steel trust, and did nothing to strengthen the steel slaves' chances against this growing monster. What happened in 1919 was inevitable. The workers put up a splendid battle but were foredoomed to failure when 24 separate unions, greedy for per capita taxes and jealous of jurisdiction, pretended to seriously oppose the trust. William Z. Foster has given us a record of this contest in which he repeatedly illustrates the attitude of these autonomous craft headquarters when confronted by the natural tendency of the strikers to join forces in industrial phalanx. The union leaders smashed the strike into which they had hypocritically entered with donations of $100 from each treasury, or a total of $2,400 with which to launch a fight against the billions of Emperor Steel! All the more significant when we consider how much importance they attach to funds for relief purposes.

Gompers was willing to concede anything if only the capitalists would embrace collective bargaining and insure a numerous progeny in contractual relations. Of the latter he had this to say in 1916:

**These industrial contracts between workers and employers are the mile-stones of industrial progress.**

To secure these mile-stones Sam would hang mill-stones around the slave's neck. He early learned the value of psychologizing his followers into the habit of associating all antagonists with bombs and firebrands. At the Nashville convention in 1897 he advocated evolution's unruffling sway, and opposed revolution's disturbing surge. In 1916 he named among "predatory forces that menace the welfare of wage-earners," extremes of which

**Their highest fringe contains the irreconcilable impossibilists who think that nothing but revolution and destruction can right the wrongs of the workers.**

### Helping The Inquisition

Going into the war spirit with a will he and his machine became the most vicious of stoolpigeons, betraying to the authorities any of their own members or other workers who expressed a broader vision of working class destiny than kissing the boss' foot to beg a wretched existence. These authorities, as usual, slavishly served the needs of industrial oligarchy. The Gompers cabal pledged this pernicious support in the name of patriotism, promising to assist the professional spies of capitalism in every way possible. So far did they go in furtherance of this treacherous alliance that A. Mitchell Palmer, wartime United States Attorney General, who made an ass of himself in his "Red Raids," publicly thanked Gompers twice for "the aid rendered the Department of Justice in rounding up the I. W. W. organizers and militants." We are reminded again that "Patriotism is the last refuge of scoundrels."

Gompers was active in the formation of the National Civic Federation, of which he was vice-president and August Belmont, who died the same day, was president, an organization founded to prove that master and slave should be friends, that the exploited should respect and love his robber and that strikes are anathema. A list of the society's prime movers in relief against a background of their industrial activities would be startling, but Sam was quite at home. This labor Perseus did not confront Medusa to slay her but to enter into affectionate alliance and guarantee the runty race of spineless robots she wanted.

### Boosting The Right of Bosses

His greatness of heart wherever the employers' welfare was concerned is revealed in the touching simplicity of the following extract from an address before the National Civic Federation in New York City, which was so well seconded by the gang at Washington that it was published in the official organ of the American Federation, February, 1902. Sam said:

**In our industrial system of society I would not have the rights of an employer toyed with nor flagrantly violated. . . . There is in our time, if not a harmony of interests . . . yet certainly a community of interests.**

It was on such occasions as these that the wily Sam displayed a subtle sense of personal adaptation, and the man whose oratorical thunder was sometimes worthy of a Marat, a Danton or the fiery Heine whom he professed to admire, remembered to act like the Romans when in Rome. But, after all, hobnobbing with N. C. F. representatives was not so foreign to his natural tendency, since both his salary and other emoluments had long since raised him out of the mire of the working class, and his distinctly personal interests shorn of organizational contacts were bourgeois. When a union official receives a salary anywhere from five to twenty-five times the income of the average member he is supposed to represent, he has been placed in the ruling class. His pay enables him to live in a home of his own, superior to the homes in which workers dwell; he fattens on a different fare; he may have a servant to assist or relieve his wife in the household; his clothing is better; he has money in the bank, and in time makes investments—in short, he has become a petit bourgeois. Such an economic environment makes him quite contented with the good old world as it is, and it is very natural that he should staunchly support its social bulwarks.

When Gompers had won his spurs as a faithful lackey of the rulers he was repeatedly invited to address gatherings of bankers and industrial magnates. Chambers of commerce were glad to hear him, so they wined him and dined him and he said what they wanted him to say, purporting to be the voice of several million union workers. In Boston he was banqueted by the officials of the building trades union and the contractors on January 7, 1920, at which festive moment he again stressed the feasibility of cordial relations between boss and worker. This banquet was a celebration of the amicable termination of an industrial dispute between building workers and their employers. This is mentioned because such gatherings were typical. The following night he spoke, by invitation, to the Boston Chamber of Commerce, and was careful to say:

**The American labor movement is not at war with society. It seeks to overthrow nothing.**

### Says Law-Breaking Got Results

Presently we intend to discuss the rewards of this constant anxiety, but before going into that matter it is interesting to hear one who so vociferously disapproved of direct action relating an outstanding instance of its successful application. For years and years he had been cautioning the workers to remain strictly within the law, conveniently forgetting, or perhaps regretting, his disobedience to Justice Wright who, in 1908, sentenced him to a year in jail for contempt, although this sentence was later set aside by the United States Supreme Court. This was in the Bucks Stove and Range Company case. Judicial facility to meet employers' needs has been frequently manifested, and how would Gompers counsel in such an exigency as that forced by the Anderson injunction tying up the funds of the Mine Workers' Union to prevent relief from being given striking coal miners? Union officials can either break the law by disbursing relief or break the strik by keeping the law.

When Gompers appeared before the Senate Com mittee on Education and Labor, January 3, 1919, he delivered himself of this opinion on compulsory arbitration in Colorado and how it was received by certain workers:

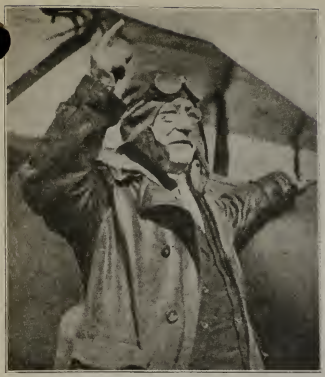
**A little more than a year and a half ago, in spite of the law, the workmen, failing to secure redress at the hands of the commission or the board, simply struck.**

**They violated the law. They were lawbreakers. But they quit work and got quicker action at the hands of the employers who have recognized since then the proper standards and conditions that should prevail and should have prevailed for a long time previously.**

### Contradicts Himself

Last year the United States Supreme Court handed down a decision invalidating the minimum wage law for women, which recalls his testimony on the same subject before the Industrial Relations Commission in New York City in 1914, where he said:

**In my judgment the proposal to establish by law a minimum wage for women, though well meant, is a curb upon the rights, the natural development, and the opportunity for development, of the women employed in the industries of our country.**



Was Sam afraid that such legislation would deprive him of a talking point, which would in turn decrease the numbers of women organized to attain and maintain wage levels thus effecting a diminution of per capita tax? The rest of his talk is sheer poppycock—all that about her natural development, her opportunities and rights. Gompers well understood that while there is little chance for any natural, healthful development of man in American industries, there is still less for woman, who is biologically more unsuited to its peculiar exactions. He suggests having thought somewhat along these lines when he gave a Senate commission this testimony in 1904:

**Our opponents talk of men losing their individuality when they join a labor organization. That is absurd. As soon as a workman enters a modern industrial plant he has lost his individuality. . . He is simply one cog in the great wheel of industry. He is one atom in the great aggregate of employees who furnish the finished product.**

With which we entirely agree, pointing out that it was even more pertinent ten years later when he blathered about natural development. Such an unfolding of any human being must have first consideration of the individual as an individual. How then are cogs and atoms to develop, as Gompers intimates?

### The Cat Let Out of the Bag

At El Paso last November he made a most significant remark, which explains why craft unions are continued with all their archaic regalia, separate sets of officers, duplication of function, district par-

"Pie in The Sky"? Sam went to a labor convention in an airplane and here he is about to start on the flight.

celing, and their contract policy by which has been lost every important strike they have waged in the last few years. He said:

**Office in the labor movement now offers opportunity for something in addition to service—it offers opportunity for the self-seeker who sees an instrumentality for personal advancement both in the economic and political field.**

Office in his "movement" never meant anything else, but there is one further remark that he made which is worth quoting. After the A. F. of L. convention at El Paso he went to Mexico City to attend the inauguration of President Calles. The new Mexican president gave a banquet in Gompers' honor, although feasting laborites while the great masses suffer hunger confers not honor but dishonor. However, Gompers, so soon to leave off all feasting forever, sang his swan song in this note at that moment:

**Radicalism, so far as the future is concerned, is dead. Now is the time to bury it. Reconstruction alone can save the world from the terrible consequences of a future world war. Labor and capital must understand one another in mutual interest in the coming generations.**

### Lifelong Service to Greed

What fidelity to corporate wealth! No wonder that his death was mourned by this country's Teapot Dome president, by bankers and business men, by all who thrive on the exploitation of the working people that Gompers, more than any other man, endeavored to keep from class cohesion which is the only basis upon which they can ever build their freedom. Other men have driven their spasmodic thrusts to preserve the class unconsciousness which enslaves American workers; Gompers' whole long life was dedicated to the task.

He praised the workers for turning "a deaf ear to all the chimerical schemes advocated by would-be social revolucionists," and lauded them for "steadily persevering in their efforts to alleviate their sufferings little by little, as their power of mutual helpfulness gradually increased with time."

Little by little, indeed! And what are the facts surrouncing this painfully slow alleviation, he alleged to be in process? The greatest sum total of material wealth ever massed in history belongs to a small, ruthless industrial and financial autocracy which has been steadily increasing its possessions and rendering the workers' position more wretched, insecure and helpless. The American Federation of Labor has never made any real effort to reach the great majority of these workers, while it sorted lone trades in the pigeonholes of ineffectiveness and damned every attempt of the workers to advance not from a caste position but from a class foundation.

### Reward of Conservatism

The results of such treacherous partitioning are to be seen on all sides. In the main there are about ten unorganized workers to every one in a union; in the trade unions themselves we find single crafts opposing industrial unity of capital while other crafts under the same management continue to serve this capital. Where an industrial union form obtains, as in the United Mine Workers of America, district divisions, in lieu of craft distinctions, lead to working class defeat. Strikes are called by districts and settled by districts, and the miners, with other workers, find themselves worse off as the years pass.

Gompers opportunism instead of inculcating freer thoughts and making his followers more manly and womanly, as he boasted, robbed them of the power to think freely and stifled the natural manhood and womanhood they owned, for how can a legitimate claim to these virtues be made when they accept wage slavery as eternal and right? What is manhood unless it is the free stature of men bound by no shackles? What is womanhood unless it is equally unfettered? And why should the producers of all the world's wealth permit a parasitic minority to possess their creations?

Based upon a social lie this misguided "expediency" cannot do other than breed disastrous error. The I. W. W. truth that there is nothing in common between master and slave is hard swallowing for those who wish to bask in the smiles of rulers, just as it will be a bitter medicine for the employing class whenever the workers shape their course on a knowledge of this opposition of interests.

Relatively, the working class is poorer now than at any other time in history, sharing in a smaller percentage of wealth than any previous subject class. Chattel slaves were sure of nourishment, a roof, covering for their limbs; what security belongs to the millions of unemployed wage slaves of this day? Can anyone expect that they are going to

gain security by meekness; by dividing their numbers while the common enemies unite forces and mass capital under centralized direction? These are questions that workers must consider and finally answer.

If the A. F. of L. could not tolerate working class solidarity within America its nationalist isolation is a corollary to be expected, and while its leaders vermiculated to the satisfaction of big business here, their refusal to come out of their shell and see the working class of the world was equally pleasant to international finance. Gompers' color-blind eyes made even yellow Amsterdam seem too red to have anything to do with.

In biographies of this man which are sure to follow, sentiment and romance will play their major part, but we have felt uninterested in his domestic life because we are concerned only with him as an embodiment of the spirit of his organization, and the non-affiliated extensions of that spirit. Biographers will tell how he first saw the light of day in 1850 and that he became a cigarmaker in America, where he was brought by his parents when a small boy. They will relate his love of music, poetry, flowers and little children—that last always makes a decided hit, the great man of worldly affairs forgetting all else to lift up a smiling child and kiss its pudgy cheek. You will learn—if you read the biographers—of Sam's happy family life, and of his devotion to his friends; of his innate kindness with all associates. Well no harm in saying those good things for a man with so many indictments against his memory. In this place we have not joined the panegyrists, but neither have we swung in the other direction, delicacy of feeling, for example, preventing us from giving Gompers' real reason for opposing prohibition, a phobia quite as pronounced in him as it is in H. L. Mencken. Let romance have its fling, but not here.

We have often been chided because our revolutionary program moves so slowly, but if that of craft union

hand-to-mouth opportunism, requiring only a modicum of intelligence and a minimum of cou age has accomplished so little of its task durir the past fifty-four years of its existence, it is hardly consistent to ask for a speedy achievement of a purpose that demands a broader understanding of life and sufficient backbone to fight for a world for its workers.

The open shop drive and unemployment have both made a mark upon Federation membership, a steady decline in numbers being reported since 1920 when the convention report gave 4,078,740 for that year against 3,906,528 for 1921, 3,195,635 for 1922 and 2,926,468 for 1923, a loss of 1,152,272 members in the period. It was estimated that 60,000 more dropped out last year. Apparently, this does not greatly worry its officialdom, their sinecures still being secure, and the successor to Gompers, William Green, treasurer of the Mine Workers, says he intends continuing the fossilized policy. Green has been in the Ohio legislature as a standpatter, so he is thoroughly qualified.

There is a "spirit of righteousness" in nearly all of these craft union leaders that was overwhelming in Gompers. Five years ago he appeared before the Boston Chamber of Commerce. Mellowed by good fellowship and other things, he excogitated with the deep feeling such an occasion warranted:

**It has been my pleasure to work with the American labor movement all my life from my young boyhood up to this hour, and I can recall with the greatest satisfaction its consistent, progressive, liberty-loving, patriotic course. When I shall have done my work, whatever it may be, if the world will remember me for five minutes after I am gone and say "He tried to be of service to his fellows in life" I shall be content.**

Wherefore he was so remembered long enough for them to lay his dead body in Sleepy Hollow where rest the ashes of various of the fellows he tried to serve, not the least of whom was a donor of libraries and the author of the Homestead Massacre.

**BARTER OF FLESH, by Mary Hope, a colorful scene in the lives of a little Italian family harnessed to our drab machine dictatorship is a story that you'll remember.**

**CIVILIZATION IN EASTERN KENTUCKY, by Alonzo Walters, is a gripping word picture of the effects of coal operations on the populace of a picturesque region. It will hold your interest.**

# What Ails California?

By ROBERT WHITAKER

II

**IT is easy enough to rave about California,—or to rail at her. There has been much of the former, deliberately promoted by the swarms of realty sharks who have fattened on the suckers they have attracted to these waters, and on a host of others who could hardly be described as suckers, but whose cravings for a comfortable climate have proven the opportunity of the land and home exploiters here. The annals of this particular form of modern piracy as they have been written in innumerable tragedies of disappointment and disaster in California there is no space here to emphasize or detail.**

**That there should be some swing toward the dispraise of California now is not to be reckoned strange. The note of criticism is by no means new. Back in the Fifties of the last century, when California was in the first flush of its world reputation, that curious American author, Hinton Rowan Helper, the author of a book on his native southland almost as famous and as fiercely acclaimed and hated as "Uncle Tom's Cabin," published a volume on California entitled, "The Land of Gold," which "knocked" the Golden State worse than anything that has been written since. The book seems to have had little effect, and is almost forgotten now, as is the author, despite his later sensational success with "The Impending Crisis of the South," referred to above. The California State Library in Sacramento has a copy of it, but elsewhere I have never laid my eyes on it, though it makes interesting reading now. Helper traveled quite extensively in California and thought it about the most unpromising state in the Union from the viewpoint of permanent development and population. He had none of the gift of sarcasm that Mencken has, nor did he deal with the "moronism" of the people here, that term having neither form nor standing then. But California survived his attack as it seems likely to survive the criticisms of our day.**

The raving and the railing, either for or against California, are apt to be more superficial than studious. And even when studied criticism of the state is applied it is likely to deal with detail, incident and statistics rather than with the fundamental issues which are involved in the development of this great western commonwealth. There are not many Californians, and there are few Americans outside of California, who understand why California is what it is today, or the directions in which the main currents of social evolution are moving here. The failure to understand California is part of our general failure to understand the America of the present age.

Two quite simple, or at least quite undeniable facts, are the keys to real understanding of the California of our time. The first is the fact that California is the Empire State of the Pacific side of the United States. The second is the fact that this is the twentieth century, and in particular it is the first half of that century. What the second half of the century may have to say, or even the second quarter of the first half, it is perhaps too soon for us to tell. But the **where** and **when** of California are as important to the understanding of the state as it is just now, as these two items are to the understanding of United States' history as a whole. California is **what** she is today because she is **where** she is. California is **what** she is today because she is **when** she is.

Just now it is quite the vogue to explain California, I know, by the size of the mid-western migration here. There is force in the dramatization of Los Angeles as the other end of the road which begins at Gopher Prairie, the western terminus of "Main Street." Sixty and seventy thousand people can be gotten together at an Iowa picnic, or a Minnesota doings. One of my radical friends, usually refers to Aimee Semple McPherson's great "Angelus Temple" as "Moronia Temple." The town itself might well be dubbed "Moron City." Probably nowhere in America is there so large an aggregation of people who represent so little of intellectual and artistic and creative life as do the people of Los Angeles. A casual view of the faces of the crowd here is appalling for the vacuousness which prevails. And this, which manifests itself visibly in the facial vistas of the street, is confirmed by a study of the schools, the churches, the courts and the club life here. **Standardized mediocrity is enthroned in stolid sovereignty here.**

But that is only to say that Los Angeles represents the America which has emphatically come to pass in the imperializing process which has been going on in the United States so swiftly during the last thirty years. That process did not originate in the Pacific, and its strength is not here. But the Pacific is the field in which it has its most obvious exhibit and where its crises are likely to develop and be fought out. The Hawaiian Islands which we took over in 1898 are in the Pacific. The Philippines, in whose waters Admiral Dewey won the first notable sea battle of our American Imperialism, are farther yet into the Pacific. Here is Guam, and here is our Samoan naval outpost. And the Panama Canal itself was built for the sake of giving the United States the greatest foothold of all for the mastery of the Pacific. The American Empire, though it may have its financial capital on Wall Street, and though Pennsylvania may continue to be the "keystone" of its economic arch, is going to be, as it is already, prominently and peculiarly the empire and the epoch of the Pacific.

California, moron as it is in vast masses of its population, whether from the mid-west or elsewhere, is beginning to sense this situation, and the signifi-

cance of it to the Golden State. **Nowhere is there more effective and intelligent organization of the forces of imperialism than on the Pacific Coast.** From Seattle to San Diego the men of Big Business are keenly conscious of the fact that "the star of empire," having swung as far westward as it could, is moving toward what we have long known as "the Far East," which is actually the Far West for us. Asia is the field of most promising exploitation now. And Japan is the most formidable power standing between us and the looting of the vast natural resources and the immeasurable masses of cheap labor yonder beyond the setting sun. Our international policy in California, and our industrial policy at home, are both dominated more and more by this rising vision of Pacific power.

The thing that ails California is the itch for empire. Empire eastward, in the United States, she could hardly expect to seize as against Chicago and New York, and the rest of Atlantic America. But empire westward, toward the islands of the Pacific and the great Asiatic mainland, is manifestly hers, if she can lead the United States in a policy of domination and exploitation there. And this she is doing at a rate which few Americans either inside or outside of California realize unless they are in on the game.

### Why They Hate the I. W. W.

Far apart as may seem to be the ruthless warfare of the patrio-maniacs and the politicians on the Pacific Coast, especially here in California, against the Industrial Workers of the World at home, and against the Japanese abroad, they are manifestations of the same motive power and the same mood. Back of them both is the grasp for empire. The I. W. W. are in the way of this economic imperialism at home. The Japanese are in the way of the same imperialism abroad. And California is the leader in the aggressiveness of the whole imperialistic swing. That swing will tolerate nothing that interferes with the building up of sea mastery, shipping from port to port, inter-state and trans-Pacific commerce.

It will be said that anti-Asiatic feeling manifested itself in California long before the rise of our Pacific power, or the dream of it, in the Chinese sand lot riots of nearly half a century ago. True. But the movement was industrial then, the timidity of labor against Asiatic competition. That fear, surviving yet, is being played upon now to strengthen the present movement against the Japanese. But the anti-Japanese movement is not original with labor. It is much higher up in its beginnings and inspiration. Neither is the fear of the I. W. W. on that has its rootage with the common people. **Popular prejudice against the I .W. W. is press-made, and manufactured for the Chambers of Commerce and their kind. San Pedro is the port of Los Angeles, the key to a Pacific sovereignty for this city and all Southern California. When the I. W. W. touch the shipping, at either San Francisco or San Pedro, they are touching the apple of the capitalist eye in California.** Both Japanese and I. W. W. are stirrers up of trouble in the back country, it is true, in the orchards and vineyards of the big interior valleys. But this would, in itself, have spent its force, as the Chinese agitation did, if there had not been tied up with it a threat to this Pacific imperialism which is growing apace in recent years. California is out to be the king pin in the United States domination of the great western ocean and the vast eastern or western world that lies beyond it. And woe to labor folks who get in the way of this program at home, or the Asiatic nation that seeks to step between us and sovereignty across the seas.

### California's Vengeful Ferocity

Explanations of California's reaction to the I. W. W. on the basis of mental or moral inferiorities or peculiarities are beside the mark, however plausible may be the massing of incidents which seem to confirm them. California folks are after all much as other people are, neither better nor worse, as the country goes. But the California of today is growing not only in population and wealth, it is growing in imperial consciousness and organization. And it is this situation, far more serious than the passing hysteria of war, or the ebullitions of personal and mob violence which we have to meet. The epidemic of world dominion which is sweeping all America manifests itself here in vengeful ferocity toward the common labor folks who have been rallied under the standards of the I. W. W., the migratory workers who are themselves at the farthest remove from imperial moods and ambitions, and manifests itself also in an increasing arrogance and insolence toward the one nation across the sea which seems most likely to interfere with our program there. And beyond this, though there is no space to discuss the matter here, it will be found that our rock-ribbed opposition to Russia is rooted in the same ambition of America to dominate the ancient eastern world in its new movement toward the epoch of the machine.

**THE MARCH PIONEER will present another of Robert Whitaker's valuable articles, "Labor and the American Empire." You must be sure to read the masterly work of this scholarly historian who interprets current and past events in the light of their world-wide economic significance. Dr. Whitaker writes from California where he is editing the Civil Liberties Union journal called "The Open Forum," and is also active in the field work against gagging freedom of speech and press.**

# The Work People's College

## WHERE INDUSTRIAL UNIONISTS ARE EFFICIENTLY EDUCATED

By KRISTEN SVANUM

**IF you followed the advice "mail that coupon to-day" for some time ago;—if you are sitting up nights cudgeling your brains over mail-order courses teaching how to become a "big executive", if you are lying awake nights building air castles on that foundation and muttering in your sleep: "Here is another fifty dollars, Grace, I am making real money now"—In short, if you think that your main chance in life consists in making an attempt to rise out of your class, this article is not very likely to interest you.**

**If, on the other hand, you have arrived at the conclusion that individual attempts by you to improve your economic conditions have only an infinitesimal chance for success, and that the only sure way of improving your conditions is through organized effort together with other members of your class, an article on The Work People's College cannot fail to interest you.**

As most readers of the Industrial Pioncer have arrived at the second conclusion, there is no need of proving the correctness of it here.

The Work People's College is no technical institution. It does not turn out stenographers, bookkeepers, doctors, lawyers, engineers, mechanics, or any other professionals or tradesmen. Its purpose is to give its students knowledge of the structure, aims, methods and philosophy of the I. W. W. and make them able to become more powerful factors in the class struggle.

The majority of the students are members of the I. W. W. and nobody comes there for any other purpose than that mentioned above. The classes are arranged for the purpose and can roughly be divided into three groups: social sciences, organization work and elementary subjects.

Under the heading of social sciences come economics, sociology, and history of the United States. The importance of a clear understanding and knowledge of these three subjects can hardly be overestimated from the organization point of view.

### Curriculum Can't Be Beaten

When you are trying to convince a worker that the I. W. W. is the only organization that has got a practical program worth while, it is not enough to answer his objections by telling him that he is wrong. Such a procedure will usually only irritate him and make him determined not to be convinced, and in that way make it much harder for you.

If you do not know anything about economics, it very difficult for you to answer even such old and exploded objections as: "What is the use of organizing? If we get higher wages they—the capitalists —will only raise the prices and we shall be no better off". Or, "The high wages caused high prices, that is the reason why we have got a panic now. The only way to get better times is by getting prices down to normal again, and that can't be done without cutting wages". If you are well grounded in Marxian economics, such objections are only grist to your mill. If you are not, chances are that either you or the worker you are trying to convince will lose patience.

Besides freeing you from disadvantages of that kind, to judge intelligently on any industrial problem, it is necessary to have more than a superficial knowledge of the material basis of society, and the only way of aquiring that is through the study of economics.

The average worker has got a vague idea that human institutions have changed, but he often believes that they are no longer subject to such change. A study of sociology will pretty soon explode such beliefs. After having traced the changes of society from primitive communism, through chattel slavery and serfdom, to wage slavery, it is rather easy to see that forces are existing to-day that are going to do away with wage slavery, and to sec that these forces are economic and can only be given full play when united in an economic organization—in a union of the working class.

The course in history of the United States is giving special application to the principles arrived at in sociology. At the end of the course the origin of the I. W. W. is described, showing how it grew out of American conditions, and how it has become the natural fighting organization of the American working class.

Under the heading of organization work, three classes are conducted: organization bookkeeping, organization work proper, and industrial survey.

The course in organization bookkeeping covers the field from filling out a job delegate report to keeping the books in the general office; explaining such things as duties of auditing committees, preparing financial statements, etc.

In organization work proper the functions of job delegates, traveling delegates, G. O. C. members and secretaries are described. Parliamentary procedure is taught with special reference to I. W. W. customs and rules at job meetings, branch meetings, committee meetings, conventions, conferences, etc. In the same class the I. W. W. preamble and constitution are analyzed, and many organization and administration problems are examined.

The course in industrial survey is teaching the students how to use statistical handbooks, tables,

etc., to compare results gained through them with their own and their fellow worker's observations on the job, and in that way produce a clear picture of general conditions prevailing in the industry in question.

The elementary subjects cover English and mathematics and are like most other subjects graded, so that the students can study in groups where all have approximately the same knowledge of the subject and the same capacity for studying it.

The advanced grades in the English classes are studying public speaking and labor journalism, not for the purpose of developing into professional soap-boxers and writers, but so that they will be able to give an intelligent account of their ideas, whether it be on the platform or in print.

### Costs and Accommodations

The students are living in the college that can house 65 of them. At the present every room is filled; but as arrangements have been made to furnish rooms in the neighboring houses the college is able to accommodate 200 students. The charge is in either case $39.00 a month for tuition, room and board.

In addition to the regular classes two open forums are conducted every week, where subjects of interest to the labor movement in general and the I. W. W. in particular are discussed. One of the students starts the discussion with an opening speech limited to 40 minutes. After he has answered questions from the audience for 30 minutes, the floor is thrown open for discussion for another 30 minutes, and the speaker has 20 minutes for rebuttal.

Saturday and Sunday there are no classes; these days give the student an opportunity to rest up or, if he so prefers, to study in his room. Every Friday night there is a business meeting where the affairs of the college are decided.

Friday night there is a dance in the college. Besides that, the students have this year already had two entertainments, both of them very successful. The students do not need to go outside the college for recreation or to have any big expenditures for that purpose.

There are a gymnasium and shower baths in the college, and all the implements that are supposed to be connected with a gymnasium. The college is located at Spirit Lake. If you want to go skating, a couple of minutes' walk will bring you to the skating rink. In that way the students are able to take care of their health with a minimum expenditure of time and energy. It goes without saying that where 70 Wobblies are together the time is passing fast, too fast.

The term starts November 15 and ends April 15. Most of the students arrive and depart on these two dates. Only a few who have to leave—on account of financial circumstances—do not stay the full term. The seven months between April and November enable many of the students to raise the necessary winter stake and to return term after term and in that way gain a solid and systematic education.

### Students Make Better I. W. W.'s.

The value of the college to the I. W. W. can hardly be exaggerated. Every student is, after he leaves the college, much better equipped to do "his bit" in the class struggle, than he was before. Quite a few of the students went, when they left the college, right to California. One of them, John Bruns, is in St. Quentin now and will, like all of the class war prisoners, be glad to receive letters from his fellow workers on the outside.

Many other students have made a good record after leaving college. Some as G. O. C. members, others as traveling delegates, and nearly all the rest of them as job delegates. And all of them agree that their studies at the college have been a great advantage for them in the organization work and educational activities that they have helped to carry on.

At the rate the attendance is increasing it will soon be necessary to increase the number of teachers. For that reason the college intends to conduct special classes for teachers next term, besides a special summer course for teachers either this year or next year. The college will then be able to turn out its own force of instructors, and whenever a college would be opened up in another locality, it would have at its disposition instructors especially trained for that kind of work.

**Members of the I. W. W. should bear in mind that whatever their previous education is, there will always be courses adapted for them at the college, from the most elementary school subjects to the most advanced studies in economics and sociology. Make up your mind now to attend college next year, and you will easily have the necessary funds—$200.00—by November 15. If you do so, you will not regret it.**

# What Have You Done to Double the Circulation of The Industrial Pioneer?

Did YOU Turn in any SUBS since the Contest Started?

Are YOU ONE of the Fellow Workers who are Helping?

***We are Going to Make 1925 the Banner Year of Our Press!***

***Read Over These Cash Prizes and GET BUSY***

## CASH PRIZES FOR SUB AGENTS

| | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| 150 | yearly | subs | ..... | $120.00 | plus | 20 | per | cent | Commission |
| 100 | " | " | ..... | 75.00 | " | " | " | " | " |
| 75 | " | " | ..... | 55.00 | " | " | " | " | " |

| 15 | " | " | ..... | 10.00 | " | " | " | " | " |

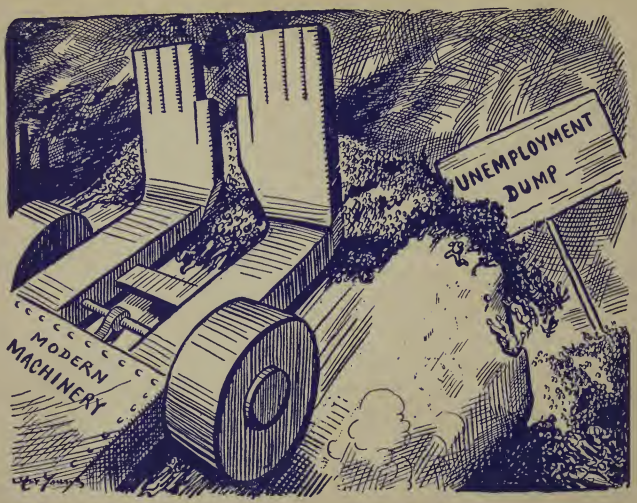
NOTE: Commission of 20 per cent includes the whole price of subscription collected.

## RULES GOVERNING CONTEST

**Contest ends Feb. 1, 1925. To the Sub-Agents Turning In the Highest Number of Subscriptions Over 150 an Additional Prize of $25.00 Will Be Paid.**

In case of a tie for the highest number of subscriptions among one or more contestants, each one will receive the prize of $25.00.

Only subscriptions accompanied by payment will be credited to Sub-Agents. Sub-Agents will not be credited with subs from books that are carried by other agents.



New subs must be turned in from week to week.

Subs put in the mails on or before February 1st that do not reach this office before the closing date will be credited to Sub-Agent. Subs will be counted four days after contest closes and winners notified by first mail and in publications.

Six months subs count one-half. Three months subs count one quarter.

## *Unemployment and the Machine*

MILLIONS of workers are out of work. They tramp from one factory to another, from mine to mine and from town to town looking for jobs which are not to be had.

Why are these millions jobless? There are other millions besides themselves who are in dire need of the food, clothing and shelter that are produced by the labor of the working class. But the factories are closed, or running with only a part of their equipment and labor complement.

Why is this condition present?

In his new pamphlet—Unemployment and the Machine—J. A. MacDonald has handled the problem in a very superior manner, and one that is clear and trenchant. All who have read the manuscript are agreed that it is the best work of its kind thus far contributed to I. W. W. literature.

We expect it to be well received especially at a time when the workers' minds are compelled to think of unemployment by their widespread and personal experience with it. Therefore, this pamphlet, which is now running serially in INDUSTRIAL SOLIDARITY, is to be put in the field in February.

Every worker should read it. Every branch and member should place their orders at once and accompany the orders with cash wherever possible in order to facilitate the work of publication.

The price is to be 10 cents a single copy, with a 40 per cent discount for orders of ten or more.

Send your orders in now to your Industrial Union Headquarters or to P. J. Welinder, General Secretary-Treasurer, 1001 W. Madison St., Chicago, Ill.

# Preamble of the Industrial Workers of the World

THE working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few, who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

WORKERS OF THE WORLD UNIVERSITY LABEL

These conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

# Seamen of the World Unite!

# EDITORIALS

## SOLIDARITY ON THE SEAS

WHEN this magazine comes to your hands our fellow workers of the Marine Transport Workers Industrial Union No. 510 will be convening in New Orleans, to which Gulf port they have invited the unions of seamen of the western hemisphere. The purpose of the International Conference is to promote greater solidarity among the toilers of the sea and on the wharves. Solidarity of this kind means an increased effectiveness of their activities for common advancement. It means that encroachments by the international shipping masters will be resisted not only by the seamen of this country, but by those of all countries shipping between North and South America, and by the seamen of the world when necessary.

Approaching the seamen of Latin-American countries first is a sound policy. No structure is built at once, but must be raised little by little, brick by brick, and 510 shows constructive wisdom in seeking the solidarity of all workers of this hemisphere engaged in the marine transport industry. When they have learned to support one another at all times, especially in strikes, a firm basis will have been laid for the unity of all workers in this industry throughout the world.

Recent revolutionary labor-displacing inventions for ship propulsion demand powerful organization of seamen for self-preservation, whose first aim must be the shortening of working hours. 510's organization work, just as all organization work, will advance with surer strides, will win the support of a widening number of wage slaves, and hold this support in proportion to the examples we can show them of success due to our plan of action, than merely by propounding theories. It is, therefore, an encouraging sign, this international conference, from which great activities are possible for the upbuilding of this strategically important industrial union.

## STEINMETZ

LAST year Charles P. Steinmetz died. He was a scientist of rare ability, being employed by the General Electric Company at Schenectady, N. Y., where he acted as Chief Consulting Engineer. He established an enviable record in the field of electrical engineering by his numerous discoveries and inventions.

Being a great engineer, Steinmetz understood, as do many less gifted men in this field, that, with all its vaunted efficiency, capitalism is excessively wasteful. Not merely in war times when the premium is upon organized destruction, but through the interims of so-called peace. Bourgeois propaganda emphasizes the waste of strikes. Men like Ford and Gary are shocked by the waste of labor turnover. Competent engineers have estimated that combined strikes, lockouts and labor turnover can not be charged with more than ten per cent of the waste of industry. The great waste is with ordinary capitalist management of the productive machinery.

Steinmetz was also a sociologist, and a revolutionary, knowing that the world's wealth, produced by the mind and strength of workers and technicians is owned and controlled by a plundering, useless, parasitic minority at the expense of its toiling creators. He scoffed at the theory of genius like this, "Any young man can do as well as I have done if he is given the right opportunity".

Steinmetz knew that capitalism denies opportunity to the great mass of the human race. He was a socialist. He supported the I. W. W. press because our goal of working class emancipation was his own goal. Now a memorial has been endowed to him by the company that employed him. It is in the form of permanent scholarships for four students at Union College.

The memorial may seem worthy to the exploiting General Electric Company, because capitalism now secures all advantages from inventions. We have a more basic, social, and incomparably greater educational program, driving straight for working class freedom. The future is for an emancipated human race, a vivid, happy, wholesome, just and great society, where inventions must redound to the common welfare. Such is to be another kind of memorial to all social protestants who have died and lived for a better, a freer world.

## COMMENDABLE PARTIALITY

THE Greer College of Automotive Engineering, Chicago, recently issued a form letter advertising the kinds of human merchandise it is able to supply. This choice paragraph appears therein:

"We have quite a number of handicapped students placed in our school by the United States Veterans Bureau and the Illinois Vocational Bureau —many of them are willing to work for small wages and their meals."

These "handicappel students" are part of the human wreckage that did not stay on Flanders Fields to fatten trench rats. These men, willing to work for the barest subsistence, are some of the boys who were sent with cheers and glory to make Morgan and his kind safe.

However, this sort of favoritism by the good automotive school is commendable, as some of the wrecks may find these low-paid jobs. Our disabled veterans are not being entirely neglected, and it reminds one of the bounteous ruling of the Police Prefect of Paris, who says injured French veterans of the late difference with Wilhelm are not to be apprehended for begging in the streets.

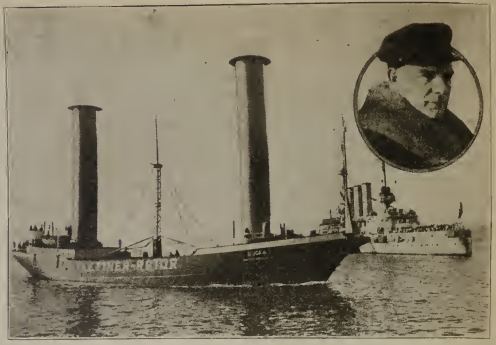
# Revolution in the Marine Industry

By T. P. SULLIVAN

The Leviathan: World's Largest Ship 59,956 Gross Tonnage.

WHILE glancing through the pages of a large metropolitan daily, my attention was arrested by an article under the heading of "News of the Mercantile Marine." The article in question was a description of a large ocean liner that had sailed from the Port of New York with its cargo of human parasites who were going abroad for their periodical visit to the shrines of debauchery and mammon in the gay capitals of Continental Europe. The "Astorbilts" and many of their stripe were present when this huge ocean greyhound left its moorings and turned its nose towards the open sea. The slaves in the stoke hole were not mentioned by this reporter in his article and neither were the rest of the crew, as they were unimportant, and who would think of associating the name of a common fireman or sailor with that of an "Astorbilt"?

Times have changed in the means and methods of production and distribution, but still slavery exists, even in our so-called "advanced" civilization, with its machine process and labor-saving devices, which react to the comfort and security of a few who perform no useful function in society and reap the material gain of the brains of genius and initiative, while on the other hand the toilers who make this wonderful, and almost seemingly impossible progress possible are ground down still further with every new invention and improvement, through the lack of organization on the industrial field.



### Wind and Wood to Steam and Steel

From the time when the first savage burned out the inside of a tree into a canoe to the beginning of the century of the Industrial Revolution, water transportation had developed the wooden ship, depending on the winds and tides, weathering the storms of Tierra del Fuego and the Cape of Good Hope, instead of stopping the trans-oceanic voyages around the great southern continents through the short-cuts of Panama and Suez. Then, less than a hundred years ago, the hand of LABOR, armed with the machine, took hold of this means of transportation. Now ocean greyhounds, under the tireless urge of steam, electricity, gasoline or petroleum, carry passengers and crew into the teeth of the wind, while from their squat stacks belches smoke in victorious defiance of the elements on all the seas of the world.

**A new invention has lately been perfected that threatens to do away with all artificial propulsion, and is known as the Flettner Rotor Sails, named after the inventor, a German, by the name of Anton Flettner, who took his idea from the aerial field, on the positive and negative pressure that forces a plane to descend and ascend.** In order to understand the principle upon which the Flettner Motor Sail acts it is necessary briefly to describe the Flettner aeroplane rudder and the Flettner ship's rudder.

Both of these were the incentives to the development of the new Flettner rotor sail which has aroused the curiosity and interest of seafaring men the world over.

The action which takes place when a body is either subject to stream lines, or moves through these, is probably as much unknown as the causes of electricity. When an aeroplane speeds through the air, it was formerly believed that the air pressure created against the lower surface of the plane forced the plane upwards. Investigations however have proven that the negative pressure existing on the upper side of the plane had just as much to do with the lifting of the mass as the positive pressure on the lower side. In other words, it was assumed that the lifting capacity of a plane depended just as much on the negative pressure as on the positive one. A plane is really sucked upward more than forced by the air pressure below.

Sails Like Giant Stacks, and Anton Flettner (insert) The Inventor.

The size and capacity of aeroplanes have increased in the last few years, and the steering of these "Giants of the Clouds" has become more difficult. This was the chief incentive toward the development of the Flettner rudder. The inventor conceived the idea of utilizing the difference in pressure to steer the plane, instead of forcing the rudder against the air current he attached a small fin or auxiliary rudder, to the rudder on the after-edge. This auxiliary, when forced against the air current, creates a positive pressure on one side and a negative pressure on the other side. In brief, Flettner steered the rudder itself and the rudder steered the plane.

### Aerodynamics Suggests Invention

After the war the idea of utilizing the difference in pressure for steering aeroplanes was carried out on ship rudders. A considerable amount of energy has to be developed in overcoming the pressure against the rudder in order to steer large ocean-going steamers, and this is the cause of outfitting large ships with expensive steering engines, developing in some cases one hundred horse-power or more. By fitting an auxiliary rudder in the after edge of the main rudder, Flettner obtained the same results in water as in air. **The area of the auxiliary rudder is about one-twelfth that of the main.** It is obvious that the power required for operating the former is a minimum compared with that which is used when turning the latter. **Flettner's auxiliary rudder may therefore be operated by hand on ships up to eight thousand tonnage.**

Anton Flettner was experimenting, using the idea of his auxiliary rudder in connection with the sails. In other words, he looked at the sail as a body moving through stream lines, and nothing would, therefore, be more natural than operating sails, for instance, metal sails, by means of this pressure difference, and thereby eliminate a considerable amount of the running rigging as well as making the handling easier and simpler. It was while investigating the possibility for such a sail ship that Flettner conceived this idea—the rotor sail.

The following law has been recognized in both aerodynamics and hydrodynamics: wherever a body is moving through stream lines, be it the bow of a dirigible, an aeroplane plane, a turbine blade or a rudder, a section is formed where the positive pressure goes over into the negative pressure. Or, to put it this way: a section which disturbs the path of stream lines and absorbs a considerable amount of energy. This law is called the "Magnus Law," not to be confused with Magnus low in thermo-electricity.

The above explanation of the "Magnus Law" is somewhat complicated and must not be taken as being scientifically and technically correct, but, nevertheless, it illustrates the conception involved when explaining the rotor sail, and also the ordinary one. We know that the latter is placed at an angle with respect to the direction of the wind, so as to obtain the greatest possible pressure through the contraction of the stream lines. The disturbance, however, created by the sail in the direction of the path of the air, could only be prevented by making the sail rotable. Flettner did this. In order to eliminate every energy absorbing section caused by the negative and positive pressure, he realized that it was necessary to transfer the sail into a rotating body. It was easy to prevent this resistance by

simply "revolving it out" or in other words removing the obstruction. The component of the wind forces will then be at 90 degrees to the direction of this, and it is this component which affects the driving power of the Flettner sailless ship.

The Flettner sailless ship has two funnel-like masts about sixty feet high and nine feet in diameter, smooth and built up of steel sheets. **The power developed by these masts is said to be fifteen times as great as that which would be obtained from a sail of the same height and width, equivalent to the diameter. The results obtained with the rotor ship Buckau of Kiel, Germany, have been the cause of several prominent shipowners placing contracts for installation of this new sail on auxiliary vessels. The Hamburg-American Line has ordered ten vessels to be so equipped.**

### Will Reduce Cost of Operation

It is obvious that driving power like this will reduce the cost of operation considerably and also cut the amount of labor needed at present to man ships, in some cases up to sixty per cent, and it is very much possible that the near future will see the rotor-sail-driven ship invading the trade routes where trade winds are favorable and economy of vital importance. It is a well known fact that it took the Diesel-engine-driven ship to compete with the sail ship in the trade with Australia, but if the future holds what it promises, auxiliary rotor sail ships will possibly dominate the long trade routes in time to come.

It must be borne in mind that the Flettner rotor sails are revolved by means of a small auxiliary engine and not by the wind. It is the action of the wind on the revolving cylinder which is translated into energy movement for the vessel. The two rotor sails each being sixty feet high by nine feet in diameter, constitute an energy development surface equivalent to that which would be afforded by a sailing vessel having 8100 square feet of canvas stretched on its masts. The Flettner rotor masts extend through the deck to the keel of the vessel where they are properly secured by bearings.

**When this ship is perfected to the extent intended seamen will be as scarce aboard it as broncho-busters on the high seas.** It is less than one hundred years ago since the first steamship crossed the Atlantic, yet today ocean warehouses ply the channels of trade, equipped with all the labor-saving accessories of steam, electricity and hydraulics, undreamed of one hundred years ago. Lighthouses of concrete flash their beacons while machines tell them their location as unerringly as the landsman can tell where he is by the street signs. **Recently ships have sailed around the world with no helmsman at the wheel.** Steering these ships was one mightier than any quartermaster, with hands that are tireless and eyes that are unblinking—electricity. Sailors call this new machine the "Metal Mike," the fading phantom—a stern reality, it takes the place of human hand and

brain—but it could well be named "Industrial Revolution."

One hundred years ago ships were made of wood. "Iron does not float" was the popular conception in those days. Now ships are of iron and steel, with a consequent decrease of weight for their tonnage of one-third. At the present time the United States is planning a number of ships much larger than any that have ever appeared on the ocean. **Those ships are to have a capacity of 70,000 tons, with a speed of thirty knots. They will leave New York on Wednesday and arrive in Southampton, England, on Monday. They will be built like palatial hotels, with a bath in each stateroom. There will be suites with two bedrooms, a sitting room, dining room, a private veranda, two bathrooms and two trunkrooms. The specifications of the crews' quarters are not made known, but one who is familiar with the sea knows that the more space and comfort allotted to the parasites who occupy these suites, the less there is for the crew. In fact, on the ships like the S. S. America, one hundred members of the crew are crowded together in the same space as one of the parasites who happens to occupy a suite on this ship.**

One hundred years ago man crept and crawled on the face of the earth, and ventured on the waters not as master but as the servant of the elements. Now he speeds over the face of the earth and dominates the ocean. The birds have been forced to grant him the supremacy of the air; the fishes the supremacy of the waters, yet it was only a hundred years ago that the school board of a little town in Ohio was asked for the use of the schoolhouse to debate the question as to whether railroads and telegraphs were necessary —both of which as yet had existed only in the realm of thought.

The same ignorance and skepticism that existed a hundred years ago still exists and there are many

(Continued on page 19.)

# America's Triumphant Slavery

By JOHN A. GAHAN

**ON the opposite page is reprinted an advertisement that at this date in our blessed era of unrestricted bourgeois light may seem unique. My assurance is given that there was nothing extraordinary about its original appearance in the year of grace 1855 and the thriving commonwealth of Tennessee. It refers to a firm whose honorable trade was in the commodity of black human work beasts. But America did not always draw a color line in the bartering of slaves.**

**Indeed, the white resident today who belongs to the Kiwanis, and whose wife is in the social swim, should be a trifle wary about pluming himself on his strain from the free loins of the dominant Nordic, if his ancestors also lived on these bounteous shores. It is commonly known that chattel slavery of blacks prevailed extensively in the South until the Civil War. It is not commonly known that white slavery flourished until long after the United States had occupied its high position among the nations, and much credence had been given to its self-styled claim to being "The land of the free, and the home of the brave." White indentured servants, held for sale, received quite as humiliating, dehumanizing treatment as blacks bartered as chattels.**

There is many a pushing, piggish, proud Rotarian, with all the cheap snobbery of the parvenu, whose lineage runs straight back to such enslaved whites chained by their necks in rows, driven from town to town for exhibition, lodged worse than ill-kept swine in the pristine hospitality of American jails, and sold at auction from the block. That's how the country got its start. We don't think such a genealogical tree anything to be ashamed of, but the hundred-percenter probably would.

### Populating America

It happened this way: some of these whites were sold into service for periods of seven or more years on the assumption that their service was legitimate recompense for the cost of their passage from Europe. Others were convicts who elected to be exiled in bondage in preference to continued incarceration or death. How easy it was to become a convict in those days may be judged from the fact that 18th Century England held 168 crimes punishable by death. In this light one sees that being a convict at that time need not carry, from this distance, the moral stigma usually inflicted upon present day convicts. In due course we shall see what prompted such severity in English penal law. At this juncture let us consider the European background leading up to America's discovery, and the industrial system established in the earlier settlements.

Too often are we disposed to attempt interpretation of historical movements and events with an horizon that is restricted. History cannot be understood except by regarding the world as a unit in which every great religious, social, political and industrial activity is reflected to its remotest corners. Those who explain history by the presence of great men would impress us with the idea that Columbus was burning with scientific thirst, and that his noble, impersonal idealism is responsible for the discovery of America! The concept is very romantic, but such teachers leave the student to learn elsewhere why Ericson's explorations along the Atlantic coast of upper North America five centuries earlier resulted in no European settlement.

Columbus did have a scientific spirit. His life as a sailor stimulated his excellent mind to geographical speculation, not uninfluenced by watching the stars upon which, just before his time, seamen relied. The mariner's compass was invented and they dared to venture farther out to sea. Still, Columbus' speculations were not rare, though admittedly unusual, nor were they peculiar to his age, learned men having pondered over the mysteries for centuries. Six hundred years before Christ Pythagoras, a Greek philosopher, held that the earth was a sphere, and theorized concerning its astronomical relations. Copernicus, a Prussian contemporary of the great Italian discoverer, published similar opinions, which were contrary to those of the church. However, he issued his work so late in life that he was permitted to die in bed.

Galileo came to the scene later on, popularizing the same notions, which, owing to their inevitable conflict with biblical mythology (the story of Joshua commanding the sun to stand still), got him into trouble from which he extricated a whole skin by repenting in genuflection at the feet of a Pope: "I abjure, hate and detest the heresy of the motion of the earth." Bruno, too, persisted in treading this hot trail of reawakening science, arriving at the stake in 1600 for his "heresy."

Columbus was more adventurous than abstract, avoiding heterodox heliocentric connotations, sticking to his geography, and capitalizing the forces in his favor. Yet even what he said about the rotundity of the earth would have been dangerous a century earlier, but circumstances were with the intrepid Italian. Europe's imperialist kings, and an ascending mercantile class **needed** what he promised—a new way to India, from whose riches they had been cut off when the Crescent of Moslam rose above St. Sofia at Constantinople in 1453.

Instead of burning him they tolerated his seven-years pilgrimage from court to court seeking financial and political patronage for the westward venture across an unknown, uncharted sea. Having just completed the Moorish expulsion in January, 1492, Spain was on the crest of enthusiastic frenzy. Columbus did not fail. He won his opportunity by dangling alluring tales of the greater monarchical glory to be gained by his voyage.

A word about his personal thrift and foresight is not amiss. He was not so thoroughly scientific as to neglect making provision for his own share of whatever material wealth resulted, and he diligently wrought to insure a happy outcome by sending back to Spain in 1494 five hundred Indians to be sold as slaves and "converted," suggesting that the money derived should be used to buy cattle needed in the development of the islands he had inadvertently discovered, which were called Hispaniola. Bickerings engendered on the score of title to the spoils eventually landed him in prison, where he died.

Peopling of the new world was divided mainly into two groups — avaricious adventurers speaking Romance languages, Spanish, Portuguese and French on the one hand, and Anglo-Saxon refugees and term-bound laborers on the other. With those of the former group we are at first interested.

Spaniards enslaved great numbers of aborigines in South America and the West Indies, the civilization destroyed in the former being culturally superior to that of the conquerors. History unfolds a terrible indictment against these christianizing conquistadors who, wherever they ventured, were ambidextrous with sword and crucifix, carrying their Dominicans and Jesuits with them to save the Indians' souls while their bodies were damned in murderous slavery. In the West Indian gold mines and sugar fields the superior race had prospered so well that by 1520—only 28 years after Columbus landed at San Salvador—the Indians had been decimated as if by a pestilence, which would have been more mercifully swift, and to continue this happy, golden era negroes were imported.

Columbus lived in the Age of Discovery. America was found as part of the world process of discovery. Prince Henry the Navigator had his own ships sailing along the African coast on the Atlantic. In 1442 one of his captains exchanged some Moorish prisoners for a number of black slaves and some gold. The traffic spread and was well established when need for slaves became great after the West Indian natives had been wiped out.

Other voyages that attempted to reach India around Cape Good Hope chanced upon other sources of slave supply. North of the equator, Western Africa extends much farther west than the coast south of the equator, and here is situated the Gulf of Guinea, whose waters wash the Gold Coast and the Slave Coast. De Gama thought he had reached a passage eastward to India in this gulf, not knowing the great length and extent of the Dark Continent. The versatility of these explorers is wonderful to contemplate. They would not return empty handed. They took slaves. India was so far off anyhow, and trading in blacks a lucrative profession.

Ships from Spain, Holland, Portugal, England and France thereafter forgot all about India and stopped along this promising coast, and later at Madagascar, to load their holds with black freight. By the time France got well into the game the West Indies had a slave population of over a million. French St. Domingo had half a million slaves in 1791, with a ruling population of 30,000 whites.

English royalists fleeing from the Cromwellian Revolution of 1641 had set up in the slave business as planters in the Barbadoes. They prospered and required territorial expansion. England warred on Spain in 1655, affording these gentlemen the patriotic opportunity to assist in the capture of Jamaica, where they spread their system. John Colleton, a Barbadian, and some followers had been given a charter by the English king many years before—1633—to found a settlement in Carolina on the continent. This was put into execution in 1670 when Charleston was founded. Slavery was advancing. Let us now observe Virginia, which had preceded Carolina in foundation.

When Virginia was founded **plantation** meant what **colony** now means. The London Company owned the Jamestown settlement. But a more intimate connection inhered between company and settlement than is now signified between mother country and colony. To illustrate: the company owned the land and the equipment. It held property rights to the labor of all settlers sent over by it. It supplied taskmasters, and provided food and clothing for the workers from its own magazine. Therefore, it owned the product. The plantation was of purely industrial character rather than of the political nature of the colony.

### Virginia Buys Black Slaves

In 1620 three important events took place in Jamestown. The London Company's charter was dissolved, to begin with. The settlement had grown out of the company's hands, and the population was divided between wealthy planters and their bondsmen, and poor whites. But one day the sails of a ship were seen nearing the settlement. This was not an everyday occurrence, to be sure, but it did not arouse very great excitement. The ship was a Dutch slaver. It unloaded its blacks and auctioned them off to eager purchasers. With all its harsh laws England was not supplying the planters with enough white slave labor, and the enterprising Dutchmen came to their aid. This was the first time that black slaves had been brought to continental North America and sold. To make life rosy all around, another ship arrived with a cargo of white women who were also auctioned off to the prurient buyers of wives. The English damsels each netted their sellers from 120 to 160 pounds of tobacco, which was legal tender there, and was worth about three shillings a pound.

Ten years afterwards clearings on the York, Rappahannock and Potomac rivers furnished another impetus to tobacco cultivation. In the meantime large planters were monopolizing the tidewater peninsulas. Better system and large scale marketing made this result inevitable. The small holders, poor whites, were crushed out. But there was still the untrod wilderness to which they emigrated with emancipated redemptioners to find an existence. The land was new and fresh, and the ingress bore important consequences, among the most immediate being that the pioneers served as a "buffer" between hostile Indians and the rich planters.

We know that the condition of the white slaves was extremely onerous because so many of them ran off, braving the forest, the natives and the risk of possible capture, which meant torture. Newspapers carried, side by side, as time passed, advertisements of fugitive whites and blacks. Descriptions of these frequently mentioned scars caused by scourgings and brands seared into the flesh, just as cattle ranchers mark their stock for identification.

With the swallowing up of small holdings by large plantations ground was being laid for an institution destined to grip the colonies and hold sway over the United States for the first half century of its Union, and then to mightily shake this Union. The farmer of small means had long ago found what his Southern fellow agriculturist had yet to learn—that it was more suitable to his interest to hire intermittent wage labor than to hold slaves or long-term bonded laborers. That accounts for the "moral repugnance" against slavery which spread in the North. That, and the advancing bourgeoisie. Before attacking this problem more fully, we can profitably view the development of chattel slavery in the South.

It was found in 1694 that Carolina's marshy lowlands favored extensive rice cultivation. The planters spent most of the money gained from rice on new slaves to grow a still greater crop, thus adding to their wealth on a progressively expanding scale. It reminds one of the modern capitalist using profits extracted from wage laborers to increase his operations by employing an ever-growing force of wage slaves, thereby steadily multiplying his wealth and the power it confers.

Indigo became a staple product in Carolina in 1745, doubling the resources of the planters and intensifying the slave system. Virginia was still going along on the importance of tobacco, and likewise Maryland. In the latter colonies at this time average plantations employed from five to ten workers, some of whom might be white redemptioners. Carolina had an average per plantation of thirty, nearly all of them being slaves.

### The Effect of the Cotton Gin

Five years later Georgia began to clamor for more slaves to produce rice and indigo, and Sea-island cotton was introduced there in 1786. It seemed that many forces conspired to fasten the prehensile claws of the slave system in the land, but no one at this time could have forseen the tremendous stimulus it received when a few years later upland cotton became "King" as a result of the labor-saving invention of the cotton gin by Eli Whitney in 1793.

New lands were feverishly sought, often violently taken, and large scale slavery pushed westward through Carolina and the Georgia Piedmont until it had dominion of the South as far west as Texas and to the north as far as the southeastern end of Kentucky. A year later, 1794, planters in Louisiana added another product to the list profitably raised by slaves—sugar cane.

# Labor and the American Empire

By ROBERT WHITAKER

**It has been our pleasure and good fortune on many occasions to have gained the keen and scholarly support, both in press and on the lecture platform, of Dr. Whitaker in the movement of working class education along industrial union lines. He should write a book—no one could do it better—called "An Outline of American Labor History". At this time he is beginning for INDUSTRIAL PIONEER a consideration of the workers of America in relation to the country's growth and its present imperialism.**

**NOT one workingman in a thousand in these United States of ours understands the part which labor has played, and has not played, in American history. If he thinks of the matter at all he passes over without knowledge and understanding the phases where labor has had most to do with the making of America, or our part of America, and he attaches an importance and success to certain modern manifestations of labor's activities far beyond what is their due.**

**In general, writers on American labor history will tell you that labor took no active part in the shaping of our national affairs until the second or third decade of the nineteenth century, at which time labor organizations in the great city-centers of the east began to make themselves felt. Out of this early labor movement, we are told, came the Common School system of the United States, to which labor points with a pride which is in sorry contrast with the manner in which the common schools have become the bulwarks in our day of the oppression and exploitation of labor. The other chapters of labor's story, as it is commonly told, have to do with the rise of the Knights of Labor, the climax of their struggle with the ruthless might of the Steel Trust, the passing of this more militant form of labor organization, with the contemporary development of the American Federation of Labor, and later of The Industrial Workers of the World. These are the outlines of Labor's History in the United States, as it is conventionally set forth. And on the whole it is a very pitiful story, and gives but a poor impression of the actual part which the workingman has had in making the United States what it is today. The picture is altogether too contracted in size, and its foreground, in the details of the doings of the last century, is too highly colored and altogether too flattering to those who have been leaders in it.**

The real story of American labor is not the story of leaders at all, but of an innumerable company of " millions who, humble and nameless, the straight hard pathway plod," and who to this day, both individually and collectively, remain practically "unhonored and unsung." American labor history in its larger aspects has little or nothing to do with the organized labor movement. It begins centuries before that movement was dreamed of, and it concerns even yet the whole body of labor more than it concerns any particular leadership or organization.

### How the Country Changed Hands

Four times within the past five hundred years the ownership of the lands which are now included within the main body of our national area, known as the United States of America, has changed hands. The ownership was with the Red Man five centuries ago, and had been with him for dozens, scores, and perhaps hundreds of centuries before. The major part of the country which we call ours now passed then into the hands of the Latin powers of Europe, Spain and France. From them it was wrested by the English, who were originally in possession of very small holdings on the Atlantic Coast. From the English it was taken by the people of the colonies themselves, mainly of English stock, but from this time calling themselves rather arrogantly and exclusively the Americans. And then came a struggle among these as to which portion of them was to control the country, those who lived in the chattel-slave belt of the Southern states, or those who occupied the Eastern, Northern, and Western sections of the land. The South lost the reins of power, and the country has been governed ever since in fact from New England, New York, and Pennsylvania, in alliance with the West.

Now in every one of these instances power has passed from one group to the other **on industrial lines.** The Red Man lost America to the White Man, not because of inferior cranial capacity, natural brain power; not because he lacked the makings of moral character, but **because circumstances were against him in the development of industrial technique.** He was just as good a fighter as the white man, but he was behind him in the knowledge and the use of tools. The reasons for this industrial belatedness cannot be more than hinted at here. In part the reasons were climatic, because the New World had no such favorable natural environment for primitive man as the Old World could show. In part the reasons had to do with the lack of domesticated and domesticable animals here. The ox and the cow, the horse, the sheep, the hog, the camel and the ass were missing, and these have had much to do with the making of civilization. A third factor in the backwardness of America during the regime of the red man was the lack of the great cereals,

wheat, and oats, and rye, and barley, and rice. The American aboriginal never got to going on the lines of that industrial ascendancy which Asia and Europe achieved because he was in want of the necessary natural and animal assistance. But the fact to be stressed here is that **it was his failure as a workingman which lost him the control of America.** Had he known tools he would have known sovereignty, of which he could not have been dispossessed as he was.

### Workers Built America

The same in substance is true of the failure of the Spanish and the French to hold their own in America, as against the English. The Latin races came as conquerors, as adventurers, as trappers, traders, missionaries. Their records compare favorably with any, on the side of heroism, self-sacrifice, devotion. But the English who came, and prevailed against them, were **workingmen.** They were farmers and artisans. Why this was so there is no space here to tell. But it was so, and English success in holding the land was **industrial success.**

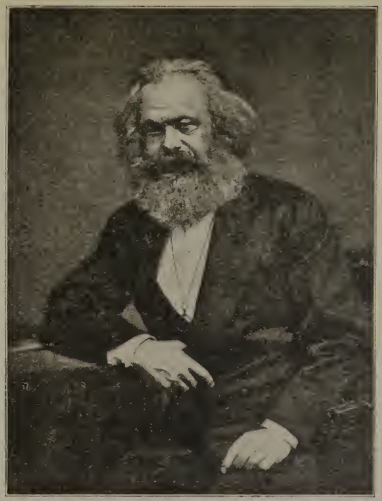
So also in the case of the colonists, it was the workers who had made the land who took the land. They took it for their masters in America as against their masters in England, but nevertheless it was the triumph of an **industrial order on this side of the sea,** as against an **industrial order on the other side of the sea.**

And it was so with the struggle between the Northern States and the Southern States. The Civil War was not, as many people imagine, a great philanthropic upheaval on behalf of the black man. The North cared very little more for the black man, if any, than did the South. It was a struggle between **two types of labor,** as to which of them was to rule in America, and **the more advanced type, industrially, won.** The common people, black or white, got little advantage out of it, but none the less they were the makers both of the South and the North, and it was they, not just on the field of battle, but far more in the field of labor, who decided the issue.

Before ever there was thought of organized labor in America the empire of America passed from the Red Man to the White Man because the White Man was the better **industrial** man. And while the organization of labor in its own defense even on the most moderate lines still slept in the womb of the future the Spaniard and the Frenchman in America lost the empire of that which is now the United States to the Englishman, because the Englishman was the better equipped and the more effective **industrial** man. So did the English governing class lose the empire of their own colonies here a little later because **industrial strength** was on the side of the colonists instead of on the side of the absentee lords of England, that is **industrial possession** here. It was a triumph of labor again. And finally it was a triumph of the workingman of the North against the workingman of the South that determined the making of modern America. **Always the empire of America has inclined to the side where the industrial emphasis was at its highest and best.**

And all this happened, let me repeat, before there was a labor union of any kind here, or **anywhere else in the world. All history is labor history.** It has been written as if kings and lords, and priests and monks, and scholars and politicians were the makers of world history. But they have been mainly **mere figure-heads for what was going on in the industrial field.** They have held their own, or lost it, as they have been able to hold the advantage at the point of industrial equipment and product. **The real makers of history have been the tool-makers and the tool-users, that is, the workingmen and the working women of the earth.**

And this has been peculiarly emphasized in the story of America. It was not kings who came here. Neither did the priests who came here hold their own, however bravely they wrought, except as they were backed by a more effective body of labor than backed the men of other nations. It was the common people of Europe and Asia and Africa who came here, and who transformed this country into what it is today. Unorganized labor, uneducated labor, unconscious labor one might almost say, it was sheer labor, the industry and skill of the workingman that won America. And they who hold it today hold it by the gift of the industrial machine.



For greater by far than the so-called American Revolution, by which labor here changed English masters for American masters, bigger than the French Revolution and all the other political revolutions of the last one hundred and fifty years, was the INDUSTRIAL REVOLUTION, which has so utterly transformed LABOR POWER in the last century. The United States has grown to its present size mainly in the last dozen decades, since the nineteenth century began. We had then been two hundred years hanging on the fringes of the Atlantic, and living by the bounty of Europe. We were **five million** or less then, and we are more than a **hundred million** now. Why? Are we so much better thinkers than were our fathers of two centuries, or three centuries ago? Are we better characters? Certainly not twenty-fold abler or better than they were, **but more than twenty-fold as efficient with tools.** The Nineteenth Century was for us the IMPERIAL CENTURY **because it was the century in which the workingman increased his** power over nature more than in all the centuries of the past, **the industrial age of all the ages that have ever been.**

And what is the workingman, the American workingman going to do about it today?

(TO BE CONTINUED)

# Our Revolutionary Position

By

FORREST EDWARDS

**A Resume of The Basic Conflicts Of Sociological Opinions From the Ancient Plato to the Moderns. Lester F. Ward and Karl Marx.**

**THE tendency to obscure the class struggle by accepting a philosophy which, at the very most, reflects the interests of the small shopkeepers and professional men—in a word, the middle class —is everywhere apparent. The minds of many well meaning revolutionists have drifted into the middle class channels of thought. They dish out middle class ideology in lieu of working class propaganda, while, at the same time, they are maintaining a revolutionary pose. This sort of misinformation on the part of the so-called revolutionists can lead only to confusion in the revolutionary movement. Much of the internal strife in that movement can be traced to the fact that so many conscientious workers do not fully grasp the revolutionary point of view.**

**In proof of the foregoing remarks, your attention will be called to several well known philosophers, who, the writer thinks, stand out in the world's history as men whose contributions to education are unique: Plato, Aristotle, Roger Bacon, Marx, Buckle and Ward. Their names appear in the order in which they wrote. We should consider each of them from the standpoint of what they thought should be done in order that this world might be a better place in which to live. The writer will present what he believes to be a fair outline of the theories of each. No attempt will be made to go fully into detail in any case. Just a brief sketch, quoted from memory, and in the writer's own language.**

Plato thought that there was something very much wrong with the way the world was run in his time. He saw the wars of conquest, the blundering statesmen and the effects of a cruel social system. He observed the people's ignorance, both in public life and out of it. He said that the way to solve social problems was to begin by building educational institutions. He would have the state promote a system of education that would make it possible for everyone to develop intellectually to the limits of his capacity.

Briefly, his scheme was founded upon the proposition that there were intellectual differences, which under no system could make all men intellectually equal, and, of course, he saw the mental disparities about him. So he proposed that each person should be given the opportunity to attend school, and after completing the elementary grades he should be permitted to enter college. He thought that after a scholar had been given this opportunity and failed to pass the examinations that he should then be required to take up some industrial occupation suitable to his degree of intelligence and capabilities.

He argued that those succeeding in passing their examinations should be promoted to a university of a higher learning still. He realized that many would

fail to pass the examinations and thereby be dropped from the roll of students. He declared that those who did pass the examinations should in turn be permitted to continue their studies until they had mastered all that the most learned professors were able to teach them. After completing their education these few who had run the gauntlet, who had been sifted out of the great masses, should then devote their time to public affairs. They should officer the various departments of state and rule by virtue of intellectual fitness.

In this way Plato struggled hard to prove by argument that which experience had proven impossible. It was his opinon that the social problems could be solved and the people benefited by virtue of being governed by intelligence rather than by ignorance and political intrigue. This scheme of things is what is known as Plato's intellectual oligarchy.

### Philosophy Still Young

Although his scheme presents a glowing picture of what he thinks the world ought to be, yet it does not take into account the fact that even in his own day the class struggle was a bitter and ancient reality. By virtue of his method of proving things by argument, rather than by placing his reliance upon experience, he completely divorced himself from the reality of the economic division in society and hence, although the social division was everywhere apparent he observed it as a matter of necessity. He knew nothing about economic science, for that branch of learning remained for the future. However, had Plato observed the economic division in society, he could have avoided his absurd conclusion. He would have been able to account for the social division, then existing, on the basis of economic division.

In the days of Plato the city of Athens contained a population of about one hundred and sixty thousand people and only thirty thousand souls. Those who dirtied their hands with labor had no souls. Slavery then as now formed the basis of the social system. Plato founded his Republic on slavery because he saw in slavery a divine institution. In this "civilized" age there are plenty of men of "authority" who are always ready to defend wage slavery on the same grounds. In fact there is no other defense for it.

Not pretending to review in detail the writings of the ancients, a task to which the writer does not feel equal, we can arrive at an understanding by searching out a few points which seem to have direct bearing on the theme. It is understood, of course that in the days of Plato, 444 B. C., and those of Aristotle, about 345 B. C., the scientific age had not yet begun. Many philosophers were yet to be born, to be educated, to write, to speak and to be burned at the stake before the old barbarian superstitions and methods were to be overcome and subdued by experimental science. The stake, the dungeon and the dagger have always been the most convincing proof of the correctness of the ideas that ruled the old world, just as the tar-and-feather party, the lynching bee and the federal prison are the chief supports upon which the ruling class of our own day depend both for proof of their theories and how much the people are really benefited by the kind services of these rulers.

Aristotle, who was a close friend and associate of Plato, had some notions about how the world ought to be run. While he resisted the communistic tendencies of Plato's Republic, he, like his friend and teacher, thought that the proper form of government was one by a wise aristocracy in which neither wealth nor numbers should be allowed to determine anything. That, so he believed, was the panacea for the social questions, and the best guarantee for exact justice. Like Plato he also believed that slavery must form the basis of the social system of any age. He defended slavery on the grounds that it was perfectly natural and in strict accordance with the divine will. Moreover, he proved by argument that it was right to make war upon, and reduce to slavery those races who were evidently intended by nature to be slaves. But just how any system of slavery, whether it be the chattel slavery of old, or the wage slavery of the 20th Century, can be reconciled to that word "justice" is hard, at least for a wage slave, to understand.

But Aristotle was very much opposed to Plato's notions about the emancipation of women, arguing that women were just simply "stunted men" fixed by nature in a position of inferiority. Our liberal and socialist friends of this day may, and do, draw on both Plato and Aristotle for much of their philosophy, but on this feminist point they take sides with Plato.

Before we leave the ancient, dead philosophers behind it should be stated that **both of these men used the deductive method of reasoning** which requires that the mind proceed from some universal proposition, i. e. it assumes some such universal concept as God to be a fact and that other things, such as slavery, are in accordance with the divine will. That was the old way of reasoning, but in our own day there are plenty of these Aristotelian fossils instructing the students in the universities.

### Inductive Reasoning Proclaimed

In the 13th Century Roger Bacon appeared on the world's stage, and he set out to change this method of reasoning that had so long held sway. He said the method of proving things by argument could not prove anything, in fact. Further: that while argument was no doubt necessary to the work of the scientist, it could never be more than just an aid to him. **Experience** was, according to this profound thinker, the only way by which men could arrive at "exact truth." **So he set in motion the experimental method, or in other words the inductive method.** He refused to accept anything as a proven fact simply because some scientific dabbler or philosophic windbag said so.

This determined mental attitude by which he refused to accept the old, and therefore "true", claims of men in authority caused him to find himself in due

time safely locked up in prison. But since the prison experiences of Roger Bacon, the whole system of philosophy has changed. In fact, the claim is made that the age of science dates from Roger Bacon in the middle of the 13th Century.

We must not dwell longer on matters so remote in the history of mankind. It will be much better if the remainder of our space is devoted to the 19th and 20th Centuries. Therefore let us look to the historian Thomas Buckle who wrote the "History of Civilization in England". Buckle was a fellow who had to struggle very hard for his education, most of which he acquired outside of schools and universities. He said that the way to write history was to describe the history of a nation's intellectual development. Buckle was a contemporary of Karl Marx, and Marx had a somewhat different notion about writing history, saying that **the way in which to faithfully record history was to show the history of the economic development of the nation.** On this basis he undertook to supply the key that would enable one to understand why people act as they do, and why nations pursue certain courses in their relations to the other nations. But Marx did not stop with merely considering the nation's economic development; he said that we must study the material conditions which include the economic development. Therefore, his key to history is known as the materialistic conception of history.

Buckle declared that human progress was due not to moral agencies, which are stationary, and which balance one another in such a manner that their influence is unfelt over a long period, but to intellectual activity which has been constantly varying and advancing. The actions of individuals are greatly affected by their moral feelings and passions, but these being antagonistic to the emotions and passions of other individuals are balanced by them, so that their effect is in the great average of human affairs nowhere to be seen, and the total actions of mankind, considered as a whole, are left to be regulated by the total knowledge of which mankind is possessed.

### The Class Struggle

That is all very well, but suppose we consider something else that he said, something which forms one of the principles of his history. It is especially interesting to one who keeps in mind that at the same time, and in another country, Marx was working out the formula known to all radicals as the materialistic conception of history. Marx was a communist or socialist and Buckle was not. Buckle said that climate, soil, food and the aspect of nature are the primary causes of intellectual progress—the first three indirectly through the accumulation and distribution of thought, the imagination being stimulated and the understanding subdued when the phenomena of the eternal world are sublime and terrible, the understanding being emboldened and the imagination curbed when these phenomena are small and feeble.

At first thought one would say: "I do not see where there can be any material difference between the Marxian theory and that of Buckle." Yet, if we observe closely in the reading of Buckle's work we are bound to see in Buckle just as we see in Lester F. Ward, great writers as they were, an absence of perception of the class struggle. Marx discovered and embraced it, but these others let it pass them unnoticed, the only struggle that they were able to discern in society being a sort of intellectual struggle.

Many of our modern radicals, pretending to accept Marxism, actually take for their text books such works as "Dynamic Sociology" by Ward, and "The History of Civilization," by Buckle. Then again, it is difficult to notice any material difference in the "intellectual oligarchy" of Plato and Aristotle and that of Ward, and the one to which we may be justified in assuming that Buckle would have subscribed himself.

Intellectual oligarchies are no solution to the economic problem of today any more than they were in the days of Plato. Both of the great works of Ward and Buckle are well worth reading but one must bear in mind the fact that after all they have not offered any new remedies or panacea for social questions. **One must keep in mind the thought that revolutionary philosophy does not emanate from the kind of men who are quite sure that the wage system is all right.** We have altogether too many spokesmen for the revolutionary movement advocating Ward and Buckle, rather than Marx and Engels.

### Marx's Contribution To History

The greatest contribution to history ever made by one man was the materialist conception of Marx. To explain it we quote the language of Frederick Engels in the introduction to the Communist Manifesto where he says:

"In every historical epoch the prevailing mode of economic production and exchange, and the social organization necessarily following from it, form the basis upon which it is built up, and from which alone can be explained the political and intellectual history of that epoch; that consequently the whole history of mankind (since the dissolution of primitive tribal society holding land in common ownership) has been a history of class struggles, a contest between exploiting and exploited, ruling and oppressed classes; that the history of these struggles forms a series of evolution in which, nowadays, a stage has been reached where the exploited and oppressed class—the proletariat—can not attain its emancipation from the sway of the exploiting and ruling class—the bourgeoisie—without at the same time, and once and for all, emancipating society at large from all exploitation, oppression, class distinctions and class struggles."

The space of time between the writing of Plato's Republic and that of the unfinished manuscripts of Marx is a long one when measured by the lifetime of one of us, but when considered in relation to the existence of mankind on this old planet it is

(Continued on Page 42)

The Harbor at Buenos Aires Where the Shanghaiers Plied their Trade Until the M. T. W. Broke It Up.

# How the M. T. W. Laid Bricks in Buenos Aires

By AUSSIE

**THE year 1919 was a black year for the shanghaiers and shipping masters in the ports of the Argentine Republic. A strike of tugboatmen tied up the p ort following "Bloody Week" in Buenos Aires, and that was not settled until all the back pay—due for the time lost while on strike—was paid, and the matter over which the strike arose adjusted to the satisfaction of the men. Hundreds of ships were tied up in port—in fact, you could walk from one side of Docks 2 and 3 to the other across steamers and windjammers lying abreast of each other. On top of this came the formation of the Marine Transport Workers' Union, which almost in a night put an end to the Shanghaiers' era, and compelled skippers to get their men from the Union Hall. The Shanghaiers were quite a resourceful crowd, for there was hardly anything that they would not try once. They tried in the beginning to buy the Union—a novel idea—but, as I said before, they would try anything once. There had been a Union (?) once before that had a short life and a lucrative one for everyone except the seamen.**

Then they tried coercion—and that failing, flapdoodle. They tried forming a "Scandinavian" Union, which died in its birthpangs in the grimy saloon of the "Cape Denmark" in Calle Veintecinco de Mayo. That was a weird union—but often these gentry had rather novel ideas on unions and their functions, if any. The secretary, a grass-eating young Norwegian mate, lasted until someone met him one dark night and unfortunately dropped a brick on his head. The M. T. W. shipped him afterwards—with a hard-case M. T. W. crew.

Down in the Boca, in the boarding house district where the Union was established, became very dangerous country for Big Pete Bengtson, Stockholm Charley and the pot-bellied gentleman from the Cafe Denmark who varied shanghai-ing with procuring. They usually went through in fast automobiles. Business went right down to zero. The skippers had to come to the Union Hall, otherwise the dock workers laid off, the tugboatmen ignored them, the "carreteros" neglected to bring any loads along—and, worst of all, their men on board just wouldn't get out of their bunks. So old time skippers belly-ached and cussed and blew off their heads in the Salisbury Bar about the Union—and then three days before their ships were loaded, trotted along to Calle Gabota and got the men from the Union to make up their crew.

The sharks had Indignation Meetings in the various uptown bars, started to drink coffee and beer, sold their cars, some of them even gave up the peroxide blondes in the Cafe Maipu and took a street car to the Races. For grafting days were over, and robbing seamen of a month's advance, and charging the ships and companies for their services in getting crews was all gone.

But at the end of 1919 an event happened. A Finnish barque—a three-master—the "Loch Linnhe"—wandered into Ibicuy, away up the Rio Plata. Now she was a no-good hooker and her crew kissed their hands to her and beat it for Buenos Aires. At Ibicuy the port-workers had no organization, in fact, about two ships or so a year are all that come in there. For once the shipping masters got a job—the combined forces were put to work finding a batch of 17 scabs to man the scow. They could not get them around the boarding houses, as no boarding house keeper dare let his men go to a non-union ship, but they picked up a bunch of riff raff—God help that mutt-headed Finlander skipper— and they were signed on, and in due course the Noah's Ark and her menagerie beat it for far and away. The Union had no power to stop her.

So that night—it was Saturday—the United Association of Shanghaiers celebrated the portentous event in Kruse's Bar at the "Green Corner," (the corner of Pedro Mendoza and Almirante Brown). That is right opposite the big transporter bridge—and a "bombero" (fire) station. The gentlemen were jubilant. They had shipped a crew—although God knows how far fees went among such a crowd. But maybe they thought that good days were about

to dawn again. So they drank and sang and cheered. And they filled their glasses with curacoa, champagne and schnapps.

The news travels quick around the Boca. The shanghaiers were drunk, singing, hilarious. Something novel for a bunch who could previously have easily qualified for the undertaker's business. A delegate passes along, pauses for a moment, gathers the news and makes hot-foot for the Union Hall.

The secretary heard the news and Ginger Irish Paddy—Oh! the janitor speedily located the delegates and called up the forces from the various hoarding houses. Result: in ten minutes about 70 marine workers, mostly Scandinavians and sailing-ship men. We had a bricked-up copper boiler at the back of the hall—and a wrecking party started in preparing ammunition. Each warrior must have had about 6 half-bricks packed in his overalls. The expeditionary force started cautiously—not to alarm the enemy unnecessarily. They dribbled in fours and fives down the various streets to converge at the "Green Corner" at 8:15 prompt.

Meantime, the booze-fighters were drinking malediction to the Union.

Then like a flash a small army percolated through the nearby side streets and with a yell raced across the street and bang! went a volley of bricks. The heroes of two minutes before sprang for the lavatory—a small and unsavory place—not meant for more than one of them, at the best of times. The Union Army, however, was unwieldly, one party got inside, while a larger party was outside alternately throwing bricks and marble tables and chairs through the space occupied a few seconds before by plate glass. The detachment inside busied itself dragging the now thoroughly sober and frightened shanghaiers out and beating them up, and throwing out the marble tables into the street, again to be returned by the brothers outside. With a crash a large sideboard carrying several hundred pesos' worth of fancy liquors was toppled over. The fun was fast and furious while it lasted. Mr. Pete Frederikson—6 feet in height and with the brain capacity of a South Dock skeeter and a throat like the hippo at the Bronx Zoo, was down on his knees protesting his innocence. Mr. Bengtson, with the celerity of a juggler, had caught three bricks and a broken stein with his head. He was all in, the booze already having acidulated in his stomach.

And then Argentine law—and order arrived! It arrived rather apologetically. A dozen very fat "Bomberos" had waddled across from the fire station, while a few stray "agentes" from Commisario 24 hurried in with their pickle forks. The war was over practically. The Bar of Señor Kruse was wrecked, and then re-wrecked several times—by experts. Bricks were everywhere. One of the attacking force, a Swiss mate, had a tiff with an "agente." He took the latter's pickle fork and broke it over his knee. The fat "bomberos" made several captures—and when the war was over, eleven were arrested.

The police invited the shanghaiers to present complaints, but these gentlemen, probably fearing more retribution, declined to present themselves. However, the eleven were taken to Swinagar Carcel and charged with most everything that was provided by the Penal Code of the Divinely founded Republic of Argentina. While the boys were accumulating a variety of animal companions—for which Argentine prisons have a special reputation—the Union was seeing somebody who had to see somebody who had to hand something to somebody—and so on.

And on a certain day the eleven lined up before the gentleman who dishes out Justice.

"You men have committed a heinous crime. You have assaulted citizens, destroyed property, violated our hospitality—blah, blah and more blah blah (a la Nicholas Murray Butler)—but I understand that there was justification for your action, that the men whom you attacked had insulted your calling and called you foul names. Under the circumstances I am going to deal very leniently with you, and release you on your words that you will behave yourselves in our great country. But I warn you very sternly that should you come before me again that I will give you not less than twenty years of forced labor in the Federal Penitentiary at Ushuaia."

And that evening the old copper at the Union Hall was at work boiling up shirts and underwear to enable eleven to go about their business without any special gymnastics.

And a chastened bunch of bad men kept still tongues in their teeth and kept out of public bars and generally acted like Salvation Army lassies under the strict eye of the Staff Sergeant-Major.

# San Quentin

By HENRY GEORGE WEISS

A lowering pile of whitish gray
Looking with bleak eyes on the bay,
And Tamalpais looking down on it;
A kitchen garden by the shore
And flowers at each cottage door,
Some benches by the road on which to sit.

Such is San Quentin from the roadway seen,
Immortalized by men
Railroaded to the "pen;"
A modern hell-hole framed in emerald green,
Behind whose frowning walls a hundred men
Suffer and starve because they **dare** be men!

Such is San Quentin that you see—
**California's Statue to Liberty!**

# Coal Civilization in Eastern Kentucky

By ALONZO WALTERS

**This article faithfully depicts conditions of coal mining in an important district. It concerns itself chiefly with wages and sanitation, company stores and county governmental corruption in the interests of the coal operators. We are promised another article by the same writer on the pseudo-organizational work of the U. M. W. of A. there. Read this and look to next month's Pioneer for an expose of the president appointed in District 30 by John M. Lewis. You will then see what kind of organization is really needed to win for the miners the common necessaries of life, of which they are now largely deprived.**

DOWN in the heart of the Cumberland mountains, on the banks of the Kentucky river, less than 70 miles from the Virginia line, lies a little mining town of about eight thousand inhabitants. This town is called Hazard. It is in Kentucky and rises in the center of what is known as the Hazard Coal Field. Other mining towns and hundreds of mining "camps" dot the valley of the Kentucky along a distance of 45 miles to the north and 58 miles to the south of Hazard. Thousands of wage slaves toil in the mines that have been opened up in that region since the first railroad line, a branch of the L. & N., was run into that region in 1912, and live with their families in the filthy camps.

Fifteen years ago Hazard had a population of less than one thousand. Fifteen years ago none of the hundreds of mining camps now to be found in the district were there. Fifteen years ago the railroad extended into that region no farther than Jackson, Kentucky, 45 miles north of Hazard. As late as then wage slavery did not exist there. The people—all natives—lived their lives, happy and content in their own quiet, simple way. Their only industries, or occupations, worth speaking of were tilling their small mountain farms for a living which, simple and rude though it would probably seem to most of us, quite satisfied all their tastes and demands,—this, and making the best moonshine liquor that ever kissed the lips of men. For pastime they hunted the small game that abounded in the hillside woodlands, or fished from the Kentucky river or some of the numerous creeks that are its tributaries. The young folks now and then went to "bean shellings," "apple cuttings," or old fashioned country "parties," and the old folks on Sundays went to "preachings." Occasionally, when some of them wanted a little excitement, a feud was started in which some two or more leading families of a community or locality proceeded to kill each other off. They knew nothing of the vices, crimes, filth, labor hells and other blessings of modern civilization, and modern civilization had not yet heard of them, or, at least, was not yet interested in them.

Then suddenly it was discovered that these mountains contained three very rich layers of coal, extending the entire length of that portion of the Kentucky valley, which traverses the mountain region. Then it was that modern civilization, or modern capitalism, which is the same thing, began to develop a very lively interest in this benighted section and its primitive people, and decided to bring to it and them all the above mentioned blessings and many others.

Now let us take a brief glimpse at this region, the Hazard Coal Field, as it has since come to be known. It would be hard to find a more deplorable, a more abominable form of slavery anywhere in the world, or in any age of history than the system of wage slavery that now exists there. Because of the fact that this region is just now in the infancy of its industrial development, and coal mining its only important industry in which wage slaves can find employment, thousands of workers are absolutely at the mercy of the coal barons. They are dependent upon them for jobs; they live in their houses, and they trade at their stores. Hence, it follows that when one of them has incurred the ill-will of his master for any reason he is thrown out with his family upon the road; his credit is cut off, and he is blacklisted throughout the entire district, so that it is impossible for him to get a job without leaving the whole coal field.

### Sample of "Prosperity"

**The coal miners in that field have had three wage cuts within the past year.** At present, local loaders are being paid 40 to 50 cents per "ton" of 3,000 pounds or more for digging coal in mines where the average thickness of the coal seam is about 40 inches. In addition to mining the coal, they must remove a streak of "jack rock" which varies from eight to eighteen inches in thickness, and all overhead slate, for which labor in most mines of the Hazard field nothing is paid. **Out of this meager**

This Is Where the Mine Superintendent Lives.

This Is A Typical "Home" of a Coal-Mine Slave.

**wage they must buy from the coal companies all their tools and working material, such as carbide, lamps, blasting powder, fuse, shooting paper, etc.**

One coal miner, at Blackey, Kentucky, told me a few days ago that for eleven days' work for the Bertha Coal Company his total earnings were only $22. Day wages range from $2 to $4.50 a day, the latter figure being the wage to the most highly skilled and extremely dangerous and responsible jobs.

While on a two-week visit to the Hazard Coal Field, in addition to gathering a lot of other data, I compiled a number of tables showing the prices which miners must pay for the barest necessaries of life in the company stores where they are forced to trade. The following, which is a table of prices charged by the Hazard-Blue Grass Coal Corporation, will serve as a typical illustration:

| | |
|---|---|
| Light overalls, per suit | $5.00 |
| Light work shirts, each | 1.00 |
| Canvas gloves, per pair | .50 to .75 |
| Flour (24-pound sack) | 1.50 |
| Salt bacon, per pound | .30 |
| Breakfast bacon, per pound | .75 |
| Ham, per pound | .50 |
| Beans, per pound | .10 |
| Butter, per pound | .80 |

Independent stores located near some of the mining camps sell the same articles from 20 to 40 per cent cheaper, but most of the miners are always in debt to the company stores.

Now just a word about health and sanitation in the mining camps of the Hazard Coal Field. The outhouses, or toilets, little wooden shacks built usually within 30 or 40 feet of the dwelling houses of the miners, are allowed to go uncleaned for months, or when cleaned the refuse is buried in the ground nearby. Water in the wells and springs which supply families of coal miners is, of course, full of deadly disease germs.

### Fixing it for the Doctors

In some cases several families have to use the same toilet. In one camp which I visited while on my recent trip, three families were using the same toilet and those in two of the houses using it were obliged to apply to the family acting as custodian of the key with which the toilet was locked. Epidemics of such diseases as typhoid are common in these mining camps.

The miners are completely at the mercy of the company doctors, who receive their salaries from monthly deductions from miners' pay envelopes. No matter how incompetent and insolent these doctors are the miners have to put up with them. One coal miner who called an independent doctor was severely reprimanded by the mine superintendent, and threatened with discharge if such a thing occurred again. The company doctor, being called again to see the little child, was angry and refused to go. **The baby died the following morning.** The father was in such desperate financial straits, due to the shamefully low wages he had been receiving, that he was unable to pay for burial expenses and had to appeal to the charity of his neighbors. A wooden

coffin was made by a friend, and burial clothes were bought with donations made by neighbors.

Although these company doctors receive handsome regular salaries from the miners, they never lose an opportunity to charge extra for treating a case when they can get away with it. Their charge for an obstetric case is $25. The little son of an Italian coal miner was bitten by a mad dog last summer. His father was compelled to pay for the medicine used in the hydrophobia treatment. This cost him $23, and the doctor charged him $2 a shot for administering the treatment. Foreigners, who are most ignorant of the customs of the locality, and negroes, are quite naturally the easiest and most common victims of these scoundrels.

**Official Corruption of District**

The post office in a mining camp is located in one end of the company store, and the postmaster in every case is a store or office clerk of the coal company. This enables the bosses to keep a tab on the kind of mail their slaves are receiving and sending out from time to time. In this manner knowledge is gained by the coal companies whether any of it comes from or goes to undesirable parties.

The coal companies of the Hazard Coal Field have one of the most thorough and efficient systems of thuggery that was ever planned and devised. One or more deputy sheriffs are stationed in every camp, and these deputies are in every case cutthroats and murderers of the vilest and most abominable type. Judging from the kind of material always appointed deputy sheriffs in this region, a man is not eligible for such a position until he has killed some people. The tamest and gentlest deputy I know of there is a man by the name of Collins, at Blackey. This fellow has never yet killed **any white man.**

The high sheriff of Perry county, of which Hazard is the county seat, is the son-in-law of J. C. Campbell, principal owner of the Campbell Coal Company. Campbell served one term as judge of Perry county, and is now the representative of that district in the state legislature of Kentucky.

The present circuit judge of that judicial district, a man by the name of Rufus Roberts, complained to all his friends at the time of his election in November, 1921, that he was head over heels in debt. Within the first two months of the railway shopmen's strike he built a magnificent residence in the little town of Hazard costing more than $30,000.

The last sheriff of Perry county boasted openly that he cleaned up $50,000 in his four-year term, on a salary of about $2,500 per annum. Some saving!

**Third Party Out of Luck Here**

The elections in mining camps are always held in a company building, with an election board made up of coal company officials and office clerks. Although Kentucky has a secret ballot law the coal miner who votes must vote his ballot openly and in the presence of this picked election board.

Such is the present condition of the wage slaves who inhabit the winding, mountain valley of the north and middle forks of the Kentucky river; a region that only a few short years ago was one of the most beautiful, picturesque, poetic and romantic areas of the world; a region inhabited by a people who knew nothing of the indescribably and unspeakably sickening and deplorable conditions that have, within the short space of less than a decade and a half, been brought to that territory by the blighting hand of twentieth century "civilizing capitalism." As I think of the trend of events of the last few years in that region the following couplet from Goldsmith's "Deserted Village" comes forcibly to my mind:

"Ill fares the land, to hast'ning ills a prey,
Where wealth accumulates and men decay!"

## REVOLUTION IN THE MARINE INDUSTRY

(Continued from page 5.)

who still believe, "That iron does not float." They are a menace to the process of social evolution, many, unconsciously. Although we have seen the revolution of the means of production and distribution we have yet to see the social revolution that is inevitable and will come whether we like it or not. It is for this reason that the I. W. W. says, "Organize the industries and prepare for the doom of capitalism." **When I hear a seaman say that the seafaring men cannot be organized strongly enough to be a power, I think of the popular conception of a hundred years ago, "Iron does not float," and know that it will be a very short time hence when seamen will control the seas and there will be a union in the marine industry whose word will be law and it will be parading under the banner of the I. W. W. Freedom of the Seas will then be a reality, not for the master class, but for the seamen who toil upon the ships of all nations.**

### The following was wirelessed from the Rotor Sail Ship on its initial voyage:

ON BOARD THE ROTORSHIP BUCKAU, in Kiel Canal, Feb. 13.—With both huge rotors whirling at a speed of 105 revolutions a minute, this strangest of ships is clearing through the canal, seaward bound, at better than nine miles an hour.

Before Capt. Callsen twisted the tiny hand wheels on the bridge which started the fore and aft rotors whirling, our auxiliary engine was giving us only seven miles an hour. With the rotors our speed increased to nine and a third miles an hour.

Since we left Kiel at 7 this morning our passage through the famous old Kaiser Wilhelm Canal has been literally a sensation. The countryside gathered from miles around and cheered. Crews of vessels in the waterway massed against their rails and stared suspiciously at the revolving cylinders, **which some shipping experts say may ultimately put thousands of sailors out of work.**

A brisk southwest wind is causing us to list to starboard like a yacht with widespread canvas. If the weather holds good we are certain of a successful North Sea passage.

# Barter of Flesh

By
MARY HOPE

BACK of the railroad tracks, the packinghouse windows looked with the slit eyes of an ogre upon the dirty sunshine where the smell of skulls and bones and guts made an odoriferous paradise for multitudes of flies. The houses of the workers appeared to be made out of burnt wood, now dank and murky. The curtains were coffee-colored, stringy and only in a few places were they lit up with the glow of a bright flower. The caretakers of flowers were mostly plump women who watered red geraniums with milk bottles and who fed their hopes with the easy and laughing food of youth. Here and there, half-ripe tomatoes nestled on someone's windowsill, looking red-eyed upon the clothesline full of creamy things sprawling in the wind like madmen in nightshirts.

In one of these houses, a little boy was washing his feet in the kitchen sink. Spurred on by the vociferous accents of his mother's language, he had cleared the sink of soup plates and proceeded to wash little Maria. His own brown toes proclaimed the generosity of seven days dust and the rite of bathing them was one of the facts of Saturday night. The other facts were pay-envelope for Mrs. Pellegreni and a rest-pause for her husband, a golden Sunday to stretch and yawn indecently, to teach the children a few tricks and to beat them affectionately. Pellegreni was an operator of a Breaker machine which scrambled two-pound cuts of hog into sausage-meat with the precision of an old virile man carefully masticating his food. It was so slow and easy that a second or an inch of non-vigilance meant a bloody tribute of flesh.

The little cleaner of feet was Genesio who performed his labors with twitching palate, for on the stove the flapping ears of egg-plants sizzled in tomato sauce and garlic; some unknown portions deliciously throttled the barbarous scent of the packinghouse and little Maria was contentedly sucking the tough skin of a hen's foot, boiled and unmanicured.

When Mrs. Pellegreni heard her husband's footsteps, the steaming table was coquettishly topped off with red-rimmed spaghetti and distant food-cousins elaborated with similar sauces. God's blood fresh plucked from the vine shadowed little hills of pudding with yellow caps and black olive-eyes, and already the little Pellegrenis had their dishes cocked in the crook of their elbows and with high, pliant fingers slid the spaghetti down their throats. Genesio, with clean feet, ran to meet his father.

"Papa, Papa, a bundle of cheese, some apples, some striped candy," said his fingers, prying into the wrappings in his father's arm.

But Pellegreni, with awkward carelessness, had sent Genesio sprawling to the floor. He was a big man with red cheeks rising high above the silken blackness of his moustache, and strength that would seem primeval were it not for the quiet intelligence shining out of his eyes and the softening effect of his voice which contained all the music potency of his race. He had sent Genesio sprawling to the floor in good natured fun, greeted his wife and wiped the tomato juice from little Maria's cheeks with his kisses. It was when he sat down to eat that Mrs. Pellegreni sprang forth in quivering horror and seized him. At the very end of his arm, where the hand should be, there was no hand. This morning it had held a lunch pail, but now a stump was wrapped in surgeon's cloth, a white bandage as clean as a hound's tooth!

"Mio Dio, mio Dio," Mrs. Pellegreni's words tumbled together in anguish. "What has happened to us, what has happened to us?"

He told his story bravely, "Who was to tell? That machine don't go fast, just up and down. Pete sent over a cart of meat and before it is all on the board, what happens? My hand, it is all dripping blood and everyone comes running. The foreman starts to swear and there I was all out and in the hospital all day and make them mad that I am strong enough to come home tonight. . . . Quiet,

quiet, cara mia . . . Think of poor Mrs. Gebrinsky, whose husband threw himself into a boiling vat of soap and she with six children, while I have only lost a hand, just a hand."

He continued with brave restraint, "Some American men come in and talk to me next week, everything will be fixed. A good sum, you will see."

Between the wails of the younger children and the wide-eyed admiration of Genesio inspecting his father's handless arm. Pellegreni comforted his wife and laid plans for the future—a generous picture for the peace of his wife's soul . . . Perhaps a little shop of their own with a red and green front and their name painted in large letters on it. It would be out in the country free of the packing-house smell, with lily-ponds and lakes for the children to wash their feet and only green branches to hide the sun.

But Mrs. Pellegreni's thoughts raced like mad horses over a cliff. The food on the table wriggled in mockery, red-mouthed and laughing, and only the infant Gesu gazed in blissful silence from the pale rim of a gas-haloed picture. Who was to tell? That hand was snapped off as sudden as a stretched thread, bitten off as though the machine had a will of its own and a demon's power. In a flash, the machine had retaliated after years of obedience, depriving its master of his hand and sending him an exile from the work in which he spent most of his life. It was a fleshly barter demanding a human hand and giving a marvelous twist to their life-paths from the squalid, barbaric packinghouses to fresh fields and wild winds, a free proprietorship of a little store and a return to the sweet, old ways of those across the sea . . . God is good . . . God is very good . . .

But when the horror of his lost hand and the glamour of his moneyed compensation had disappeared, Pellegreni discovered that he would only receive one-half of the agreed sum of money. This was quickly swallowed in the preparation of their business enterprise and its subsequent failure . . . and a little later, Pellegreni was seen walking the plank to the Packinghouse Employment office looking for work assisting the unloading of carts of chopped pig's meat for the filling of sausage skins.

Occasionally, Pellegreni wonders about his hand. On one thousand American tables, a minute portion of his hand had steamed mutely. The diners had not known that human flesh was shredded within the peppered rolls of sausage before them, and which their chaste palates received without a protest. Sometimes Pellegreni thinks of this and he laughs.

# The Origin of God

By PASQUALE RUSSO

**THE idea of God is a figment of the human brain This idea was not conjured up among a civilized people, acquainted with the laws of nature, but among savages. They, poor victims of ignorance, worshipped the sun, moon, winds, rivers, animals and trees as gods.**

**These gods were made into idols, conjured up and worshipped in savage ignorance. The idea of a divine rule of the universe originated in the fertile brain of savages during primitive times. Of this origin, the average Christian is woefully ignorant, but the less they know about the beginning of their murderous and bloody deity, the more intense is their adherence and devotion.**

"The Christian concept of a god—the god as a patron of the sick, the god as a spinner of cobwebs, the god as a spirit—is one of the most corrupt concepts that has ever been set up in this world; it probably touches low watermark in the ebbing evolution of the god type. God degenerated into the contradiction of life. Instead of being its transfiguration and eternal. Yea! In him war is declared on life, on nature, on the will to live! God becomes the formula of every slander upon the 'here and now,' and for every lie about the beyond! In him nothingness is deified, and the will to nothingness is made holy." (From The Anti-Christ by F. W. Nietzsche, P. 67).

It is now known that God is a myth, and the average well-informed and intelligent man places no faith in the concept. He reasons that if this world of ours is ruled by a God if infinite wisdom and power, surely it would be a place of happiness instead of sorrow. The world, as we know it, is beset with the scourges of crime, poverty and exploitation. This in itself suffices to disprove the existence of a God.

Further proof of our thesis is submitted in the following: In the year 1620 the first cargo of slaves was sold to the tobacco planters of Jamestown, Virginia. These poor, innocent negroes were kidnaped from their homeland, Africa, by pious Christians and brought to this country in order that wealthy Americans could exploit them. This was, manifestly, an atrocious crime, and since God is reputed to be a lover of mercy and justice, why did he not make his power felt by thwarting its consummation?

### No Freedom For Blacks

Passing to the second stage of our story, and referring to statistics, we find that nearly three million slaves were brought to the American colonies between the years 1620 and 1775. In the year 1776 a great change was consummated. After years of agitation for freedom, men of trade and wealth (planters and merchants) joined hands in

the common cause of freeing themselves from English despotism. Washington, Morris, Hamilton and Hancock were land speculators and their hatred of England was derived from this fact; in short, the mother country imposed restrictions upon their business. The revolt against England being successful, the freedom thus obtained was not for negroes. Since some men were to be freed, why didn't God include the negroes?

In 1863, Lincoln, under military necessity issued the emancipation proclamation, freeing the slaves —on paper only. Famous as this document has become, it in nowise helped the negroes. From that time till today the persecution of the negroes has not ceased. Over four thousands negroes have been lynched by so-called good Christians, and in no instance has God, in any manner, intervened in the atrocities. Why doesn't God stop this mob violence? The average negro has the reputation of being a good Christian. After a hard day's work he sings and prays and is a regular attendant at church, all to glorify God. When the mob puts the rope around his neck, he calls on God for help, but God disdains to answer. Why? Simply because there is no God to answer.

It is disgraceful that Christians should lynch a helpless negro. According to the Christian theory, the negro was created by the same God that made the white man. Some there are who will deny this, however, both negro and white adore and pray to the same God. In addition, a Christian God has for 1924 years augmented the miseries of the earth with cunning and slavery. Therefore, no reasoning man should worship an imaginary God, who according to the bible, kills with pleasure.

"The conception of a God who kills, murders, and damns forever creates a brood of human imitators who will execute his bloodiest decrees. The Doctrine of the Atonement is alone responsible for the many thousands of innocent martyrs to the tortures and flames of the Inquisition. Demolish the conception of a blood sacrifice as a legal necessity in God's government, and you at once shatter the gates of a revengeful hell and raze the walls of a selfish heaven." (From The Doom, P. 59).

To us moderns, at least, reason should be our god. Above this there should be no greater. Why is it men are not willing to confess their ignorance of God? To a rational creature this appears to be a species of dishonesty. In the last analysis, there is not a human being on the planet that knows aught of God. There exists no proof that God has either written or spoken a word, and if there be any such who have a first-hand knowledge of God, why should he not speak and make his facts known? True, there is a pretended knowledge and faith in God, but the pretenders are usually so ignorant their opinions and judgments are without value. As to positive knowledge of God, not a single human being can state where God is or what kind of an animal he may be. As for the authorship of the Christian bible, it evidently was written by ordinary and average men and contains, so far as one can judge, not a particle of divine wisdom.

### Nature No Respecter of Man

To everyone the manifestations of the world are a mystery. Even the wisest of us knows not the meaning of life, its growth and decay; we are surrounded by phenomena we cannot comprehend. To ascribe the world's existence to God solves no problem; it only enlarges it, because the world's **creation** is more complicated than its mere **existence.**

In the sweep of the earth around its orbit there is without doubt some law, but man's welfare is no part of it. In the comings and goings of the seasons there may be some objective, but as for consideration of their welfare, spiders have the same rating as men.

In examining Nature we find no traces of God. We all admire the forces that bring the sunshine, the snow and rain, yet imposes no punishment of hell. Nature is direct and honest; there is nothing religious about her. "Nature exists independently of all philosophy. It is the foundation upon which we, ourselves, products of Nature, are built. Outside man and Nature, nothing exists, and the higher beings which our religious phantasies have created are only the fantastic reflection of our own individuality." (Frederick Engels).

The earth, according to astronomy, revolves on its axis, traveling about 25,000 miles a day, and in a year 558 millions of miles on its circuit about the sun. Thus the earth moves, controlled by two natural forces, centrifugal and gravitational, if science is to be believed. From this we conclude the universe in space is a boundless infinite, without beginning or end.

The beautiful sky is a product of natural forces, and under its dominion lurks no damnation in the blossoming of the rose or the pricking of the brier. Nature's manifestations can be depended upon; there is no deception in them.

God, as such, was not given us by nature. He is but the creature of man's imaginings, thus the whole history of God is false. To the degree that earnest investigators have been able to determine, there is no God in nature. Such a being is not to be discerned in the sky, the sun, the moon: the stars, though far from us, manifest no divinity, and it is useless to look into the depths of the ocean. If there be a God, he is unknown to man and with some confidence we may now say that nature, and not an imaginary God, is the great queen of the universe.

# I Can't Help Snickering

By W. A.

## STARTLING MURDERS REVEALED

The editor of the **Nation's Business,** organ of the Chamber of Commerce of the United States, prefers startling charges against the American lords of industry anent the deaths of Woodrow Wilson and Warren Gamaliel Harding. Instead of the demise of the former being caused by softening of the brain and of the latter being killed by too greedy attention to the delicate parts of hard shelled crabs this noted journalist adduces the following: "We murdered our former president Woodrow Wilson by our unjust criticism and again we broke the heart of the other late lamented President Harding by a similar process and then gave him five carloads of flowers to show how much we loved him."

## BROADENING EFFECTS OF TRAVEL

That secret society of lumbermen known as the HOO HOO Club of St. Louis was given inside information about the lives of the people of China and Japan according to a recent pronouncement of the **American Lumberman,** leading exponent of the principles of HOO HOO in these United States. E. C. Robinson, president of the E. C. Robinson Lumber Company, divulged the secrets of the Orient to the assembled go-getters. The estimable lumber journal reports that, "while it was a delightful trip, Mr. Robinson said that he came home more than ever impressed with the fact that there is no place like America."

## STARTLING DISCLOSURE OF SOCIAL EVOLUTION

**The Annalist,** authoritaive financial journal of New York City, published weekly by the New York Times, views the tendencies of the national ruling class with some alarm. It says, "Already here we can see our wealthy classes possessed of several residences in different states and parts of states, and securing sporting rights and other agreeable amenities in large quantities; in the intervals they travel for amusement or to supervise their interests in foreign lands."

## OPTIMISTIC VIEWPOINT AS OBSERVED IN FLORIDA

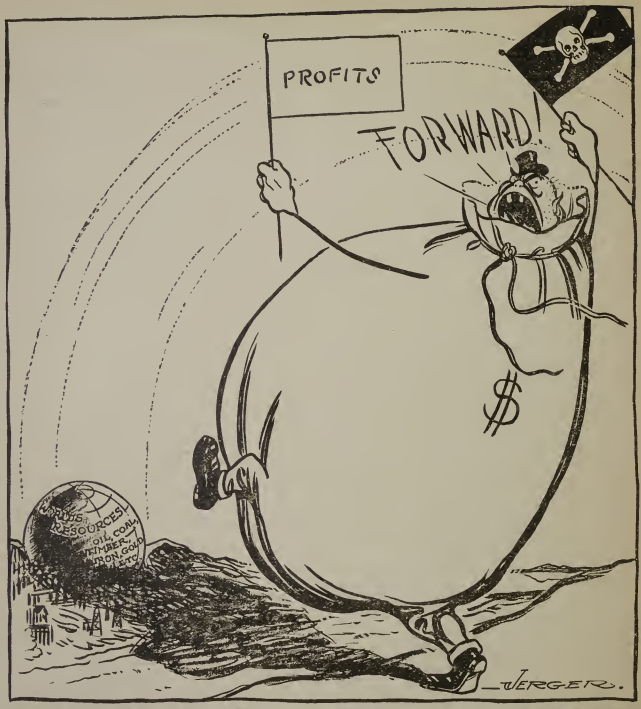
The **Dearborn Independent,** chief organ of the anti-Jewish movement in America, discloses a revival of the ancient spirit of the Medes and Persians in the land of resorts, swamps and citrus fruit. It says: "By a vote of six to one, Florida recently adopted a constitutional amendment forever prohibiting the levying of inheritance or income taxes."

## NEW ICONOCLASM AMONG BUILDERS

**The American Contractor,** prominent journal of the construction industry, in speaking of the advantage of attending conventions inadvertently indicates that a spirit of iconoclasm is affecting the masters' gyppos. It says, "You get to meet contractors from all over the United States, and every man acts just exactly as he wants to act. If there happens to be one contractor in the bunch who wants to wear pearl gray spats, he wears pearl gray spats."

A leading editorial in the same issue of this respectable journal refers to even more dangerous tendencies amongst building enterpreneurs. The editor says, "Arthur S. Bent, in an address a year ago to the Associated General Contractors, let fall a concept of the contractor that is good to think of. He said, 'Let's look him over a bit before we consider whether he is really needed!' "

And this Arthur Bent, we believe, comes from California where such thoughts are not considered nice.



## LOGIC IS ARRAYED IN FAVOR OF CHILD LABOR

The National Association of Manufacturers through its organ **Service to Industry,** sums up the following points in opposition to the proposed Twentieth Amendment to the Constitution of the United States, which would place some hindrances in the way of exploiting children in industry: "If we wanted to be tomcattish, we would say that many of those who are loudest in their fanatical advocacy of the proposition to nationalize the tenderest portion of the country's human life have no children of their own and probably don't want any. Rather than assume the individual responsibilities attached to the bringing into the world and into maturity children of their own, they prefer to assist Congress in rearing those of others. But we will not say that because it would be so unkindly true—and bare truth is shocking to the modesty of modern Americans when they see it coming towards them."

## EXPERT WHISTLES AT ECONOMIC WASTE

Amazing disclosure as to the reasons why miners and railroad workers can't produce still more profits for the coupon clippers is indicated in an article in **American Industries,** a national magazine for manufacturers, Egbert Douglas, eminent engineer, states, "The steam transportation companies realize the possibilities of electrification, but the cost of the change is so terrific that with present earnings, on most roads, the change is out of the question on account of money matters.

"We will, therefore, have to remain contented with our steam locomotives with their ten per cent efficiency, or less, and provide them with about thirty per cent of our coal, and whistle at the waste of ninety per cent of it."

# Economic Background of 5-5-3

By K. HIROTA

**WAR clouds are hovering, and the storm is bound to be unleashed to break furiously over the world ere long, if we are to believe the lessons of experience and the evidence of our senses. Although the last great spree left in its wake a world filled with disease and wreckage, and the nations are still staggering beneath an insoluble burden of almost incalculable debt piled up to expedite the carnage and ruin, we observe assiduous preparations by the world's greatest powers for another titanic contest.**

**This next war will see bonds of alliance shifted, but into whatever international blocs governments divide for the slaughter, it is workers who will fight the battles, spill their blood and guts, lose their health, reason, limbs and lives to satisfy imperialistic ambitions of the ruling classes of rival governments.**

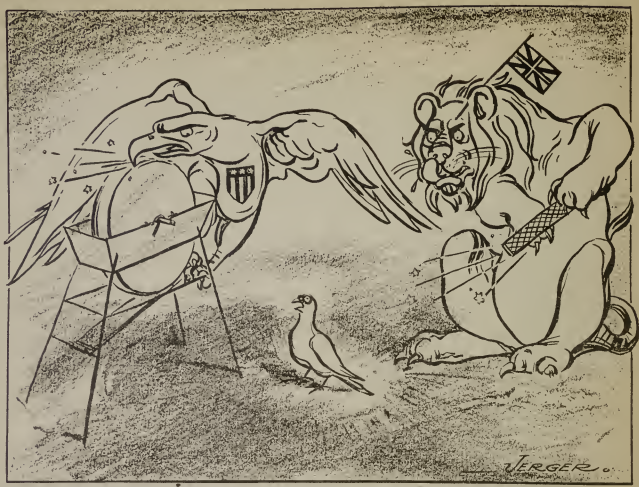
Contrary to popular domestic belief, manufactured by the brass check press, the Washington Disarmament Conference was not a meeting to stop warfare, but an American "pacifist" brake on the jingo current sweeping to embattled realization **too soon** to suit the purposes of United States imperialism. It was the masterful voice of the new Americanism demanding that England understand its second fiddle position, that it forever renounce its ancient title, "Mistress of the Seas," and that the existing **relative** naval strength be preserved for ten years, in which time the United States will have manned its vessels and properly trained its sailors.

A plan was agreed upon between England, the United States, Japan and France establishing a ratio for the first two states named of five each, and for the other two of three each. It applied to battleships, battle cruisers and airplane carriers. As France cannot dare to oppose the United States, owing to the economic whip America holds, France is not racing on the battleship program but is appropriating great sums for the building of airplanes. Hence the agreement is usually spoken of as the **5-5-3 Ratio,** meaning that England and America are to be equal in naval strength, and that Japan is not to have more than sixty per cent of the armed sea power of her foremost rivals.

Certain American ships were scrapped after the conference in order to come within the limitations, but jingo newspapers are now raising the cry that the United States ships are not up to the proper requirements permitted by the ratio. They contend that the gun elevation on these warships is lower than that maintained on British types. Some of these elevation experts claim that the low elevation, which reduces the distance at which a projectile can be fired, diminishes the American position so that the ratio is really 5-4-3.

### Jingo Initiative Prominent

For months a debate, led by Fred A. Britten, Illinois congressman, for the jingoes, has been raging in the House over this matter. Outwardly, Coolidge opposes the appropriations vote needed to raise the gun elevation, on the policy of "economy". Actually, he is being directed by the economic masters of the more dominant faction of American imperialism, which has a long, careful scheme to put into operation which the "hot-heads", the too-eager plunderers like Britten's crowd, would interfere with. The cool heads do not intend to permit any naval disadvantages to be suffered by this country, and they are building **fast cruisers, submarines and auxiliary war ships** at a great rate.



Britain has called for a conference of the **white** peoples of the Pacific "to promote a better economic, commercial and political understanding and to prepare for the common defense against encroachment of the yellow race". That is his language. He says Japan is openly preparing for war, and his faction resent the attitude of various Japanese newspapers which objected to American fleet maneuvers in the vicinity of the Hawaiian Islands.

It is impossible to understand this game of empire by considering isolated nations. Such examination will reveal the brush strokes, and is important, but one must regard the dominant powers of the world to command a really informing perspective, remembering that, however viciously states snap and tear for the spoils of working-class-extracted surplus value, the world is an economic unit. In such manner let us without too remote allusions consider the roots of the existing situation.

### Imperialist Strategy Sketched

The world war gave to the United States an opportunity to increase the relative strength of her navy, which she seized and improved on so thoroughly that she reached the maritime strength of England. But England needed American aid. England was seeing her great warships going to the bottom of the German submarine-infested seas. America, as a protecting ally, crept up and attained equal sea power with proud Britain. Both these governments were allies of Japan, but the Tokyo government saw how much England had to handle and took advantage of this pre-occupation to fasten itself on China, in which vast country lie such immense, **virgin fields of iron and coal she needs so greatly.** Tsarist Russia before the Russian-Japanese war leased to Japan the important Liau-Tung Peninsula, and the territory became Japan's by virtue of her victory in that war some twenty years ago. Japanese imperialism, the will to expansion of the Japanese capitalists, was on the road to power.

Great Britain had its key positions to the Far East economic situation in possession of the two

strongholds, Hong Kong and Singapore. Germany lost its footing in China, and French capital advanced its influence there.

The United States made war on Spain in 1898 as a pretext to increase its oceanic possessions, and accepted the support of the Filipinos, who looked naively upon America as a traditional liberator, only to find that this government wanted Spain out of the islands, not to secure Philippine independence, but to establish its own rule over the Philippine Islands. The newly acquired territory was rich in raw materials, **which are still only ten per cent developed,** and the islands are so strategically placed on the bosom of the Pacific that they are regarded as the crossroads to the rich Far East. **This archipelago is close to the Chinese mainland, and Manila Bay is of outstanding naval value.**

### Rule By the Dollar

American capital has been pouring into China for the exploitation of its tempting resources. Hawaii was annexed as part of the program in much the same manner as the Philippines, and the Panama Canal was rushed to completion to insure American's imperialistic advantages on the Pacific. In China Japan was the outstanding rival of the United States by the end of the world war, having seized the province of Man-Tung with its great port, Tsin-Tao. It was required by the red-white-and-blue empire-makers that Japan be isolated in the Far East. So the United States made treaties with England to this effect. **These two powers are obliged to hide their fangs from one another yet awhile.**

American's strength in world relations can be gauged by her ultimatum to England practically forbidding further fortification of that Far East Gibraltor, Singapore. The Anglo-Japanese treaty in reference to China was smashed by the 1921 Washington Conference. Thus the United States has demonstrated its statecraft in a commendable manner.

Wars have been going on in China for some time, dating from several months **after** the Harding conference adjourned. In these hostilities in North China, General Wu Pei Fu is doing the bidding of the Anglo-Dollarica alliance, and Chang-Tso-Lin is the general acting for the Japanese. In 1923 the United States grew bold and drove out the Japanese-selected president, Li-Yuan-Hung, in whose stead this government set up Tsao-Kun. So far only Chinese workers are bleeding for this imperialism. Will American and English workers be drawn into the maelstrom?

### Economic Strength of United States

This brings us to a consideration of relations between this country and England. America's economic supremacy may be quickly and strong-

ly shown by a few figures. The United States produce of the total world production in various important commodities the following percentages: Wheat, 25 per cent; oats, 35 per cent; corn, 75 per cent; coal, 50 per cent; pig iron, 60 per cent; brass, 60 per cent; steel, 60 per cent; zinc, 47 per cent. The United States own 36 per cent of the railroad mileage of the world, and her commercial fleet, built almost entirely during the world war, totals 25 per cent of the world's ship tonnage. It owns and **uses** 84 per cent of the world's automobiles; it has only 14 per cent of the gold production, **but has scooped into its vaults 44.2 per cent of the world's gold reserve.** The United States has also a national income two and one-half times as great as the **combined** national incomes of France, Germany, Japan and England!

With so strong a balance of trade power based on this ownership, it is politic for England to dance to Yankee music, and to go along with America in opposition to the Japanese designs in China. But to think that the United States is going to abandon her march for world domination after Japan is disposed of, when her finance capital imperialists have felt the pride and power of their victorious position is absurd. Especially so, when we recall that it is not yet thirty years since American capitalists definitely set about for colonial, foreign expansion, and the advance has steadily accelerated until 1924, when it fairly leaped into the first position commercially, as a result of the war. It is likewise unthinkable that England, with its ancient training in diplomatic intrigue, and with its fortified bases in colonies scattered over the world, is likely to permit too great prominence, too much American imperial power to be developed without challenging it by force of arms.

The fortifications of Britain's colonies are strong, but the peoples of these colonies are almost **en masse** demanding national independence, or dreaming about it. To turn these demands and dreams of Hindus, Egyptians, Irishmen and others into her favor, the United States will appear again as a liberator, just as she appeared in Cuba, Hawaii, Panama and the Philippines.

There is the crux of the matter, so far as the capitalists of all these ruthless, greedy, vulpine governments are concerned. The congressional squabble is not between an imperialist group on one hand and a non-imperialist pack on the other, but between those who want the **penetration** and **assimilation** to be **hurried**, and those who have learned to be patiently potent like predatory beasts **lying steeled and in waiting.** These are the eagles that conveniently metamorphose themselves into doves **pro tempore**, and the tigers that quietly stalk with claws retracted, seeming as gentle as house cats. Americans are said to be impulsive. Britten is of this kind. But the backers of Calvin Ignoramus are trying to control the voracious appetites as British statesmen have so often succeeded in doing. Hughes is of this type.

### When Japan Is Whipped, What?

However, the world seems to be on the verge of a war between this country and Japan. If so, with the stage set as it is at present, England must assist America. If France can extricate herself in any way from America she may assist Japan. Should such a war materialize, it is almost certain to result in Anglo-American victory. Then looms up another war to decide the relative roles of the United States and Great Britain. Any war involving either England, Japan, France or the United States is sure to embroil the whole world.

There is a possibility that England may not wait for the American triumph over Japan in blood, but seek to bring its own great difference with America to an issue. At no time has the world scene been so ominous since 1914, and the conflagration that may soon burst into flame will be more devastating than the horrible tragedy that began in August of that year.

### War's Meaning to Humanity

Success or defeat for imperialist powers means the same thing to the working class. In the fighting it means that workers must wallow in trench and latrine, run their bayonets into the guts of their fellow workers of the other side, with whom they have no quarrel but an identical economic, social and fraternal interest. It means syphilis, tuberculosis, cholera, typhus, influenza for combatants and civilians alike. It means broken homes, stunted children, ruined women, starvation, an agony of suspense and a frightful misery for the working class.

For the capitalist masters it means greater wealth, power, luxury, security, dissipation. It means for the rich class aggrandizement of more riches, and addition to its numbers, as witness 23,000 new millionnaires in this country from the pickings of the world war.

War means the destruction of all that is good in man, and the triumph of all that is most evil in him. It means cripples, lunatics, broken hearts and gentlest cherished hopes scattered forever. It means the abrogation of what little liberty of expression and collective spirit is in the workers' possession. It means tyranny, espionage, graft, lynching, local venom and race hatred on a limitless scale. It sets a judiciary over the liberties of real men and women who dare to protest in the name of humanity and working class solidarity, flinging them into dungeons to rot away their lives. War truly looses **"a red wind of hate upon us,"** and **"weaves the threads of life into a tassel to deck a sabre-hilt."**

War in inevitable unless one tremendous force learns to act concertedly against it. **This is the force of international working class solidarity. This is the force which the I. W. W. strives to upbuild. Between one- and two-thirds of the world's commodities are produced by the speeded wage slaves of**

**the United States.** Here, then, is our great field for action. This is where we must bend our greatest efforts for industrial organization. If we can line up the slaves of America, the slaves of the world will follow. There was never a greater impending crisis for the subject class of any historical epoch. There has never been a more promising, more glorious future for any working class than the one that we can usher upon the emancipated world if we unite in the industries and fight together on the economic field.

China is a trough for the imperialistic hogs, because they want its raw materials; they want to build their factory system there, just as they have built it over the world in the short space of two centuries. Surplus value robbed from the labor of workers in America, England, France, Germany, Japan and all other capitalist countries compels commercial expansion, forces bourgeois rivalries for markets. Stop the expropriation and wars will neither be fomented nor fought. Industrial organization alone of all proletarian weapons can squeeze the last dime from holy profits and thereby destroy indsutrial slavery.

If you are a wage worker get into the Industrial Workers of the World where you belong. Help in the fight for industrial freedom. Do something for yourself, your loved ones, your class. It is your own choice. Our masters are on the high road to empire. Empire means unequalled degradation for the workers. Join the I. W. W. We need you; you need us if you are workers. Together we can strike our mighty sledge-hammer blows at the bars and walls of economic slavery, and win to industrial freedom.

# The Damned I. W. W.

By COVINGTON AMI

**WE HEAR much nowadays about the errors, the faults and failures of the I. W. W., but seldom do the critics carry their logic to its logical conclusion. Nearly always they deal in half truths or else suppress the fundamental facts on which the I. W. W. differs from all other labor organizations. They build a straw man and then proceed triumphantly to destroy the "Boogum," thus proving themselves eternally right and the I. W. W. everlastingly wrong.**

**If it is a capitalist writer who is on the job, then the organization is one vast "conspiracy" of "criminal syndicalists," "saboteurs" and "violence worshippers" bent on overthrowing at the cost of "chaos" and "anarchy" the gentle, non-violent, peace-loving and super-efficient capitalist class.**

If a craft union bunk-shooter is at work, then the I. W. W. is all the capitalist pencil-pusher says it is, plus the charge that the "I. W. W. wants to destroy the craft unions and wreck the labor movement."

If a socialist spieler is pounding the typewriter, then the I. W. W. will most probably be charged with "intending to commit blasphemy against the State," or else with infidelity to the "Holy Ballot Box," or something equally foolish and impossible.

If it is a communist intellectual doing the dressing down, then, "the I. W. W. is drawing all the militants out of the A. F. of L.," and, by refusing "to bore from within," "turning the entire labor movement over to the Gompers bureaucracy." Also it, the I. W. W., "has learned nothing from or since the World War began." Especially it has not learned that the true way to "capture the powers of the State" is with the "Holy Bullet" instead of with the "Sacred Ballot." True, most of the communists have themselves only recently learned this remarkable way of changing Old Orders in New Worlds overnight; but, be that as it may, the I. W. W. is all wrong and they, of course, are all right. Besides, did not the I. W. W. insolently refuse to "disband," and that when it was peremptorily ordered to do so from both Washington and Moscow? It did. Therefore it surely deserves the excommunication it has received at the hands of the capitalists, the craftists, the socialists and the communists; for, is not the majority always right and the minority always wrong? Give us a rest.

### I. W. W. Not Syndicalist

Answering the capitalists, the I. W. W. is **not** a "syndicalist" organization, "criminal" or otherwise, and the capitalists, especially the industrial capitalists, **know it is not.**

They know as well as we do that the I. W. W. idea is sound to the core. For they know as well as we do that industrial unionism is an attempt on the part of the workers to organize each industry and all industries on a **co-operative** base, out of which will come a government of, by and for the workers—an Industrial Democracy, if you please.

That the capitalists have learned the value of this fundamental I. W. W. idea of economic organization as opposed to the political idea, is clearly shown, not only by their bitter persecution of the I. W. W. militants, but by the "horizontal trusts" being rapidly builded up by capitalist "wizards" like Henry Ford in the United States and the late Hugo Stinnes in Germany.

These "horizontal trusts" are nothing more nor less than the I. W. W. idea of organizing industry from the raw materials to the final market, and they are sweeping their competitors, whether capitalist or craftist out of their way as chaff is swept before a cyclone. They have not only made the little business men their humble retainers and kicked the

craft unions out of their plants, but they have also subordinated the State to their will and are destined soon to be lords of banking and agriculture as well as of industry.

In other words, in the "horizontal trust," the capitalists have stolen the I. W. W. idea of economic organization, applied it solely to their own benefit and, after committing the theft, have striven to "outlaw" the I. W. W. in the minds of the masses, in order that the masses of the people may be led to believe, now as of old, that the autocrats are their friends while the democrats are "blasphemers of God," "enemies of Caesar," and a danger to society." So it ever was and is.

### Who Calls Us "Outlaws"?

So it has come to pass that, though their ideas are stolen and used against the masses, the I. W. W. is today "outlawed," and, not only by the idea-thieves, but by craftists, communists and socialists, as well. For what is it, this everlasting cry of "dual unionism" raised against the I. W. W. by the craft union, socialist, and communist leaders, but a proscribing, an "outlawing" of the I. W. W.?

It is easy to understand the action of the capitalists, for they KNOW and FEAR the power of an INDUSTRIALLY ORGANIZED working class. It is also easy to understand the attitude of the craft union leaders, for the industrial union is to the craft union what the trust is to little business, and the little business leaders of labor love their little power too dearly to surrender it without a fight, even for the welfare of the workers. It is, further, easy to understand the gyrations of the socialist leaders, for to the great, great majority of them the "Law of Economic Determinism" has become a sort of kismet which will yet, somehow or other, save Man from himself and, in the meanwhile, nothing should be done to scare it off the job, lest "political democracy" be also lost and with it the honors and emoluments to politicians for "regulating the trusts" and "saving the people from Wall Street." But it is not so easy to understand the tactics of the communist leaders. They are for "boring from within" the capitalist unions but against "boring from within" the capitalist political parties—against "dual unionism" and decentralization but for staying in the A. F. of L., which is "dual unionism" gone to seed and decentralization run mad.

### Communist "Achievements"

All that I can see that they have up to date accomplished in the United States, which is where we live and with which we must, therefore, be most concerned, is to do to the I. W. W. what they so freely charge the I. W. W. with doing to the A. F. of L.—withdraw the militants from it without in any way strengthening the militant groups in the A. F. of L. and Railway Brotherhoods, while at the same time they have divided the militants forced out of the old unions so that today both groups are practically impotent to accomplish anything really worth while.

By raising the cry of "dual unionism" they have played directly, not only into the hands of the "barons of labor" who govern the trade unions, but have unconsciously aided the capitalist class in disrupting the I. W. W., for this cry tends to make even the unorganized workers believe that the I. W. W. is "trying to disrupt the labor movement," a thing the craft union oligarchs have ceaselessly tried to impress on the minds of the masses, both organized and unorganized.

Now, it is clear to all who really know the history of the American labor movement that the I. W. W. is not and never was a "dual union" as opposed to the A. F. of L. For the history of the American movement will show that wherever the American workers have attempted spontaneously to organize they have always sought to build **industrial** unions and not craft unions. Historically, it is the craft union that is the "dual union" and the "foreign importation," and not the industrial union. It was the A. F. of L. that "scabbed" the Knights of Labor, the American Railway Union, and the Western Federation of Miners out of existence. And this the A. F. of L. did because its leaders **did not wish to see the semi-skilled and unskilled workers organized,** believing that the organization of the semi-skilled and unskilled would end their petty special privileges as an "aristocracy of labor."

### A. F. of L. Caste, not Class Unionism

The history of craft unionism will, I think, fully bear out this charge that the craft union leaders did not wish to see the unorganized millions organized; and, not only this, but that it has been their unbroken policy to prevent them from organizing as long as it was in their power to do so. Wherever they have seemingly allowed such organization, history will show that, in every instance, they have sought to keep the semi-skilled and unskilled in an inferior position to the crafts—they have sought to keep them "helpers" forever—to organize a "caste" and not a "class unionism." This policy has, of course, prevented the working **class** from organizing, for in this policy the craft union machine has had the able assistance of the capitalists and plutocrats.

Nothing has stood in the way of the craft union leaders—they have gagged at nothing in their determination to prevent the unorganized from organizing in the only way they, the unorganized, can really and effectively organize, that is to say, into industrial unions. All this is history, and it proves that the craft union leaders have steadily pursued a policy of preventing the unorganized from organizing. The I. W. W. is not the only union the barons of labor have "damned" as "outlaw," as I call the outraged membership of the Railway Yardmen's Association to bear witness.

Yet it is these leaders that the communists render aid and comfort to when they raise the false cry of "dual unionism" against the I. W. W. It is to a "Job Trust" and not to the unorganized masses

that they demand that we turn for the power with which to build a new and higher order of society. It is in vain, for no stream can rise higher than its source, and now, as of old, figs cannot be gathered from thistles.

Nor is this all. The craft union, like all other little business, is a decaying and dying institution. Within the vast industrialism that has swept over the United States in the past few decades, it has become an economic ghost—a thing incapable of incarnation into effective social action. It can neither be "amalgamated" nor "revolutionized," for the social body that gave it birth died beyond hope of resurrection when the plutocracy won the elections of 1896.

### Tomorrow is for Live Ones

The future does not belong to the dead but to the living, and, socially speaking, the hope of the future is, as far as the working class is concerned, not in the ossified minds of the so-called skilled craftsmen, but in the unorganized millions—in the new **machine-using** proletariat, and not in the **tool-toting** craftsmen.

This machine-using proletariat is the coming master of the world, and, whether we like it or not, it will yet make the world in its own image; for, once organized, and it will yet surely organize, there is no earthly power that can resist it.

Out of this new machine-using proletariat the New Society will come. Inch by inch and by leaps and bounds, it will conquer its way to power. For it will till the farms, delve the mines, make the weapons, control all transportation, and, finally, through sheer massed weight **at the point of production,** if by no other power, govern the world and all that is in it.

The New World will be of its making. No minority will, for long, be able to impose its will upon it. Its world will be builded from the ground up, and that world will be an **industrial world.** Its government will be made in its own image—an Industrial Democracy. It will not be a "Soviet State," especially here in these United States, but an Industrial Co-operative Commonwealth—an Economic Society based foursquare on the interests of the **income makers** as against the **income takers.** Everywhere it will seek for "direct action," communal self-government and individual happiness, as against the present indirect, over-centralized, robot-breeding civilization.

### Why I. W. W. is Hated

It is because these things are even now foreshadowed in its Preamble and form of organization that the I. W. W. is so bitterly hated by the autocrats of industry, the aristocrats of labor, and the dictators of the state. They one and all recognize in it the beginning of the end of the last great slavery—the slavery of Man to the Caesars of Usury.

It is for these reasons, among others, that I think the communists are totally wrong in their tactics toward the I. W. W. and other labor organization in the United States. For here, unlike in Russia, the agrarian workers have become, like their city brothers, bondsmen of the "labor-saving machine," and their only hope of economic freedom and social emancipation lies in their developing the power through industrial organization to control absolutely the machines, the use of which determines the standard of living they now have and can hope to aspire to.

To do this, absolutely to control for themselves the machines on which their standard of living depends, the workers will yet be forced to turn to the plan of organization offered to them by the I. W. W.; for, as capitalism now stands in the United States especially, it is the only scientific plan of organization that is before the workers. They have no second choice. They organize industrially and scientifically, or they surrender themselves and their children to be peons and tenants forever.

The I. W. W., being composed of human beings, has its faults; it has made its blunders; but, in its eighteen years of strenuous history, it has nothing to be really ashamed of. In that brief space of time it has carried the message of SOLIDARITY through all the seven seas and to the six continents of the earth. Often and often it has brought the light of hope to men and women the great and wise had proclaimed beyond the hope of salvation, awakened them from their inertia and despair, and led them, naked-handed, in many an epic struggle to regain their lost right to be classed as human beings instead of the mere beasts of burden to which capitalism had condemned them.

### Appeal to the Young

No organization that ever rose on American soil has done so much for the "outlawed" in so brief a space of time, and no organization now in sight has more to offer the workers and farmers of the world, if our young men and women will put their shoulders to the wheel and, remembering, not only the failures of the organization but also the triumphs of its glorious history, press forward in the old spirit of "One for All and All for Each," than has "The Damned I. W. W."

It is up to you, the young men and women of labor, to say whether slavery or freedom shall triumph on this continent and throughout the world, for the veterans cannot lead the vanguard forever. Therefore, be not too harsh in your judgments of the rebel trail-blazers of yesterday, but, like them, join the militant minority and do the best you can to carry the crimson banner of labor yet a little further forward from where they fell. So, wave by wave, vanguard following vanguard, shall the final victory come and the toilers at last be free in industrial democracy.

# America's Triumphant Slavery

(Continued from page 8.)

It will be noted that by this time the American Revolution had been fought, English ties severed, and the internal struggle between semi-feudal aristocracy and industrial mercantilism had begun in deadly earnest. For decades this contest of nascent northern capitalism based on wage labor against ancient southern landlordism rooted in chattel slavery blazed high. The fires of this internecine competition of master classes lusting for absolute power were drowned at last by blood spilled in civil war, and industrial capitalist supremacy was decisively established over the smoking ruins of a broken, proud, reactionary South.

If you do not think this literally true, verify it with the accounts of Sherman's victorious march to the sea through Georgia, whereby he broke the backbone of the Confederacy. Read also the cruel story of Reconstruction by which a corrupt slavocracy was bled white and every last shred of power ripped from its humiliated form. If we examine slavery's intimate workings we can better understand why the system passed away; why its beneficiaries were beaten in the conflict they waged so long and with such seemingly unbeatable advantages.

Upstart, reckless, incipient slave owners, too eager for quick returns on their black chattels, often drove them to speedy death. In time it was carefully calculated that to task negroes at a pace conducive to longevity was more economical. Wherefore we see them evincing a most paternal solicitude for their human property. On the larger and more important plantations the prestige and whims of the owners demanded that they be absent from home a large part of the year. In some cases these owners had various estates, sometimes widely separated. In either event it became necessary to rely upon overseers, whose cruelty and irritability might react unfavorably on the master's property. To injure seriously or to kill a $2,000 negro in an excess of punitive zeal could not be allowed. So the overseers were obliged to sign contracts with the owners, and observe the rules laid down by these masters.

Richard Corbin, Esq., indited a letter of instructions to his agent, James Semple, for the management of his Virginia plantation, dated January 1, 1759, from which the following excerpts are taken. (We have not changed the style of these quotations except to underscore certain parts.):

1st. The care of negroes is the first thing to be recommended; that you give me timely notice of their wants that they may be provided with all necessaries. . . . The Breeding wenches more particularly you must instruct the overseers to be Kind and Indulgent to, and not force them when with Child upon any service or hardship that will be injurious to them and that they have every necessary when in that condition that is needful for them . . . ."

They viewed the matter without sentiment, just as a farmer might instruct a farm hand against the calving of a valuable cow. Nowadays the inestimable boons of capitalist culture shield our working class mothers from comparison to lower animals, and they are privileged to remain at their drudgery until confinement and to return to it as soon as they have sufficient strength to stand on their feet.

In the rules governing the rice estate of P. C. Weston in South Carolina nearly a century later the same solicitude attends the slave mother. I quote this paragraph:

"Lying-in women are to be attended by the midwife as long as is necessary, and by a woman put to nurse them for a fortnight. They will remain at the negro houses for 4 weeks, and then work 2 weeks on the highland. In some cases, however, it is necessary to allow them to lie up longer. The health of many women has been entirely ruined by want of care in this particular."

Charles Manigault, Esq., made a contract with S. F. Clark, his overseer, in 1853, relating to the management of his estate in Chatham county, Georgia. From it I have taken this:

". . . . I will devote all my experience and exertions to attend to all Mr. Manigault's interests and Plantation concerns according to his wishes and instructions and as most conducive to his interest and to the comfort and welfare of his Negroes. I will treat them all with kindness and consideration in sickness and health."

At the risk of causing the mouths of hungry unemployed readers to water and making them envious of their black brothers of the earlier day I have copied the following from instructions by Alexander Telfair, of Savannah, Georgia, to the overseer of his plantation near Augusta, dated June 11, 1832:

"1. The allowance for every grown Negro however old and good for nothing, and every young one that works in the field is a peck of corn each week, and a pint of salt, and a piece of meat, not exceeding fourteen pounds, per month.

"2. No Negro to have more than fifty lashes inflicted for any offense, no matter how great the crime.

"3. The suckling children, and all other small ones who do not work in the fields, draw a half allowance of corn and salt.

"12. All visiting between this place and the one in Georgia is forbidden, except with Tickets from the respective overseers, and that but very seldom. There are none who have husbands or wives over there and no connexions of that kind are allowed to be formed.

"22. The Negroes measures for Shoes to be sent down with the name written on each, by my Raft hands, or any other certain conveyance, to me, early in October. All draw shoes except the children, and those that nurse them."

Not over fifty lashes for any crime! How they spared their property! Now our wage slaves are beaten to death in chain gangs, and pompous judges send innocent men and women to prison for long

terms for promulgating ideas obnoxious to the owners of this republican robbers' roost. Why, even the slave's moral conduct was guarded against temptation, while we have so immensely advanced that there is a prostitute on every other corner in certain districts of our cities.

Nursing of children did not mean only babies in arms. The children were valuable stock to be carefully protected. In summertime, when miasmas crept sickeningly over the lowlands, the pickaninnies were sent to healthier uplands. Today we have our unnatural, pauperizing, fresh-air funds to send a few children of our growing slum proletariat to the country for a week or two: "country" places that are often malarial districts!

These rules of planters gave rise to laws by which certain colonies outlined the treatment of slaves in detail. As this legislation had the planters' sanction, often being their own composition, it was enforced. Quite different was the situation in 1757 when legislation was attempted that did not carry their approval, as is indicated in the following complaint of one who really deplored the moral effect of the system:

". . . . Our Assembly, foreseeing the ill consequences of importing such numbers of slaves among us, hath often attempted to lay a duty upon them which would amount to a prohibition, such as ten or twenty pounds a head, **but no Governor dare pass such a law, having instructions to the contrary from the Board of Trade at home.**"

Economic dictatorship over political bodies in this country has had directing power in every important instance. But what destroyed chattel slavery? In the Harding campaign his lieutenants dared to say that the Republican Party was conceived in moral repugnance of chattel slavery. An ampler lie was never uttered, as will presently become clear. Now let us show exactly what did wipe out the black slave regime, and what forces rose in its stead as the controlling power of the Federal Government, incidentally producing the party to which the present presidential incumbent subscribes.

The Northern colonies in pre-revolutionary times had found slavery unprofitable. Small farms, on each of which a few individuals usually worked, rather than extensive tracts under cultivation and employing many hands, were the rule. But do not imagine for a moment that to own such a little holding meant security. The small farmer then was just about as shamefully and thoroughly exploited by the "big fellows" as he is now. Still, most of the labor was rural, the cities being small and not numerous. To these cities were drawn the merchant class that engaged in shipping and shipbuilding, ordinary trade, and then became manufacturers. Here, too, were artisans and mechanics.

As fast as the merchants developed an industry to a point that made it a dangerous or threatening competitor to the English manufacturers, the latter quickly caused Parliament and King to forbid the manufacture of the commodity in the colonies. A long succession of such prohibitions really fomented the rebellion that became a revolution. The colonial manufacturers, who were frequently land and slave owners, as well, wanted their own parliament, and freedom to engage in the trade of their manufactures.

When the revolution was fought slavery did not present so promising a future as commerce and manufacture. Therefore the English attack on the latter mustered the united colonies to an opposition that seemed based on common interest. The dual character of ownership by many of the richest men in the South, such as the Virginian, Robert Carter, who owned 60,000 acres and 600 slaves in addition to iron foundries and grain mills, rallied them to support the war.

Their independence gained, these aristocrats and autocrats, Washington, Randolph, Adams, Jefferson, Hancock and the other wealthy "fathers," might have eventually, through their heirs, developed a manufacturing system without the seeds of division and civil war, had not the cotton gin pushed the slave regime into the predominant position. After that the fight resolved itself into one to a finish, with capitalism of the North spreading to the great West and the slavocracy of the South pushing its way to the great Southwest. To gain territory, the former ruthlessly drove the Indians to the sea and fought a second war with England for its life in commerce, while the South instigated the Mexican- War in its greed for land.

Despite the impetus to cotton production, wage slavery was always present in the South, and the Southerners tried to compete with the textile manufacturers of New England. Chattel slaves were used in Southern cotton mills in 1828, and J. S. Buckingham in his "Slave States of America" said this in a discussion of the cotton mills at Athens, Georgia, where chattel and wage slaves were working side by side:

". . . . There is no difficulty among them on account of color, the white girls working in the same room and at the same loom with the black girls; and boys of each color, as well as men and women, working without apparent repugnance or objection . . . The negroes here are found to be quite as easily taught to perform all the regular duties of spinners and weavers as the whites, **and are just as tractable when taught; but their labor is dearer than that of the whites,** for while the free boys receive about $7 (7 dollars) a month, out of which they find themselves, the slaves are paid the same wages (which is handed over to their owners) and the mill-owner has to feed them all in addition; **so that the free labor is cheaper to him than the slave,** and the hope expressed by the proprietor to me was that progressive increase of white population by immigration would enable him to employ wholly free labor, which, to him, would be more advantageous."

That is the flower of lucidity. It would be difficult to say in fewer words or plainer language why chattel slavery was doomed to extinction; why it must be superseded by the more economical wage slavery. Such thoughts and statements were very

common as time went on. The dominant elements of their respective Northern and Southern productive modes each were contending for the country, and that was why such bitterness marked the debates at Washington whenever a state asked admission to the Union. Naturally each side wanted its own way, and as the capitalists advanced, the slave aristocracy found it more difficult to have new states admitted as slave.

Capitalist philosophy was penetrating the South. Charles Lyell, an English writer, had this to say after a visit in 1849:

"After calculating the interest of the money laid out in the purchase of slaves, and the price of their food, a lawyer undertook to show me that a negro cost less than an English servant; **but, as two blacks do the work of only one white, it is a mere delusion to imagine that their labor is not dearer.**"

He also wrote this:

"That slave labor is more expensive than free, is an opinion which is certainly gaining ground in the higher parts of Alabama, and is now professed openly by some Northerners who have settled there. One of them said to me: **'Half the population of the State is employed in seeing that the other half does its work and those who work accomplish half of what they might under a better system.'** 'We can not', said another, 'raise capital enough for a new cotton factory because all our savings go to buy negroes, or, as has lately happened, **to feed them when the crop is deficient.'** A white bricklayer had lately gone from Tuscaloosa to serve an apprenticeship in his trade at Boston. He had been earning 2 1-2 dollars a day there, by laying 3000 bricks daily. A Southern planter, who had previously been exceedingly boastful and proud of the strength of one of his negroes (who could, in fact, carry a much greater weight than this same white bricklayer), was at first incredulous when he heard of this feat, for his pattern slave could not lay more than 1000 bricks a day."

When the worker's food, clothing and shelter depended on his ability to get a job, and the continuance of this job for any length of time depended on his diligence, then did the quintessence of slave systems manifest its peculiarly desirable affinity with the thousands of new machines that were constantly being invented.

But the haughty aristocrats of a reactionary South, wedded to the old ways, jealous of innovation, and hating the bourgeois competition that threatened them and whose political expression was winning control of the Federal Government, refused to see their destiny or to embrace the weapons they knew were too skillfully wielded by their adversaries. Helper wrote a book showing in calm, statistical language just why the old chattel regime must perish. His books were burned by the slavocracy. Yet they did infinitely more to arouse intelligent opinion on the subject, and to enthuse Northern capital to go into the backward country, thus hastening the decline of slave power, than all the exaggerated propaganda sentimentalism of Miss Stowe's "Uncle Tom's Cabin."

The long struggle that led to guerrilla warfare in Kansas, and violence in other states, was nearing a climax. In 1853 a slave owner declared:

"I am satisfied too, that our slaves are better off, as they are, than the majority of your free laboring classes at the North. . . . They certainly are better off than the English agricultural laborers or, I believe, those of any other Christian country. Free labor might be more profitable to us. I am inclined to think it would be. **The slaves are excessively careless and wasteful, and, in various ways—which, without you lived among them you could hardly be made to understand—subject us to very annoying losses.**"

Chief Justice Teaney of the United States Supreme Court, who rendered the famous pro-slavery decision in the Dred Scott case, was a Maryland slaveholder. The decision was made in the Buchanan administration, which immediately preceded the election of Lincoln. The slave power was making a last desperate stand before opening hostilities in military warfare. Lincoln's party was that of the winning capitalism that was sweeping all before it on its triumphant westward course. **It was dedicated to the new slavery in the wages form.** It did not hold chattel slavery in reprobation for humanitarian reasons, and "The Great Emancipator" told Congress that he would sign a law if they passed it, making slavery a permanent institution in the territory where it existed. In a letter to Horace Greeley, dated August 22, 1862, Lincoln said:

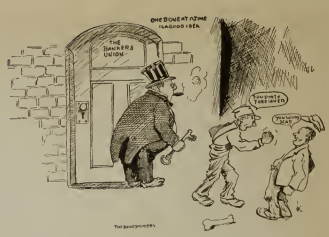
**". . . . My paramount object in this struggle is to save the Union, and is not either to save or destroy slavery.**

**"If I could save the Union without freeing any slave, I would do it; and if I could have it by freeing all the slaves, I would do it; and if I could save it by freeing some and leaving others alone, I would also do that. . . . .** I have here stated my purpose according to my view of **official** duty; and I intend no modification of my oft-expressed **personal** wish that all men everywhere could be free."

So much for the "moral repugnance" of the new political dominant to the institution of slavery. The wage slave scheme was far more profitable to the exploiters than the chattel slave method, and the system that will rob the greatest number of workers in the most thoroughgoing manner is the one the dear boss will swear by. He swore by it in those days, and shed crocodile tears for the poor black chattels who did not enjoy the glorious freedom of the Northern white wage slave and the poor white trash in the South.

Immigration has been mentioned above in a quotation as a factor upon which pro-capitalist residents in the South depended to whip the slavocracy out of existence. Many Irishmen came to the States in the middle of the last century. They proved to be better producers for their employers

than the proudest buck nigger that ever was elevated to the post of "driver," or worked himself to death in the fields. In 1865 an employer in Dixie "eulogizes" the sons of Erin in these glowing terms:



"The Irish labor in ditches and banking is so superior to that done by the very best negro men, that I made use of it as far as my means would allow. . . . The Irishman works with a shovel (and long bent handle) and wheelbarrow. The foreman loads each barrow as wheeled to him over a board, each man in line pushes forward his wheelbarrow, carrying a load of huge weight; reaching his destination, the load is immediately discharged, and the wheelbarrow is drawn empty behind the man. **There is no talking, as with negroes, no trifling, but the work goes on rapidly and in a serious manner."**

We often indicate the remarkable concentration of industrialized capitalism, with single firms employing thousands and tens of thousands of wage slaves. These huge corporate monsters were strikingly foreshadowed long ago. In 1791 Peabody, an American shipowner, employed 7000 seamen who took his vessels to all ports of the world. The Peabodys and Carters, Girards and Astors were the American pioneers of the greatest system of exploitation that has ever existed. Foundation of the American Government gave them unlimited scope to develop and to exploit the richest territory in the world by applying producers to the land and industries of this vast area and then properly squeezing from these workers everything created above the level of a miserable sustenance.

Merchant capital became industrial capital, and the present dominant form of bourgeois evolution is finance capital, with banking firms so grouped that they direct the employment not of wage slaves by ten thousands but by millions. Upon them depend the crusts and rags and hovels of these immense armies of workers. To them has been drawn, octopus-like, half of the gold resources of the world, and upon their interest the people must either wallow in slavery or rot in war. The peace of nations is in their keeping. At present America is steeling herself for the greatest strides on the bloody path of empire that have ever been made.

Today black chattel slavery is only a memory. The negro was given that freedom enjoyed by his brother—freedom to hunt his food, clothing and shelter; to besiege factory gates in desperate want of the precious job, imploring the protection of the new wage master, and to feel through all his miserable days the pinch of poverty and the torment of insecurity.

The ante-bellum observer described with vivid strokes how black boys and girls, and white boys and girls, as well as the men and women of the two races worked "together without apparent repugnance or objection." Capitalist necessity promoted this harmony, just as it engenders race prejudice and race wars when these suit its purpose. There

is no negro problem in America, no race problem. Neither is there a sex problem. But there is the all-pervading problem of slavery. Not the old, inefficient, paternalistic kind that held three million blacks when at its pinnacle, but the modern piecework, hurry-up, bonus-crazy, systematized wage slavery that enthralls a working class of 27,000,000 victims and their dependents in the United States alone.

Against this vilest of slaveries white and black, brown and yellow workers, men and women and children, irrespective of the gods they worship and the creeds they profess, have a common, class conflict. Against their common enemy, the universal and unified bourgeoisie, whose soul is in a ledger and whose heartbeats are the clicks of tickers and cash registers; whose pitiless, frigid, inhumane driving force is summed up in the motto they fling in our teeth, "There is no sentiment in business"; against these robbers of the vast wealth our labors produce, a united and universal working class, solidified in industrial formation, must throw its conscious, revolutionary strength. There is no place so lacking working class organization as America; no land more sorely needs it.

President Buchanan assumed that slavery was a national institution with the right to exist anywhere in the Union, and that a slave owner "might legally call the roll of his slaves on Bunker Hill." A very few years passed, and chattel slavery was no more.

Today the bankers and industrialists call the roll of their wage slaves on Bunker Hill, Elk Hill, Capitol Hill, Teapot, Dome, or wherever they please. The slave roll has increased, the new slavery is more efficient. Its exponents are proud and arrogant. They do not know that they have built on sands that lie in the pathway of evolution's inexorable stream.

Our task is to line up our fellow wage slaves on the jobs, make them our organized fellow workers, and together perform our great part of the proletarian mission of ridding the world of its plundering parasites and all forms of slavery forever.

These Old Men, Who Are First To Be Discharged, Are Shown Here Seeking Charity

# Discharged

By

BOOMER

THE night shift had just gone to work in "the glory hole" at Copco, when the shift boss told them to leave their shovels down below and come up on top.

There was one of the workers who climbed up on top of the bank hesitatingly; he knew what was coming, sack carrying. He was an old man, not so much because of his years, which were but fifty-two, but because of hardships and the privation he had suffered. He dreaded the carrying of the sacks filled with dirt; they were too heavy for his feeble strength.

He could get along all right shoveling, but he could not "stall" on the sack carrying; the eyes of the boss were too sharp for that, and he was a driver, Big Dan was. A good fellow in town or on the road, but a driver on the job. That was the reason Big Dan always got bossing jobs.

The old man had to climb up and take his turn carrying sacks. The first two trips were made all right; a young fellow pulled up a sack lighter than the others each trip, and said, "Take this one, Fellow Worker, it is lighter for you."

The old man did not know why he was called "Fellow Worker," but as long as he could get light sacks to carry, he could stick on the job.

Then Dan put the young fellow placing the sacks in the bulk head, and the next trip the old man got a heavy sack. He walked very slowly with his load. It was just all that he could carry. Then he stumbled. For a moment the tired old fellow hoped that Dan did not see the stumble, but he did.

The old man reached the place to which they were carrying the sacks and placed his load on the pile; he was out of breath and weak, but he knew he must stick with it; there were a few more sacks to carry and then they would be mucking again. He could hold his own mucking, and he must stay on this job. It was hard for a man with white hair and stooped shoulders to get a job these days. Now, there was a time when he used to do station work, that he could outwork many a man larger than he was. "Ah, well, them days were gone," and he heaved a sigh.

But Dan cut short his remininscence by tapping him on the shoulder and jerking his thumb towards the camp, "Go get it, Old Timer, you are only in the way out here." And as he climbed up the steep trail up to camp it kept ringing in his head, **"only in the way."** He had heard that many times of late, the bootlegger had told him that down in Sacramento, after the few dollars he had earned, haying, were spent.

The next morning he got his check and as he was leaving camp he met Dan. This Dan he had fed many times. He asked Dan why he was canned. Dan looked serious; then pulled a ten-dollar bill from his pocket. "Here, Old Timer, I am your friend, but on the job I am a boss, and to be a boss one has to forget friendship. I didn't can you, Old Timer, it is the system of exploitation; I was merely the mouthpiece.

"Take this ten-spot, it will help in the jungles, and remember a man can't let friendship interfere on the job. Any time that I can't get more work out of a crew than someone else, I lose out. Why, right here on this job are a dozen trying to get the job I have."

The old man took the bill, and placed it in a tobacco sack with the check, and then started on the eighteen-mile hike to the railroad. He kept wondering on the way, about what Dan had said. Dan had talked almost like the paper he read one night in the jungles at Sissons.

It was evening when the old man reached Hornbrook, a little town on the S. P. in northern California. He was tired, as he did not have any food, but went right down to the jungles to lie down and rest. There were quite a bunch in the jungles, some "cooking up," some washing, one or two lying on the dead grass, sleeping, and a few reading.

Most of them were of a clean-cut type, and there wasn't a single sign of booze, or "canned heat" of any kind; they all appeared to be sober.

The old man selected a place, spread out his blanket, removed his shoes, and lay down to rest. After a time he began to grow hungry, and was thinking of going up town to get something to "cook up."

It was when he put his shoes on and stood up that a tall slender fellow called to him to "come over and have a can of coffee." To be invited to have a can of coffee, according to the etiquette of the jungles, means to have a share of whatever there is. The old man thought the slim fellow meant someone else. He was not used to being invited to eat with others in the jungles.

But when the invitation was repeated then he knew it was he that was being invited, and with a "Don't mind if I do," he joined the group gathered around the "feed."

There were six and he made the seventh who consumed fried sausage, scrambled eggs, potatoes fried with onions and drank excellent coffee with canned milk and sugar.

True, the old man had been in the jungles many times, but it was always after he had been on a drunk and was broke, and all there had been to eat were the odds and ends begged or stolen. This was the first time he had ever been in the jungles where there was plenty.

He drank the coffee gratefully and consumed the food ravenously, all the while wondering why he had been invited.

The conversation of the others was all about organization, and soon he learned that they were all I. W. W.s. In times past he had always kept away from the jungles where there were I. W. W.s, because they were such bad actors. He had been afraid of them.

The bootleggers had told him some terrible stories of the things the I. W. W.s did to men they met who didn't have a card. But this bunch "sure treated him white."

After the "feed" two of the men washed the cans and cleaned up the jungles.

The slim fellow rolled and lit a cigarette, then handed his can of tobacco to the old man bidding him fill up the old pipe, which he did. Slim then asked him which way he was headed, and before the old man realized it they were sitting on the ground talking as though they had known each other for years. The old man was telling him things he had not spoken of for years: of the girl he had won for a wife when a young man; of the money he had made at station work; of the home they had built in 'Frisco; of the laughing blue-eyed baby, and the joy he knew when he returned with a good stake; then of the 'Frisco earthquake and how he had lost it all, home, wife, baby, everything, even the insurance money he had been beaten out of.

He didn't know why he told this man his pitiful story. Perhaps it was because of the understanding smile; anyway, he felt better after telling it. Then he told him of Dan discharging him. That seemed to be the worst of all. The rich company spent millions up there, and Dan would not let him stay. Surely they could afford the few dollars his pay would amount to, even if he couldn't do much work.

"Yes, Old Timer, it looks that way, but business is not done like that; you stay on the job only as long as your labor is profitable, and the speed of a crew of workers depends on all being able to hit the ball. Then, too, you say that you don't belong to any union," Slim spoke slowly and kindly. "Well, you consider yourself beaten, and so you are. You are not an old man, but you are standing all alone in an age of combinations. If you become a member of the I. W. W., there is the organized strength of thousands put behind you, while you add the strength of one. You have an ideal in life, it makes you young again, it will take the place of the wife and baby you lost, those that you used to enjoy working for. Here, stay here a day or so and rest up; we all have a few dollars made fighting forest fires, and I will give you literature to read; then if you want to join, Mickey over there," and Slim pointed towards the delegate, "will fix you up."

Slim rose to his feet, smiled again and said, "I'll get you something to read, Fellow Worker," and walked over to a packsack and after rummaging in it for awhile returned with a book, **What Is The I. W. W.?** and left him to read, and the old man read, and in the peace and quiet there he learned many things. The big thing though, the old man had discovered, was that there were places where he was wanted. He learned that no matter how old or feeble one of the workers becomes, he is welcome wherever members of the I. W. W. are to be found. He felt the surge of strength, the blood went racing through his veins; his shoulders lost much of the stoop, and after reading, resting and eating in the jungles, he felt as good as any man. He had also learned how to conserve his strength, and was astonished to find how long a few dollars lasted when he was with a bunch of fellow workers and kept away from the bootleggers.

A week later Big Dan received a letter up at the power job at Copco which read:

"Dear Dan:—I thank you for discharging me. I met some real men in the jungles at Hornbrook, and they started in to educate me.

"I have not blowed my money in for booze as I used to, and I realize that the bootleggers used to lie to me about the I. W. W. Dan, I know now that you were not to blame for canning me. I read 'The Economic Interpretation of the Job' and it showed me the fix you were in.

"So the only thing to do is educate and organize so as to change the system.

"I am yours for
Revolutionary Industrial Unionism which makes a man young again.

OLD-TIMER."

# Shaw's Saint Joan

By ROBERT GRAYSON.

CAUCHON (conciliatory, dropping his polemical tone): My lord, we shall not defeat The Maid if we strike against one another. I know well that there is a Will to Power in the world. I know that while it lasts there will be a struggle between the emperor and the Pope, between the dukes and the political cardinals, between the barons and the kings. The devil divides us and governs. I see you are no friend to the Church: you are an earl first and last, as I am a churchman first and last. But can we not sink our differences in the face of a common enemy? I see now what is in your mind is not that this girl has never once mentioned The Church, and thinks only of God and herself, but that she has never once mentioned the peerage and thinks only of the king and herself.

WARWICK. Quite so. These two ideas of hers are the same idea at bottom. It goes deep, my lord. It is the protest of the individual soul against the interference of priest or peer between the private man and his God. I should call it Protestantism if I had to find a name for it.

CAUCHON (look hard at him) You understand it wonderfully well, my lord. Scratch an Englishman and find a Protestant.

WARWICK (playing the pink of courtesy) I think you are not entirely void of sympathy with The Maid's secular heresy, my lord. I leave you to find a name for it.

CAUCHON. You mistake me, my lord. I have no sympathy with her political presumptions. But as a priest I have gained a knowledge of the minds of the common people; and there you will find yet another most dangerous idea. I can express it only by such phrases as France for the French, England for the English, Italy for the Italians, Spain for the Spanish, and so forth. It is sometimes so narrow and bitter in country folk that it surprises me that this country girl can rise above the idea of her village for its villagers. But she can. She does. When she threatens to drive the English from the soil of France she is undoubtedly thinking of the whole extent of country in which French is spoken. To her the French-speaking people are what the Holy Scriptures describe as a nation. Call this side of her heresy Nationalism if you will: I can find no better name for it. I can only tell you that it is essentially anti-Catholic and anti-Christian; for the Catholic Church knows only one realm, and that is the realm of Christ's kingdom. Divide that kingdom into nations, and you dethrone Christ, and who will stand between our throats and the sword? The world will perish in a welter of war.

WARWICK. Well, if you will burn the Protestant, I will burn the Nationalist, though perhaps I shall not carry Messire John with me there. England for the English will appeal to him.

CHAPLAIN. Certainly England for English goes without saying: it is a simple law of nature. But this woman denies to England her legitimate conquests, given her by God because of her peculiar fitness to rule over less civilized races for their own good. I do not understand what your lordships mean by Protestant and Nationalist: you are too learned and subtle for a poor clerk like myself. But I know as a matter of plain common sense that the woman is a rebel; and that is enough for me. She rebels against Nature by wearing man's clothes and fighting. She rebels against The Church by usurping the divine authority of the Pope. She rebels against

God by her damnable league with Satan and his evil spirits against our army. And all these rebellions are only excuses for her great rebellion against England. That is not to be endured. Let her perish. Let her not infect the whole flock. It is expedient that one woman die for the people.

WARWICK (rising) My lord: we seem to be agreed.

CAUCHON (rising also, but in protest) I will not imperil my soul. I will uphold the justice of The Church. I will strive to the utmost for this woman's salvation.

WARWICK. I am sorry for the poor girl. I hate these severities. I will spare her if I can.

THE CHAPLAIN (implacably) I would burn her with my own hands.

CAUCHON (blessing him) Sancta Simplicitas!

The scene is the first in the third act and shows the tent of the English commander, Richard de Beauchamp the Earl Warwick, in his camp on French soil after the successive defeats his armies have suffered at Orleans. Jargeau, Meung, Beaugency and Patay.

Peter Cauchon, the influential and cunning Bishop of Beauvais, visits the camp to discuss the peril of feudal and ecclesiastical positions at the hands of the conquering mystic, Joan of Arc, who is wanted by both earl and bishop for the purpose of stopping her activities and destroying her importance.

The chaplain, John de Stogumber, is attached to the English camp and readily, though very crudely, lends himself to the designs of his intellectual and worldly superiors.

### Joan Is Captured

So presently Joan was captured by the Burgundians during an unsuccessful sortie at Compeigne, and sold to the English for sixteen thousand pounds. The dialogue is presented because it places the reader in possession of the insight, forethought and motives of the forces making the tragedy.

Nationalism was rising by the process of viewing the king as the head of the state—the king with real executive powers, and not a caparisoned imbecile topped with a crown for show purposes only. In France Charles was only a Dauphin, and he did not have even the trappings or the coronet. To give him a crown and power meant a diminution of the real strength of the nobles, the feudal lords. It signified elimination of the titled middleman who wielded actual power.

Thus Joan, who wrought so valiantly over the weak spirit of the cowardly, bullied Charles, to make him rise to kingly ambition and evince the commanding qualities of a king in reality, was guilty of a political heresy in the reckoning of the shrewd Warwick who knew whence his power came, and whither it was doomed if once the people embraced a will to nationalism by which th nobles faded before the greater glory of a governmental concept embodied by one man—the monarch.

Cauchon viewed her transgressions against authority in a different way, not caring about the fate of secular nobles so long as the church and its political prelates suffered no loss of prestige. Both of these men, peer and priest, understood Joan's significance better than she herself could possibly have understood it. She was brainy, but illiterate. She was in her teens, and not given to introspection except when her powerful imagination (nourished through childhood's plastic years on stories by travelers and soldiers who stopped at her father's rather comfortable home in Domremy), seemed to hear divine voices. She was in the fight herself, heart and mind devoted fanatically to a mission for whose achievement she regarded herself heavenly appointed. With these native and occupational hindrances she could not command the social and spiritual perspectives that the earl and the bishop saw. They knew what her success meant to both the political and sacerdotal status quo of 1429.

### Her Greatest "Crime"

Cauchon opposed her spiritual heresy, being mindful of the fact that a religious system permitting the individual to approach his supernatural concepts without the imposed guidance of a churchman at every step is not specially conductive to the healthy estate of the priestly caste, nor to a perpetuation of its domination.

I think that Shaw has done a splendid piece of work in his drama if he has in no other way contributed to education than by so faultlessly and understandingly showing the meaning, by use of the popular dramatic vehicle, of the nation's rise, its consequence to feudal nobles, and also the historic roots of conscience' freedom which flowered in the Reformation. My kind words press swiftly. Shaw's portrait of The Maid is quite sympathetic, not gushing like Mark Twain's and without being grossly false and distorted as was that done by Voltaire. His preface to the book displays his grasp of the story, and his conception of the churchman's attitude in the 15th Century is psychologically true and whole.

There is an opinion quite common that the priest necessarily disbelieved the credo and ceremonials that he so forcefully insisted upon others accepting out of whole cloth, in that time under pain of everlasting fagots ablaze, with an occasional mundane scorching in the kiln of object lesson—that tangible memento mori, the stake. Such a view of the clergyman is erroneous. No one has better illustrated my contention than Veblen who points out that the priests of any religion, taking them by and large, believe in the hocus pocus they exemplify. What made Torquemada a holy terror was his intense and narrow faith. It made him atrociously vengeful. More mercy is always possible in the skeptic than in the zealot. If this were not true we should be spared many brutalities, but we should also view a world without its clerical martyrs. Such self-conviction cherished by performer and ordained lends greater vigor to the constancy of theological propagation, and color to the rewards and punishments—especially to the latter. Cauchon did not believe Joan a witch, and said so. That was a vulgar opinion and concerned with the moment. He regarded her as a heresiarch, and correctly. For heresy she was tried and found guilty. The bishop was perfectly sincere and he saw both the moment and the future.

### Joan's Weakness and Strength

When Joan first felt the imminence of her danger she recanted. That was quite natural and womanly. Who would not shrink from the flames except the mad flagellant? Naively, she expected to be delivered from the English and liberated. But her judges had prepared against this anticipated renunciation. Tried at Rouen before a joint ecclesiastical court at whose head sat the Bishop of Beauvais, and the Inquisitor, John Lemaitre, of the Dominican order, she was in a trap from which there was no escape. When she made her mark on the abjuration the sentence was pronounced.

THE INQUISITOR: Because thou hast sinned most presumptuously against God and the Holy Church, and that thou mayest repent thy errors in solitary contemplation, and be shielded from all temptation to return to them, we, for the good of thy soul, and for a penance that may wipe out thy sins and bring thee finally unspotted to the throne of grace, do condemn thee to eat the bread of sorrow and drink the water of affliction to the end of thy earthly days in perpetual imprisonment.

JOAN (rising in consternation and terrible anger): Am I not then to be set free?

LADVENU (a priest who tried to save her; the one, in fact, who persuaded her to recant) (mildly

shocked): Set free, child, after such wickedness as yours! What are you dreaming of?

JOAN: Give me that writing. (She rushes to the tables, snatches up the paper, and tears it into fragments): Light your fire: do you think I dread it as much as the life of a rat in a hole? My voices were right.

LADVENU: Joan! Joan!

JOAN: Yes; they told me you were fools (the word gives great offense), and that I was not to listen to your fine words nor trust to your charity. You promised me my life; but you lied. (Indignant exclamations). You think that life is nothing but not being stone dead. It is not the bread and water I fear; I can live on bread: when have I asked for more? It is no hardship to drink water if the water be clean. Bread has no sorrow for me, and water no affliction. But to shut me from the light of the sky and the sight of the fields and flowers; to chain my feet so that I can never again ride with the soldiers nor climb the hills; to make me breathe foul damp darkness, and keep from me everything that brings me back to the love of God when your wickedness and foolishness tempt me to hate Him: all this is worse than the furnace in the Bible that was heated seven times. I could do without my warhorse; I could drag about in a skirt; I could let the banners and the trumpets and the knights and soldiers pass me and leave me behind as they leave the other women, if only I could still hear the wind in the trees, the larks in the sunshine, the young lambs crying through the healthy frost, and the blessed blessed church bells that send my angel voices floating to me on the wind. But without these things I cannot live; and by your wanting to take them away from me, or from any human creature, I know that your council is of the devil, and that mine is of God.

That finished Joan. She was nineteen. They pronounced her a relapsed heretic, cut her from the church tree, and Warwick got the incorrigible branch that he wanted. She was burned in the public square at Rouen and all the people went out to see her die.

### Too Many Retouched Characters

I have so far considered the drama in the light of its historic exactness and psychological truth. Enough of the action has been given to show the forceful beauty of Shaw's greatness. Consideration of several weaknesses follows: Sitting through three and one-half hours of the play I felt dissatisfied, not because of its length—it is all most interesting—but perhaps simply because we expect so much from Shaw. In spite of the nonsense of Brassbound, Candida and Back to Methuselah we still look hopefully for the perfection displayed by some of his other dramas. I felt that he is becoming very religious and that we should not feel surprised if another Anglicized Irishman, who so early and stoutly proclaimed his atheism, has swung into the fashionable stride and joined the mystics.

Then, too, Shaw is so glib, writing has become so facile for him that he follows lines of least resistance and jerks old characters from his well-stocked closet, dusts them off a bit, and struts them across the stage as brand new creations. It still rakes in the shekels, but we recognize them anyhow by their demeanor and speech. Warwick bears a striking resemblance to Burgoyne in the "Devil's Disciple," where the latter "with utmost suavity" apologizes to the rebel he is about to hang, pleading "political necessity" and disowning personal animosity.

In the epilogue to Saint Joan, where she appears as a vision and the characters of the play are dragged from bed, the distance and the grave to hail the exonerated maid and make their farewell speeches, Warwick, who was so earnest and brisk about seeing her body dispatched, says pleasantly to her spirit: "The burning was purely political. There was no personal feeling against you, I assure you." To which Joan replies, "I bear no malice, my lord." Most saintly! Warwich then continued: "Just so. Very kind of you to meet me in that way: a touch of true breeding. But I insist on apologizing very amply. (Which is proper since Joan was so amply reduced to a cinder). The truth is, these political necessities sometimes turn out to be political mistakes; and this one was a veritable howler; for your spirit conquered us, madam, in spite of our faggots. History will remember me for your sake, though the incidents of the connection were perhaps a little unfortunate."

Even Joan has a Shavian prototype, Lady Cicely, the positive woman in "Captain Brassbound's Conversion," who, like The Maid, has power over the wills of men and treats them in much the same fashion. The same play gives us Brassbound himself as a forerunner to the Squire Robert de Baudricourt, while Drinkwater is a true figure of the steward in Saint Joan.

"Caesar and Cleopatra" furnishes the youthful Ptolemy who is like the puerile Dauphin, and Chaplain de Stogumber has the earmarks of Brittanus in his heavy plodding without humor, in direct faith in his leader, even though concealed, and in his British predisposition to be exact, narrow and rude at the same moment. Both characters are hopelessly unable to attain the subtle heights of their commanders' thinking.

### Methuselah Technique Repeated

These are a few examples, but there are others that any reader of Shaw will discover upon examination. The epilogue is a technique employed to glorify a martyr at the expense of her contemporaries and the institution which both condemned, cleared and canonized Joan. It is fair, because she was ahead of her age and a greater character than those who surrounded her. But it harks back to the cry of the eternal martyr and presupposes a new redemption of mankind by the triumph of saints when all men are saints. Bringing central characters back into an epilogue is too close a repetition to the tiresome folly "Back to Methuselah," in which Shaw ends that book by presenting the Serpent, Cain, Eve, Adam and Lilith (a spirit of the endless and omniscient), who appear in the order named, say their little trite or enigmatical speeches and vanish.

When Saint Joan nears its last curtain, and the book the last page, A Gentleman of 1920 enters

to announce that Rome has at last made Joan a saint. But none of her contemporaries want the agitator back. When she speaks about being permitted to return, this Gentleman says that that is an eventuality not contemplated by Rome to which he must return for further orders. It is very keen satire and well placed. Then all leave Joan, one by one, and

> The last remaining rays of light gather into a white radiance descending on Joan. The hour continues to strike.
>
> JOAN: O God that madest this beautiful earth, when will it be ready to receive Thy saints? How long, O Lord, how long?

**Last Impressions**

After that you feel as though you had been tricked into a church, a very pretty church, too. But if you want freedom and fellowship in life you cannot echo poor Joan, because you don't believe that the earth will be revivified by saints, but cleansed of its social parasites by very human men and women. By men and women lacking that moral impeccability that is said to win halos, but surely possessed of sufficient vision, method and strength to make the earth fit for humanity in economic equality.

The play is well acted, but to do Shaw justice one must read the book with its ample, lucid preface in which he explains so much that remains inexplicable in the drama. I shall conclude by quoting the author concerning the trial. He says: "Joan got a far fairer trial from the Church and the Inquisition than any prisoner of her type and in her situation gets nowadays in any official secular court; and the decision was according to law." Which isn't saying much for modern courts, but is undeniably true.

# Waste

(A Book Review.)

THIS is a brilliant novel following the development of a thinker's life, and flooding light on the social forces to which he was inextricably bound, for all that he strove heroically to make his own life. Jarvis Thornton's career, from an unhappy, impoverished boyhood to its final disillusionment in comparative affluence at fifty, shows step by step the effect of environment engulfing, embittering, stunning, absorbing and destroying the individual.

Throughout the story we feel the fullness of Thornton's antipathy to established gainless ruts, and his revulsion as an engineer, architect and artist to the stupid, permeating squalor of life, one immense, shoddy class rushing from hovels to work places and back to hovels again, a soddening treadmill, and another smaller class bustling about in pursuit of the most propitious chance to rob these slaves and do a very thorough job of it. Out of this vortex issues no peace but that of the grave; life is stultifying, and where there is beauty it withers at the blighting touch of a dirty, capitalist civilization, while within the confines there is room for no tranquillity nor for the happy expression of life. There is only a great deal of room for an endless suppression of the poor and lots of smokestacks at one end, and a bloated gentility at the other debased by appetites.

**Denounces the War**

The war is castigated in a way that could hardly be improved upon by the most ardently eloquent anti-militarist. Thornton's son, just an ignorant bourgeois lad who does not really know his father (nor, indeed, does the father know his son) because the boy has been packed from one school to another by his woefully stupid mother in an effort to make a "gentleman" of him, is killed in the war. Like other boys, unable to feel the seriousness and tragedy of war, he itches to "get into the scrap," and this desire gratified, he speedily falls before the foe.

Thus the father observes the waste of life so near to his own heart, a very part of himself, but sadly separated from him always by an ambitious mother unsympathetic to the husband she uses solely for support. The man sees warm youth, eager and inexperienced, believing the lies of patriotism, sacrificed; sees the guns chewing these boys up by millions and leaving them to the rats that fatten to repletion on the wastes of no-man's land. For into this inferno Jarvis Thornton had gone prior to America's war declaration. Then he believed the monstrous lie that war purifies. At last he understands that the horrible technique of destruction serves no good end, chastises no too-proud souls, but drains them of their faith and mercy, and leaves them stark and shrivelled. So he quits, and when his friends finally discover his abhorrence to the war they say nothing, secretly regarding him as a bit "yellow." These acquaintances know war by story only.

**The Surprise Speech**

Before he is known as more than a visitor who has served in the conflict, he is invited to a luncheon at a club in a fashionable "Hun-hating" summer colony on the coast of Maine, where he lives. To honor him he is surprised by being asked to speak on the war. Unable to evade, he makes a speech, a part of which was:

"A few months ago I was lunching with a gathering very much like this, in Rome, a party of English, French, and Italian friends—I was the only Amer-

ican. The talk turned on art, and some of the younger men, civilians, connected with the diplomatic service and the various propaganda services, began to depreciate German artistic and intellectual achievements. 'There never has been a great German painter,' one young man declared. Then a French officer at my side spoke up. He was wounded in the thigh and his hand still trembled from trench malaria—he had fought from the opening of the war, though his age, his high civilian rank, exempted him from military service. 'I hate,' said my friend in a voice that still vibrates in my soul, 'I hate to hear a great people traduced—how about Albrecht Dürer?' and there was no more silly talk about the despicable Huns at that luncheon. . . . "

This took them by surprise and they eyed him angrily. A gold cross dangling over a bishop's rotund belly, an admiral's pretended indifference and the hateful glare of a bitter old money-bags squaw roused his anger, and he said, dividing his gaze between the cross and the knitting needles of the acrimonious "lady":

"Over there under the whine of the guns they can think of something better than fabled atrocities and rapes, but here, on our peaceful, beautiful coast you spend your time swapping idle yarns that a child of twelve years old ought to know to be lies. Spend your time knitting sweaters and socks and dropping a curse in every stitch. You, you women," he said, pointing across the table at the Bishop's cross, but apparently at the thin lady with the sneering lips and the fat lady with the gaping mouth, "you women whom one might expect as the vessels of life to be more interested in preserving youth and manhood from another slaughter like this, some of you mothers, with sons already gone or going or likely to go into the hell of the trenches—you women in whose wombs the life of the race lies, to be preserved for something better than war, you sit and bloody-mouthed mumble your curses and miserable tales, while you knit and 'help win the war' by adding to the fearful river of hate that must some day be quenched."

He had one approving listener, an old college professor, who said on the way home from this luncheon which forthwith "broke up":

"No use, my boy, no use at all; they want to hate, suppressed emotions and all that; read the psychology books. They feel good when they hate: it makes 'em religious! Look at the clergy in the war! By God, just look at the Bishops of the Church, damn 'em!"

Thornton was reported by the admiral and watched thenceforth. His social position saved him, and also the fact that he had no positive program, and entered no organization. In fact, the book stresses the necessity of self-reliance of the individual, and its chief character fights throughout life for escape from the gregariousness of the herd, and of institutions. One gathers that he leans toward philosophic anarchism.

The author's style is fine, his analyses are searching as far as he probes, and the effects of an interesting life wasted in the social mechanism repay the reader's attention. The Wobblies are mentioned sketchily, and not understandingly, and the Department of Justice is neatly "panned," while the Intelligence Bureau is referred to as a "mad-house."

Love plays its part, but there is not even a hint at pornography, and the Sumners cannot condemn the manner in which it weaves through the pages. The emphasis throughout is upon social squalor dirtying life, thwarting the best outcome of affection, and stifling a cry for beauty in the world. Robert Herrick is doing good work among a liberal class who must be given the truth in carefully measured doses generously mixed with individualistic soft soap. There are many books, you know, that we think excellent which the progressives and pink tea dilettanti refuse to read at all. One has to sneak up on them. At all events, there is a wealth of meat and beauty in this fine sociological novel that will satisfy.

## THE THIRD DEGREE

By VERA MÖLLER

**(The Vision which may have come to Bob Medford in "Gertie")**

They've bound me to the bars, arms, trunk and limbs,
A harpy sits and watches in my cell,
And still he asks the question: "Will you sign?"
And still my white lips answer: "Go to hell!"

The straps! The straps! I try to shift my weight,
To ease each aching muscle, 'tis in vain;
They hold me tight as in a mighty vise,
While still more terrible becomes the pain
Until hot pincers seem to tear my back—
The harpy looks up grinning and says: "Well,
'Tis a fine day. You'd best give in, my lad."
But still I shriek in answer: "Go to hell!"
And still the leaden hours drag slowly on,
While inch by inch my body seems to die;
A nightmare numbness creeps from limb to limb,
Until my numbed brain questions, "Is it I?"

They touch my flesh with lighted cigarettes;
They try to mock me with the sight of food—
They can not hurt me, I am not the man
Whom they have bound there, let them take his blood.

For I am wandering out in space and see
A land where Justice is no empty name
And men are free, and gone, forever gone,
Are lust and greed and cruelty and shame.
I know that while I hung upon the bars
The light of dawn was struggling through the gloom,
That in the sweat of anguish and of blood
Wrung out of victims tyrants wrote their doom.

And then—I fall, and feel a stabbing pain,
For something tripped me up, a branch or vine.
They slap my face, "Here! None of that, my lad!
There'll be no sleep for you until you sign."

# Our Revolutionary Position

(Continued from page 13.)

only another day. Economic development seems a slow process to the human observer, but when we consider the great changes that have taken place in the economic and social relations of mankind during the last three thousand years and compare them with the progress made in the hundred thousand years prior thereto, then human progress does not seem so sluggish. Again, if we look with care we are compelled to admit that more progress has been made in every avenue of human activity in the last two hundred years than was made in any five thousand years before. It would, it seems, be quite reasonable to say that science has progressed more during the past twenty-five years than in any two-hundred-year period preceding.

Consider the matter of writing history, for example. It is admitted that very little was done in this line before the fifteenth century. H. G. Wells, among others, complains of the disgusting condition in which the records of history have been kept. Buckle uses up several pages on this subject. So it is not at all surprising that no great historian has in writing history employed the formula of Marx.

### Experimental Science

It was my intention to use much space in criticizing Ward's "Dynamic Sociology," but already the manuscript has grown to such proportions that it will be impossible to do more than remark, in passing, that Ward saw in education alone the panacea of the social question. His indictment of both government and religion, and the clearness with which he proves his case, namely, that they are a bar, rather than an aid, to progress, is sure to win the admiration of the radically inclined worker. But, after all, when we recall that Ward found no real fault with the wages system, and that as a consequence, he did not recognize the class struggle and the class slavery arising therefrom, one is compelled to ask the question of socialists, communists, and some wobblies: "How do you reconcile the philosophy of Ward, Buckle, Aristotle and Plato with proletarian philosophy?" And it is fair to add: "You complain of the confusion in the revolutionary movement. What else can you expect? The conflict between the old ideas and the new is very much alive among those who profess to champion the new."

Since the days when Roger Bacon looked out from behind the prison bars and told the world that all the old philosophers were wrong, and that the road to progress was by experimental science, great progress has been made in every field of human endeavor. But the progress of science, and therefore of industry, during the last fifty years has been wonderful. We have now reached the stage in industrial production where real advances may easily be seen by each generation.

Modern industry has grouped and regrouped the workers in every line until now, two or ten thousand workers will enter an industrial establishment, do their bit, and at the end of each shift be replaced by an equal number of workers, who will continue working where the others left off. All this without any noticeable change in the whole mechanical process beyond the blowing of the whistle and the punching of the clock. Everything works in harmony, with mechanical precision. We might very easily say that the capitalist system has done more to lighten the burden of the man who toils than has any other system in history. Thus, while pointing to the wonderful achievements of capitalism, and the benefits that the people have derived from electricity, steel, steam, oil and concrete, we condemn the social organization which makes of these achievements instruments of torture, plunder and oppression. We can even go further. We can say that **we cannot conceive of any system more unjust, useless and cruel to rule the destinies of the people in the future than is the capitalist system.**

The capitalist system has developed rapidly. It has removed all of the old problems that seemed so perplexing to the old philosophers. The social question of today is new and was unknown to the long-whiskered philosophers of old. What does it matter to us what Plato, Aristotle, Jesus or any of the rest of them said? At most, whatever they said had to do with the conditions of their time. The social questions of today must be solved by modern philosophy and modern methods. We care more about what Steinmetz had to say on the social problem than we do about the opinions of Adam Smith or John S. Mill, or those held by any others living before our own time. Steinmetz lived amid the whirl of modern machinery and they did not.

### How to Solve Our Problems

The solution of the social problem can be found in the material conditions that now exist. The first thing in order is education, conducted on the basis of sound principles. Modern educational institutions give you an education which at most must be but a beginner's course. You are started out in life, but good care is taken that you are started out on the wrong road, and then, of course, they trust that you will follow that road so far that you will never believe that there is another road, perhaps not so well paved, but much shorter, and which, if followed, will lead you on to that condition of happiness for which all men hope, and which but few achieve. The things that one learns at school are never sufficient. One must add to that education after leaving school.

**The next thing in order is for the working class to organize according to the way that modern industry has grouped them in production.** That would be according to industry. Industrial unionism is the logical form of organization for the working class of today. The workers must, first of all, understand that their problems are industrial, and not

political in character. The economic division, so clearly evident to all workers in modern industry who work for wages, would seem to prove the necessity for a union sufficiently broad in scope as to include all who work for wages.

Conditions in each industry are slightly different, and so the union of the workers, in its internal structure, must be slightly different in order to meet the requirements of the workers in that industry. But the union in its main outlines, in its general structure, must be the same. It must be as broad as industry itself. In this respect the writer accepts "universalism," but in the same way and for the same reasons that he accepts it in its general application to the union, he rejects it when it is applied to the internal structure, the working program of the union, because it does not fit the conditions.

### Meaning of Industrial Unionism

Why must the workers organize industrially? The question might very well be answered in a few words, namely, to achieve their emancipation. Now, what do the workers desire to be emancipated from? They are now separated, freed from the product of their labor. In other words, they are exploited, robbed, plundered, "gypped" out of it by the instrumentality of the wages system. To secure a condition of happiness for which we are all fighting in our own way, the working class must organize industrially so that when the great crisis comes in the evolution of the capitalist system, the workers can free themselves from all exploitation—from the rule of capital.

The industrial union of the workers is essential not only as a means of resisting the employing class in its effort to reduce workers to a lower economic level now and while capitalism lasts, but it will be of special use in starting up production again after capitalism, for any reason, has come to the end of its career. The big problem with which the workers are confronted is not just simply stopping production, which is a simple matter, but to start it on a new basis.

That is the function of revolutionary industrial unionism. There is absolutely no doubt but that the road to freedom is industrial unionism. It may be argued that the workers are not yet ready to accept such a program. That objection, and it is a frequent one, is entirely aside from the issue. The only question that we workers are concerned with is whether or not the plan is sound. If so, then why not support it? If, on the other hand, you admit it is a sound program, but for the reason that the millions of workers are not yet ready to embrace it, you attempt to justify your stand in supporting some other program economically unsound, you are simply doing what you can to add to the confusion, to the already too confused mental state of your fellow workers.

If you popularize Plato or Ward rather than propagate the teachings of Marx and Engels, then your standing as a revolutionist is open to question. If you teach the middle class ideology of the eighteenth century rather than the proletarian philosophy of today, then at the very least and fairest estimate to you you are not only hopelessly confused, but at least a hundred and fifty years behind the times.

**Can You Get A Job When You Need One? NO.**
**Are You Unemployed During Hard Times? YES.**

**DO YOU KNOW WHY?**

READ

# "UNEMPLOYMENT AND THE MACHINE"

By J. A. MacDONALD

***and YOU will know!***

**"Unfortunately to the worker, unemployment is more than a problem. It is a grim reality, a terrible nightmare of hunger, natural wants unsatisfied, desires thwarted and life lived below even the animal scale. To him unemployment is a spectre that dogs his steps, haunts his dreams and makes a horror of his working hours. For him unemployment chills the fervor of love and changes it to hate by the ashes of cold fires. It breaks up his home, and drives him into the cold of winter and to a colder charity with its loss of the priceless gift of self-respect."**

# WOBBLES

## AFTER THAT, IT'S EASY!

Mike and Pat, who had gone to bed drunk, got up early one morning to catch a train. Mike went down the dark passageway of the hotel, feeling with his foot for the top step of the staircase. The elevator shaft door was open and he stepped down and fell ten stories. When Pat came along a few minutes later he reached the open elevator door, but was more cautious, and he called down: "Mike, is this the staircase?" "It is," said Mike, "but look out for that first step, it's a son-of-a-gun."

## READ FAST!

"Conditions in the U. S. A. is gettin' worser an' worser," observes a case-hardened pine-cat. "Why just the other day the boss came into the bunkhouse and cut the crew!—An' then I sees in a paper where the employers in the Spokane restaurants cut all the girls too! Gettin' so's a worker isn't safe nowheres."—**The Flying Doughnut.**

## THE INSPIRED WHALE

A minister was visiting some logging camps in an effort to save the lumberjacks' souls. He made a bad start by picking on a Wobbly. The dialogue that the camp listened to ran this way:

"Do I have to believe that old Bible?"

"Oh, yes, that is the Inspired Word."

"That Jonah-whale story, too?"

"Certainly, it is all part of our faith."

"But," went on the Wobbly, "a whale's throat is so small it can only swallow a small fish, and not a man. How about that?"

"Why, my good friend, since the Lord made all things, could he not have made a special whale to swallow Jonah?"

That settled the evangelism at that camp.

## A NECESSARY CHANGE

"Pardon me, Miss, but I gave you my order some twenty minutes ago, and—," began a meek looking customer.

"Well, what about it?" demanded Heloise, of the Rapid Fire Restaurant.

"Nun-nothing," he replied. "Except that I wish to make it an entreaty instead of an order."

## REALIZATION

Two of the unemployed many were passing a factory gate when the 12 o'clock whistle blew.

"Dinner time, Jack," said one.

"Yes, but it's just plain 12 o'clock for us," Jack replied.

## CLASSIFIED

John Farmer had quartered his harvest saviors in the barn. A Wobbly victim raised a protesting voice.

"You're kickin' all the time," said the farmer. "I used to sleep in barns lots o' times, an' I never kicked."

"That's nothing," rejoined the Wob. "Who ever heard of a jackass kicking against sleeping in a barn?"

## BROADCASTING

Mr. F. S. Yamamote, of 209 Ninth street, Milwaukee, Wis., unburdens himself as follows in Experience, for December:

"I know a man who is so dumb he thinks I. W. W. is a broadcasting station."

Your acquaintance is absolutely correct, Mr. Yamamote. You may rest assured that no one need hesitate in stating that the I. W. W. is the MOST POWERFUL broadcasting station in the world for sound logic, sound principles, and the most practical method of educating the wage workers yet outlined.

To all workers, whether your name is of a sweet potato-ish sound or not, let us say you are invited to send a postcard and TUNE IN for the best wising-up you ever received in the interest of all wage workers. Address I. W. W., 1001 West Madison street, Chicago, Ill.

# The Social Forces

By JOHN CANNAVAN

## CHAPTER VI

**"The trades unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry." —I. W. W. Preamble.**

WHEN the need of economic organization first was felt by the wage workers, those who were impressed by it were craftsmen, for, at that period, skilled workers constituted the working force in an establishment. These workers were competent to function in all the processes required for the production of special articles, from raw material to completion.

The industrial (and social) castes of "mechanic" and "laborer" were then well defined and accepted; and the mechanic caste refused to consider the unskilled workers as industrial or social equals.

That they were interdependent factors industrially and common victims of the same economic relationship, was not recognized. The craftsmen were, at that stage, the important industrial element, and the consciousness of this importance reflected itself in the attitude of superiority assumed toward the unskilled. Manufacturing, at that time, was deemed to begin with raw material and to end with the finished product. The raw material was only superficially recognized as the embodiment of prior labor, and the fact that the completed article had yet to be carried to its social destination was not yet realized to an extent which would bring to the craftsmen a sense of the interdependence of all working class elements. **There was no class conception.** As a result, the early unions were composed solely of craftsmen.

### Division of Workers

One of the effects of such organizations was to draw a line of demarcation between skilled and unskilled workers—to divide the working class. Moreover, these separate unions of skilled workers, in the different trades, made unity of the skilled workers impossible. The unskilled workers represented a large unorganized mass of individuals, while the skilled workers represented an element organized by groups, without coherence or a means of achieving it. Nevertheless, these unions, in a day of blind and unrestricted **competition** among the employers, **whose margins of capital were small,** were able to embarrass the individual employers, so that gains were made by the organized workmen.

It became evident to the employers that they must unitedly oppose these combinations of craftsmen, and we find that they did so **united.** The united opposition offered by the employers forced the craftsmen to form local, central labor bodies, and to invest these with economic authority to command obedience from the constituent craft unions. Skilled labor thus equipped itself with economic solidarity locally though the instances in which this evident purpose was carried out are few.

As the country developed, villages sprang up, to grow into towns and cities. These depended upon craftsmen, and the craft unions connected the workers in the old and new localities. It was natural for these craftsmen, believing, as they did, that their interests would be better served, to organize into national bodies. This they did.

### Weakness of Craft Union Position

As craftsmen they appeared to have served themselves well by so doing, but, in looking backward, we are enabled to see that, as a matter of fact, they weakened, instead of strengthening themselves, by bringing about the division which has made the **American section of the working class the weakest and most backward in the world,** industrially and socially. For while the standards here are higher than those in Britain, Germany and other capitalistically advanced countries, relatively, and as compared with social advancements, the workers of the United States are behind those of other lands.

The rise of national craft unions, when viewed from the working class standpoint, meant that whole bodies of workingmen were divided off, effectively separated from the other workers, while their industrial association continued. These organizations, while apparently conforming to the industrial arrangement, actually ran counter to it. Besides, these unions presented and fostered the conception that the workers so organized, were independent of other workers and sufficient to cope with all the industrial problems that might confront them; that questions arising in their employments were only craft questions in which the balance of the workers had neither share nor interest.

This posture emphasized a failure to recognize the interdependence of the working class elements by attempting to deny their association in production. These unions saw the wage relationship and did not see that it extended beyond the limits of the crafts and included the workers collectively, just as it did the employers of labor as a class. This flying in the face of fact has been productive of evil results for American labor.

For the craft unions, there is no class struggle and no class issue; neither is there class interest to advance. Occasionally, class feeling breaks through the artificial boundaries set by these unions and their memberships make common cause with some struggling unassociated group, only to be penalized or outlawed.

### Lack of Class Consciousness

These unorganized workers are, because of their craft unions, detached from every effort by other workers and prevent united action by the working class. The belief is carefully cultivated that the craft union membership have nothing in common with one another, or the working class. Based upon this misconception, it is not surprising that the craft unions have time and again wrecked every attempt

to form an economic movement upon a national scale for American labor. **When, eventually, the Knights of Labor promised the realization of such an organization, the American Federation of Labor, preserving craft division, was brought into being to do the Knights of Labor to death.**

The A. F. of L. is not a national instrument for American labor. It is the preventive of the organization of such an instrument. It knits the unions of which it is composed in a system that pits one set of workers in an industry against all other sets of workmen in the industry and carries this arrangement throughout industries where it commands any following. It keeps the working class at odds with itself and working at cross purposes. Moreover, it stands ready to combat any and every attempt to weld the workers into a solid force. It stands guard over the division that spells weakness and ineffectiveness for American labor.

Capitalist control of industry and society is predicated upon working class division. Only while division prevails in the ranks of the workers will the rule of capitalists endure. This division of the workers cannot be permanent. It will survive only while the conceptions that guide labor prevent the recognition of the class struggle by the workers. Once the working class reject these conceptions, the mastership of the bourgeoisie is at an end. The very earliest capitalist spokesmen have given utterance to this recognition long before Marx and Engels enunciated the theory of the class struggle. The capitalists, driven by fear of such outcome, have invoked the aid of every agency that might assist in delaying, if not preventing, this culmination. They have even created new agencies and used them as their interest demanded and need arose.

### The Tool of Capitalism

The modern American labor movement, as expressed by the A. F. of L. and railroad brotherhoods, presents itself as a device by which the capitalist idea of the wage relationship is inculcated in the minds of the worker, and preserves the division that delivers labor into the hands of its enemies. Division, as a result of the craft system, is organized and entrenched behind the misguided loyalty of working class ignorance and prejudice to old forms and customs. The forces that prevented the recognition of their class interest and the means of serving it, found in the craft system, which has dominated American labor for more than forty years, a satisfactory medium. Above all else, the A. F. of L., with its kindred unions, functions to keep the workers divided industrially, and, in so doing, it constitutes the greatest bulwark of the capitalist system.

**This organization, without body or substance, without economic jurisdiction or power, fraudulently pretends to be, and unfortunately is accepted as the national expression of American labor interest, while being really the national expression of the capitalist interest in relation to labor.** It was conceived by ignorance and seized by design. The national and international unions, prior to 1881, were inclined to favor only such a national labor arrangement as they could dominate, and which would not interfere with them in economic matters.

So, when the Federation of Organized Trades and Labor Unions of the United States and Canada (A. F. of L.) was formed, representation was so distributed that control was vested in these national organizations. The courtesy of representation was accorded central bodies and state federations, but it was merely courtesy, for the representation allowed them is of a character which does not permit interference with the will of the national unions in their guidance of the affairs of organized labor. The C. L. U. and state federation delegates sit in the convention without being able to influence decisions in any degree whatever. Upon the Executive Council, which is the governing body, there sit only the heads of the international unions and the subordinate organizations have no representation whatever. It is theirs only to obey, not to suggest or question.

### Capitalist-Minded Labor Fakirs

The mentality that governs in the Executive Council* of the A. F. of L. is influenced by the associations into which the members of this official directorate are thrown. More "Labor" philosophy is imbibed from capitalist contact than from worker sources. The capitalist conception of union function, policy and usefulness guides the management of the craft union system; and, although the control of this movement manifests itself contrary to what the experiences of the organized workers warrant, and what they would approve, the system is so perfectly balanced that they bend to the dictation against their judgment and inclination. They do not realize that the A. F. of L. is anti-labor in conception, policy and action. Nor need they be expected to learn, until some agency, outside of the craft system, interprets the significance of events for them and supplies them with an organization which will enable them to break the bond that holds them in thrall to this system.

### Union Label's Real Meaning

**The "union label" provided the craft system with an invaluable asset, whereby the interest of the employer and that of the wage workers were made to appear identical.** This device had the effect of serving the employer and blinding the workers to the class nature of the struggle in which they were engaged.

To boost the sale of union label goods is to boost the business of the manufacturer who employs union labor. This leads to a belief that the union, to some extent anyway, is dependent upon the employer—an idea that tends to deprive the union of aggressiveness.

The idea underlying union label patronage is that it affords greater opportunity for employment to unionized workers, but the far more important

* **See "Historical Cathechism of American Unionism." Published by the I. W. W., 1001 West Madison St., Chicago, Ill. Price 25c.**

fact is that by diverting union custom to goods so labelled, it confers advantage on the employers of union employes and fosters the belief that the interests of employer and employe are identical. The greater the demand for label products, the better chance particular groups have for employment. Therefore it is reasoned the more the boss sells the steadier the employes work. What is good for the boss is good for the worker. So runs the confusion arising from the label.

And, again, upon a product **only one of the processes may be unionized** but the **label of that group carries the impression that the whole of the labor embodied in it has been expended under union conditions or that the non-union workers do not count.** The label is thus made to blind the workers to the **class character** of production.

But the greatest service the union label renders the employing class lies in the cultivation of the idea that labor can act effectively to advance its interest at the **consuming** instead of at the **producing** end of a **commodity;** that action as buyers is more effective than action as workers; that the boycott carries greater assurance than concerted action in the working place. No greater service than fostering this perverted view of industry could be done for the capitalist class.

Under this conception organized workers will cheerfully assist in the production of a commodity which they will try to induce buyers not to purchase. Such is the contradictory "logic" of the A. F. of L. which deludes labor and comforts the employing class.

When the boycott at the counter is substituted for production prevention in the working place, the labor movement is facing backward. An ounce of prevention is worth a ton of cure in labor matters as in other things.

### A. F. of L. Organizes Skill

The A. F. of L. system does not and cannot organize the most numerous and most powerful of all industrial elements—the unskilled workers. Where unskilled workers have been enrolled into its membership they, like all others, have been hopelessly divided.*

A labor movement to be worthy of its name and mission must function economically, and, instead of arraying its component unions against one another, must unite them to further the common cause of labor. To hold one set of workers upon the job while others are striking is to cancel the effect of the strikers, for production is not a craft process, **but a process that involves several sets of workers.** Those who remain upon a struck job assist the employer to defeat their striking fellows. Any movement that not only sanctions but provides for such procedure, cannot be regarded as a labor movement. With the A. F. of L. and the railroad brotherhood unions this is a definite and fixed policy. It is not something adopted occasionally for reasons of expediency, but a cardinal tenet of their industrial creed.

**The A. F. of L. itself is not an organization. It is only an influence which sponsors and sanctifies the crimes against labor in the name of labor.**

The international unions are the organized, continent-wide segregation of labor classifications from the rest of the working class. It is not out of place to repeat that these unions represent the organized dismemberment of the American working class. While they survive they will function to preserve that dismemberment. Labor's first duty is to rid itself of these handicaps to unity and progress. Whither are the A. F. of L. unions traveling? They have no goal toward which they are directing labor. They drift from day to day, and from one industrial situation to another with no set objective to attain and no definite labor principle by which the labor hosts may be guided. They accept as just and rightful the relationship against which they are an organized product. They have never yet, even in 1886, arrayed the organized workers for an attack upon the **relationship** that victimizes the wage workers.

### Why Bosses Fear the I. W. W.

While the craft system, A. F. of L. and the Big Four dominate the workers in industry and transportation, economic solidarity will be beyond the workers of America. Organized workers will continue to be set against organized workers. Economic division and weakness will prevail and the capitalist class will not even have a remote cause for fear. **The only danger they stand in dread of is that the workers will become possessed of the I. W. W. idea and break from the control of the capitalist labor lieutenants.**

One thing is certain that, until the craft system collapses, the workers of America will be held in thrall and made to serve the capitalist interest. This system cannot be modified to serve the proletarian interest. It must be destroyed.

The I. W. W. is the antithesis of the A. F. of L. It is based upon recognition of the class struggle, and class unity is its endeavor. It is an economic organization, international in scope, which confines itself to an economic sphere and function. **It has a definite objective—the replacement of capitalism by an industrialized society, the affairs of which will be administered by the workers. Labor will be social service, with the profit taint removed.**

The I. W. W. is a **labor union** in the truest and highest sense of the term. When its principles are understood by the workers, they will accept and apply them. Already in growing numbers they are responding to its appeal. Eventually through it, they will attain the position of which they are worthy and take into their hands the world and its affairs. Speed the day!

(TO BE CONCLUDED NEXT MONTH)

# Press Week February 22 - 28

The Industrial Pioneer, according to anticipation, will be in the field toward the close of the seven days—February 22 to 28—dedicated to the increase of our publications sales. Press Week is a general, initial, and concerted drive by I. W. W. branches, I. W. W. members and friends. All interested in a powerful working class press must unite to wipe out our debt and extend the scope of our circulation.

The plan to increase bundle orders and subscriptions and to raise funds by holding entertainments throughout the whole I. W. W. movement is just the opening gun in a steady effort to upbuild the press. Get into the work and make it an unprecedented success. By sincere, united, intelligent action every member and every branch can accomplish great things for the plan, and put our greatest weapon on a sound, growing basis.

## PUBLICATIONS OF THE INDUSTRIAL WORKERS OF THE WORLD

**(Authorized by the General Executive Board of the I. W. W.)**

(ENGLISH)

**INDUSTRIAL SOLIDARITY**

Published weekly at 1001 W. Madison St., Chicago, Ill. Subscription price: $2 per year; six months, $1. Bundle orders, 3 cents a copy. Single copies, 5 cents.

**INDUSTRIAL PIONEER**

The only real revolutionary magazine of the working class, published monthly in the English language. $2 per year; $1 for six months; 50 cents for three months; single copies, 20 cents.

(RUSSIAN)

**GOLOS TRUZENIKA**

(The Voice of Labor)

Magazine, published monthly at 1001 W. Madison St., Chicago, Ill. Subscription price: $1.50 per year; six months, 80 cents. Bundle orders, over 5 copies, 10c per copy. Single copies 15c each.

(HUNGARIAN)

**BERMUNKAS**

(Wage Worker)

Published weekly at 1001 W. Madison St., Chicago, Ill. Subscription price: $2 per year; six months, $1. Bundle orders, 3c per copy. Single copy, 5c.

(ITALIAN)

**IL PROLETARIO**

(The Proletarian)

Published weekly at 158 Carroll St., New York, N. Y. Subscription price: $2 per year; six months, $1. Bundle orders, 3c per copy. Single copies, 5c.

(SPANISH)

**SOLIDARIDAD**

(Solidarity)

Published twice monthly at 1001 West Madison St., Chicago, Ill. Subscription price: $1 per year (26 issues). Single copies, 5c.

(CZECHO-SLOVAK)

**JEDNA VELKA UNIE**

(One Big Union)

Magazine. Published monthly at 1001 W. Madison St., Chicago, Ill. Subscription price: $2 per year; single copy, 20c. Bundle orders, 14c per copy.

(FINNISH)

**TIE VAPAUTEEN**

(The Road To Freedom)

Magazine. Published monthly at 1001 W. Madison St., Chicago, Ill. Subscription price: $1.75 per year. Bundle orders, over 5 copies, 20 per cent discount allowed. Single copies, 15c.

**INDUSTRIALISTI**

(The Industrialist)

Published daily in Duluth, Minn. Write to Box 464, Duluth, Minn., for prices on bundle orders and subscriptions.

(SCANDINAVIAN)

**INDUSTRI ARBETAREN**

(Industrial Worker)

The Scandinavian organ of the I. W. W. Contains articles in Swedish and Norwegian. For sale on all news-stands at 5c a copy. Bundle orders, 3c per copy. Single copies, 5c. $1 per year.

# Literary and Artistic Contest

INDUSTRIAL PIONEER and INDUSTRIAL SOLIDARITY have combined to offer a prize of $75 for the best piece of literature submitted, and a prize of $50 for the best cartoon submitted. April 15, 1925, is the date for closing the contest, when all manuscripts and drawings must be in the hands of the manager of the two publications.

The best article or fiction work and the best cartoon will be published in the May Day editions of both publications. The other material submitted in the contest is to become the property of the I. W. W. press, to be published either in English or translation by the various editors at their discretion.

All material submitted for the contest should be sent unsigned, but with some identifying mark, to the manager of the Industrial Pioneer and Industrial Solidarity, and should be marked "For Solidarity-Pioneer Contest". A separate letter should be mailed at the same time as the manuscript or drawing and should contain the identifying mark inside a sealed envelope on the outside of which is written the contestant's name and address. When the judges have announced their decision these envelopes will be opened. The contest is open to both members of the I. W. W. and non-members.

Several prominent writers and artists are under consideration as judges. Their names will be announced soon, and the men chosen to pass on the merits of the articles, stories and cartoons will be such as to leave no doubt as to their competency and fairness.

Nothing sent in competition for these prizes shall advocate parliamentarism, religion, class collaboration, co-operative projects, or utopian colonization schemes. Such articles or cartoons will not be considered for the prize.

Manuscripts for the literary prize may be fiction or non-fiction, but not poetry, and must not exceed 5,000 words.

Fiction should embrace some phase of the workers' lives involving the class-struggle. Non-fiction may deal with the whole or any part of the field of labor and industry—including organization, history, present tendencies, and future possibilities. The articles may be either general and theoretical or as highly specialized as the author may desire.

Cartoons may be drawn in any medium, but must be dead black on dead white. This does not mean the exclusion of shadings or the use of Chinese white, but it does bar the use of colored inks or crayons. These cartoons should tell the story by means of the drawing and should require little or no lettering on them to make them intelligible.

Cartoons should be of a general propaganda nature and not illustrative of current events, as it may be some time before they are actually printed.

Working Class Fiction

# Preamble of the Industrial Workers of the World

The working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few, who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

These conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

# THE INDUSTRIAL PIONEER

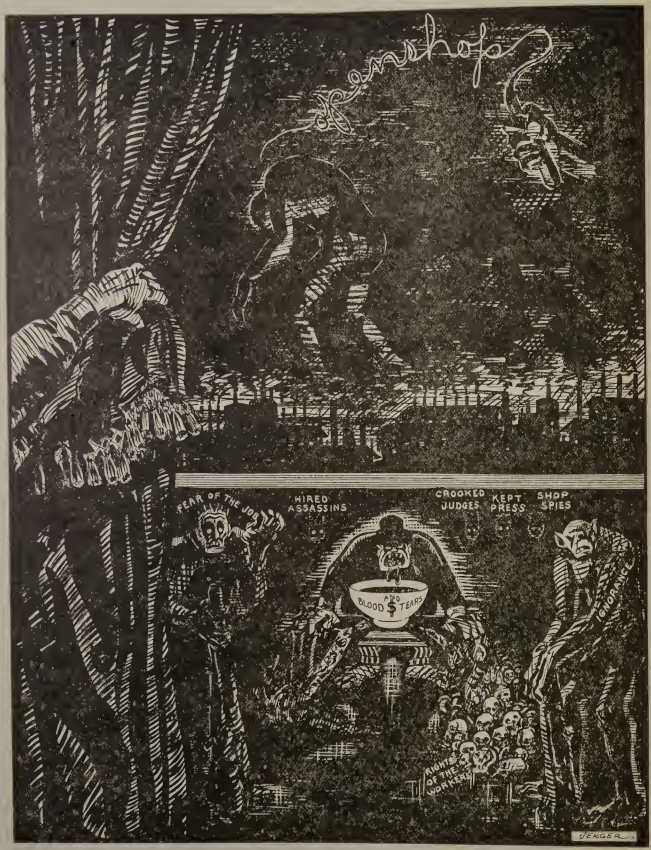
## Editorials

**AGGRESSIVENESS.**—The labor movement is one in which stagnation invites disaster. We cannot long remain inactive without experiencing the legal and extralegal violence perpetrated on our class because its apathy inspires the masters with courage. Labor history is replete with evidences that will support this contention. A most striking example was shown in the countless raids on radical halls, and on meetings during the war mania and even after the November, 1918 armistice. It was an exhilarating sport to go gunning for radicals in perfect safety, additionally rewarded by the badge of noble patriotic service. But this open season was suddenly closed at Centralia, Wash., where union workingmen defended their lives and their union hall against a uniformed mob serving the machinations of the murderous lumber trust. That was the high water mark for the American Legion and other "sports". That ended the bloody raids by mobs against militant workers. And that is why the whole working class, regardless of affiliations, owe the Centralia group now in Walla Walla prison their solidarity and eternal loyalty. How to show it is discussed later.

Decline in union membership signifies a growing retreat born of unemployment, and intensified by it. While this situation prevails the boss class has been heartened to push us a little lower than we were. Index figures of wages and commodity costs will show a decided reduction in the workers' standard of living. In the textile industry the absence of concerted organization drives has been rewarded by a ten per cent wage cut. The unorganized steel workers at Youngstown, Ohio, were cut in wages 2½ per cent, an opening wedge for more drastic reductions. In New York, iron workers struck against a wage reduction. These are instances of what is happening on the industrial field.



The political reflexion is not less striking. In California the Supreme Court recently rendered a decision making I. W. W. membership a crime, by sustaining the verdict of a trial court in the case against twenty-eight members. In Washington the State Supreme Court ruled that picketing theatres is illegal.

But the most violent of these labor-hating acts was the passing of a bill in Idaho making slowing down on the job a major crime, sabotage, if you please. Governor Moore signed this vicious law. On the interpretation of the law depends whether all workers in Idaho are criminals, because workers everywhere naturally, as members of an exploited, subject class, go slow on some jobs sometimes. It is a legal whip. All they have to do now is give the superintendents and foremen the real rawhides and the picture of Idaho civilization is complete.

Workers can gain nothing by standing still, and it is savagely apparent that they lose by inertia. The best defense in war is to attack. The best defense in class warfare is also to attack. Go forward! Organize the working class, and with economic direct action put your class where it should be, at the command of its own destinies, and the bosses where they belong, in overalls.

**BORING THROUGH.**—Memory need not be greatly taxed to recall the strenuous missionarying of Comrade Foster and his colleagues for the good of our working class souls, and their pocketbooks. We were solemnly advised to disperse because the I. W. W. had all the red blood, and the craft unions

(Continued on Page 46)

TRUTH PULLS ASIDE THE CURTAIN OF LIES AND REVEALS THE MONSTER

# United States Steel

By JOHN A. GAHAN

SAY steel to me and I do not think of what it has done for social progress, of its gifts to civilization. I think of battles. War. War where cold steel rips flesh, and white-hot fragments of bursting shells strike down the living, defile the murdered dead. War sending human heads bouncing on shell-scarred hills and plains. Booted bodiless legs hanging in the blood-red sun of dawn on splintered trees. Mass graves plowed, re-plowed, churned by whining steel. Such is one side of the mental picture. On the other, what? More battles in the prodigious industry that has sprung to towering stature like a ruthless, restless giant.

Steel and battles are synonyms to me. That may be inconsequential, impressionistic, vague, imaginative. But it is of the utmost consequence that for all the millions of robots who have, through successive generations, given their labor, their pain and blood; whose hopes have withered and despair been born out of a grimy, sweated, endless slavery in poverty's cesspool—I say it is of the greatest importance that they, too, have felt and do feel their toil and conflict as interchangeable terms, a oneness of class warfare not separable.

A GRAY-HAIRED EXCEPTION.
Speed Gets 'Em Now While They're Young

We do not suppose that this was the prevision of the inventors, Kelly and Bessemer, one in Kentucky, the other in Britain, who, independently, discovered the affinity of carbon and oxygen, thereby making heat units cheap and the development of the steel industry to gigantic proportions inevitable. They were pioneers and small capitalists, their business was not to estimate social effects, not to foresee the appalling total of misery that has been and still is the fate of steel workers. Destiny commanded that the world complete its industrial revolution and that a well-nigh omnipotent autocracy seize empire. It was not for the inventors to calculate or compass the vast arena of embattled steel slaves periodically flinging their lives and protests against the armed forces of the masters of steel. Their business was to profit by their discovery. Kelly was less shrewd than Bessemer, and the process of making steel is named after the latter, while for a long time in the early days this country imported steel from England, wrongly thinking the Kelly-made product inferior.

### Andrew Carnegie

Along with this early steel from Britain was imported a Scotch lad whose history was fated profoundly to influence the steel industry. Andrew Carnegie was a messenger boy who picked up the trade of telegraphy. By a happy stroke of audacity, which duplicated now would land the doer in jail, —dispatching independent orders—he won the patronage of Thomas A. Scott, general superintendent of the Pennsylvania Railroad. Scott made Carnegie his secretary. Those were the happy days of oil and railroad rebates, prefiguring the railroad melons and Teapot Domes of our own enlightened day. Andy made his first money in oil speculation. "He gave his note for a block of stock in one of the smaller Pennsylvania oil companies and then paid the note out of dividends received on the stock within a single year." His superior, Scott, was an insider, tipping Carnegie off on the best stocks to buy. The young man had no intention to let his race count for nothing, hoarding what he could, and planning to rise from a subordinate position to one of command.

### Essentially Parasitic

It has been said of him that he was a gambler in early experiments with steel production by the Bessemer process, but, like so many of his parasitic sort, he waited until others had beaten the trail, paved the way and found the goal. It was a sure thing when Andy made his first investment in the Iron City Forge Company, in 1864, securing one-sixth of the capital stock for $8,920. Scott and others were helping him, realizing his peculiar abilities, which when analyzed mean nothing more than the wits excessively and heartlessly to rob workers. Carnegie was their investment. With this favoritism he was able to form the Keystone Bridge Company. His profits from this enterprise paid for his stock in four years. The Pennsyl-

vania Railroad was giving him rates by which he beat smaller competitors. This canny Scot was on the way to power.

Then he met Henry C. Frick, a young man who made a flying start in the coke manufacturing business in Western Pennsylvania. Coke with iron ore and limestone are the three great constituents in steel manufacture. It wasn't long until Carnegie organized the firm of Carnegie, McCandless and Company. On top of this achievement he raised $700,000 to build the Edgar Thomson Works, near Pittsburgh. It should be noted that this plant was named after the Pennsylvania Railroad president at that time. Like Pharaohs and emperors, these industrial captains wanted their vainglory satisfied. Towns and factories were named after them. This was part of the game of good business—a sycophantic practice that still endures.

Acquisition of iron ore beds speedily followed. The ore was in the Lake Superior district. To bring it from that point involved transportation difficulties, and the steel masters established steamship and railroad lines. Rockefeller owned the great Mesaba Range ore fields at first, but Carnegie and his associates convinced John D. that it was a poor investment and he, more interested in oil, sold out at a moderate figure. Very soon the property was worth tens of millions to its new owners. The stroke made possible a reduction in ore prices which crushed weaker competitors. Carnegie's crowd quickly jumped in as bankruptcy stared these latter in the face and bought them out—cheap.

### Small Business Passes

The 'Eighties and 'Nineties saw a lot of this destruction of small business. Combination was the order of the era. Several examples of this are interesting. Interesting, too, appears the new plan of concentration. The American Sugar Refining Company and the American Tobacco Company were the models for others to emulate. "Instead of placing the control of acquired plants in the hands of 'trustees,' holding companies were formed, which acquired all or a majority of stocks in certain competing plants under one control, often by exchanging the stock of the holding company for the stock of the plant."

In the eight years from 1890-98 the combination of tobacco manufacturers in the American Tobacco Company increased its "capital" five times over, or in money from twenty-five to one hundred and twenty-five millions. Other combines were the Amalgamated Copper Company; the American Smelting & Refining Company, with a hundred millions and 100 plants; the fifty-million-dollar American Woolen Company, taking in a large number of New England mills; the American Car and Foundry Company; the American Hide and Leather Company, consolidating over twenty large manufacturers; and the International Paper Company, capitalized at fifty millions.

That so basic a manufacture as steel could remain outside this development is unthinkable. Yet, while the Federal Steel Company was incorporated in '98

**ECONOMIC REASONS FOR THE DEVELOPMENT OF THE CALUMET REGION**

**Black Areas—Heavy Coal Deposits; Cross-Patch Areas—Light Coal Deposits; Dotted Areas—Iron Ore**

as a holding company to acquire stock for the Illinois Steel Company, and other steel centralization progressed, Carnegie was inclined to put too much faith in his own individuality. He was one of the old-timers, and friction concerning combination into a more powerful and interlocked managerial directorate appeared. His partners, Frick and Phipps, chiefly the former, broke friendship with him on this score. Frick was always more far-seeing. He knew that independent companies, or even minority groups, were becoming obsolete in the new industrial alignment.

### The Fight for Control

The prime mover for absolute unity and control was the late J. Pierpont Morgan. This banker met Judge Elbert H. Gary, a corporation lawyer, and was convinced that Gary was the man to be made president of the monopoly yet on paper. Steel mills were being bought up, and the Elgin, Joliet and Eastern Railway was taken over. It operates in the Chicago-Gary district.

While Carnegie was holding out of the new Morgan combine, a ninety-million-dollar company was ushered on the scene by the John W. Gates crowd, combining many western plants, making barbed wire, nails and wire fencing, into the American Steel and Wire Company. Carnegie wanted to retire, but Frick did not. He was progressive.

"To his mind the days of one-man power were over; great enterprise in the future would be dominated and controlled by diverse interests; and even complete industries, if they hoped to live, would of necessity become allied with others. He believed that combination must take the place of competition."

Though Andy wanted to get out of a business he could not dominate, he angled with characteristic

cunning for his own price. William H. Moore, a Chicago capitalist of great organizing ability, was empowered to post a million dollar ninety-day option on Carnegie's share in the company bearing his name. The price was set at $157,950,000. A temporary panic prevented Moore's group from being able to raise the balance. Carnegie said nothing, did not extend the option a single day, and he was ahead of the game one easy million. But the Scotchman thought better of his holdings by the time a second offer was made, and he raised the price to 250 millions.

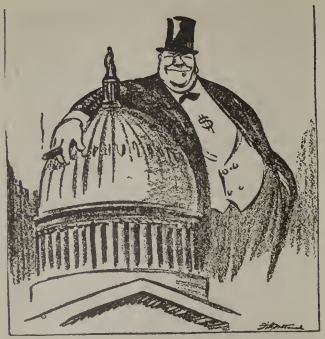
In 1897 he appointed Charles Schwab president of the Carnegie Steel Company. Schwab had made good as his secretary, manager and all-around slave driver. In addition to these virtues he was a forceful speaker. Carnegie still wanted to get out, but he wanted his price. To frighten his numerous rivals into making an effort to come to terms, he said he would fight all of them on their own ground. Accordingly, he prepared to enter the tube business against Morgan's National Tube Company, actually securing 5,000 acres at Conneaut on Lake Erie and letting contracts for building a 12-million-dollar tube plant.

Opposing Gates and his American Steel and Wire outfit he made ready in Pittsburgh to erect a large rod mill. Rockefeller had an ore fleet on the Great Lakes and Carnegie ordered a rival one to carry ore to his mills. He announced that he would have an ore-carrying railroad constructed between Lake Erie and the Pittsburgh mills. The old fellow even put surveyors at work to plan a railroad route between the mills and the Atlantic to fight the Pennsylvania Railroad. His profits in 1900 had been $40,000,000. His mills were producing one-fourth of all Bessemer steel in the country and half of the structural steel and armor plate. He was out of debt, had lower productive costs, thanks to vicious repression of his workers and the ability to grasp new inventions and methods.

### World's Largest Sale

Then Schwab was sent to persuade Morgan. They say he talked for eight hours. At last the banker-industrialist agreed to buy Carnegie out. But slaves produce wealth very fast, and by this time the price had jumped enormously. Carnegie and his associates received over $447,000,000 in stocks and bonds. It was the greatest sale in the world's history.

RAILROADING INSIDE THE PLANT



HOT MILL WORKER TAKING A BREATHING SPELL

Carnegie satisfied, he dropped the projects just outlined and things looked all right for Morgan. All right until he found that Gates and the other industrialists of Federal Steel except Gary did not want to let Carnegie "sandbag" them, so they raised their price on the sale and J. Pierpont was up against it to finance the monopoly purchase. He called into conference George W. Perkins, E. H. Gary, Marshall Field, Norman B. Ream, H. C. Frick and H. H. Rogers. The conference agreed that the Gates and Moore interests must be brought in, and that Standard Oil was the greatest menace owing to its ore deposits and ore fleet on the Lakes. At length Gates and Moore "came in," and Frick was commissioned to have a little talk with John D. Frick was a believer, as has been said before, in the community of interests idea. Other champions of this credo were Cassatt of the Pennsylvania Railroad, Harriman of the Northern Pacific and Hill of the Great Northern.

Rockefeller heard Frick well and agreeably, selling for eighty millions in stock, and eight and one-half millions in cash for the ore-carrying steamers.

In this manner the United States Steel Corporation was organized in 1901 with a capitalization of $1,100,000,000, and a bonded debt of more than $300,000,000. The two greatest banking groups in

# The Crime Situation In the U. S. A.

By HUBERT LANGEROCK

## Is America a Nation of Crooks?

**THOSE of us whose hair is beginning to turn gray have a distinct recollection that in their youth, the shouts of a newsboy peddling an extra with a crime spattered all over the front page, made people stop and take notice. Today, this is no longer the case. We are getting used to crime. It is becoming frequent enough to be rated commonplace. About ten thousand people were murdered in the United States during 1924.**

**This constitutes one more record in favor of this country. Verily, we have got the world beaten. Dr. Frederick Hoffman figures out that ten thousand murders means a rate of over 100 per million as against 4 per million for England and Wales. There are more hold-ups in Los Angeles in one month than in the whole of France in the course of one year.**

The Law Enforcement Committee of the American Bar Association reports that our criminal population during 1910 to 1920 increased 10 per cent faster than the general population. The prison population of England has decreased steadily since 1876. During 1921, in England and Wales, there were 63 murders. In the United States with three times that population, there were far more than one hundred times as many murders. In France, during 1919, there were 121 burglaries. In Louisville, Ky., there were 241, and in Chicago 1,862. France has forty million people.

### Cost of Crime in Dollars

If the life of the citizen alone were at stake, the master class would not pay much attention to this situation. It is quite well aware of the fact that it is the master class and that, as such, it is getting from the agencies of law and order more than an even share of protection. Mr. Morgan's secretary every evening notifies police headquarters of the movements of his boss for the following day and a special detail sees to it that the gentleman's motorcar will always find open traffic ahead; but what cop ever bothers whether John Smith who works uptown, on the graveyard shift, gets held up when he slinks back to his wife and kids on the lower East Side during the wee small hours?

But there is the element of cost to reckon with. Crime is one of our leading industries. Its yearly output is, in round figures, $10,000,000,000. Crime, not railroads, movies or automobiles, ranks second to agriculture in the industrial hierarchy of capitalistic America.

First, there is the direct cost. Forgeries netted $100,000,000 in 1924. The annual loss through embezzlement by trusted employes has increased five times since 1910 and is still increasing. E. A. St. John, president of the National Security Company, estimates the country's present loss, on that score, at one hundred to one hundred and a quarter million dollars a year.

In the Bankers' Monthly, Carl H. Getz made a study of the economic toll of crime based on the records of fidelity and insurance companies, police departments and business associations. Payments by insurance companies on burglary claims have increased tenfold in the last ten years. Payments on embezzlement insurance have increased sevenfold. Surety companies declare that burglars, bandits, thieves, forgers, bucket shop operators and con men mopped up $3,000,000,000 last year.

If the bootlegger billions could be counted and if political graft could even be remotely estimated, to say nothing of the earning of professional arsonists, the total would certainly lead the gross earnings of any industry save farming or manufactur-

ing, considered as a whole.

William R. Joyce, chairman of the National Surety Company, estimates that burglars get $225,000,000 annually; bandits $50,000,000; common thieves $150,000,000. He figures that embezzlers get away with $125,000,000 per year. Fraudulent bankrupts and credit swindlers rake off $100,000,000 a year. Merchants cash over one hundred million dollars' worth of bad checks per year, while forgers and raisers get them for twenty-five million dollars more. Stock and land frauds and confidence games are figured at two billion dollars per year while political graft is simply incalculable.

### Criminality A Vast Industry

Such figures give crime a volume comparable to industry. Only organization makes such a volume possible. The business must carry heavy overhead expenses. Lawyers must be engaged, politicians and other officials bribed and subsidized. The criminals have headquarters and branches of more or less extent. Fences, moonshiners, confidence men, and other of these gentry pay rent. There must be capital invested in equipment, such as automobiles, firearms and various commodities and tools. Doing such a vast business, crime must necessarily have a tremendous organization.

In figuring the total cost we must add the indirect cost of prevention and punishment to the sums obtained by the criminals.

So we have to take account of the indirect cost of courts, police, judges, court officers, probation officers, parole and pardon commissions and so on. For the city of New York alone, this represents an annual expense of over forty million dollars.

For the whole of the United States, those indirect expenses are equivalent to a per capita tax of three dollars per year upon every man, woman and child.

Next comes the keep of eighty thousand convicts whose cost of maintenance rises, in certain instances, as high as three dollars per day, with only six of our penal institutions self-supporting.

A criminal is generally a waster. As a matter of self-defense, he usually destroys beyond the possibility of further use that part of his plunder which he cannot immediately or easily remove.

The haul of the burglars, robbers and swindlers of this country would pay for the cost of building a Panama Canal every year.

### Who Pays The Costs?

Now the question arises, who pays for all this? The ultimate consumer? So it would seem, but what there is left of competition prevents many a capitalist from taking the cost of burglary out of his price to the consumer. Forgery, credit frauds, commercial bribery and confidence games are paid for by their immediate victims. Insurance against crime protects and is being taken out in increasing amounts, but the business men pay the premium and, although the latter is a general overhead expense, the trust magnates understand that, with all their control of prices, they would be able to keep for themselves a larger share of the surplus value squeezed from the workers if that particular item could be lowered, like their taxation, or entirely done away with through the efficiency of the repressive agencies of the state.

The purchasing power of the public must be assumed to be a more or less fixed quantity. If then, because of enormous stealing, the sellers of goods must add a fixed charge to the cost of every article sold, it stands to reason that the consumption will automatically decrease.

And right here is the spot where crime begins to hurt the master class.

Because of a crime wave, the National Bureau of Casualty and Surety underwriters has boosted the insurance rates in California's large cities. Rates for drug stores, amusement places, messengers and paymasters are doubled, churches will pay 60 per cent more and homes in Los Angeles County 50 per cent more.

At this juncture, the master class, hit in the pocket book, sits up and begins to take notice and commissions its hired specialists to try what it feels unable to do itself: ferret out the cause of the situation.

To this investigation I wish to bring an unsolicited contribution.

Not being a hundred per cent American, my outlook is international. I dare to go and look beyond the physical boundaries of the United States for facts that may throw some light upon our national problems.

So, I bring forward a statistically established fact, general all over Europe.

### Crime Festers and Erupts In Capitalism

Given two districts, one overwhelmingly respectful of law, order, religion and the capitalistic state, the other class conscious and manifesting its class consciousness through economic, co-operative and political organization of the workers with all the tactical mistakes and flounderings of a downtrodden class attempting to improve its condition; crimes in general and crimes against private property in particular will decrease in the latter and increase in the former; in other words, crime will decrease in exactly the same measure that revolutionary sentiment based upon class consciousness becomes more firmly and intelligently established.

To generalize: crime may be either habitual, hereditary, congenital or instinctive on the one hand or purely accidental, the result of momentarily present conditions on the other hand. The first kind of criminal predominates in Europe, the second kind in the United States.

The European criminal is generally a product of heredity and wants, before anything else, medical care. The American criminal is more a product of American economic conditions perverted by an illogical reaction.

Confronted with our present day social system, the average American, instead of reacting as a member of a class, which is the logical way under present-day technical conditions of production, reacts as an individual, takes chances, tries to imitate and, to use his own phrase, "attempts to get away with it."

From this fundamental attitude spring, as from a fountain head, all the special characteristics of American criminality. The four most essential are:

Ultra-individualism.

Youthfulness of the average criminal.

Simulated crime.

Police co-operation.

Let us briefly consider these features of American crime.

Under changed economic conditions, American capitalism is using the respect of the unthinking crowd for all things traditional in order to bolster up its own status by using the institutions of the period of settlement and economic individualism as a means of social restraint to prevent society from adjusting itself in its laws and institutions to the changes made mandatory by the rule of the machine process as the leading mode of production.

This attitude, although insincere and hypocritical in its purpose and method, carries within itself its own penalties. Some of the victims of such a propaganda are liable to believe it sincerely and to act upon their convictions.

The spirit of acquisitiveness, the desire to possess, leads, in its intensified form, to a contempt of all social guarantees. The majority of the native-born are sons of pioneers who have inherited, under changed technical and economic conditions, the ruthless contempt of the rights and feelings of others which went with the scramble for wealth during the economic stage of settlement and individual competition.

### One Murder Every Hour

Hence the contempt of human life inherent in American society, ten thousand murders a year, one each hour throughout the year and their number steadily increasing. Why should the majority of the American people be able to abhor crime when their church, press and movies are consistently and purposely glorifying the principle of individual competition even when it is sharpened by the use of all the inventions and devices of modern technology? Have we a right to wonder when those same people sitting as jurors are positively ingenious in thinking up excuses for one who takes another's life and if there has sprung up a doctrine which consider as insane every man who murders and claims to be insane or is able to pay enough to an expert to claim it for him?

As a nation, the American people condone crime because they have not reached a degree of social enlightenment where crime becomes anti-social. The situation is absolutely identical with that pointed out by the German psychologist who, commenting upon the results of the last presidential election, wrote this cryptic sentence: "the majority of the electorate has absolved the oil thieves because that same majority is, as far as mentality goes, composed of potential oil thieves."

The second outstanding trait of American criminality is the comparatively young age of the criminals.

The statistics for the nation show that the vast majority of the defendants in criminal cases are under the age of 20.

Mr. St. John, the president of the U. S. Surety Company, states that the records of this company show that at least 75 per cent of all crimes committed through burglary and robbery are the work of youths under 25 years of age. Moreover the facts in this case indicate that the age of criminals of this class is steadily decreasing. A most significant feature, said Mr. St. John, in the alarming increase of crime in this country in the last ten years, is the fact that it has been in financial crimes and not in crimes of violence.

Juvenile probation officers throughout the country are unanimous in the statement that the offenses committed by children are much graver than they used to be ten years ago.

Why all this crime and, especially, why are so many juveniles entering this anti-social field of predatory endeavor?

### Who Is To Be Blamed?

Many shallow thinkers blame the home and the parents.

They merely exhibit their lack of insight. The machine process, in taking industry out of the home to the factory, has destroyed the economic foundation of the family. Home discipline was, in the last analysis, and still is today in backward technical forms of production, such as family farming, not the result of an arbitrary moral discipline exercised by the head of the family but the logical outgrowth of the material necessities of home production.

When industry left the home, the home became merely a unit of consumption and no attempt to make the home and its training uphold a certain code of morality is possible if that moral code is in contradiction with the realities of economic life as it affects the members of the family individually and jointly. The fact that the church, acting on behalf of the master class, wishes the home to stand for a certain form of capitalistic morality will not make it so when that morality clashes with the economic interests of the family membership.

Parental parasitism is a secondary cause of juvenile crime. The parent who sends a child out into the street to peddle newspapers in order that it may help to make up the deficit of the family budget, deliberately exposes his offspring to surroundings where unsocial influences will work their nefarious influence with comparative facility. But even these circumstances do not explain the increase

# The Mate of the "Cis"

By "AUSSIE"

WHEN the Marine Transport Workers' Union was organized in Buenos Aires in May, 1919, the matter of controlling the port zone was the most important point upon which the eventual success or failure of the new union would depend. To obtain this control it was necessary to put an end to the reign of the shanghaiers, and to compel the captains of ships to get their men directly from the Union Hall. Nothing but force would be likely to do this as the captains—for financial reasons—were always hand in hand with the Czars of the port, Stockholm Charley, Bengtson, Big Pete and Stannius, the bloated Dane from the Cafe in Calle 25 de Mayo.

The first thing to do was to prevent the men from going around the ships on their own, or from accepting jobs from shipping masters, and the second was the solidarity of the Argentine longshoremen, "carreteros" and tug boatmen, who immediately declared "black" any skipper who tried to kick over the traces. One or two lessons were sufficient in the early days of the Union, and once the precedent became established it was followed as a matter of course. Of course, few of the skippers liked the arrangement, but when they found that there was no other way, they cursed and blew, but turned up at the Union Hall and took their men, as they were called by the secretary at 2 p. m. each day.

A paid delegate patrolled each dock and visited each ship. Every skipper knew within one hour after his ship was tied up that if he was lacking any men he must have his full crew signed on the articles on union conditions three days before the loading was completed. Every marine worker on his arrival was also told of the rules of the port, and that while he might prefer his own union—in England, Norway or the United States—to the Marine Transport Workers, yet he could only ship again through the Union.

In July, 1919 forty sailing ships arrived from all corners of the earth within two or three weeks to load grain, linseed and other foodstuffs to hungry Europe. The Boca and Barracas were crowded with barques, full-rigged ships, barkentines, schooners and auxiliaries. A forest of masts, reminiscent of days long gone, lined the wharves from Dock One down to the turn of the Riachuelo—Finlanders, Yankees, Bluenosers, a couple of Spaniards, half a dozen long rusty limejuicers, but most of them of Norwegian registry—ships varying in capacity and age from the spotless cadet-training ship of the East Asiatic Company of Copenhagen, the lordly "Viking," to the seventy year old "Ellen," the oldest deep-water sailer, all rusty and battered from the storms of four generations, but still classed in "Lloyds".

And from them flowed a reservoir of men to join the Union—and to reship and carry its message to the ports of Europe and North America.

And in this argosy—an argosy which has already scattered itself on ocean floors and in harbor hulks — came the "Cis". The "Cis" was squat and bluff, and the Germans had made many fortunes from her capacious hull, before they sold her in war days to the Norwegians. When she tied up, several of her men went ashore, and her white haired skipper and his peculiar mate were told of rules and requirements. The skipper participated little in the affairs of his ship, leaving all the matters to his bull-headed "styrmand." The mate came from Christiansand and knowing—which is more than people do—that he **did** have peculiarities, he took good care to see that no Christiansand seamen should work on his ship. On the trip down from New York it appeared that an ordinary sailor from Christiansand got on board while the tugs were taking the "Cis" seawards. It was half an hour later before the mate discovered it—the ship was stopped, a boat was sent ashore with the youth from the mate's home town—who already had a month's wages in his jeans.

But try as he could, the mate's fame spread across the seven seas, and every Norse mate had his yarns to tell of the weird individual from Christiansand who drove the "Cis" through the scud and muck of the "Trades".

The "Cis" was loading fast and so Stavanger Charley the delegate visited the craft. "When are you coming to see about those men, mate?" he asked. "I dont think much about the Union, anyway, not this Buenos Aires Union. Maybe they'll give me someone from Christiansand!" was the answer of the mate.

"Well," says Charley, "we are always willing to be reasonable, if you are."

And so on the following day, the mate arrived at the Union Hall. But he was not alone. Behind him—like a tail behind a comet—came a procession of men, all of them members of the Union.

"Hello, secretary!", he shook hands, "I am the 'styrmand' of the 'Cis'. I want four A. Bs, three ordinaries, a sailmaker, a carpenter and a messboy."

"Fine," says the secretary. "We are just going to call the roll, and then you can see the men who are going with you."

"No, you don't have to call the roll," says the mate. "I have already got my men. They are here right now, all union men, and none of 'em from Christiansand."

The secretary said, "No, this Union doesn't work that way, mate." Then turning to the men who came in with the mate, "You men beat it, unless you want to be put on the boycott list. You know what the penalty is for hunting your own jobs and cheating your fellow unionists who have been ashore longer." Hanging their heads they went out of the hall.

The mate got red in the face. He was very angry. "I am going to take those men, and no one else." The secretary told him that things didn't work that way, that the man longest ashore was the man who had first option on the job.

The mate got more angry. "This is not a Union, and you can't bluff me. I'll show you who I am. You can't put any Christiansanders over on me."

And he hustled through the waiting crowd of seamen and as he got to the door, he turned around and raised his doubled fist, "And I'll see you in Hell before I'll take a man from this place".

"All right," shouted the secretary. "You'll see what you will see, mate."

Now the mate was angry, and when a mate like he was, got angry—well—he went to quench his thirst. He hied him into the Hamburger Bier Hall and shouted himself several beers with cross sections of "caña". And as he drank he became more indignant; he became red-hot. Soon the pent-up torrent broke loose and in good sea-language he began to call the Marine Transport Workers every name of a fornicated blue cow he could think of.

Soon a German port-worker came running to the Union Hall. He told how the mate of the "Cis" was using blistering language about the Union and expressing doubt whether any of the members were born in the bonds of holy wedlock.

The hall was still full of marine workers. The secretary got up on a form. "Fellow workers, the mate of the 'Cis' is at the Hamburger Bier Hall blowing off his head and cursing the Union. Fall in, quick march!"

The mate—like a politician at a meeting—had already gathered a crowd of beach-combers, longshoremen, and was talking in Norwegian and English alternately with a stein in his hand, from the veranda of the Bier Hall, when the Union Army came down the street.

Like a flash, he divined that the army was looking for him. He dropped the stein and hurdled the railing into the street. And then despite the mixture inside him, he put his legs to work. Like a greyhound he made down Pedro Mendoza towards the old "Cis". Behind him came the prize runners of the M. T. W., who were shouting—with laughter on their faces—for his blood.

He beat them to the ship and scorning the gangplank he leaped over the side. In a few moments he was in the chain locker which he speedily barred on the inside. In the meantime, the "Cis" was swarming with members of the Union who were setting up blood-curdling howls what they would do to the mate.

As night fell they went home, but the mate refusing even the knocks of the second mate—the skipper was ashore—stayed all night with the anchor chains and the antagonistic mixtures in his commissary department.

And with the dawn, he crept out and slithered into his bunk. And as the sun rose, and the crew went about their tasks and the longshoremen gathered by for the day's work, he jumped hundreds of ships with thousands of wild raving savages chasing him, just missing him. On and on, sweating, struggling and panting, on, on—would he ever get away from them?——

"Hey! hey! styrmand! Get up! Wake up!" and then just as he jumped off the mainmast into the harbor below—he opened his eyes and there with the second mate—was standing Stavanger Charlie, the delegate, spruce and clean.

"Hello, styrmand, you look pretty sick this morning. Now how about that crew you were thinking of getting from us?"

"Tell the secretary to select the men himself and send 'em on board tomorrow morning. I don't feel like going anywhere today."

And in due course the "Cis" sailed, the mate was chummy with the delegate—and there wasn't even one "hombre" from Christiansand.

Leastways 'cept the mate himself.

And the Norwegian mates now have another story about the mate of the "Cis", with more or less variations and frills.

# Stigmata

By MARY HOPE

HER black eyes were blood-shot and looked at the world with a calm weariness as though she had forgotten she was tired. Simplicity in its lowly but most beatific sense had sweetened the lines around the large mouth and given a delicacy to her black countenance which few perceived.

She jumbled her words mysteriously like pebbles in a dark closed bucket. Her toothless gums shone in broken pinkness against the brown color of her lips and it was difficult to understand her speech. She was the negress, Leda, bent over a pail of soapy water and her co-workers were an Irish cook and a waitress. The wind of her conversation always blew the same way, something of this breath, "If you love God with all your heart and soul, with all your strength and mind, then peace will enter your hearts . . . I save up my money to be a missionary down South, to bring Jesus to everyone . . . He is the Life and Strength . . ." And God seemed as obvious to her as the sky above her head or the greasy floor beneath her feet. She continued endlessly, weaving impending fantasies in her rich gestures, giving symptoms of an abandonment to the ecstasy of her faith and it was only a dirty floor to wash that eclipsed her anxious emotions.

The day passed with the usual onslaught of floors to scrub, a mountain of dishes to wash, the greasy scatterings of potato peelings and rubbish to efface from notice amid the clash of silver and the callous insistence of the watchful boss—a proteinaceous person easily identified with pork chops and mayonnaise. The Irish cook, no longer young, and over whose generous widths and growing years despairing mists were gathering to cloud the sun of her vitality, listened apathetically to the religious effusions of Leda, the negress. The gradual evaporation of the cook's strength which had once seemed so invincible and splendid was a miserable observation.

"Aye, Leda." The Irish cook's laughter was pathetically condensed with weariness. "Some day, we'll come ridin' past in limousines with our noses up and horses no more as we are now."

What incongruous humor in her ridiculous verbiage, "We'll get a rich man who will put us in a glass-cage and throw snow balls at us!"

Snatching a singular hour of absence from the proprietor's watchful economy, Leda sat on a soap box restfully and began to soak her calloused feet in hot water.

"Sore?" She splashed the water expressively. "It's like bones breaking through my skin." Despite the incomprehensible shuffling of her words, Leda conveyed to us a momentous symbol of Christ's visitation upon her and showed us, graved in the soles of her queerish dark feet, two cruciforms like cross ruts in a worn and weary road. "You see God remembers me and gives me crosses to bear even upon my feet."

So the misery of each day passed with the pseudo-alleviation of Leda's Christianity and the Irish cook's humor and brightened only by that intangible warmth of human contact and understanding of which they were not aware, and which was in its highest sense a spirit of solidarity woven from the sweat-soaked threads of a common despair. . . .

In her gaunt gestures, the simple twist of her prayer-spun lips, the stark attachment of her Christly passion, Leda needed no earthly salve, for her economic wounds were haloed with God's blessing and kissed by the saints . . . And the Irish cook's vision of an old money bag and the artifices of her humor played their part on behalf of the boss.

. . . Yet strange as it may seem, both Leda and the Irish cook, one with the full vitality of the newborn protestant magnifying her indignation, the other one with outrage flaming her tired body, marched out of the restaurant in a genuine spirit of rebellion—and gave the waitress a story to write.

CEREMONIAL DANCE OF IGORROTES

# Was Morgan Wrong?

By VERN SMITH

WHEN Lewis H. Morgan's book, **Ancient Society**, appeared in 1877, with its at that time startling theories of the evolution of material culture, and of the development of social, religious political and philosophical systems of mankind on the basis of the material advancement; and especially with its theories of the early group marriage and primitive family life which were so shocking to so many of the mid-Victorians, it was met with a storm of protest. Morgan himself answered his critics ably, but did not live to the end of the battle. The rising radical philosophers, scientists and historians took up the fight, and gradually won a world to grudging acknowledgment of Morgan's contribution.

The first words of Section I. of the Communist Manifesto of 1848 are: "The history of all hitherto existing society is the history of class struggles." To this, a later edition, edited by Engels, adds this note: "That is, all written history. In 1847, the pre-history of society, the social organization existing previous to recorded history, was all but unknown. Since then, Haxthausen discovered common ownership of land in Russia, Maurer proved it to be the social foundation from which all Teutonic races started in history, and by and by village communities were found to be, or to have been, the primitive form of society everywhere from India to Ireland. The inner organization of this primitive communistic society was laid bare in its typical form, by Morgan's crowning discovery of the true nature of the gens and its relation to the tribe. With the dissolution of these primeval communities society begins to be differentiated into separate and finally antagonistic classes. I have attempted to retrace this process of dissolution in **The Origin of the Family, Private Property and the State.**"

**Evolution respects no dying social classes, and capitalists dare not admit of an endless social evolution. They wish to keep things as they are. Change is fatal to them. Morgan's anthropological theories, squaring with Marxism, make no exceptions for bourgeois convenience in socio-industrial development. Hence, Morgan must be discredited by the class now controlling the universities. Boas, Lowie and Goldenweiser have stepped forward to destroy Morgan. We leave it to our readers to judge how far they can succeed if Marxians go after the trio with the powerful weapons employed here by Fellow Worker Smith. However, the anthropologists are invited to reply.—Editor.**

### Engels' Debt to Morgan

Not only did Engels retrace this process, making of the first six chapters of the **Origin of the Family** a neat little summary of Morgan's work, with a certain amount of additional proof, but he wrote two new essays, the last two chapters of the book, on "The Gens Among Celts and Germans," and "The Rise of the State Among Germans," both in the same scientific vein of Morgan, but making a distinct addition to the material already on hand.

It would be absolutely impossible to tell of the vast number of Reds who found Morgan a handy club against conservative opponents, but we must mention Mary Marcy, Lida Parce, Ernest Untermann, Wm. Paul, August Bebel, Karl Liebknecht, and no one knows how many others, of all varieties and shades of revolutionary thought, there may be.

Paul La Fargue, the theoretician of the French Marxists, in his book, **The Evolution of Property**, frankly

draws on Morgan for most of the meat of his chapters on "Primitive Communism," and "Family or Consanguine Collectivism," making, indeed, lengthy quotations from **Ancient Society** and other books by the same author to prove his points.

Of course, after a time, others than those opposed to the present economic order were inclined to take cognizance of this hard thinking, unavoidable man from New York with the interpretations that were finally beginning to have a certain amount of the toleration that comes with familiarity, and we find that Professor Jenks (who is no Red) declares in his **History of Politics**, that **Ancient Society** will ultimately be recognized as one of the great scientific products of the nineteenth century. Prof. A. C. Haddon decided that "Morgan was undoubtedly the greatest sociologist of the past century." Naturally, this does not exhaust that list either.

So, we've all read Morgan, either at first or second hand. Let us, then, have another look at his world-famous system, in order to be fresh for the shock of a new criticism. I assure you, there is going to be a bitter ideological struggle, when the pluralistic anthropologists tear into him.

### Outline of Morgan's Theory

In addition to Morgan's essential theory that the family, social, religious and cultural organizations of man correspond to the material evolution of the race, he claims, furthermore, that the material evolution is based on certain inventions, each of which produced a tremendous change in the way of making a living, and therefore in all these other things. For the sake of convenience in reference, he divides cultural progress into arbitrary stages, each of which is marked off from those above and below it by some invention of considerable importance, but which is also colored by various other inventions, and has a definite content of social, family, and other sorts of organization, and possesses a certain amount and kind of knowledge, philosophy or science. Following is an outline of the Morgan classification, mostly from pages 9 to 12 of **Ancient Society:**

1. Lower Status of Savagery: From the infancy of the human race to the commencement of the next period. Man living in a restricted habitat on fruits, nuts, etc., and probably using language.

2. Middle Status of Savagery: From the acquisition of a fish subsistence and a knowledge of the use of fire, with mankind spreading over most of the earth's surface. Includes Australians and part of the Polynesians.

3. Upper Status of Savagery: Commenced with the invention of the bow and arrow, and ended with the invention of the art of pottery. Includes Athapascan tribes of Hudson's Bay country, Columbia River tribes, and some coast tribes of North and South America.

4. Lower Status of Barbarism: From the use of pottery to either the cultivation of maize and other plants with irrigation or the domestication of animals, other than the dog. Contains Indian tribes east of the Missouri River, and such European peoples as practiced the art of pottery without using field agriculture, or herding.

5. Middle Status of Barbarism: From animals or irrigation to smelting of iron. Includes tribes using bronze, adobe brick, or stone architecture. Includes most ancient Egyptians, many peoples of Europe and Asia as shown by archaeology, and the Pueblo, Aztec, Inca, Maya, etc., of America.

6. Upper Status of Barbarism: From iron to writing. Contains none of the American Indians, but many peoples of Asia, and all of Europe at one time, for example: Greeks of Homeric epoch, Latins before founding of Rome, Germans of the time of Caesar, etc.

7. Status of Civilization: Everything since barbarism. With this classification of material progress went a change in the forms of society. For instance, all society below the middle status of barbarism was organized non-politically, that is, fundamentally non-territorially, on the basis of blood relationship. Once the clan and the gens became established, in the middle status of savagery, they form the material out of which tribes and later confederacies of tribes are formed. The clan or gens is a group of blood relatives tracing descent from a common ancestor, female in the case of the clan, and male in the case of the gens. The distinction between them is a later refinement—Morgan uses the words interchangeably, but recognizes the difference between what he calls the "female gens," and the male gens. Gentes, or clans, may be organized into phratries, which are subdivisions of tribes, or former gentes, now subdivided into smaller gentes.

These are essentially democratic governments. There is no private property in land. Private property in such things begins with the cultivation of the soil in field agriculture which makes possible profitable slavery, and sequestration of the profits.

The gens and clan organization grow out of the sexual class organization,·of a type similar to that now possessed by the Australians (second period of savagery), who are in process of developing gentes and tribes from moieties.

### Private Ownership of Wives

Since the early social organization of man depends on blood relationship, Morgan made a special study of this, and through an ingenious course of reasoning, discovered relics in the language of the tribes of the upper status of savagery and the lower status of barbarism. He deduced the fact that these peoples, who lived in a pairing, semi-monogamous (Syndyasmian) family with easy divorce, had once had a form of group marriage. The gens acted as a restriction on marriage, even then, since it

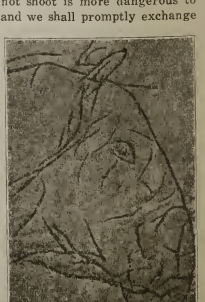
Some Prehistoric Artist Drew This Musk Ox on a Cave Wall

was a general rule that none should marry inside their gens. But the terms of relationship showed that there had been, in the middle status of savagery, a family in which, when a person married one of a group of sisters and cousins, he found he had married all of them, and vice-versa, all his brothers and cousins were the husbands of his wife. This system Morgan found among tribes in Polynesia, and chose to call "Punaluan." But the Polynesians had another system of relationship terms, which showed that at one time, perhaps in the first status of savagery, they had considered to be married all men and women in each generation, including own brothers and sisters. It was Morgan's idea that the consanguine family might have been, but was not certainly preceded by a system of absolute promiscuity. He pointed to the gradual growth of restrictions, as cases of attempted strengthening of the race through a realization of the dangers of too close in-breeding, not a conscious invention, but just the survival of those tribes which for some more or less accidental reason began to practice the marriage class system and other restrictions.

The introduction of field agriculture or of pastoral life was, of course, the change that broke down the relatively happy time of democracy in government, tribal and not individual ownership of land, no exploitation of slaves, and no permanent, indissoluble marriage.

The fact that herds could be tended by slaves, and that the increase could be taken over, sequestered, and held by an individual, and that in field agriculture slaves could be worked in gangs, plowing and harvesting, and the product stored in the master's warehouse, made some men rich, and they proceeded to run things. Not only that, they wanted to give their riches to their children, and they wanted to be sure that these children were their very own, so they sequestered the women also, established private property in wives, and introduced the rigid, monogamous marriage, or the polygamous marriage with the harem in some form or another, and, of course, as a corollary, since this made women scarce, and chastity made some of them unapproachable, prostitution of the others came into existence on a larger and larger scale. Also class war developed, and empires, and the more primitive, nature religions gave way to elaborately ritualistic, pessimistic, and dualistic religions, suitable to hold in place a subject race, and comfort a still human class of exploiters.

### Facts Confirm Materialistic Conception



If all this is true, its usefulness in the defense of the materialistic conception of history is obvious. Those of us who wish to use these facts as proof of our argument that history shows capitalism did not always exist, and therefore, presumably is not a permanent human trait like eyes or teeth or children, and will not always exist like these latter, naturally do not wish to see the evolutionary theory smashed. Therefore, in considering its trustworthiness and present tenability, we should watch out, and remember that we are biased.

Now bias, or predilection in favor of any definite idea, works this way, especially where the emotions are concerned, or the material interests of the observer: It is simply a psychological law, undeniable and so far as we know, unchallenged, that when our jobs, or our reputation, or anything else that we want depends on our gathering proof for a given doctrine, we see more readily, and remember better those things which support that doctrine. We easily invent excuses for overlooking those things which do not support it. A very obvious fact implying the contrary of what we wish breaks through and convinces us we are wrong, but with some people it takes a startlingly apparent fact indeed, and then sometimes they are not able to appreciate it in all its signficance, even while admitting its presence.

But the sensible person, realizing that he is biased, can correct for this. I trust we shall be able to do so throughout this article. I am sure that some of Morgan's critics are equally biased, against him, and that, being unconscious of this fact, they are led into error.

Let us make it perfectly clear right here, that we do not believe that the materialistic conception of history rests on the judgment of anthropology. The quotation from Marx and Engels above shows that they were convinced of the accuracy of economic determinism (to use a somewhat too strict expression) before Morgan's time. When **Ancient Society** appeared on the scene, it provided a wealth of argument based on pre-history which was wonderfully fitted, almost as though by design of someone, to support the conclusions of Marx and Engels based on written history. And, of course, we have all used these arguments as a weapon against capitalism. Now, however, when we have a reason to begin to suspect this weapon of unreliability, we shall be quite able to examine it dispassionately, in fact, very critically, for we know that a broken sabre or a gun that will not shoot is more dangerous to us than to the foe, and we shall promptly exchange it for another.

We have no interest, as revolutionists, in Morgan's theories, as such; we have no "school" of ethnology to maintain; our jobs do not depend on our ability to pose as scientists. And for that reason, our investigation of these anthropological theories will be fairer and more accurate than that of the fiercely contending scientists, and our bias, if we have one, easier to correct for than theirs.

ROCK CARVING OF WOOLLY RHINOCEROS

Neither can we deny that Morgan's theory has been fundamentally and drastically attacked, and by no mean antagonists.

There came three scholars out of Europe to make a new American School. The first was Franz Boas. A glance at **Who's Who in America** gives us his history. He was born in Minden, Westphalia, Germany, in 1858, which means that by this time he is an old man, and also that he was a partial contemporary of Morgan's and undoubtedly heard many an echo of the old controversy—Morgan versus the conservatives. He forms a bridge with the past. He was educated mainly in three German universities—Heidelberg, Bonn and Kiel—good universities, where they really work, and have a scientific tradition. He has a degree of Doctor of Philosophy from each of the universities of Kiel and Graz, and holds from the University of Oxford the degrees of Doctor of Laws and Doctor of Science. In 1883-4 he explored Baffin Land. In 1885-6 we find him assistant in the Royal Ethnographical Museum in Berlin, and docent of geography at the University of Berlin. He carried on investigating expeditions in Porto Rico, Mexico and other parts of North America between 1886 and 1923, after he had permanently thrown in his lot with America and established his residence in the United States. We find him docent of anthropology in Clark University for ten years, from 1882 to 1892, chief assistant to the department of anthropology of the Chicago Expedition, assistant curator in 1896 and curator in 1901-5 of the department of anthropology of the American Museum of Natural History. And this is significant, he was lecturer of anthropology at Columbia University from 1896-1899, and professor of anthropology there from 1899 to the present time.

Alexander Goldenweiser was born in Kiev, Russia, in 1880, and after attending several good schools in Germany and Russia, came to America and studied at Harvard University for a year, then graduated from Columbia University in 1902; got a degree of Master of Arts there in 1904, and a degree of Doctor of Philosophy in 1910. He immediately began lecturing on anthropology at Columbia University, and continued to do so for nine years. Since then he has lectured at the New School for Social Research in New York City, up to the present time. This has not prevented him from lecturing at the Rand School in 1915, and acting as professor of anthropology at the University of Washington during the summer of 1923.

Robert Lowie was born in Vienna, Austria, in 1883, and came to the United States at the age of ten years. He secured a degree of Bachelor of Arts from the City College of New York in 1901, being also initiated into the Phi Beta Kappa fraternity (an honorary society, supposed to be reserved for especially brilliant students). In 1908 he was given a degree of Doctor of Philosophy at Columbia University, and like Goldenweiser, served there as an assistant in anthropology until 1909. From there he went to the American Museum of Natural History, where he functioned as assistant curator from 1909 to 1913, and associate curator from 1913 to 1921. From there he went back to Columbia, to act as lecturer in co-operation with his former teacher, Boas, from 1921 to now. His academic activities were enlarged by several terms as associate professor of anthropology at the University of California and by taking part in anthropological expeditions to the Northern Plains Indians, Lake Athabaska tribes, Plateau tribes, Hopi Indians, and others, scattered through a course of ten years. He is associate editor of the American Anthropologist magazine since 1912, and was editor of American Anthropological Literature for a year.

### Setting Up the "New School"

Now, whatever radicals may think of the class character of American education, and the present writer would be the last in the world to deny that it is a prop for capitalism, it still remains true that these three men are brilliant, tireless workers, and have studied both books and men. On them the educational authorities have showered some of their choicest honors, and they hold positions of authority. Their criticism on matters anthropological and ethnological cannot be disregarded. They are the official exponents of modern American anthropological science. None others in America are in the same class with them at all.

Futhermore, after a glance at this brief review of their personal history, I think we are right in surmising that Boas, the link with the past, set up the "new" school. He was the man who struck the keynote at Columbia, and established the atmosphere; probably he also directed the researches, at least by suggestion, of both Lowie and Goldenweiser. The "new school," the "American school," is the "Columbia school" of three German-speaking scientists*

But they themselves refer to it as the "American School." Might it not be proper to suspect here a group patriotism, devoted to building up by hook or crook, a new theory, which has captured the imaginations of three like-minded men? Might it not even be reasonable to suppose that the Americanism of the immigrant, perhaps of the immigrant persecuted in his old home and somewhat unconsciously resentful of that fact, has thrown these three into a fierce and brilliant charge against the Morgan theories **still held in Europe?**

### How They Get "That Way"

Consider another thing. We will show, in a moment, in an analysis of their attack on Morgan, that their theory is largely that there is no theory, that

(Continued on Page 31)

* **Of course it is not even suggested that without Boas & Co. the "new school" would not have arisen. Conditions created it, as will presently be shown.**

# Of the Making of Shrines

By COVINGTON AMI

The world is filled with Holy Sepulchres.

The history of Mankind is marked by the making of Shrines.

His sublimest heroes are not soldiers but Saints.

His Saints are divided into two groups, Saints pacific and Saints militant.

In the first group we have Buddha, Christ, Zoroaster and Confucius.

In the second group we have Moses, Mahomet, Lincoln and Lenin.

The first group is honored with platitudes, the second with pantheons, and both with Shrines.

Out of the tombs of the Saints spring the creeds that govern Mankind, the dogmas by which the Aristocracies rule the Democracies, the laws and constitutions by which the Few harness the Many in their service.

True, most of the Saints did not wish this to happen to the Many, but it did; for the Many, having slaved for centuries, believed, and still believe, that labor is a "curse" and not a blessing; and, so believing, they naturally and of course sought, and seek, to escape the "curse," which, not being able to do in fact, they attempt vicariously—that is to say, not being able to join the Few here on Earth, they hope to be with them in Paradise.

From all of which it will be seen that the Saints are both the freers and enslavers of Humanity, both Lucifers and Liberticides.

Also it will be seen that Asis has given us, with one exception, all our greatest Saints, all our most sacred Shrines—Asis, whose peoples are today outlawed by all the Higher Civilizations.

What strange tricks Time plays on Men!

To what queer ends it bends the purposes of the Saints!

But this is not what I started out to do. I did not will to write a reverie when I began.

What I was interested in was the Making of Shrines by men.

And, to tell the truth, I was more interested in watching the building of the Shrine of the last great Saint than in aught else; for I have been truly astonished at the rapidity with which it has been reared and the swiftness with which the new Priesthood has assumed pontifical authority.

Indeed, there are already many and multiplying signs that Lenin is destined soon to be acknowledged one of the very greatest Saints this Earth has ever known, his Shrine a pilgrim center to millions born and to be born.

All the paraphernalia is there and, Scientist though he was, Saint he shall be.

Fate and the Third International have willed it so.

Fate because Asia is enslaved, and the enslaved always look for Saviors; the Third International because the Shrines of Saints are ever the centers of faith, and creeds are more powerful than cannon.

In vain shall Trotsky and the apostles, passing away, cry: "Lenin was too human a man for deification!"

So was Jesus of Nazareth, but the Priesthood won the battle against the Apostles, and the miracle was wrought.

Already the Pope senses danger; but in vain shall he hurl his bulls against Moscow, and in vain shall the Plutocracies of the West march against the Plutocracies of the East; for ever before the new Gods the old Gods fall.

Behold, the new Shrine rises and the Cross and Crescent pale before the Sickle and the Hammer, and then shall the Three Stars prevail and Man at last be free.

Kismet.

---

**Author's Note:**—Nothing in the above line is intended to reflect in any way upon the character of Lenin, whom the author considers the greatest statesman of the century, just as he considers Leon Trotsky the greatest military genius of this age; but the commercial communists, those who are building over the dust of Lenin another "Holy Sepulchre" at Moscow, can take it as they will and howl to their hearts' content: for the author ever was a heretic, and cares no more for the bulls and dogmas of Pope Zinoviev than he does for those of Pope Pius. Now as ever he cries: "Long live INDUSTRIAL DEMOCRACY."

—C. A.

# The U. M. W. of A. in Eastern Kentucky

By ALONZO WALTERS

**IN AN article published in the March Pioneer I described some of the rotten labor conditions that prevail in one of the Eastern Kentucky coal fields; the miserably low wages for which miners in that field must work; and the hellishly abominable state of tyranny and terror to which they and their families are at all times subjected at the hands of the Eastern Kentucky coal plutocracy and its henchmen. I compared, by way of contrast, the simple, happy, contented life of the people of that region before the invasion of capital a few short years ago with the sickening state of existence of the wage slaves who largely people that district today—who crawl about daily, amid innumerable dangers, in the dark bowels of the earth, digging profits for their greedy and heartless masters, and who during the hours when they are off the job live with their families in the stinking cesspools of filth that are known as "mining camps".**

**The purpose of this article is to discuss WHAT HAS BEEN DONE—or, more properly, what has NOT been done—by organized labor to ameliorate the miseries and improve the conditions of the toilers in that region.**

As explained in my previous article, the first coal mines were opened in the Kentucky valley south of Jackson, Kentucky,—in what is now known as the Hazard Coal Field—in 1912. From that time until the beginning of 1920 the field remained a part of District No. 17 (the West Virginia district) of the United Mine Workers of America. But no attempt was made by the U. M. W. of A. to organize the Hazard coal field until the latter part of the year 1919, at which time a mild "drive" was started under the direction of Frank Keeney, who was then president of District No. 17. Then for two months the organization spread like wildfire. The coal miners lined up in hordes—defying discharge, blacklist, and eviction from their homes in the face of a cruel winter; defying the assaults and atrocities of the "officers of the law," who worked in conjunction with the coal operators; defying even **death**—which was the fate of many of them at the hands of these hired thugs and assassins. Never was the future of any labor organization more hopeful, more bright and promising, than was that of the U. M. W. of A. in the Hazard (Ky.) coal field at the beginning of the year 1920.

### "I Dub Thee Sir Knight"

Then came the 1920 national convention of the U. M. W. of A.

At this convention—which met, as do all the national conventions of the U. M. W. of A., for the purpose of ascertaining and carrying out the wishes of His Most High and (dis)-Honorable Majesty, King John L. Lewis, ruler of the U. M. W. of A.— it was decided—in much the same manner that the old British Parliaments in centuries gone by used to decide matters for the pleasure of their king, whose word was law throughout the realm—to cut off the Hazard and Big Sandy coal fields from District No. 17, and make a new district of them, which was to be District No. 30. The purpose for this action was to create a pie-card position for a new pay-roll pet who had recently found favor in the eyes of King John. Accordingly this man, whose name was Samuel Pascoe, was appointed to the position of "provisional president" of the new district. A nice, handsomely elegant and luxurious office was fitted up for him at Ashland, Kentucky, and everything put in readiness for him to begin the more or less delightful "work" of reposing his fat southern extremity upon soft cushions while a lucrative salary—squeezed from the hard-earned dollars of dues-paying, coal-digging members of the U. M. W. of A.—flowed in upon him in an incessant stream.

I have been told that this Pascoe qualified himself, in part, for this new promotion by selling to political candidates the "support" of the coal miners in the Peoria (Ill.) sub-district, of which he had been an official just prior to his assignment to the new District No. 30. I do not know whether this is true or not—I have no desire to be unjust to the man—but I can safely and conscientiously declare, after having personally learned as much as I have about his character during the course of his career in Eastern Kentucky, that if I believed in a God—an all-wise, all-powerful and divine creator of all that is—my faith in such a Being would be bound to take a terrible tumble upon noting such an inexcusable blunder on the part of such a Creator as the wasting of so much good material for the making of a mule to create and inflict upon an innocent and helpless working class such a stupid and jackass-like ignoramus—and at the same time such a contemptible and detestable scoundrel—as this Samuel Pascoe.

But I will proceed, leaving the reader to judge, after reading the facts about Pascoe which I shall now relate, whether I am justified in using such strongly denunciatory terms in introducing him to them.

### Official Sabotage

As I have already stated, there had never been a brighter outlook for any labor organization, in a hitherto unorganized field, than was that of the U. M. W. of A. in the Hazard and Big Sandy coal field of Kentucky at the time Pascoe took charge of

the organization in these coal fields—in the beginning of the year 1920. Coal miners from one end to the other of both these coal fields were itching for organization—clambering over one another to "get into the union." As often as a mining camp was visited by an organizer, a local union was established in that camp. More than a score of large locals had been organized in the Hazard field alone; fully that many more had been organized in the Big Sandy field—all during the last two months of 1919.

Such was the situation when Pascoe took charge. What did he do? Let us see.

As a first step, and with no apparent reason for so doing, he cut short—stopped completely—all organizing work. **Every organizer in District No. 30 was at once recalled from the field** where he happened to be working at the time Pascoe took charge—recalled, never to return again.

This most amazing piece of treachery on the part of a union official—who had been sent down there ostensibly for the purpose of advancing the interests of his organization in the district to which he had been assigned and of finishing the work of organizing, already so well begun—completely astounded the coal miners of Eastern Kentucky. All the local unions in that district sent resolutions and letters—one after another—demanding and entreating Pascoe to explain his reason for such unheard-of conduct. Coal miners in unorganized localities held spontaneous meetings and sent in appealing and entreating petitions. Scores of individuals, in as many different parts of the district, wrote letters. All to the same end—and **all in vain.** The vast majority of the resolutions, petitions, letters and appeals were contemptuously ignored by Pascoe. In the few cases in which he did condescend to make reply his replies were as insolent and insulting as such an ignoramus as he knew how to make them. He flatly refused to give any explanation for what he had done or what he yet planned to do; gave the coal miners of District No. 30 to understand that **he was running things now**; that he had his own reasons for what he was doing—reasons which he felt under no obligation to confide to them; so please be governed accordingly, etc., etc. This was the gist and tone of all the replies this scoundrel saw fit to make to these outraged coal miners who had been forced to place their trust in him. Of course, since he is an ignoramus, and almost totally illiterate, as I shall later on show, the wording was in much cruder and blunter terms than the above.

### Doing the Operators' Dirty Work

**His next move was to completely destroy the local unions that had been organized previous to his being placed in charge of that district.** This was accomplished by a very simple, but none the less **extremely brutal** method. In the first place, he refused to offer the slightest protection, encouragement or sympathy to these locals against the merciless onslaughts of the coal operators. Coal miners were forced to sign the infamous "yellow dog contract". Those who refused to sign were fired, evicted and blacklisted. The most active union men and "agitators" were in this manner driven from the field—forced to seek new employment in other regions. Some of the most persistent were beaten up—some even murdered—by the hired thugs of the coal operators. All of which failed to have the slightest softening effect upon the stony heart of the beast who occupied the "provisional district" office at Ashland. The only part he played in this struggle of the coal miners of District 30 against their employers was to confiscate the funds of local unions as fast as they collapsed under the enemy's blows.

COMELY WIFE OF MINER AND COMPANY SHACK WHERE SHE LIVES

In spite, however, of all the vicious and relentless attacks made upon them by the coal barons—and also despite the fact that at no time were they given the slightest assistance or sympathy by the organization of which they were a part—there were three local unions, at Blackey, Fleming and McRoberts, Kentucky, that bravely held their own against the coal operators, and remained intact for several months. Pascoe's patience finally gave way with these three locals—he found it impossible to restrain his longing to grasp within his greedy and slimy clutches the money that remained in the treasuries of these heroic local unions. So he visited them, some time in the latter part of the summer of 1920, took away their charters upon some flimsy pretext, and robbed them of their funds.

Five years have elapsed since that time, and nothing whatever has been done toward making another attempt to organize District No. 30. Nor has any encouraging word come at any time during this period to the coal miners of that district which

would indicate that there is the slightest intention on the part of the U. M. W. of A. to ever organize that district. Coal miners in District No. 30, after being so shamefully deserted by Pascoe, have poured hundreds of letters into the office of John L. Lewis, appealing to him to have something done to organize them. Lewis, when he saw fit to make reply at all, merely referred these coal miners to "their provisional president," Samuel Pascoe.

### Explaining the Fakir's Motives

It may be wondered by those not familiar with the workings of the machinery of the U. M. W. of A.—and for that matter the machinery of nearly all the other so-called "unions" of the American Federation of Labor—as handled by the gang of selfish and self-seeking grafters who head the organization, **what the motive could be** of a union official who deliberately follows such a line of conduct as that followed by Samuel Pascoe in Eastern Kentucky during these five years. However, to those who have been in the old A. F. of L. "unions" long enough to have the slightest understanding of such a situation, his motive is obvious. According to the U. M. W. of A. constitution, as long as a district remains unorganized it is a "provisional district," and its affairs are managed by a "provisional president," who is appointed by the international president of the organization. But as soon as a majority of the miners in a district are organized—then the district is called "self-governing," and a district president and other district officials are **elected** from the ranks of the coal miners who live in that district. As Pascoe belongs to District No. 12, **he would not be eligible for election to the position which he now holds as appointee** of his friend and benefactor, John L. Lewis. Hence his reason for protecting his pie-card by keeping the district unorganized as long as possible.

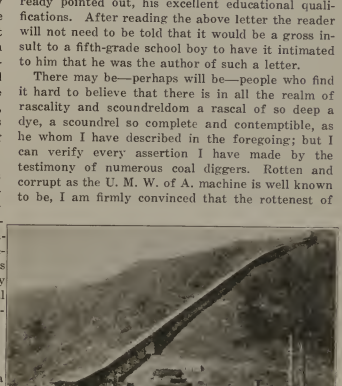
This is his first motive. Many of the coal miners in District No. 30 strongly suspect and openly intimate that he has also an additional motive—**that he is in a secret conspiracy with the coal operators of Eastern Kentucky to keep that field unorganized**, in which case it is of course to be presumed that he is receiving from these coal operators large slugs of "dough," in addition to the salary he receives from the U. M. W. of A. as "provisional president". I leave the reader to draw his own inference about that, after reading the above.

### Conspicuous Ignorance

In order to give the readers of this article a chance to see for themselves a sample of the intellectual attainments, the educational qualifications, of a man who is entrusted by the U. M. W. of A. with such an important, responsible and lucrative position as "provisional president" of a district, I insert here a letter which was written by Pascoe to a blacklisted coal miner of Hazard, Kentucky. It will be noted that good grammar, correct spelling and proper punctuation are conspicuous in this letter—by reason of their absence therefrom:

Ashland ky, Dec, 16, 1924,

* * * * * *
* * *



Dear sir,

your Most asTounding letter of Dec, 1, reached this office in Due Time, and in Reply to your most Ignorant Inquiries will say the national Exuctive Board Mapp out our policys and I am Carrying them out to the letter, we are not giveing any Information to such Ignorant and silly questions, I am returning your Stamps and I hope In the future you will avoid Demonstrateing your Total Ignorance by not writeing and asking such silly and ignorant questions.

yours very Truly,
Samuel Pascoe,

The above letter was written by Pascoe in reply to a blacklisted coal miner, who had written him, politely and **very pertinently** inquiring if it was his intention ever again to organize the Hazard Coal Field, and if not, why? Pascoe's letter in reply not only illustrates the insolent contempt in which he holds the victimized and blacklisted coal diggers of his district and his brutal disregard for their feelings and welfare, but also shows, as I have already pointed out, his excellent educational qualifications. After reading the above letter the reader will not need to be told that it would be a gross insult to a fifth-grade school boy to have it intimated to him that he was the author of such a letter.

There may be—perhaps will be—people who find it hard to believe that there is in all the realm of rascality and scoundreldom a rascal of so deep a dye, a scoundrel so complete and contemptible, as he whom I have described in the foregoing; but I can verify every assertion I have made by the testimony of numerous coal diggers. Rotten and corrupt as the U. M. W. of A. machine is well known to be, I am firmly convinced that the rottenest of

A HILLSIDE COAL MINE

all its official cogs—not even excepting the prince of rottenness, John L. Lewis—is that pitiful parody on manhood—no, beg pardon! I mean **snakehood** and **mulehood** (with apologies, of course, to all natural serpents and donkeys)—who for the last five years has played traitor to the coal diggers of Kentucky's hills—**Samuel Pascoe.**

**Workers Foully Betrayed**

In the foregoing paragraphs I have faithfully endeavored to review as fully and concisely as was possible, within the space to which I felt obliged to limit myself— and this article is already longer than I intended it should be when I began writing it—the shameful history of the United Mine Workers of America in Eastern Kentucky. Their achievements in that region may be easily summarized: They have completely crushed—more completely than it could have been done by the coal barons themselves, with all the dastardly methods that are known to them—every movement that has ever been started by Eastern Kentucky coal miners to organize themselves or better in any way their awful conditions; they have turned a deaf ear to all the heart-rending appeals that came to them from victimized coal miners and their families. While true-blooded workers were exhibiting the heroic courage to suffer hardships and miseries beyond power of description for the advancement of unionism, these official traitors of the working class sat silent and serene in their snug, comfortable offices, doing nothing but draw their fat salaries and help keep under the iron heel of oppression the wage slaves whom they had betrayed.

One thing worth noting, however, is that they have succeeded—and succeeded well—in accomplishing. They have completely destroyed every bit of faith that the working class of Eastern Kentucky ever had in the United Mine Workers of America.

# Women in Industry

By CONSTANCE EDGERTON

**Here is a group of stories by a social worker who lost her job when the unemployment club cracked down. Her experiences prior to and following this crisis are interesting, and she has vividly presented them black on white. One is impressed by her sincerity and the keen manner in which she observes life around her. Her conclusions suggest that she has been jarred from her old faith in labor legislation, and that she sees the impossibility of working class advances through legislatures. The advance must be made by economic association and in an era of great industry the mode of industrial unionism stands out scientifically correct.**

## I. WELFARE WORKS

### "SHIPMENTS" ARE HUMAN CARGO

A BLISTERING day. The earth lay parched and cracked. I sat at my desk making copy for the shop paper. My telephone buzzed. A soft voice greeted me: "I am Mrs. Everett Shoemaker. My husband died one hour ago. We are alone up here. A labor scout* brought us from Syracuse. Some one told me if I called Miss Edgerton you would do everything for me" . . . I assured her I would, so I laid aside my copy for a talk with the undertaker, and then the florist, for the plant was liable to spread—almost certain to. This funeral was taken care of, and charged to the Welfare department. * * *

* * *

On a wet chill October day my office door opened and a woman entered. In her arms she carried a baby. I took the child. The little mother said: "They sent me to Miss Edgerton and said you would find rooms for us. I am so tired. We are staying at a hotel. The labor scout brought us from St. Louis. He said we could get a furnished apartment for twenty-five dollars a month".

Janesville was a boom town. Single rooms (for sleeping only) rented from seven to fifteen dollars a week. Men paid it and smiled.

"We were doing fairly well in St. Louis," went on the little woman, "but Henry heard the labor scout talking and wild horses could not stop him from coming to Janesville. He thinks we will get rich quick".

I had no place for her. Women and babies were prohibited. Her eyes filled with tears. She was so tiny, so girlish, so pathetic. "Whenever I read of that first Christmas night and all the inns being full, I wept," she said.

On my mother's land was our playhouse, from childhood days. It was one room, unplastered, twenty by twenty, and a porch. Hither I brought her. She was delighted with this little house and insisted on paying rent. Here Henry sat on the porch—for the rain cleared and October's haze covered the land. The elms and the sycamores were covering the ground with their litter of leaves. On the hillsides the wild plum bushes showed their bluish red fruit. There was a smoky haze in the sky. The girl-woman saw it all and was happy.

The house was well enough for mild weather but with January she was taken down with pneumonia. Her mother came from St. Louis. The struggle was brief. The girl-woman who had followed her man (and a labor scout) into a land of golden nuggets, went back to the home of her childhood in a coffin... The little playhouse is empty. The big plant is closed. A ghost town stands, silently wondering where are the men and the women who laughed, worked and planned; who poured out as the noon whistle blew, smiling, dreaming their golden dreams. . . . For such is the way of labor scouts. They know not God, truth, honor, nor labor conditions. They get while the getting is good, and their spoil is not only man's body, but his soul.

* * *

"Hello Miss Edgerton," caroled Mr. Moore, labor scout supreme, as he led two well dressed young girls into my office. "I brought you two girls and told them you would find a nice, cheap home for them." Which could not be done. Before I could reply Mr. Moore was gone.

The girls hailed from Davenport, Iowa. Both were stenographers. Moore had told them they would receive forty dollars a week salary, and good board was cheap. Gently I told them I was the highest paid woman in the plant and my wages were not forty dollars. Board was not less than fifteen dollars (including lodging). From careful survey and much budgeting I knew carfare, laundry and other necessary items eat deeply into the earnings. Moore had said they could save a thousand dollars in a year.

I got in touch with all departments. There were no openings for them. Just what possessed Mr. Moore to bring them on this wild trip I was unable to determine. However they were here and must be taken care of. I decided to take the meekest one in as my clerk—a luxury I had long been promised. Her wages were set at eighteen dollars a week. The other one I charged to the employment department,

* A labor scout is an agent sent out by corporations to recruit laborers.

boarding her at the Du Pont Club until she should be placed.

The days wore on. Miss Brown, our clerk, was my chief concern. Her board was fifteen dollars a week. Miss Arden, her partner, was having her board paid, and drawing twenty dollars a week for her time, although she was not employed, making her wage thirty-five dollars.

I had put in a stiff plea for this, and disregarding all orders, had sent her board bill to the employment department, which was eagerly waiting for Miss Brown to pay her carfare from Davenport to Janesville, as is the way of shipments. The girl was not earning enough to live decently on and was worried to the extreme.

I made out a bill for one hundred dollars to the employment department, received a check for the same, and cashing it, turned it over to Miss Brown, as part compensation for her mis-treatment. Constantly, with higher authority, I talked of these two girls, and Scout Moore's false representations. Finally, both girls were taken in and given desks in the time department, at twenty dollars a week, and their board paid by the plant, at the Du Pont Club.

* * *

"Miss Edgerton, I hereby appoint you camp inspector," sang my chief one melting July day, when the smell of decaying garbage from the camp was enough to make even a staid woman like me start out reforming. Very ignorant was I of camp sanitation, but willing to try anything once, so I presented myself at the camp gate. The policeman admitted me. In the quartermaster's office I told my errand. He accompanied me on the rounds—through a camp that housed fifteen hundred men, and was insistent that my report begin and end with: "ADVISED DISPOSAL OF GARBAGE. SAME TAKEN CARE OF." I followed his instructions, and was congratulated on the masterly report I turned in. Verily, the duties of camp inspector were easily mastered.

* * *

"Today I will ask you to attend to my phone calls; give the sporting my publicity; answer telegrams; accept games and write out contracts, while I take my team to practice," said George Perring, athletic director, and member of the welfare department, to me, as the spring wind coaxed me to play truant.

"While I," said Glenn Gardiner, also a welfare worker, just out of the university, and whose sole duties were to polish his pink finger nails, "have to help lay out the shop paper. Take care of my affairs, Miss Edgerton."

"Do not ask dear Miss Edgerton to do more than she is able to do," spoke Mr. Holst, who wrote top heavy essays which were supposed to teach the workingman to invest the monies he did not have. "It is imperative I go to the bank to meet some of our department payments, and Miss Edgerton always attends to my office."

Up spoke Claude Fagan, another welfare worker: "Miss Edgerton promised to take care of my office while I attend the Morgan funeral. I asked her yesterday."

"Whoa now," warned Roger West, the Safety Engineer. "My work calls me to Plant Number Two, and Miss Edgerton is looking after my calls."

Half an hour later all were gone. I sat alone in the building—a portable house consisting of six small offices. Entered Mr. Markham, our chief, with: "Hello Miss Edgerton. Where are all the boys?"

"Playing golf," I answered, taken off guard, and forgetting their perfectly good alibis.

* * *

Like a bolt from heaven, or a tidal wave, it came in the late fall of 1920, the curtailment of industry. In two weeks the plant had laid off twelve hundred men and four hundred women. No need of a welfare worker now . . . Like hundreds of others, I found myself looking for work. Just work. No special brand. While wondering where and when to find it, the mail brought me a letter from Paula Van Norden, also an industrial welfare worker, who had been let out in the depression, and was coming on from Chicago.

## II. KRAUT

"Shake a leg! You there! Think this is a tea party?" I paid no heed. My mind was on my work, at which I was slow, and the work was stuffing kraut. Now the owner of the voice stopped at my side and rasped on: "I mean you, Constance!"

"I am Miss Edgerton to you," I said, not quickening my pace.

"Haw! haw! haw! Thass good! Miss Edgerton! How do you get that way? Let your little lamb away from your side tonight long enough to ride over to Delevan with me?"

"I would kill her first," I said and kept stuffing kraut.

The lamb he referred to was Paula Van Norden, twenty-three, pretty, laughing, a welfare worker by profession, a kraut packer by necessity. This work supplied her with her daily bread, and afforded her the opportunity to study the conditions of working women first hand. She would have much to report from this factory—The Bower City Canning Company.

Our day began at 7 a. m. We packed kraut continuously until 6 p. m. We ate our lunch as we worked. At 6:30, after a hastily snatched supper, we reported again for work, under an assumed name, as the state laws say no woman shall work in excess of forty-four hours per week. Our night work was labeling, at which we made twenty-four cents an hour. We worked three hours a night. Each pay day we drew two checks, under two names, which we would cash at the factory office, thus saving questioning at the bank. The shed in which we

stuffed kraut was an unplastered building, no fire, poorly lighted, invariably cold. Our hands were cut and bleeding from pushing the kraut into the small openings on the cans. Sometimes fingers were bandaged; sometimes not. We all liked the night work. It was in another part of the building, and we were warm. We could sit down at this work.

"You oughta tell Paula to go out with the boss," said Lil Hogan to me when he had passed beyond hearing. "It'd make it easier for you both."

"Paula does not care to go with him," I said.

"Yes, she does," said Lil cheerily. "She's young and she has to have expansion. Whatya such a spoil sport for? She'll hate you by an' by when she thinks how you crabbed her and kept her in."

Beside me was a new girl, tall and slim. Somehow she reminded me of a young poplar tree. Her hair was bronze. She wore a green silk sweater and a woolen sport skirt. I trembled inwardly thinking of their ruin. The boss slid between us and cooed at her: "Any chance of my taking you to Delevan tonight?"

Next day she was absent and the consensus of opinion was that he discharged her for daring to refuse his invitation. His boast was that if a girl was not sociable, it was the gate for her. With Paula he was lenient. Ever she represented me as the fierce aunt and declared to him she would go out with him but for my interference, and he fell for her story.

Lil Hogan was all primed for a talk on high society. "That red head what was, ain't no further ahead refusing the boss. Maybe she's looking for a job now. The boss is a gentleman. He spends like a millionaire, speeds past all them cement headed cops, and treats a girl right," she said as her fingers flew around in the kraut.

A seasonal worker was Lil. The beanery was her sole means of support. She was large, dark, beautiful, well past thirty, and lived with her aged parents in a modest cottage near the factory. She seemed to have no spiritual, no intellectual side to her make up. She lived for pleasure. Expansion was her objective. Six weeks out of the year she worked in the pea fields; five months in the factory, and was idle the remainder. What she earned she put on her back. Her father was a street sweeper and supplied the table.

Not a bad place to work, the beanery, all things considered. Beating the state law on hours, we averaged $3.85 per day. In mid-November the "pack" come to a finish. We were alert for another job . . . which we secured at once.

This was a shade factory, said to be the only one in the United States. Our salary was thirty cents an hour. We worked nine hours a day. The afternoon of the second day Paula was canned, and I quit. Just why Paula was discharged we did not know. They gave no reason, simply handed her a time check. . . .

Next morning at eight we reported for work at the Parker Pen Company. Paula did typing. I was file clerk. This was an ideal place to work—rest rooms, cafeteria, recesses, nurse, matron and doctor. Our salary was eighteen dollars a week for forty-four hours.

We were living our own way once more, finding nothing to startle us; women treated fair; offices well ventilated, heated, lighted. We quit, for ours was the vagabond life, which in years to come would be our reference book.

## III. WITHIN THE LAW

They tell you Wisconsin has a Minimum Wage Law; workingwomen are protected; an employer is fined should he pay less than the minimum wage. At civic meetings a speaker comes down from Madison and tells you this is so; he says if you hear of a case contrary, it is your duty to report it, so justice may be meted out to the woman; a fine levied on the man.

Well and good, in writing. The law exists only on paper. Women are exploited. Industry prospers.

To obtain firsthand data, I answered an advertisement for an office clerk. It was a September afternoon in 1922. The firm advertising was a Branch Office of the Holland Furnace, located at Janesville, Wisconsin.

The youngish-old man who was branch manager told me the Holland could not afford to pay much, and there was not much work to do, but a girl had to be decent, honest, smart, intelligent, know the town, know how to meet and salve the public, be able to sell a furnace, keep books, answer correspondence, and the Holland would be willing to pay for this.

He hemmed and hawed, beat about the bush, and finally stated the wages. Ten dollars a week.

"The law holds ten dollars and fifty cents a week for inexperienced workers, and thirteen for experienced, as the minimum wage," I said.

"The Holland Furnace is a poor concern," he whined. "If you start for ten, I will raise you two dollars every week until you are getting eighteen."

Desiring data, and meaning to report the case as soon as I was at work, I took the job.

For three weeks I worked for ten dollars a week. Then I asked for an increase. He refused on the grounds that the Holland was not financially sound. However, if I would stay, next week, he would pay more.

Knowing that the Minimum Wage Law was effective in Wisconsin, I telephoned the manager of the Chamber of Commerce asking what steps were necessary to bring this matter before the proper authority, as I was being exploited, paid less than it takes to maintain a slave. Was there redress for this wrong? To which he replied:

"I don't care about such things. Call up Stanley

Dunwiddie,"—the district attorney. I did. Mr. Dunwiddie said that while he felt it was wrong he did not feel disposed to do anything about it; that if he looked into every law that was infringed simply because he was district attorney, it would be necessary for him to have a dozen assistants.

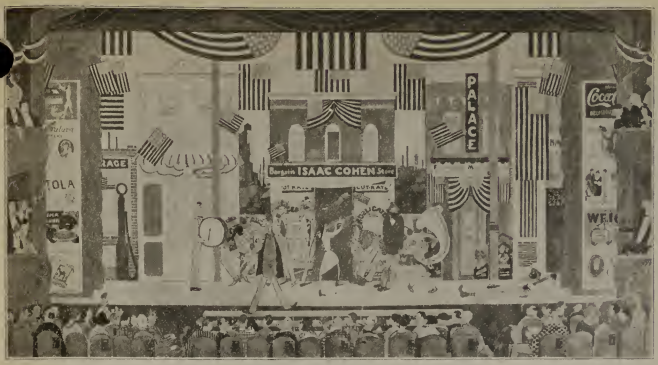
A poker fell on my foot and disabled me. This looked as if fate had taken the affair out of my hands. It was a matter for the Industrial Commission to adjust, and when they saw the salary I was receiving they would see to it that the Holland Furnace Company paid for breaking a law.

This was a mistake. They were interested in dealing with me.

Time wore along. My foot was so painful that I could not walk. I appealed to the Commission, who set a hearing for July 12, 1923. At this hearing Kardux, manager of the Holland Furnace, stated he paid me ten dollars per week because I was inexperienced, and his testimony was stricken out.

Mr. McCormick, chief examiner for the Commission, was fair in every way. My doctor bills were allowed, and ten dollars a week compensation to me all through my disability. He scorned a man who would pay a woman ten dollars a week. He was powerless to enforce the law. His business was settling claims for injured workers, not looking up law infringements.

About the fifteenth of October, 1922, Kardux employed a Miss Myrtle Probst as clerk. Her wage was ten dollars a week. Her home was not in Janesville. She paid four dollars a week for her room. Her meals, laundry, carfare and clothes could not be covered with the remaining six dollars. After three desperate weeks of semi-starvation and running behind in her room rent, she asked for more wages. He told her quite baldly he would make up the deficiency to her, with his own money, if she conformed to his low desires. Miss Probst left.



A Mrs. Edith Mann was his next clerk. He named no wage but assured her he would pay "enough to get by on" and for three weeks refused to give her anything! She left. He had never turned her name into the Main office as a worker. To this day she has that three weeks' salary coming to her. She took the matter up with the district attorney, and with the manager of the Chamber of Commerce. Both advised her they did not wish to become involved in so small a matter. Mr. Nelson (manager of the Chamber) asked her if it was her first trip off the farm.

The Holland Furnace Company is still doing business. Only two nights ago an eloquent speaker (who teaches sociology at the University of Wisconsin) spoke to us on the Minimum Wage Law, declaring it was effective. I wonder who is wrong?

# Question

By HENRY GEORGE WEISS

Put to the test would my spirit rebel
At yielding my flesh to the chain and the cell?
Would freedom be naught, would high honor be flown,
If weighed 'twixt the truth and a dungeon of stone?
Would I cringe to the vassals of power and gold
If the noose of the hangman were looped for the bold?
Would timidity conquer when danger drew nigh?
Would the flesh be so weak as to fear once to die?
Down with the thought! Such a fate is the worst
That stamps one a coward forever accursed,
A traitor to truth, a dastard, a knave!
Far better the dungeon, the rope and the grave!
High heaven the strength in my bosom instill
That held to the last the courage of Hill!

THIS IS THE SETTING FOR THE FIRST ACT

# Those Processional Blues

By BOB ROBBINS

NEW YORK has recently been treated to a fantastic play called "Processional". It is a product of this jazz age. The underlying philosophy seems to be that we are all either products or adherents of it. From the picture that John Lawson, the author, has photographed from life we note that the characters are victims of the jazz germ. These are the miners who are striking in the little West Virginia town where the action takes place; the agitator-philosopher; a low-comedy sheriff; a Jew storekeeper, as played, typical of the burlesque show, or maybe the conception of Anne Nichols, whose "Abie's Irish Rose" is now, I suspect, playing every tank town in this great free country of ours. In fact everything and everybody is typical—and commonplace.

Here is the concise formula for the play: "Everybody's doing it . . ." Most of us will remember this phrase as the title of a particularly jazzy tune when jazz was still an infant. Now it is an overgrown kid—for the most part making childish noises. Lawson has presented a rather chaotic picture. True enough it is like life, but even the most sordid of lives is varied and a little less monotonous than some of his marionettes. Then you may ask me, "Well, then, should Lawson inject color into this vaudeville show?" Not necessarily; but certainly the O'Neill flavor and the Shaw wit are admirable things!

When "Processional" was first produced early in February it provoked much discussion and varied opinions, and even the dramatic critics were puzzled by this freak show. A few weeks later, however, they saw the light and hailed it in such manner that Ringling Brothers' Circus press agent must have been put to shame.

Here are some of the characters in the procession, marching to the tune of the Yankee Doodle Blues: a high-hatted mine owner, parading around in a Prince Albert coat, and actually **living** in the town where he operates (beg pardon, where the miners operate) his mines; the sheriff, who is photographed, by the newspaperman, standing over the agitator who has been knocked down by the **army**; then there is the glib-tongued newspaperman, who poses and quotes random lines of poetry,—the kind of guy who is quite capable of getting off that famous line, chock full of bunk, "I am the master of my fate, I am the captain of my soul," etc. He is covering the strike and is prepared to make everybody famous—or infamous—as the case may be. He flashes a telegram: "Burn up the wires. (Signed). William Randolph Hearst." He's got the "Billy Hearst Blues." . . . It's contagious. . . . It's outrageous. . . . Jazz . . . Processional . . .

The Ku Klux Klan is burlesqued and ridiculed. Somebody gets sentimental about the other fellow's mother. The hundred per centers come in for a rap, with this choice line: "Pioneers is sons-o'-bitches!" "Everybody's doing it . . ." Jazz spares no one! We're all in on it!

This "Processional" is most certainly worth seeing when it hits your locality.

# The Passing of a Building Trades Boss

By SAM MURRAY

UP TO the time of his withdrawal a few years ago there is no question that P. H. McCarthy was the most prominent and best known figure in the labor movement west of the Mississippi River. A review of some of the high spots of his spectacular career should be both instructive and interesting to the student of labor history.

Most of the citations are common knowledge with old union men of the Bay district, some can be vouched for by the personal experience of the writer, while some of the less important but interesting matter, based on common gossip, have not, so far as I know, ever been denied.

It may also be well to state here that facts are dealt with only in so far as they are, in the opinion of the writer, useful and not on account of any bearing that they have on the personal character of the individual. The writer has never been an advocate or believer in the efficacy of character assassination, for, if we could by the usual outburst of acrimonious diatribes, vilification and abuse prove that the leaders of the A. F. of L. were any more crooks and fakirs than we are, we would accomplish nothing except, probably, encourage a similar union under a different leadership; for if Christ himself and his twelve apostles should succeed the head of the A. F. of L. and his coterie of vice-regents, we should still have that atavistic anachronism, a craft union, and to assume that any amount of renovation, revision, amalgamation or cross breeding will produce anything but a hybrid monstrosity is pure Fosterian bunk.

### How The Great Man Started

P. H. McCarthy, we are told, arrived in San Francisco from Ireland, in the early 'Nineties and his first job was purchased at Murray and Ready's Employment Agency, then in a little office on Clay Street. I well remember this office, and its rise to the position of a great labor agency is almost as spectacular as the career of its humble but promising clients; nor were these careers entirely separate, for at the time that McCarthy was first tasting of the glory of his fame as a labor leader this outfit was conducting a strike-breaking agency and, in a weekly Bulletin they issued free to employers, they were the first to give P. H. McCarthy the name of Pin Head McCarthy often afterwards applied by his enemies. The job we are informed was that of a porter in the Argonaut Hotel at thirty dollars per month.

I am not informed if he was a carpenter at that time or just when he first joined the carpenters' union, but in the years that followed the period of the Spanish war, when the building trades were making great inroads in the industry with their closed shop program, he at once became a central figure not only among the carpenters but in the whole industry. He was distinguished on account of his adherence to two principles.

### Foresight Demonstrated

He was a strong federation advocate. At a time when most mechanics could see no farther than their trade he was an advocate of the principle of close federation within the industry, and it is doubtful if any other part of the A. F. of L. was as closely federated as that part ruled over by P. H. McCarthy. He was the father of the local and state building trades councils of both of which he was permanent head until his late resignation. He also had a genius for welding together the organizations of small contractors, which prevailed in the industry at that time, and the organizations of their employees into a solid, compact body, that was pretty nearly able to dictate terms; so that when the Spreckles or some other big outfit wanted to build a large office building they ran up against a solid combination, and what they wouldn't do to a working stiff trying to get a home on the installment plan isn't worth mentioning. For twenty years the building industry of the Bay district was held in the vice-like grip of this dual dictatorship, and to try to secure employment without the favor of the great boss was like trying to break into congress without a political machine. Although most of McCarthy's life was

spent in the labor movement, we are informed that before the earthquake of 1906, comparatively early in his career, his real estate was assessed at $65,000, probably half of its salable value. Judging from rumors of later times he should be near the millionaire class by now.

**Typical Craftist Tactics**

Like all craft union leaders, he was an ardent upholder of the "sacred contract." So after the earthquake he hastened to inform the employers that no advantage would be taken of the increased demand for building workers and that all contracts would be scrupulously lived up to. Electrical Workers' Union No. 6. (inside wiremen) had a contract, but owing to abnormal conditions, prices of living, particularly rents, having gone up like a rocket, they asked to have that part of their contract calling for five dollars a day changed to six dollars. Most of the small contractors signed up, but the big ones appealed to McCarthy and he instructed the wiremen to stick to their agreement. But they claimed that they had secured the signatures of the majority of the contractors and as an emergency had developed since the contract was signed they were justified in their demands, and they called a strike on all the five-dollar jobs. McCarthy outlawed them and sent out a call for union electricians to come to Frisco and work for five dollars. Where six-dollar men were employed alongside of other crafts P. H. called his men off and compelled the employment of five-dollar men. The union was broken up and McCarthy's strikebreaking union, which he had organized at the beginning of the trouble, fell heir to the charter and a number of old No. Sixes. At the time that this strike was called I had a shopmate who quit his job and joined McCarthy's union. Afterwards when he was elected mayor, McCarthy appointed him a Deputy Electrical Inspector at a salary of $1,800 per year. Since his former job was that of a shipyard wireman at $4.00 per day, he, like Casey Jones, "was doing mighty fine;" which goes to show that Mac didn't always forget his friends who helped him against his enemies.

Similar stunts to the above were later pulled on the plumbers, plasterers and others; nor were they always confined to the workers in the Building Industry, for in 1918, while I was working in the shipyards, I noticed that Murray and Ready were continually advertising for men to man dredges in the bay. Since these jobs are not the kind to go begging in Frisco even in war time I asked a dredgeman who was temporarily stopping at the hotel where I lived. He said, "Oh, that is P. H. McCarthy's union". He then related to me how his union had replaced their business agent, who was a political friend of P. H., and with the help of P. H. the ousted official was trying to organize a new union. They had gotten a few dredges, dissatisfied with the union, to agree to employ their men, but they had no men, so they went to this former strikebreaking agency and gave them an order for men. You paid ten dollars job fee and they sent you to the business agent and he collected an initiation fee of fifteen dollars and you were a union man with a union job.

**Any Compromise For Union Shadow**

As has been observed above, McCarthy was far from having the full support of the building workers behind him, but on account of his system and friendship of employers his machine kept a strangle hold on the jobs (the key to the heart of the craft union building worker) which always gave them a safe majority, although there was always a strong undercurrent of discontent both as a matter of principle and in the case of individuals who thought they could do better without the machine.

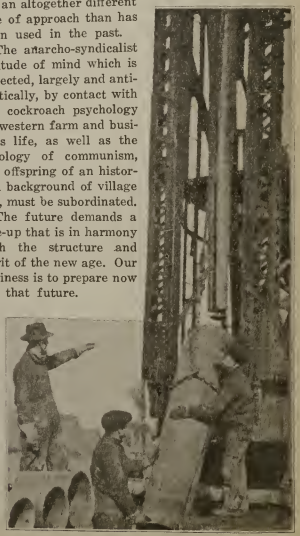
Then came the open shop drive of 1921. The bosses announced the American Plan and the men struck. Times were hard and work in other lines scarce, but the men held out nobly. McCarthy and his men got together and cooked up a scheme whereby the men were to go back under the American Plan but keep the union together. However, some could not see through the scheme of keeping a union together after it had demonstrated its inability to do anything for them, just to furnish jobs for the officials. For twenty years the union had kept them at work and protected them from the competition of out-of-town workers. It is true the dues were high, assessments regular and heavy and the leaders had grown rich and famous, but they paid as long as the fence around the jobs held. But now the boss had kicked over the fence and was hiring anybody he pleased and still the leaders wanted them to pay. They refused to go back to work, got together, and called a general strike in all the industries of the Bay district against the American Plan. Some of them left their unions and others were expelled. Their general strike was more or less a fiasco but they had made a lot of noise and scared the leader. McCarthy resigned and became a sort of expert adviser to his former supporter who was elected in his place, and an attempt was made at a conciliation, but the insurgents refused to be pacified. They declared that they had been sold out and that McCarthy and his whole bunch were a lot of crooks and fakirs and that the time had arrived for a complete realignment. They formed a mass union (called it an industrial union), which floundered around for awhile and then died.

**Getting In On "The Ground Floor"**

McCarthy's final stunt was a political one. The water power possibilities of California are prominent among the greatest resources of this state of great natural wealth and feeble-minded politicians. In the campaign of 1922 there was a referendum on the ballot designed to permit the state to assume control of the water power. Quite naturally the power trust opposed this "socialistic" measure and P. H. took the field in their behalf. After the measure was defeated it developed that McCarthy had received the modest sum of $10,000 out of their fund. When confronted with this, the former baggage buster and wood butcher explained that it was merely a normal fee for services actually rendered

during the few weeks he was in their employ. But the measure had been sponsored by liberal bourgeois like Rudolph Spreckles, Wm. Kent and Franklin Hitchborn, and they were able to stir up quite a stink over the fact that California's greatest labor leader had taken this money for his efforts in helping the power monopoly to fasten its grip on the future of the "Golden State". So McCarthy severed all connections with the state and local building trades councils and is apparently out of the labor movement for good.

Most of the efforts of the enemies of P. H. McCarthy are in the direction of a recital of his shady acts with the aim of proving he owed his success to having sold out to the employers, but these accusations really amount to nothing as they are hard to prove and there have always been crooks and fakirs in all kinds of labor unions and not all have been on the side of the so-called reaction by any means. Very hard, indeed, would it be to establish that any of his acts were out of harmony with the principles and tactics of craft unionism.



In my opinion McCarthy "got there" because he was the kind of a plug that fitted into a certain hole when that hole was open. A lesser genius, or any other kind of tactics, would hardly have succeeded at the time. He was a great leader and organizer and along with a magnificent fighting spirit he was ruthless and despotic. While the placid career of Samuel Gompers was only occasionally disturbed by the feeble peckings of socialists or communists, McCarthy was always the storm center of vigorous strife. There was always more or less friction between the Building Trades Council and the Labor Council, and as the Labor Council was constantly changing officers and McCarthy was a permanent fixture in the Building Trades Temple it was on his head that the weight of most of the bitterness fell. This and his habit of scabbing insurgent unions out of existence or into line caused him to live an exceptionally strenuous life.

What we learn from a study of McCarthy's life, which differs little, in character, from that of other craft union leaders for the past 20 or 30 years, and is a verification of the I. W. W. contention that craft unionism with its contract and harmony principles under professional labor leaders has only benefited the few at the expense of the many, is the knowledge we gain of the epoch that he personified that will be of use to us in the future. Since "experience is only a name some people have for their mistakes" the knowledge of the mistakes of labor's past must be depended on as our guide for the future. However, we will also have to learn to distinguish between the mistakes of the past and the experiences which got by on account of past conditions which no longer exist.

The career of P. H. McCarthy cannot be duplicated in the present age. It belongs to the era that preceded the world war. The small contractor, largely, upon whose friendship and co-operation he rode to power and prestige, is no longer a factor and the labor agent of the employer, in the form of a union leader, has been replaced largely by the secret, undercover agent. The successful organizer of the future will be the man who can rise above the new obstacles with which we are confronted. He will be a genius and a fighting man, just as McCarthy and his kind, and just as the I. W. W. soap-boxer speaking from the street corner at his stupid crowd, or the delegate carrying the rigging through lumber camps and harvest drives, was often a genius and a fighting man of a certain order, but he must use tactics and possess qualities that are somewhat different from those that distinguished either the A. F. of L. leaders or the pioneers of the I. W. W. The post-war epoch with its concentration of all economic power into the hands of a few world financiers; the passing of political power; the extremely large grouping of workers under scientific management, both in the matter or securing output and keeping them in subjection, including the chloroforming paternalism sometimes practised; possibility of steady employment for life together with the extreme uncertainty of it; the passing or subdividing of the mechanical trades are some of the conditions along with which the effect of the post-war civilization on the life and habits of the worker off the job will call for an altogether different line of approach than has been used in the past.

The anarcho-syndicalist attitude of mind which is reflected, largely and antithetically, by contact with the cockroach psychology of western farm and business life, as well as the ideology of communism, the offspring of an historical background of village life, must be subordinated.

The future demands a line-up that is in harmony with the structure and spirit of the new age. Our business is to prepare now for that future.

By LAURA TANNE

## Voice

No eulogies for great men from me.
Let them sleep quietly in their auspicious caverns
With names sodden with dust and worm-decorated.
Repetitious eternal eulogies smitten with holy tradition—
I'll not disturb you.

Songs for a Greek boy hiding his English grammar book
Under a bowl of sugar, within shadows of red meat
In the restaurant where he works
Injecting vividness of glance at the young Swedish girl
In white apron, bringing visions of golden marguerites
And wild sea-winds chained in pale flesh.

Songs for a coal-heaver bronzed and blackened
And mighty as the elements he handles.

Songs for Italian street-cleaners and factory workers
Listening in souls' ecstasy when Chaliapin, the Russian, sings;
When a Teutonic goddess kisses Latin operas with her voice.

Songs for splendid Jewesses and laughing Irish girls
Playing in harmony "Ring-around-the rosie"
In the muddy field of the class war
And going down together. (How many Christs sleep within them?)

My tribe, my race, my people,
A valiant throng, unknowing their greatness.
They sleep, sleep while the sun burns high in the skies
And they can never remember themselves.
Only I, out of the millions, scatter roses in their midst
And clear the winds for songs and silence.

## ?

Gay girls, shop girls, running to the movies
On the March night-before.
They challenge the wind to rip their laughing frailty
And mock the dark night with their raillery of joy.
Giggling, gaudy, gum-chewing, rouge-lipped
And clad in lace regalia
They whisper in the movies, sending thought-webs
Of kisses in the dark for the cinema hero
Who fades out at 10:30 when the orchestra
Blahs a blatant goodnight. . . .
Straphangers, glad with silliness,
Proud of no rips in their 95-cent silk stockings
Juggle along home. . . .
Gay girls, shop girls,
With sleepy pale lights in their night-before eyes,
With lingering patches of powder-snow on their cheeks,
These girls seriously calculate chances of winning
A fight against a 10 per cent cut in wages.

By EDW. E. ANDERSEN

MAGGIE, oh Maggie! what do you think of this? There is a sign down at one of them employment offices—on First Street—saying that there are men wanted on a railroad out west in Washington? What do you think of it, Maggie, should I go? It is work, you know; and I can't find a thing to do here at home; and I feel that you're getting tired of working out." There was anxiety in John Harris' voice as he spoke to his wife.

Margaret Harris did not answer but stood, plate and dishrag poised in mid-air, looking at her husband with a sorrowful, careworn, questioning look of surprise in her eyes.

"Don't look at me like that, Maggie," pleaded Harris.

"Why shouldn't I, John? Don't you realize what you have just said? Don't you realize what it would mean for me and the kids, for all of us, to have you go away two thousand miles to work? John how dare you harbor such a thought? And here you speak of it as though you expect me to consent to such a proposal. I won't even consider it! What if one of us should get sick or hurt? Ain't it better for all of us to be together if anything like that should happen? And as far as work is concerned: when did I ever complain because you can't find any? I know that you have looked for it hard enough. I am your wife, John, the mother of your children. I have never complained because I had to work out in order to keep house and home together. So you just keep still on that account. I have just done what I consider my duty in that matter, towards you and the children, no more. What do you want to leave for just now that things are commencing to look a little brighter? The children are going to school regularly again; work will soon open up so you can get a job at your old trade, and it won't be long before Sonny will be able to help out; he will be fourteen this coming May. Just think what that will mean, John, with you and Sonny both working—and our little home here! I can't understand how you can even think of going way out there to go to work. You'll find something here pretty soon. John, John!" Margaret buried a sob in the dishpan.

"I don't know how to start reasoning with you, Maggie. I grant that you have said a lot that's true. But, Maggie, I am a man. In me is a man's pride and that pride has been pricked. I feel like a cur living off your hard work—you working your fingers to the bone in other people's washtubs, and me loafing. I have felt that way the whole winter long. No work—and here is spring and still no work in sight. Maggie, it hurts! I also feel kind of cheap every time the children ask me for little spending money and I have none to give them. I feel that I am losing the respect of my own children because I am unable to provide and they have to go to their mother. Maggie, let me go out there and make a little money so I can come back and make the kids happy, and you happy, by buying all of you the clothes and things so badly needed—and myself happy in doing it and having earned the money that enabled me to do it. Maggie, it is my right as a father—say that I may go. Won't you, now, won't you? It will be but a couple of months and I'll be back again. By that time work may open up here. Two months is not forever. Maggie, say yes, won't you?"

Margaret nodded her assent without looking at John, tears dropping in the dishpan.

"There, there, I knew you would, Maggie! They'll send the men to-morrow afternoon at 4 o'clock. I'll go down the first thing in the morning and get it fixed so I can go. But—it will cost two dollars employment fee."

After some meditation Margaret fished two dollars from her worn little purse.

"Thanks, Maggie, you know I wouldn't take it—only it means a job."

The next morning there was leave-taking. Maggie cried on John's shoulder as he took her in his arms to kiss her "good bye" after the children had left for school. She was late to work that morning.

Ten days later there was a letter from John telling that the job he got was no good, and that he was going to try to get another one in a big construction camp two hundred miles from where he was at present. It was a month before another one came; there was a cheerful note in it, but no money. Margaret suspected that all was not so well with John as it might be.

The summer dragged along with just an occasional letter. The sum of his writings was a terrible indictment of the filth and misery of the western construction camps, and told of his futile travels from camp to camp in order to find a bearable one; there were no good ones. Finally the letters came no more.

The little home settled down to get along without a father. Sonny went to work and his meager check helped to buy the daily provender.

One morning in early summer four years later Mrs. Harris went to Sonny's room to wake him and found his bed untouched, and a small note on the pillow: "Dear Mama, I am on my way to the harvest fields. I have worked inside of the factory so long that I feel that I am entitled to a little vacation out in the fresh air. I'll be back in the fall with lots of money for you and Katherine. Sonny."

With the note held tightly against her breast she started into the void before her, seeing visions, through the mist of her tears, of Sonny being fed to the same inscrutable monster that had swallowed her husband.

Again she was late for work. The second time in four years.

# Was Morgan Wrong?

(Continued from Page 15)

generalizations are very dangerous in the science of anthropology, and that each separate case is to be considered by itself as different from all others. Resemblances they admit, with reservation, but they throw their emphasis on the differences.

Now does not this theory of no theory sound familiar? Is it not the scientific offshoot of the pragmatic philosophy which corrodes American intellectual thought? Doesn't it remind one of the present attitude of American bourgeois (and college) economists, who have decided that there is not a law of value?

Protestantism or agnosticism in religion, liberalism in politics, philosophical anarchy in economics, and pragmatism in philosophy are the natural reactions of petty bourgeoisie, faced with the class struggle which they detest, with the Marxian theory of value which they cannot refute and dare not accept, and with the dread of any kind of cold hard logic, since their own position is illogical, and their own class is in danger of finding itself any day without a reason for existence.

Nevertheless, it is the children of the middle classes who go to school and to university in the greatest numbers, and form the human basis of both undergraduate masses and selected faculty.

ONE OF THE "WILD MEN"

Furthermore, the poor harassed instructor in social sciences, faced with desperately revolutionary theories which, probably, deep down in his heart he suspects are true, is influenced to agree with his petty bourgeois students, probably his own parents, and finds his escape in liberalism, doubt, scepticism, raised to the pitch of pragmatic philosophy. Besides this, as long as he is doubtful, sceptical, pragmatic, anti-Morgan, there is little danger that he will come into conflict with the dark forces of American Big Business, which will not for very long permit any real freedom of thought, if that freedom leads to anti-capitalistic conclusions, of an effective nature, such as are likely to make revolutionists of the students.

I do not mean in any way to imply that Boas, Goldenweiser, or Lowie are bought. That is not the way the system works. But they are professional men, immersed in the timid, doubtful faculties of American universities inhabited by cautious and fearful petty bourgeoisie. How can they escape contagion? When the road to personal progress is through doubt, good manners, and destructive attacks on dangerous doctrines, will it not automatically result that those investigators who are for some reason predisposed to see what their superiors desire to have discovered, are given preference, and take authority, and thereafter guide the next generation along the same road? We see on the horizon the advance guard of a whole army of "new school" agitators, none of whom can as yet be compared in ability to the trinity of Columbia.

### Betrayed by Their Own Sincerity

The fact that these three men are in their own way, and to the best of their belief, honest investigators, leads them to make some curious confessions, very significant confessions for us.

Thus Goldenweiser in his youth was much more vigorously anti-Morgan than he is now. For instance, we find him saying in one of his later works: "From an examination of all such tribes (as the Australian Kamilaroi)—and their number is large—one might derive the impression that the alleged universality of clan or gentile exogamy represents but another superannuated dogma, that clans and gentes, while exogamous in many instances, have in others no connection whatsoever with matrimony. This conclusion would be erroneous." And then in a note on this passage Goldenweiser says: "An attitude such as this could easily be derived from a perusal of the section on exogamy of my "Totemism, An Analytical Study" **(Journal of American Folk-Lore,** 1910). While characterized by an enthusiasm born of a successful destructive analysis, my attitude at the time suffered from the neglect of a broader historico-

geographical standpoint." (**Early Civilizations,** pages 249-250.) The relevance of this quotation will be understood immediately by the reader who pauses a moment to think that Morgan's system lays great stress on the matrimonial aspect of gentile society, and that Goldenweiser acknowledges a high degree of enthusiasm in his assault on this theory, so great an enthusiasm that he fell into an error, which he now honestly admits. Probably there is here a greater error even than that which he now recognizes. At any rate, we believe we can point out in the same book another significant error of Goldenweiser's almost ludicrous in its simplicity. Morgan, you remember, had a plan by which humanity advanced materially from bronze implements to those of iron, the use of iron marking the change from what he called the middle stage of barbarism to the upper stage of barbarism. True, Morgan laid little stress on the use of bronze, which does not even appear in his table of the stages of material culture (**Ancient Society,** Kerr, page 12), and other qualifications are given there for a people in the middle period of barbarism. But farther on in the text, Morgan several times mentions that bronze closely precedes the use of iron. Morganites in Europe, unfortunately, exaggerated this precedence, and this opens the way for the following terrific punch, delivered at "evolutionists" in general (including Morgan, of course) by Goldenweiser: "In material culture, the evolutionist, basing his conclusions upon the archaeological reconstruction of European prehistory, posited the three stages: stone, bronze, and iron. But in the only other culture area where the use of iron was known, namely, that of Negro Africa, the stage of iron followed directly upon that of stone, omitting the bronze stage." (Goldenweiser, **Early Civilization,** Knopf, page 25).

### "Anthropologically Near-Sighted"

Well, perhaps the evolutionist is wrong, and perhaps not. We shall have something to say yet about this matter of iron in Negro Africa. But one thing is certain. Goldenweiser's zeal in the destruction of the evolutionists has led him to overlook something himself, that little thing being none other than the continent of Asia, which must be called a whole congeries of culture areas, all the largest of which advanced from the use of bronze to that of iron. This just shows you what preoccupation with destructive criticisms, and pride in new theories will do to an ordinarily careful man.

To this set of self-betrayals, we must add Lowie's charmingly frank little statement from page 91 of his **Culture and Ethnology.** (On this and preceding pages he has been arguing against evolutionary doctrines):

BUILDING A CHURCH FOR "CIVILIZED" CEREMONIALS

"That certain tendencies of all but universal occurrence are characteristic of culture (such tendencies as the universal belief in an animated nature, which he has previously mentioned.—V. S.) no fair observer can deny, and it is the manifest business of ethnology to ascertain all such regularities." Lowie seems not in this case to be speaking of the mere groupings of Goldenweiser, but almost to be thinking of the stages in culture of the evolutionists, for he continues farther on (page 92): "Recently I completed an investigation of Plains Indians societies begun on the most rigorous of historical principles, with a distinct bias in favor of the unique character of cultural data. But after smiting hip and thigh the assumption that North American societies were akin to analogous institutions in Africa and elsewhere, I came face to face with the fact that after all, among the Plains Indians, as among other tribes, the tendency of age mates to flock together had formed social organizations and thus acted as a cultural determinant."

This is a very Morgan-like conclusion, of a universal factor working in all tribes of a similar material culture to form similar social organizations in them all. In this case, Lowie recognizes the fact that he was biased against any such ideas. May we not, with a fair degree of justice, suppose that he is biased in other cases in the same way, and that, because he has not recognized the bias there, his observations and judgments have been warped?

## SECTION III. THE NEW SCHOOL THEORY.

Of course, as explained above, it may be that the theory of the "American School" of anthropology is losing its definiteness. Apparently these men started out young and fresh, with intent to sweep the world, and have bit by bit learned to tone down their statements, and even, as we have seen, to make concessions and admissions of failure.

However, there is still enough content left to the

Columbia school of anthropological theory to make it worth considering. Starting out by declaring that general theories of culture are impossible and untrue, it seems to have been modified by common consent until it appears to be about like this now:

1. NEGATIVE ASPECTS.

There is no universal type of progress. Each cultural field is subject to "laws" of its own, due, it appears, to chance inventions and fortuitous borrowings from neighbors.

There is no group marriage worth mentioning.

There is no evidence of a primitive state of sexual promiscuity.

The clan or gens is not universal; when it does appear its functions differ widely.

Social organization has no connection with the degree of material culture, highly developed states and elaborate ceremonial appearing among very primitive people, while the opposite may be true of people with a much greater material development.

There is no universal progress from hunting to pastoral to agricultural life.

There is no universal progress at all, deterioration being an ever present possibility, and in some cases an actual fact.

There is little relation between progress and environment.

Race has very little to do with progress.

2. POSITIVE ASPECTS.

Every people, every tribe or village even, develops or retrogrades due to definite, usually ascertainable, local or historical conditions.

Whether through contact or parallel development, certain large areas have some similarity of tools, or social life, or general culture, and sometimes, for smaller areas, all these may be co-ordinated. Thus it is proper to speak of the Negro African field, which divides into the Kalihari Desert field, the Soudan, the southeastern grass lands, etc. The more detail is insisted upon, the narrower becomes each field, and the more subdivisions have to be introduced. Especially, every people is unique, and cannot be classed with others, though it may superficially resemble them.

The family, of parents and children, is universal, having existed from the most primitive times down to the present.

Religion is universal.

Social organization, groups larger than the children with their parents, is universal.

Private and community property are both universal even among the most primitive peoples.

Art is universal.

War is universal.

One race is as good as another, potentially.

* * *

### The Triumvirate Speak

To make clear this outline, a few quotations might be given. Thus, Lowie says:

"**A priori**, it is conceivable that an undisturbed culture might necessarily develop by what biologists call orthogenetic evolution, i. e., in a definite direction through different stages, which is indeed what is commonly known as the classical scheme of cultural evolution, of which men like Morgan are the protagonists. Now, how do the observed facts square with this theoretical possibility?

"As Prof. Boas and American ethnologists generally have maintained, many facts are quite inconsistent with the theory of unilinear evolution. That theory can be tested very simply by comparing the sequence of events in two or more areas in which independent development has taken place. For example, has technology in Africa followed the lines ascertained for ancient Europe? We know that it has not. Though unlike southern Scandinavia, the dark continent is not lacking in copper deposits, the African stone age was not superseded by a copper age, but directly by a period of iron. Similarly, I have already pointed out that the possession of the same domesticated animals does not produce the same economic utilization of them. While the Tungus ( a central Asian tribe) rides his reindeer, Siberians harness their animals to a sledge; the Chinaman will not milk his cattle, while the Zulus' diet consists largely of milk. That the particular innovation occurred at a given time and place is, of course, no less the result of definite causes than any other phenomenon of the universe. But often it seems to have been caused by an accidental complex of conditions rather than in accordance with some fixed principle." (**Primitive Culture**, McMurtrie, New York, page 81.)

Then we have Goldenweiser: "In the final analysis, what we have found is this: every local civilization is in certain respects like all civilizations, in certain others, like all primitive civilizations; then it is like the civilizations of certain very large geographical areas, continental in their sweep; it is further like the civilization of a more restricted area; and finally it is like unto itself, in certain local peculiarities, individual and unique. Can anything be said in explanation of this curious situation?" (**Early Civilization**, page 123.)

To get an idea of what Goldenweiser is thinking about, we may take the following extracts from the same book (pages 115-128):

"Five examples of early civilizations have been passed in review (Eskimo, Tlingit and Haida, Iroquois, Baganda, Arunta, and allied tribes). . . In these five primitive communities we encounter all of the aspects that characterize human civilization, including our own. Religion, art, social and political organization, industries, economic pursuits and ideals, all of these elements are represented . . it must be recognized that common humanity, not only in matters psychological but also in civilization, is revealed in all of the cases here analyzed.

"Another set of traits which claim our attention are peculiar to the five tribes insofar as they are primitive . . with the exception of the African Baganda, the local units comprised in the test tribes are small. . . . These local groups are relatively

TYPES OF BONTOC TRIBE STUDIED BY MORGAN

isolated. . . . And the result of this is that the local cultures are relatively peculiar unto themselves, much more individual and specialized than is the case later in history . . . written language is unknown.

"Further, the five groups represent characteristic folk civilizations, meaning by this that the cultural traits of each group, in the form of knowledge, attitudes and functions, are much more evenly distributed among the individual members of the group than is ever the case in modern society.

" . . . . the individual is nowhere so free from social pressure and public opinion, from the rule and custom of the group, as to figure as a conspicuous unit in civilizational growth.

" . . . . Knowledge remains unsystematized . . . . there is no science.

"There are traits in each which are not only human and primitive, but characteristic of certain wide geographic areas. Thus the tribes of America, though differing from each other in scores of cultural peculiarities, are fundamentally alike in others.

"Thus, in no one of the three test tribes (of America) is there any domestication of animals, with the exception of the dog. . . . Then there is the limitation of the power of the chief, a characteristic trait of North America.

"Then there is the cult of the guardian spirit—

" . . . . . it is typical of North American industry that in each of the major areas, some one, or at least a very small number of industries are highly developed, while others are neglected or absent. . . . the Southwest, with its basketry, pottery, weaving, architecture, and mosaic work, stands out as a conspicuous exception.

" . . . . there are still other traits which further particularize the civilizations of these tribes. In North America, the Tlingit and Haida are differentiated from the Eskimo and Iroquois by a whole series of cultural peculiarities. The potlatch, the prominence of rank in all matters social and ceremonial, three social classes—nobles, commoners and slaves—great elaboration of woodwork, and with it a distinctive art born within the wood industry, all of these traits are known to ethnologists as characteristic Northwest Coast features.

"Similarly, among the Iroquois, there is the high development of bark work, the plant patterns in embroidery, the high position in economics, society, politics and ceremonialism, and finally, the League itself."

### The Parthian Shot

Now, just to have all three of the Columbia school on record, we must quote from Franz Boas, briefly: "It (the evolutionary viewpoint, Morgan's system) seems to involve a certain correlation between industrial development and social development, and therefore a definite sequence of inventions as well as of forms of organization and belief."

Fair enough, says the evolutionist. But Boas is none of these, and proceeds to criticize at length, too great length for us to do more than to point out one objection of his. It will be recollected that Morgan used the invention of pottery to mark the change from upper savagery to lower barbarism. Well, Boas says that large areas of the world's people got quite well advanced without the use of pottery, among them these same Tlingit and Haida Northwest Coast Indians, with their nobles, commoners, and slaves. Also the South Africans (yellow peoples of the desert), Australians, Northeastern Siberians, and a few others have no pottery, though some of them, Boas thinks, are far enough advanced to have broken through the Morgan classification in which people without pottery should remain. Boas says: "Its (pottery's) presence seems to be due more to geographical location than to general cultural causes." (**Mind of Primitive Man**, chapter VII.) Neither does he think it always developed from basketry, as Morgan suggests (but does not insist upon.—V. S.)

This is enough to show the substantial agreement between the three musketeers who would make up the firing squad, at the scientific execution of our old friend Morgan. Next we must consider how well **their** theories hold water, and what effect the facts they have discovered actually have on Morgan's system.

(TO BE CONCLUDED IN THE MAY ISSUE)

# Labor and the American Empire

By ROBERT WHITAKER

II.

ON MY desk beside me as I write this article are two labor papers. They are weeklies, of the ordinary eight-page type. Both are published in Los Angeles. One is in its nineteenth, the other in its second volume. The older paper, quite significantly, bears the title of THE CITIZEN, and for a sub-title the words, "Labor's Official Paper". The other paper is "The Southern California LABOR PRESS," the words, "LABOR PRESS" being larger, as I have written them here, and on a line by themselves. Underneath is the claim, "The paper with the Circulation." On either side of the main title, "LABOR PRESS," is a picture, to the left a steel structure, with half the girders yet uncovered, to the right a towering oil derrick, with others in the background.

Whatever circulation either or both of these papers may have, their combined circulation is very much less than the full labor strength of this city and section. They speak for "organized labor," and organized labor is but a small proportion of the total labor force in any American community. And what passes for organized labor does not by any means include all to whom the title belongs. The Communists, the Socialists, the I. W. W. are all organized here, and include considerable labor following all told, and these papers do not so much as claim to speak for them. Also the "hoboes" are organized, but can hardly claim to be included within the circulation or representation of these weeklies, except as organized labor is concerned in the general problem of the unemployed. At the most, whether official or unofficial, the two regular labor papers of Los Angeles speak, as do the labor papers everywhere in the United States, for only a portion of the working people who are the industrial army of the country.

Their limited circulation is, however, not the most important limitation which they have. The larger limitation is their attitude toward labor itself. Labor is to them incidental to the idea that the workingman is a "citizen" and an "American" before he is a labor man. The geographical is more prominent in their thinking than is the industrial. It is **where the workingman lives,** not the fact that **he is a workingman** which primarily concerns them. And as Americans, therefore, they are more interested in the American city, the American state, the American nation, and finally in the American empire than they are in the status of the working people of the world as such.

It is not so with the man of business today. He is interested in making money, and this is everywhere his dominant concern. His business may be so limited that he may concern himself very little with that which lies outside of his own community. Here in Los Angeles are business men who hardly see any other community from year's end to year's end, except as they may take a motor trip to some neighboring town or city over a Sunday or on a very brief vacation trip. Their homes are here, their stores or shops are here, and here they find the wholesalers from whom they buy, or are visited by the traveling salesmen who represent outside wholesalers. Money making for them is a much localized affair.

Beyond these are business men whose field is the state, or the nation, and in increasing numbers we have today the business men whose field is the world. These international business men it is who are working now, quite ineffectively as yet, for some kind of international understanding which will assure them of uninterrupted avenues for commerce within the larger area where they deal. Some would have America compel this peace by force. Some would have America align herself with England, and perhaps others of "the superior nations" for a "League of Nations" or a "World Court," under which the "policing of the world" can be carried on. Some want such a confederation of all nations as would be fairly reproductive in the world field of our own union of states in the national field. But in all instances the business man is interested in social organization **as a business man, and for the purpose of making it easier to make money and control it.** His empire, whatever name it may take, though it be merely the booster's boosting for his own city, or a Californian's contention against Japan, or the jingo passion for "America first," his empire is always **the empire of finance.** His geographical interests are never superior to his economic interests, but are always subordinate to them. **It is the opportunity to exploit labor more effectively which underlies all the policies of the owning class.** If the business man does not want recognition of Russia, for instance, it is because his exploiting operations are so limited that he has no sense of Russia's relation to enlarged opportunity for himself or his immediate associates. If he does want the recognition of Russia it is not that he abhors Bolshevism any the less but that he needs, in his larger field of exploitation, to come to some understanding with Bolshevism so as to keep his raw materials and his marketable goods moving. But where he sees profit there he follows, for his star of empire is neither eastward nor westward but always where the best promise of profit abides.

Up to this hour the American business man could well afford to be a nationalist, for there was abundant opportunity within the national realm or **under the movement of the national flag** to carry on his exploitation of labor. The saying that "trade follows the flag" is a reversal of the fact. It is much

more accurate to say that **"the flag follows the swag."** And **as long as the flag is strong enough to protect the swag** we can afford to be nationalists. But when the swag is gathered on a great international scale, and the force behind the flag is not strong enough to guarantee that profits will be protected, then it is time for the big business man to lead the business world in some kind of world organization which will secure him in holding and enlarging his loot. That is why the movement for world peace is strongest where international holdings are largest in America just now, and why the investing bankers, whose field of investment is international, are more inclined to world order than are the manufacturing classes who are as yet more distinctly American in their interests. Also the churches are swinging into line with the movement for world peace more emphatically where they are most under the guidance of the big men of finance. Just as American Big Business put the saloon out of the running, leaving bootlegging to provide for the rich boozer who can afford it, so Big Business in America today is going to put war out of business, if the makers of munitions and warships can be so controlled as to make the program practicable. **But this anti-war movement at the heart of it comes from no abhorrence of war but from the necessity for world peace in the interests of international exploitation.**

The American workingman is being used as the tool of this process. He is to be kept a nationalist to the point where nationalism can serve the interests of profit, and those who believe that **Uncle Sam should go it alone in providing his own international insurance by building up a militarism powerful enough to boss the whole world** are for unlimited nationalism on the part of the workingman. Those who think that some sort of alliance among the Big Fellows, that is, the Big Nations, is indispensable, are willing that the workingman shall support the League of Nations. But in either case the workingman is to be kept loyal to whatever slogans his industrial masters may accept as in the line of maintaining and increasing their exploitation of the earth.

Meanwhile we are seeing within America the operation of a process not unlike that which was carried on in the imperial city on the Tiber two thousand years ago. The workingmen of Rome as the owning class of that robber city spread their nets all over the Mediterranean world, were made allies in this exploitation, to the extent of being given "bread and circuses" as long as they consented to the program. Their masters said, in substance, "Be good, and lend a hand while we loot the world, and you shall have the odds and ends of our pickings." When they were not "good," the workingmen of Rome were thrown to the lions in the arena or crucified by thousands at a time.

The United States today is the supreme "robber city" of the world. The loot of the nations is coming here, as it never came to any nation in the whole experience of man. So we are shutting our gates against the foreigners, **that our favored class of workers may not grow too large for the "petting" that is theirs.** Bread and circuses are being given to us beyond anything of which the Romans dreamed. Movies, radios, Ford cars, newspaper sensationalism, all these are depended upon to keep our workingmen content while they are being used to pile up a surplus with which the American plunderbund can enslave the labor of the world. Why bring the workers of Europe here when we can put a whole nation into bondage by a Dawes plan? Is it not far better to lend money to the masters of France, and let them work their slaves at home for the tribute which Wall Street exacts wherever its lendings go than it is to have the Frenchmen here? And will not the American workingman be glad enough to sit on the back of the world, if only his own master class will give him the chance to act as slave driver at a fair return?

All the indications are that he will, if the program can be carried on. But whether it can be continued so that the slave-drivers, willing enough to sell themselves out to the slave-owners, shall be kept comfortable and secure in their ascendancy, is another matter. Concerning this I may have something further to say.

## *The May Day Industrial Pioneer*

**Send in your orders early for this greatest issue of the best monthly magazine in the English language devoted to the propagation of revolutionary industrial unionism.**

**The May number will be a powerfully inspiring force to revolutionary labor seeking working class international solidarity under the red banner and the fighting spirit of the I. W. W. The best is not too good for the working class, and our contributors throughout the world are bending their finest efforts to make the May Day edition unexcelled anywhere, or at any time.**

**ORDER WITHOUT DELAY.**

# The Crime Situation in the U. S. A.

(Continued from Page 8)

in juvenile crime. They prepare the soil, but they do not provide the seed.

The seed of juvenile criminality is to be found in the capitalistic propaganda of our school system. The master controls the state, and, through the state, the school, and he uses the school, as he uses all the connective institutions of society, papers, churches, courts and saloons, incidentally to fulfil their primary task but primarily to uphold his economic rule.

### Training Thieves By "Higher Learning"

In the schools, he causes to be taught the poker morality and that distorted form of pragmatism which William James called the "worship of the bitch-goddess success," and which is fast becoming the national philosophy of the United States. The youth of the land is thus consciously trained to respect the possession of money regardless of the source of that money.

Of all the periods of human life, boyhood is the most individualistic. The boy lacks the restraint which the adult derives from his contact with the material side of life. The most delicate part of the training of boys is to create in them a social view of life without repressing their instinctive desires by methods so harsh that those desires will flare up dangerously in later life on account of that very repression.

The boy is self-centered, he is not especially mindful of the welfare of others, and to that boy the school teaches belated individualism entirely out of harmony with the realities of economic life. In its clumsily stupid way, the master class teaches him a false class morality with the purpose of defending the institution of private property and when the boy goes to the logical extreme of such a teaching and, incidentally, begins to take liberties with the private property of the master class, the latter wonders at the unexpected results of a training which it has itself devised and planned.

### Subtlety of Crime Trade

In a general way, the development of modern commercialism has been responsible for a great increase in the number of crimes based on violations of trust and the inordinate desire for rapid gain. Crime has become more subtle and refined and the temptations of occupation have increased. It is in connection with these features that we come upon the third special characteristic of American criminality, viz.: the prevalence of simulated or faked crime. Crime in Europe is generally an outside job. It is a frontal attack upon the existing property system, often childish in plan and execution but open and bold. In America, on the contrary, the inside job tends to prevail.

The American detective, when given a case, looks immediately towards the insiders, the European detective looks on the outside.

Nearly all the thefts of goods in course of transportation which, by the way, cost the shippers and carriers an average of five hundred million dollars a year, are inside jobs. For robberies of goods from railroad trains, the migratory worker is generally blamed, but the railroad detective, assuming that he be honest, prefers to look for the guilty parties amongst the members of the train crew.

Many a paymaster who is held up by a gang of footpads, had the whole performance rehearsed beforehand under his own direction.

In the inside job, the robbery is generally conceived by an employe who takes advantage of his position. There are even instances where the robbed party himself takes part in the robbery, as in the case of over-insured automobiles stolen by thieves working in collusion with the owners, the thief selling the car for what he can get and the owner receiving the exaggerated price put on the car from the insurance company. This form of automobile stealing constitutes no small proportion of the total number of automobile thefts.

### Where The Cops Fit In

From the inside job there is only one small step, and a logical one, to the element of police complicity in crime which constitutes the fourth distinctive character of American criminality.

Many bourgeois writers on criminology claim that the police and the judges are too lenient with crime but hardly any of them take the trouble to investigate the cause of such a leniency. Historically and theoretically the police are supposed to prevent and to repress crime. This however is mere theory. As the class consciousness of the industrial proletariat grows, the master class finds itself more distinctly threatened in its privileges and entrusts the police with the task of restraining the socially discordant elements.

Ten years ago, a policeman took the trouble to pick a quarrel or to dig up some flimsy pretext before hitting a striker; today these formalities are dispensed with, he hits him at once because he is a striker and as such in revolt against the economic system which the police are there to protect.

In ancient Carthage, the ruling class understood the power of the police arm and it manned the police force with its own sons. Under the wage system, the capitalist hires one gang of wage workers to suppress the protests of another gang.

The man who hires out as a policeman, does not do so by conviction or through a feeling of admiration for the beauties of the capitalistic system. He joins the force because it is the line of least resistance according to his way of thinking. He knows the nature of the work in store for him, he knows that the conscious worker despises him but he thinks that it is an easy living and that, occasionally, he may be able to start some side line job on his own

account and to avert suspicion by draping himself in the supposed dignity of his office since there is kept alive by capitalistic necessity the fiction that the police, like Caesar's wife, must never be suspected. For, through the very nature of their function, police are the most powerfully organized body of civil employees in the country.

In time of strike the police are supposed to recruit both strikebreakers and private detectives for the protection of capitalistic property. This they can not do unless they have those individuals ready at hand and they cannot have them at their command unless they supply them with means of livelihood when they are not wanted in action. Here we have the first elements of collusion between the police and the criminal population. The police guarantee immunity and in return share in the loot. Instead of harrying the criminal, the police have come to terms with him.

Under such conditions increase of police forces can have no checking influence upon the spread of crime.

### "Getting Away With It"

It is interesting to trace the economic foundation of certain so-called reforms from this angle. Organized crime protected by police collusion cost one life insurance company in one year $724,000. Having been compelled to pay that amount in 1923, the Metropolitan investigated. It found that only one criminal for every 146 crimes paid the death penalty. Of those crimes, thirty-two were held justifiable. For the 114 cases left, there were only 69 indictments. Over one-third of the assailants were never arrested. The 69 indictments led to 11 no-trial cases and 58 trials. The latter resulted in 16 acquittals and forty-two convictions. Of the 42 convicted persons, 35 went to the penitentiary and the balance got out through an appeal. So that, in the last analysis, 35 murderers out of 146 are actually punished. No wonder then that, in the country as a whole, there are admitted to be 135,000 criminals at large.

### Radical Opposition

The master class knows that it is liable to want them at any time although occasionally some particular interest, hit to the extent of the Metropolitan Insurance Company, may suggest that state police would be just as efficient against strikers and perhaps a little more efficient against murderers.

In summing up this inquiry into the nature and causes of crime in the United States under the capitalistic system, I want to emphasize first of all the social origin of crime. It is the worst defect in society, openly abnormal or unsocial. The criminal is both ignorant and a coward. His ignorance along economic and social lines leads him to react as an individual where he should react with his class. He thus becomes a deliberate enemy to the welfare of the workers because he openly attacks the fundamental principle of social life. He is non-social and, hence, an enemy to socialization. He destroys the person with whom he should co-operate, takes without giving and tries to live off the toil of others like the master class which he imitates.

Our educational system has, so far, had no influence on criminality. We have not outgrown the old idea of education which held for its purpose the elevation of one class above another. We have only modified it to suit present day industrial conditions. We still have a type of education which prepares a man for a life without work while the education of the mass is entirely limited by the desire for efficiency under conditions of capitalistic management.

College men provide as many criminals as their less educated fellow citizens. Lawyers lead all college men in the number of prison records. Educated men, as a rule, serve only one term. Uneducated men go back repeatedly. Usually college men keep out of prison till the age of forty. This situation is very easily explained. At that age they begin to realize that their subservience to the master class has not given them any kind of economic security and they take a long chance to protect their impending old age.

### Educated Religious Criminals

Ninety-eight per cent of all educated criminals are church members.

The social origin of crime is further proved by a classification in the crime world which follows exactly the division of society in classes along economic lines.

The underworld of crime has its own upper, middle and lower class. It also knows the value of organization. To the expert criminal the fellow who works single-handed looks a good deal like a small business man to a Wobbly. He is a would-be and has not a ghost of a chance to get away with it. The experienced criminal is organized, retains his lawyer by the year, just as a corporation, and has a respectable standing with the police and the politicians.

The crime situation forcibly reminds us of the startling conclusion with which the French novelist Zola winds up his great work "Nana". Capitalistic society is a dungheap, it is in a state of putrefaction, but out of this rottenness springs forth the disease-carrying fly with the golden body and the iridescent wings. In its flutterings it is just as liable to alight in the hovel of the slave as in the mansion of the master.

Whatever be the motive behind the criminal, the incidence of crime upon the master class is a good deal of a retribution for those who benefit by our social system.

# Drifting to Peonage in California

By CALIFORNIA PUBLICITY MAN

**"THE LAND QUESTION MEANS HUNGER, THIRST, NAKEDNESS, NOTICE TO QUIT, LABOR SPENT IN VAIN, THE TOIL OF YEARS SEIZED UPON, THE BREAKING UP OF HOMES; THE MISERY, SICKNESS, DEATHS OF PARENTS, CHILDREN, WIVES; THE DESPAIR AND WILDNESS WHICH SPRING UP IN THE HEARTS OF THE POOR, WHEN LEGAL FORCE, LIKE A SHARP HARROW, GOES OVER THE MOST SENSITIVE AND VITAL RIGHTS OF MANKIND. ALL THIS IS CONTAINED IN THE LAND QUESTION."**

**—Cardinal Manning.**

IN THE above quotation we have an epitome of the struggles and toil, privation and misery endured by the "sons of the soil." The devout prelate understood the position of the farmers in present day society. But even he did not understand the full significance of the tragedy of a farmer's life.

**In California, one of the richest, if not the richest state in the Union, we see the glaring injustice of our economic system in relation to those who fill the bread basket of the world. We boast of the wealth of the Golden State. We send out literature portraying the wonderful opportunities afforded all persons who wish to become farmers in the rich agricultural belts of California. But we only paint one side of the picture, and like the "Vision of Mirza" in Joseph Addison's beautiful allegory, we leave the terrible side in darkness.**

The Sacramento Valley is indeed rich. Its soil is fecund, its climate suitable to agriculture and horticulture. One would think that anybody fortunate enough to own land in this enchanted valley could not help becoming wealthy. And indeed, wealth in abundance is produced in Sacramento county. Los Angeles alone, of all the counties in California, leads her in the production of wealth. And yet—

### The Ghost at the Feast

There is a spectre that haunts the farmers of this wonderful valley. Scarcely any one of them is free from the dread menace of losing his farm. No matter how long they have lived on their farms; no matter how many improvements they have put on the place; if they cannot meet the payments on the mortgage they are forced to relinquish the homestead, and depart to become wanderers. A mortgage is an ever-present spectre, haunting the lives of the men who have made "Superior California" what it is.

### A Few Statistics

It has been said that statistics are dry reading, and yet they are sometimes necessary to make clear our position. We will be as brief as possible.

The United States Census Report for 1920 states that California is the fourth state in the amount of farm mortgages. This is accounted for by the fact of so many persons falling into the snare of unscrupulous land sharks. The poor, unwary farmers of the Middle West read the luring advertising, telling of the wonderful opportunities in the Golden State, and come to California, here to become serfs of the soil. The report shows that 50.4 per cent of the farms operated by owners in California are mortgaged and that the average mortgage is in excess of thirty per cent of the total value of the property. It also states that 35.6 per cent of the farms of California are operated by tenants. This makes a total of 86 per cent of the farms in California that are encumbered or rented. **In other words only 14 per cent of the farms are free of debt. This in the richest state in the Union.**

**In Sacramento county the percentage of mortgaged farms is larger than in the state as a whole. The report shows that in 1910 forty per cent of the farms in Sacramento county were mortgaged. In 1920 the amount of mortgages had increased to 54.1 per cent, while the number of tenants had grown from 21 per cent to 35.3 per cent. In ten years the number of mortgages had increased 14.1 per cent and the number of renters had increased 14.2 per cent. And this in a decade of great national and state prosperity. Despite the European war the amount of mortgages has rapidly increased. This report does not include chattel mortgages or mortgages on personal property, but only real estate mortgages. We find, according to the report, that less than 11 per cent of the farmers in Sacramento county own their own land. This is a strong indictment of our economic system, when only ten per cent of our farmers, who have toiled early and late, can call themselves independent. There must be something wrong.**

The enemies of the Industrial Workers of the World are fond of saying that if the I. W. W. ever assumed control of industry they would immediately expropriate the farmer. This is ridiculous. The farmers are now expropriated by bankers holding mortgages on the land.

### Whither Are We Going?

The number of mortgaged farms is rapidly increasing in California. In Sacramento county the number is increasing faster than elsewhere. It is

not the fault of the farmers. They are not indolent or shiftless as a class. They are industrious and hard-working. Yet, we find that they are unable to make ends meet. Every day we read of farmers in the rich valley being dispossessed because they cannot pay their taxes. The situation is serious. The farmers are not to blame. And surely the I. W. W. is not to blame for this situation. Even the editor of the Sacramento Bee would hardly dare to lay the blame on the I. W. W. Long before the I. W. W. came into existence the farmers were faced with the problem of economic insecurity. We must look elsewhere to find the cause.

### The Workers and the Drones

To anyone who has studied economics the cause is easily found. There are two classes in society, the working class and the shirking class. The farmers and wage workers produce the wealth, and the shirkers steal it. This is plain language, but it is meant to be plain. The master class produce no wealth. They add nothing to the value of any commodity produced. The workers—including the farmers—produce all wealth. This is proven by the fact that when the workers take their hands from the wheels of industry, wealth production ceases. If the workers do not produce all wealth, how else is it produced? The wish of a capitalist can not produce wealth. If it could we would have no need for workers. **But the capitalists have stolen the industries from the workers, and arrogate unto themselves four-fifths of the wealth produced.** These are government statistics, and cannot be denied.

### The Tragedy of It All

Here in California, as in all lands, and in all ages, we find that those who love truth are vilified and persecuted. Because some know the solution to the problems that confront society they are persecuted, imprisoned, mobbed. Eighty-eight men are in the "Twin Hells" because they desired social redemption rather than individual gain. Maurice Hewlett in "Open Country" pays a glowing tribute to the restless souls of all ages that aptly describes the men in San Quentin and Folsom who went singing to prison in behalf of Labor:

### The Way of the World

"It is doubtless necessary that there should be frequent crucifixions. It seems to be the way of the world. A man to whom the truth is blazed as clear as noon goes into the streets filled to the lips with his revelation. Smug citizens avoid him, put up their shutters, and lock their doors; dogs bark at his heels; the ribald gather, one throws a stone.

"Then comes the storm upon him in which he falls, battered, bleeding, with glazed eyes. There's an end to the blasphemer who dared to question established order, who says that use and wont are not sacred at all, but hoary in iniquity.

"Having slain him, they learn that he was a god, and his revelation a law of nature. Up goes a statue, and his words are read as gospel. That's how we get on in this quaint world, climbing to the stars on the heaped bodies of our heroes and sages."

How true are the words of this earnest writer. It has been the same throughout the ages and will continue until we have learned the great lesson of working class solidarity. It seems as if we must learn by persecution, misery, poverty and exploitation. No other way has yet been shown us whereby we can emancipate ourselves. The road to liberty goes through the prison gate.

### The Prison

**"And I looked again, and I saw in the jail those deliverers who in each age have saved the world from itself and set it free, and gyves were on their wrists and ankles.**

**"Woe to the cause that hath not passed through a prison.**

**"And I saw within the jail them that gave liberty to the slave, and them that unbounded the mind of man, and them that led onward to Freedom and Justice and Love.**

**"Woe to the cause that hath not passed through a prison."**

Back of the terrible persecution of Union men in California is the same group of pirates who have enslaved the farmers of Sacramento county. The cause of the men in prison and awaiting trial under the Criminal Syndicalism law, is your cause. Their fight is also yours.

For information write to the California Branch of the General Defense Committee, 226 Russ Building, San Francisco, California.

## Announcement

**The MAY DAY NUMBER**

**Of**

**INDUSTRIAL PIONEER,**

true to the traditions of international revolutionary labor, is going to be the greatest issue we have ever published. Among the special features contributed by the best writers, artists and poets of our movement, a number of excellent book reviews will appear.

RALPH CHAPLIN, poet, artist, writer and lecturer, will review Upton Sinclair's great new book, "Mammonart."

J. A. MacDONALD, author of our latest I.W.W. book, "Unemployment and the Machine," is going to tell us what he thinks about a United Press correspondent's volume called "The Re-Forging of Russia."

ROBERT GRAYSON has promised several reviews including, "The Causes of Industrial Unrest," by John Fitch; "Spring Thunder and Other Poems," by Mark Van Doren; "Straws and Prayerbooks," by James Branch Cabell, author of "Jurgen"; and the greatest war story since Barbusse's "Under Fire"—"The Ninth of November," by Bernhard Kellermann.

EX-SENATOR R. F. PETTIGREW of South Dakota, author of "Imperial Washington," has written me indicting what he sees as the tactical blunders of the I. W. W., and he offers suggestions by which he believes we could more successfully advance.

In the May Day Industrial Pioneer his article will be run and my reply to it. This discussion should repay the reader's earnest attention.—EDITOR.

# United States Steel

(Continued from Page 5)

BROADWAY ENTRANCE TO THE GARY WALLED STEEL PLANT. (1) General Administration Building. Arrow Points To The Guard House

Wall Street were tied to the merger. Seventy per cent of the iron and steel industry passed under the control of the new corporation at once, with scores of banks, railroads and other corporate enterprises. Later the power was strengthened by assimilating the Tennessee Coal, Iron and Railroad Company, which had iron ore holdings in the Virginia district.

**The Gary Dream Takes Form**

This greatest combine in history was capable of gigantic moves, and a glance at the map presented with this article reveals the economic reasons for the greatest constructive undertaking United States Steel ever assumed. We now look to Gary. Not the man, but the city named for him.

Not quite nineteen years ago the site on which the city now stands was a swamp and sand dune waste. The new corporation made a careful survey, weighed every consideration, and decided to assemble there on the south shore of Lake Michigan the world's largest steel plant. This and more. A city was laid out and built. A better situation could not have been chosen. William H. Moore's reasons for the choice are to the point. He said of the site:

"It had the added advantage of the focus supply of the corporation's system of subsidiary mills manufacturing sheet steel, tinplate, bridge and structural iron, wire and wire products in a continuous chain of twenty plants in Ohio, Indiana, Illinois and Wisconsin."

Gary is centrally located in the region whose natural resources and manufactures are indispensable to steel making. It is near the Virginia coke ovens, the Illinois coal mines, the limestone of Michigan and the iron ore of the Lakes region. Chicago is only twenty-five miles away and this metropolis uses a great amount of structural steel. Railroad shipping costs were better by reason of the hub position in the country's industrial wheel. Ore steamers could be unloaded right into the docks on the grounds where the red furnace tongues now hungrily lick the sky.

How many thousands of travelers have been fascinated as their trains sped through the dark past the steel mills' glare, the streaming, sulphurous light across the night's black dome. Some of these who peer through railroad coach windows long to go nearer this magical aurora borealis of modern industry. So I dropped off a New York Central train at Gary not many days ago for the purpose of going into the steel mills.

**Getting Into the Mills**

It isn't easy to get in. Guards watch at the entrances to the walled barony that strategically fronts the lake for seven miles. You are supposed to look for a pass in the office. This might be granted, and it might not. Without the pass you somehow mingle with the crowds pouring into the Broadway entrance, pass the uniformed policemen on each side, go through the time-clock sheds. In this manner I found myself safely inside the immense domain where the slaves of 43 nationalities and races—about 30,000 in number—are busily creating in sweated toil, pain, and death—for they are "bumped off" at a fearful rate—the sinews of power for the earth's largest known combination of management and capital.

**Racial Slave Compound**

Race hatreds outside may go to extremes. Within the walls of Illinois Steel prejudices are cunningly permitted to act as a spur to greater productivity, but dissension threatening to interfere with it is

MOUNTAINS OF ORE AT BLAST FURNACES

POURING STEEL FROM THE PLATFORM

not tolerated. There you will find the native whites and blacks from both the North and South straining themselves in interdependent tasks beside Lithuanians, Italians, Poles, Armenians, Greeks, Russians, Hungarians, Swedes and all the rest. There is welded together in social effort a racial compound upon whose bowed back marches the empire of steel to world domination.

### The Greatness of Illinois Steel

Limits of space and my own lack of technical knowledge of steel making prevent me from setting down more than an impressionist view of the Gary plant. Through the vast stretches of this arena one walks hour after hour in yards and mills and past the open hearths. To east and west an endless pile of murky structures. Machine shops, electrical power plants, blast furnaces, coke ovens, and the mills—rail mills, merchant mills, axle mills; then sheet and tinplate plants, structural steel works, pumping stations, car foundries, and the concrete ore docks.

Gouging far into the land a harbor was set. Labor's great hands rudely lifted up the lazy, easy-going Calumet river, skillfully placing it in a new bed. Half a dozen ore steamers can be accommodated simultaneously in the turning basin. These steamers ply between the Lake Superior iron mine ports, through the Sault Ste. Marie canal, and Gary. In a couple of hours they take on their 12,000-ton cargoes of iron ore in Duluth. At the Gary port I watched Hulett unloaders scoop into the holds like giant hands, picking up 15 tons at each grasp. In a few hours an ore steamer is emptied and started on the return trip for another load.

Illinois Steel is a big outfit. That's what you keep thinking as you hike along with far-off stacks dim in the gray distance, while you never seem to find the end. It must be a dangerous place, too, you think, because there are countless red signs posted warning not to come too near; to look out. Across one of these signs a worker had scrawled this improvement on the original legend: "Keep head in, cars cut it off dam queek." Cranes and cars operated everywhere inside the mills and yards. Cranemen direct mechanical arms that pick up and put down twelve, fifteen, twenty tons of rails, pigs, rods, or ingots. Sometimes chains are wrapped around the loads, at other points big, round, flat electric magnets do the job.

Standing back a short distance from the rail mill you see a pitch black aperture. Suddenly a white-hot snake darts out of the dark and lies still. A signal whistle toots and, with a hissing sound, the writhing snake vanishes. Going closer you see rails being drawn and straightened. At another point converters are being filled before the furnaces with liquid metal. The big jib crane runs along to this inferno, its three hooks are fastened to the great "pot" by a man, and up goes the converter.

### Falling Into the Steel

Then you see the molten metal poured from these huge vessels into cylindrical containers that are loaded on special trains. When these are stripped the ingots are solid. From above carbon monoxide rises sickeningly. It is fatal to breathe it for more than fifteen minutes. A minute or two of the "gas" and you're dizzy. In the old days, when speeding was rather a new thing, the foreign work-

ers, unused to American industry, often found ...aves in the lakes of liquid steel below. When one ... in there was no need for a funeral. It was like ...drop of water on a red-hot flatiron, an instantaneous annihilating sizzle. This became so common that a priest protested and demanded to be given the steel to bury "in consecrated ground."

There is an intricate system of railroading with trains, ingot-buggies, low cars for pigs, gondolas—drawn by electric and steam locomotives. Paved roads traverse the plant, and many motor trucks whiz by. In the sheet steel mill I watched hydraulic shears cut the flat metal into various lengths. In one of the merchant mills, where the noise is deafening, a white worker observed my attention as he and a negro stacked angle bars after they had been cut. Putting his mouth to my ear he shouted, "By the time the shift's over, you can't tell me from the other nigger."

### The Eight-Hour Day

Most of the employees are on an eight-hour basis. Some of the laborers put in ten hours. When business is very good, various departments run twelve hours, the hours over eight receiving straight-time rates. A productive basis in one of the mills—which means paying a bonus for production above a given minimum—is in force. From a few cents to a few dollars a day over the flat day-work rate can be made in most cases. But there are flagrant examples of fraud in this bonus business. One worker told me he had made seven cents a month "extra" for the last three months. The bonus can be arranged to reduce the day-work rates. In one department where the rate is $4.28 a shift they fix it like this: should even one day of the semi-monthly pay be worked on a productive (tonnage) basis, the entire pay is rated by tons and manipulated so that wages fall below the minimum.

More or less construction work progresses in the plant at all times, and I saw a small army of shovel stiffs boldly silhouetted against the northern horizon. They were filling in an immense depression near the lake. At other points gandy-dancers were fixing the tracks. My exit was made near the Y. M. C. A. Cafeteria and the Corporation Hospital. Here the wall ends, but brass buttons in the sentry box gives everyone a good "looking over." Passing this sentinel the road drops down and curves back to town. An electric trolley runs over this thoroughfare to the tinplate mill. After a short walk a gate is passed through over which runs the legend that it is private property belonging to the Gary Land Company, and no trespassing is allowed.

### Social Welfare

The homes at this end of town are clean places, the display kind, but they are depressingly monotonous in good Portland concrete. You see, the steel kings started the world's largest cement plant at Gary's edge, Buffington, and they boost the product. The 144 miles of sidewalk are made uniformly of concrete, too. It is at other points of this city that the low-paid slaves exist and there are five social welfare houses doing a thriving business trying to keep a lot of them from starving to death.

Gary has a fairly good library with very obliging clerks. The structure was donated by Carnegie, the land by Judge Gary, and the city meets the upkeep. In this building is collected, quite naturally, a large amount of data about the city, the mills and the history of steel. In the Gary Chamber of Commerce survey—so worded as to attract outside capital to the city—much information has been put down by these earnest Babbitts. Therefrom I learned that the mills make their own coke; that the smoke that used to go to the four winds and that settled on Monday morning clothes-lines is cleaned and used to make electricity, so that it runs the mills and supplies all electric power and lights for the city; that two trunk-line railroads were picked up over a distance of ten miles and laid out of the way to build the Illinois Steel plant; and that 90 per cent of the slaves in Gary are males, and employed in the mills. The Chamber of Commerce says that the male slaves make 44 cents an hour. the female 25 cents. It says this, too: "With the exception of the building trades, practically every establishment in Gary operates under the American plan." Cheerio!

Then it gives the scale per hour for building workers in the city—lathers, plumbers, sheet metal workers, and structural iron workers, $1.50; plasterers, $1.37½; electricians, carpenters, painters and roofers, $1.25; hod carriers one dollar, and unskilled laborers 87½ cents.

Note the last element, please. Eighty-seven and one-half cents an hour for ORGANIZED unskilled laborers—44 cents an hour for the UNorganized unskilled laborers in the steel mills. There is but one difference in the two groups—those on building construction have organized their economic power, but the mill slaves still toil without unionism for half the wage.

### The Wave of Blacks

Sixteen per cent of the population of Gary is colored, or 12,700 negroes, who are but a small part of the black horde sweeping northward from the vicious sport of Southern whites—lynching. Desperately they fled. Here, then, was material to use against white steel slaves, and in 1919 they were used to break the strike. I was unable to learn how many more blacks came to Gary in the last two years, but observant workers said the number is very large. One thousand Mexicans are in the city, but other plants in the many industrial enterprises near Gary employ a larger number than Illinois Steel. With Negroes present the steel masters feel that they have a force to smash possible strikes. The black men are anxious to get settled in a new territory, and they are accustomed to a lower living standard. They are more tractable than whites, and race hatred may be engendered to cause them to fight their white fellow workers in case of strike or

PENNSYLVANIA STATE COSSACKS DOING THEIR STUFF IN THE 1919 STEEL STRIKE

action leading up to a strike. This is Mr. Gary's strategy today. The native white population in the city is only 23,400, or 30 per cent of the whole. Native whites and blacks constitute less than half of the total population, according to a census secured in December, 1924, and published for the first time in Industrial Solidarity as 78,400. With 65 churches in Gary, foreign language schools as well as the vaunted platoon brand, whites and blacks, 43 nationalities, skilled American beneficiaries in the working class getting good wages in the mills, the various employers' associations and the K. K. K. auxiliary, a complicated situation appears when we plan organization. Yet heroic attempts have been made by the different racial groups acting together to free themselves from their misery.

### The Great Steel Strike

The 1919 strike was broken, but it had a far-reaching effect for improvement. United States Steel would not capitulate to a defeated rebellion, but afraid of a repetition it sought to bring about the eight-hour shifts, "gracefully," to save its face. In Gary, at least, eight-hour weekly alternating shifts are worked by the majority. An advance has been made. But the purchasing power of wages is less now in the steel industry than it was in 1907, while the work has been speeded up to five times the rate obtaining at that time. The evil effects of this violence are most apparent in the hot metal departments. That would be the logical place to start a drive for industrial unionism.

The first demand of the 1919 conflict that involved 365,600 steel strikers was for the right to bargain collectively. That is still denied, and, of course, the other demands for a union check-off system and seniority principles were refused. The eight-hour day is not universal and is not recognized on union principle because Gary runs on the American Plan, as do all mills of the corporation. Demand Number 6 was for an "Increase in wages sufficient to guarantee American standard of living." This is still denied the vast majority of the slaves. Number 8 called for double rates of pay for all overtime above eight hours, for holiday and Sunday work. No such rates prevail.

Need for unionism is more urgent now than it was in 1919 because the speed has been accelerated and the living standards lowered. That this organization must be on the I. W. W. plan of industrial action should be made clear to all workers. The steel barons are not organized by craft union counterparts. They have organized in One Big Union. Steel workers do not work in independent, isolated trades, but are interdependently active in the processes of industrialized manufacture. There is no other kind of unionism than the industrial form that is worth a tinker's damn to them. No matter what the race or nation or color or sex (a small number of women are employed there) hardships and excessive exploitation are the common experiences. The I. W. W. form of organization takes all the workers of the industry into one big industrial union without regard to language, race, sex, or creed.

During the steel strike a certain priest, who was more of a working class rebel than he was a clergyman, said, as he fought for the strikers: "The A. F. of L. doesn't belong here. The I. W. W. should come in." An industrial organization campaign can bring the steel workers together. In the last strike

they fought bravely, suffering untold hardships, but when the hordes of pinks, stools and thugs, the militia and state cossacks, and General Wood's regular assassins failed to beat them back to the mills, craft union officialdom's treacherous power rallied to the masters' need and the strike was smashed.

### Fighting Homeguards

No finer spectacle of working class solidarity was ever flung across the vivid stage of class warfare than that of the steel slave hosts risen from despair's smouldering ashes, flaming in rebellion, and holding their ranks intact from Chicago to Birmingham, Bethlehem to Pueblo. They fought against industrial autocracy. For their action they were beaten by hundreds, jailed in masses, held in high bail or without bail, and heavily fined. Twenty of them died at the hands of the steel corporation's hirelings. But they held out. State cossacks spurred their black mounts over the "Hunky" doorsills; working class wives and mothers were outraged. Still they stood up for their convictions.

Coming from backward agricultural districts of Europe, most of these workers were not prepared to bear the exactions of modern industry. But they believed the American myth, and this faith did not die until they had been crushed to lowest depths, spat upon by their "betters," completely enslaved. Then they rose up. The spirit of these homeguards is an inspiration to proletarian solidarity.

The long history of the steel workers is one of courageous struggle against vicious oppression. Away back in 1892 Carnegie cut wages to the bone, and the workers struck. Then he took a vacation to the Scottish lochs, leaving Frick to do the killing. An army of Pinkertons embarked at midnight on the Monongahela river, and steamed to Homestead. When they landed the strikers were waiting in battle formation to receive them. There in the early morning light, under the shadow of the hills dotted with their shacks, these steel rebels fought repression's hirelings to a standstill, forcing them to surrender after a bloody struggle.

Time and time again has the homeguard shown that he will fight. With wife and children faced by starvation he must fight. They fought at Cabin Creek, Coeur d'Alene, on the Mesaba Range; at Lawrence and Ludlow and Herrin. Five thousand of them mobilized against industrial serfdom in West Virginia and were met with airplane and machine gun fire.

### Time to Organize

A propitious moment for industrial union organization exists. Forward orders of the United States Steel Corporation published on March 11 showed for the month ending February 28 an increase over the previous month of 247,448 tons. The same report showed an unfilled tonnage of 5,284,771 tons. One year ago the orders were 371,870 tons less. Every workingman knows that the best time to attempt improvement of conditions, the period when there is the best chance for success, is when employing classes have orders ahead. There is a boom in the steel industry.

Whether we work in the steel industry or not it is our duty to upbuild our industrial unions, thereby preparing such powerful support as is requisite to any organizational campaign launched by the Industrial Workers of the World. Our opportunity to organize is great. Shall we seize it?

This was what I was wondering—just as we all wonder so often—when the western express thundered into Gary, and the leaping flames of the mills were left behind.

## *We Never Forget*

**THE PRISON COMFORT CLUB of Seattle is being handled through the Joint Branches of Seattle, and in order to take care of the relief for the families of the Centralia defendants who are confined it is necessary to raise $180 each month. The major portion of this amount is remitted to those who have families, or dependents who have no means of support from any other source. The remainder is remitted to those who are confined, for relief, to purchase such articles as they need for their comfort while on the inside.**

**At the present time there is being held one entertainment a month for the Prison Comfort Club by the Seattle Joint Branches, and as far as we know, all other Prison Comfort Clubs have disbanded, which means a heavy burden upon the Seattle Joint Branches.**

**This is a worthy work, and deserving of your support. Can you help the Seattle Joint Branches to raise the required sum? The assurance that their families are being cared for lightens the time of our imprisoned fellow workers, and it is no more than right that we do all we possibly can to help. Why leave it to a few?**

**Send all remittances to Chas. Humphreys, Box 365, Seattle, Wash.**

had none. Transfusion was necessary. By the slight favor of disbanding, and letting the migratory and unskilled workers go to hell, we were to pry our way into the fakiration, infiltrating it with revolutionary spirit. England was held up as a classic example of organizational success without dual unionism. Great advantage to the labor movement was alleged as a result. These benefits became clearer when the yellow leaders of the tinted unions showed their hand in the Triple Alliance; and another of these boons bulked big when Ramsay MacDonald wore the princely toga as a laborite premier to do the dirty work of the yellow social (capitalist) democracy.

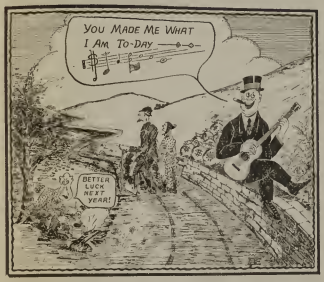
But this boring business has been meeting with many reverses. Comrade Dunne bored himself straight through the Portland American Federation convention—perhaps to prove the prophecy of Comrade Foster who wrote a book called, "The Revolutionary Crises in England, France, Germany and Italy". In this he said that borers are doomed to expulsion, individually or in groups, in single locals or whole district blocs. To more forcefully illustrate his argument (Resolved that we bore) he pointed to the expulsion of the powerful red minority in France from the conservative C. G. T. This minority was not much weaker, numerically, than the "orthodox" element. But out went the reds.

The Seattle Central Labor Council recently voted to throw out its communist delegates. Detroit's corresponding body expelled Comrade Reynolds, and the spirit is carried further in District No. 12, U. M. W. of A., where Duncan MacDonald was driven out on pain of lifting the charter of his local—No. 448— at Springfield, Illinois. At this time the Farrington machine is trying to bulldoze the miners there from keeping their unemployed council together. These councils are reproachfully called dual unions. But they exist merely to approximate equity of employment by miners sharing the division of time with their fellow workers.

It is folly to attempt the impossible. A great, feasible organization campaign can be carried on. The fakiration unions, appealing to skilled workers, who are in a rapidly diminishing and small minority, are not fertile fields for revolutionary activity. There is no sense in these heroics that are like trying to run against a barrage of 75 MM. guns. The I. W. W. has never been a dual union, and while there are around twenty-four million unskilled, unorganized wage slaves in this country we can not see the wisdom of entering the trade unions with no other end inevitable than that of being kicked out. Let's go after the 24,000,000. The machine process is going after the few million skilled with a vengeance.

**SOBRIETY.**—Anti-prohibition sentiment and propaganda are rushing in a strong wave across a large section of the liberal and conservative magazine world. Prohibition is variously denounced as a failure, executive and ethical, and as a brake on "personal liberty". Several remarks in this connection can be profitably ventured.

Booze as a beverage is certainly not palatable and beer quenches thirst because there is a lot of water in it. The whiskey soak gulps his shot as I would castor oil, and he makes a wry face. Other intoxicants taste almost as bad—even worse occasionally. Booze, then, must serve other satisfactions than those of taste. Drinkers are looking for the "kick"; the maggots acrawl in their brains, as London put it. That bunk about a legal renaissance of light wines and beers is a shallow mask. If drinkers don't want the tingling, aphrodisiac or soporific effects of booze, and the poison is admittedly unpalatable, why not turn to ice cream sodas or root beer?



The late capitalist-world-lamented Samuel Gompers syndicated articles favoring the return of booze as a preventive of radicalism, citing Soviet Russia as an example of what happened to the tsar when vodka was outlawed. He said workers needed a solace for life's miseries. Booze, in his opinion, induced the healing anaesthesia.

Wobblies in great strikes have thought differently. They have repeatedly shown that action by industrially united, sober workers removes industrial and social wretchedness. This requires clear minds and bodies not rotted with alcohol.

In the Pacific Northwest strikes it became a tactic of battle for the Wobblies to close the moonshine joints. They have been castigated by certain asses; called stoolpigeons because of this activity. The tactic employed in speedily closing all booze dumps was the work of men belonging to a class that is more fully robbed and degraded by the existence of rum parlors. No violence accompanied the action. It was effective throughout the strike zone and it is an everlasting credit to the I. W. W.

Where were these gentry who bray personal liberty when a reluctant people were drafted en masse for organized murder and destruction in 1917? Why did they raise no voice against the brutal abrogation of liberties in **vital** matters? We did not participate in the religio-emotional movement that created prohibition in America. Our stand against booze pre-dated theirs. Revolutionary industrial unionists reaffirm and maintain the anti-booze stand of militant labor, and when the traffic gets in our way we shall not wait to pray it out of existence or to vote it out. It has no place in class warfare, and so far as we are concerned we simply put it out.

# WOBBLES

TO THE POORHOUSE

## EXACT

The Lady ventured: "Did you notice that pile of wood in the yard?"

The Tramp said: "Yes'm, I seen it."

"You should mind your grammar. You mean you 'saw' it."

"No'm. You saw me see it, but you ain't see me saw it."

## REFUTATION

"That speaker seemed to be disposed to speak kindly of you. He said you had been faithful to every trust."

"I scorn his insidious innuendoes!" shouted Senator Sorghum. "I haven't worked for a trust for years!"

## THEOLOGICAL MATHEMATICS

"What would happen if you were to break one of the ten commandments?" asked the vicar.

Willie: "Well, then there would be nine."

## PATRIOTISM

"Say, Pop, what is patriotism?"

"Patriotism, my son, is the chip you place on your shoulder and dare the other fellow to knock off."

## "BLESSED ARE THE MEEK"

Blessed are the meek for they shall inherit the earth. . . . . But Wall Street adds: "After we get through with it."

## PRECOCIOUS

Minister: "Do you know it is wrong to swear, little boy?"

Little Boy: "Hell, yes! Don't you?"

## TOMMY WAS RIGHT

Teacher: "Children, can any of you tell me what is the most dangerous part of an automobile?"

Tommy: "Yes, miss, I can! It's the driver."

## HELP!

(From the Arbitrator)

President Coolidge is entitled to be called spiritual. More so than Washington, Jefferson and Lincoln; **and yet they were just as great as Coolidge.**

## SCISSORBILLICUS AMERICANUS

"Workin'?"

"No; wish I was."

"I'm at the mills. Hiring men every day. Better rustle them."

"Oh, I've been there."

"No luck?"

"Well, they gave me a job, but I don't like the hours."

"Yes, I know eight hours are pretty long, but we have to work them until we can get . . ."

"It isn't that," interrupted the unemployed stiff. "Why, the first thing you know the eight hours are up, and **that makes the evenings too long.**"

## FABLE

Once upon a time a Wobbly wrote on all sorts of subjects but sent nothing to our press because he said none of his stuff was as good as anything we print.

## SOME WELL-KNOWN MISTAKES

When a doctor makes a mistake he buries it.

When a carpenter makes a mistake it's what he expected.

When a lawyer makes a mistake it was just what he wanted, because he has a chance to try the case all over again.

When a preacher makes a mistake that's theology.

When a judge makes a mistake it becomes the law of the land.

But when an editor makes a mistake—Good Night!

# Boosts for the Pioneer

SEVERAL unsigned brickbats were hurled at me during the last month or so. One of the anonymous, intrepid persons called me a vile name. Can you imagine that! It isn't nice. However, every now and then I revert to the training of early youth, and I'll return good for evil merely replying here by calling HIM a son-of-a-GUN. Other readers are of a different opinion regarding The Industrial Pioneer.

**Tom Barker** writes from New York: "The Pioneer is good of late and ought to go heavy. It certainly ought to pay its way and more on the contents, dress-up, etc. Here's luck to it and you for Industrial Freedom."

**B. A. Green,** Portland lawyer, has this to say: "Enclosed herewith find check for $1.00 for subscription to The Industrial Pioneer. This magazine is one of the best being published and I certainly do not want to miss any issues of it."

**Ed Delaney** sent the following from San Francisco: "I think the Pioneer is fine since you have had it. You have done a splendid job of editing it thus far. Assuring you of any assistance I can offer, and with best wishes, Yours for a Greater I.W.W."

**Hubert Langerock** wrote from the same city: "I have given the subject of editing The Industrial Pioneer an unusual amount of thought. In my opinion you have done extremely well."

From San Francisco **Edw. E. Andersen** delivered this boost: "I have the February issue of The Industrial Pioneer before me, and I sure think it is fine. Keep up the good work!"

**Dr. Whitaker** writes from California, "You are doing fine work."

**E. W. McIntosh,** of Hoquiam, Wash., says: "The Pioneer for March came yesterday and we must say it is excellent. As a labor magazine it stands paramount. We do not think it could possibly be improved upon.

"All articles are of a high order from an educational and literary standpoint. No, the Pioneer could not be improved upon, but the circulation ought to be larger."

One of the Centralia I. W. W., held with seven others in Walla Walla by an atrocious sentence, wrote a long letter a part of which runs: "I have read every issue of the Pioneer since it has been published, and I want to say that the February issue, to my way of thinking, was by far the best. It was sure a hummer! Those poems by Vera Moller were certainly great. Also, 'What Freedom Means to Us,' and the splendid article on the Centralia case. Mission Soup was sure a burning satire against this rotten old system. Boomer's article was fine, too. Fellow workers, you have a magazine to be proud of, so give the editor and manager your cooperation. 510 of New York is setting the pace for you all to follow. They've jumped the bundle order from 200 to 1,700, and will increase it again next month to 3,000. It is up to every fellow worker to grab a sub book and get busy. It is up to the branches to do the same. Remember that 'Knowledge is power.'

"To you unorganized, let me say that you should lose no time, but join the One Big Union Grand, for which I am always yours, **Britt Smith.**"

**Henry George Weiss** is a regular reader who lives out in the hills and it's a long hike to town to get the papers. So his letter comments on the January issue. These are a few of his remarks: "I have just read the January Industrial Pioneer from cover to cover. * * * I am going to town today to get the February number and I shall read it with great eagerness. I have been requested to bring three copies back with me for others, and all on the strength of the January number. I expect Pioneer to grow under your hands. * * * Excuse the length of this but your editing makes me feel enthusiastic. Always yours in the fight for freedom."

A fine spirit is rapidly developing to put our press on a basis of greater circulation, and this means greater educational value, which, in turn, means a greater organization. In New York City our fellow workers of M. T. W. I. U. No. 510 are doing very effective work in putting this magazine on the news stands, and reports from there show that fully half of the copies thus placed have been sold. In Chicago the radical papers on stands are paid for to the extent of about ten per cent. But what New York members are doing can be duplicated here and in other large cities if an earnest and intelligently planned campaign is launched. This must be done and it is going to be done—in Chicago and elsewhere. The start has been made and it is a good one. Let's all bend our energies to keep it up and make the press circulation what it should be.

# Get Another Sub!!

## Second Big Subscription Drive Now On!

The Joint Press Committee has started the second big circulation drive to build up the Press. The English, Finnish, Spanish, Hungarian, Czecho-Slovak and Russian units of the I. W. W. press have combined their energies to increase the circulation of all publications published by the I. W. W.

### CASH PRIZES OFFERED FOR SUBS

The present contest includes subs for all publications represented on the Joint Press Committee and any sub turned in for any of these publications counts. The Cash Prizes are liberal and anybody can win the biggest prize.

### CASH PRIZES FOR SUB AGENTS:

| | | | |
|---|---|---|---|
| **75** | **Yearly Subs** | **$55.00** | **plus 10 per cent commission** |
| **50** | " " | **$35.00** | " " " " " |
| **25** | " " | **$18.00** | " " " " " |
| **15** | " " | **$10.00** | " " " " " |
| **10** | " " | **$ 8.00** | " " " " " |

## RULES GOVERNING CONTEST

**Contest opens March 15, 1925, and ends April 20, 1925. To the Sub Agent who turns in the highest number of subscriptions over 75 an additional prize of $15 will be paid.**

Only subscriptions accompanied by payment will be credited to Sub Agents. Sub Agents will not be credited with subs from books that are carried by other agents.

New subs must be turned in promptly to insure credit to Sub Agent.

Subs put in the mails on or before April 20, 1925, that do not reach this office before the closing date will be credited to Sub Agent. All subs will be counted four days after contest closes and winners notified by first mail and in publications.

One-year subs count one; six-months subs count one-half; three-months subs count one-quarter.

# A Voice from a Living Tomb

## Does it Mean Anything to You?

HAVE YOU FORGOTTEN the heroic struggle that has been waged in "Darkest California" against the forces of reaction the past six years?

HAVE YOU FORGOTTEN your eighty-eight fellow workers who are imprisoned in California because of their activity in YOUR organization?

HAVE YOU FORGOTTEN that these men must be supplied with relief?

HAVE YOU FORGOTTEN that it takes three dollars in cash each month for each one inside; besides, hundreds of dollars to supply their other little necessities from the outside?

We Never Forget!

HAVE YOU FORGOTTEN that this relief money must come from the workers' pockets, as no one else will supply it?

HAVE YOU FORGOTTEN that the Criminal Syndicalism law under which these men are imprisoned is still on the statute books of California?

HAVE YOU FORGOTTEN that some of these men will be freed shortly and that unless you help now, they will be forced to enter the outside world in the dead of winter with only the five dollars which the state supplies?

HAVE YOU FORGOTTEN that the men who are to be released this year will come out only to again face the same law which they have suffered under?

HAVE YOU FORGOTTEN that publicity must go out to the entire civilized world and especially to California's voters until such time as the masters have ceased persecuting organized labor?

HAVE YOU FORGOTTEN that it is up to you, who are on the outside, to see that funds are supplied with which to keep this publicity going out?

HAVE YOU FORGOTTEN that these men are depending on YOU to carry on the struggle which they have been temporarily forced to forsake?

IF YOU HAVE NOT FORGOTTEN SEND IN A DONATION

MAY DAY NUMBER

# May Day

By HENRY GEORGE WEISS

THE First of May . . . What does it mean to you?
Ah, let me tell you what it means to me!
It means the glory and the bravery
Of those bright souls that Hate could not subdue;
It means the tragedy, the misery
That countless hosts of labor have passed through
It means the heart to dare, the will to do;
The sacrifice of those who gladly died
That Freedom might abide
Among the scarred and bleeding ranks of toil—
If only as a vision in the heart
Of yonder serf that wrestles with the soil,
Of yonder slave that labors in the mart.

May Day . . . . it means to me
The day that tyrants quake
To hear the chains that slaves arise and shake
In every land and clime, on every sea. . . . .

O, Hunkies, Wops, America white, black,
Lift up your heads and shoulders—throw them back—
This is your Day, your Vision! March—be free!

## M(A)Y DAY!

THE CHURCH (SOLICITOUSLY), "MY GOOD BROTHER, YOU MUST STAY BOWED DOWN IN THE RUT! IT'S LABORS DUTY!"

KEPT PRESS (HYSTERICALLY), "YOU BEAST! GET DOWN! YOUR PLACE IS IN THE SHADOWS, NOT IN THE SUN!"

BIG BUSINESS TO THE ARMY AND POLICE (SAVAGELY), "WATCH HIM! IF HE DOESN'T GET DOWN, KNOCK HIM DOWN!"

Vol. III.—No. 1. May, 1925 Whole Number No. 25.

## Editorials

ORGANIZE ON MAY DAY—You are all so familiar with the facts related to May Day's historic significance, that there is hardly need to trace its origin. You know how ancient and medieval peoples welcomed the return of spring; how they rejoiced in the reawakening and rebirth of flora and fauna. They felt revivified by this glorious bursting into the joy of living, after long confinement in winter's prison. We share this racial heritage, this spontaneous happiness. Our gladdened spirits surge anew at vernal beauty and skies that have cleared.

But May Day has another meaning for revolutionary workers, one that is incomparably greater. This day has been chosen by them to celebrate every class aspiration, attempt, act and achievement for freedom along the bloody trail of class rule. Recorded history, it has been truly said, is one of class struggles. Its annals are those of conflict between divergent social interests. The old battle between the useful people and the drones has survived in pitiless bitterness through ages. Names of victor and victim have changed, but always has there been the spectacle of miserable workers painfully creating wealth, and ruling idlers consuming and destroying it. Master and slave, patrician and plebian, baron and bondman, lord and serf—always the same fundamental fight, the same fierce oppression and heartless exploitation of the useful many by the useless few.

Now in our matchless epoch of superlative democratic opportunity there is the employer and employee, the capitalist legalized plunderer and the outraged wage slave. These classes continue the ancient contest in a life and death struggle. They are at grips, and it so happens that machine evolution is now ready to admit of social arrangements in which there is to be no master and no slave. The workers are marching with progress. They can retard their victory, but in the end they must win the struggle.

Already they they dare to envision a dreamland of their liberation. They are learning to act together, and to think in terms of industrial organization. They have challenged the dear boss, and they have set aside a day from the time otherwise devoted to making profits for him. On this day they come together with their fellow workers. This is heresy, blasphemy, sacrilege, lese majeste, treason, rebellion and all the other horrible sins that are a joy to our hearts and a terror to bourgeois vermin thriving on the living body of the proletariat.

May Day is our day, wrested from a class that palsies with fright whenever workers get together for common cause. We meet our fellow workers in fraternity. We salute them throughout the world, and pledge labor's international solidarity. We proclaim a universal union of proletarian interests. We have no bars because of race, or color, or tongue, none because of sex or faith. We have the same interests as workers, and we have nothing in common with the capitalist class. That is the natural and scientific alignment of the modern subject class seeking its freedom. And May Day is a harbinger of this freedom. When we have educated the workers and rallied them to build up sufficient organized power we are going to take every day in the year for the workers. Every day through the swing of the seasons to establish the kind of a world that we want, a fellowship of effort and leisure. We want a world of helpfulness and understanding to heal the wounds of class oppression, and to give to humanity the art of living happily.

Today we are preparing to strike from our bodies

(Continued on page Forty)

# May Day and the Working Class

By EUGENE V. DEBS

**THE request for an article from the editor of the Industrial Pioneer for the May Day issue comes at a time when I am so fully occupied with other matters that I can hardly hope to do justice to that publication, but I must, at least, do the best I can in the way of a May Day greeting to the Industrial Pioneer.**

Before me as I write there lies a copy of the April issue of this working class publication, and I wish first of all to commend the editor and the organization it represents for the excellence of its contents. It is gotten up in most attractive form, printed on first class paper, is well illustrated pictorially, while its various departments are filled with articles of a wide scope by writers of the highest standing in the labor movement.

The Industrial Workers of the World, of which the Industrial Pioneer is an official publication, will soon have rounded twenty years of organized existence, and from beginning to end it has been a tempestuous period in the struggle of the American workers for industrial emancipation. No labor union in the entire history of the labor movement has been as shamelessly misrepresented, as relentlessly persecuted, as brutally attacked, and as savagely hunted down by the ruling class and its minions and mercenaries as the Industrial Workers of the World. During the recent international butchery when "patriotism" was the watchword on the lips of every traitor, coward and hireling, its offices were repeatedly raided, its books and other effects confiscated, its literature was destroyed, its meeting places mobbed, its workers assaulted, beaten up and jailed, and its organizers lynched and murdered in cold blood with the connivance of the public authorities and with the whole-hearted approval and applause of the bourgeois moron multitude.

But the organization still lives to celebrate May Day, 1925, and to marshal its forces for renewed attack upon the system which branded it as outlaw when itself was the criminal, the arch-criminal whose victims are to be found wherever workers toil and produce in servitude and are condemned to poverty and to die in despair.

As these lines are written the eight members of the Industrial Workers of the World serving life sentences at Walla Walla, Washington, for defending their hall at Centralia against an attack of American Legion hoodlums, cowards and cold-blooded murderers are vividly before me, and I wonder as I have wondered a thousand times before, why the American workers permit these eight honest, innocent workingmen, whose only crime was that they stood up like men in defense of the cause of labor at a time when it took heroic blood to do it—why the American movement tolerates the infinite outrage of these men rotting away in one of the vilest prison pens in the country.

Those eight I. W. W. convicts at Walla Walla are heroes in the true sense of the term, and I hail them as such at this May Day celebration, proud of their high courage and self-respect, and ashamed to be at large while they are in that foul dungeon branded as felons.

In celebrating May Day the workers would be unworthy of the day, they would be guilty of inexcusable neglect and of gross betrayal of their vaunted solidarity if they failed to remember the

class-war prisoners in Washington, in California, in Idaho, in Kansas, in Texas, in Massachusetts and other states, to proclaim their innocence, to glorify their heroism, and to demand in a commanding and determined voice their liberation.

May Day ought to be a glorious day for all the workers of the world. It is their international holiday; their day of universal rejoicing; their day of hope and inspiration.

May Day as a holiday was not granted to them by their patronizing masters as a boon for slaves to be grateful for, but it was appropriated by themselves and dedicated to themselves as the day upon which to assemble their forces, to close up their ranks, to stand erect, shoulder to shoulder, to feel the touch and thrill and throb of proletarian solidarity; to take counsel of themselves; to take an inventory of their own mental, moral and spiritual as well as their physical resources; to recognize their common identity as wage slaves; to realize their class interests, their class aspirations, their class power and their class study; to draw the line sharply between their class, the toiling and producing millions, and the class of their exploiters and oppressors, and, face front, to wage the class struggle with unceasing energy, high resolve, and unrelaxing determination until the last citadel of capitalism has been captured and the workers of the world have made themselves the rulers of the world.

To this great end the workers must educate, organize and train themselves under their own self imposed discipline; they must, in a word, fit themselves for industrial mastery and for the fulfillment of their historic mission which means nothing less than the emancipation of the human race from ignorance, superstition and every form of servility and servitude.

May Day is the day for the proclamation of our clearest thoughts, our highest resolves, and our noblest aspirations.

Solidarity must ever be the battle cry of the workers in the face of all that is done by the ruling powers and their henchmen to prevent it.

The legislatures, the courts, the colleges, the newspapers, the churches: all the organized social forces and all the powers of government, aided and abetted by cowardly and treacherous labor leaders, so-called, are pitted in combination against the rising revolutionary movement of the working class in every capitalist nation on earth. But in spite of all this the movement is progressing steadily ,increasing daily in numbers and in power, cultivating its capacity to think and act for itself, its self-respect and self-reliance, and marching bravely toward its goal.

Everything depends upon the thoroughgoing organization of the workers along industrial, political and co-operative lines, on the basis of the class struggle, and upon waging this struggle with increasing intelligence, intensity and determination through all the passing days and years.

There are numberless battles to be fought and many of them will be fierce enough to test us all in every fibre, but fortunately the movement we are fighting in and for is out of the depths, with the forces of evolution and revolution, of which it was born, sustaining it and pledged to its ultimate triumph, and though we may lose ten thousand battles we shall finally win the war for the liberation of the race.

# Farewell!

By RICARDO FLORES MAGON

Written just before his death in the Federal Prison, Leavenworth, Kansas. Translated from the Spanish.

We cannot break our chains with weak desire,
With whines and supplicating cries.
'Tis not by crawling meekly in the mire
The free-winged eagle learns to mount the skies.

The gladiator, victor in the fight,
On whom the hard contested laurels fall,
Goes not into the arena pale with fright
But steps forth fearlessly defying all.

Oh Victory! Oh Victory, dear and fair,
Thou crownest him who does his best,
Who, perishing, still unafraid to bear,
Goes down to dust, thy image in his breast.

Farewell; Oh, comrades, I scorn life as a slave!
I begged no tyrant for my life, though sweet it was,
Though chained I go unconquered to my grave,
Dying for my own birth-right—and the world's.

ROTTING IN DEATH ON THE BATTLEFIELD TO MAKE EMPIRES SAFE

# The Coming War Against Asia

BY

AGNES SMEDLEY

The writer of this important critique of world imperialist policies is in Germany from which vantage point in the industro-militarist arena she is able to view affairs searchingly. We think her observations worthy of your most earnest attention.

**WITH a tread as certain as Time itself, the English and American governments are leading the world on to another world slaughter. But this time the war will not be simply to crush some single paltry rival in Europe; it is going to be a war against all Asia, and the battle line will extend from the Suez to Tokyo.**

**The signs are plain and sinister for the preparations for this war. They range from the propaganda on racial and color questions right through to the American naval maneuvers in the Pacific and to the building of the British naval and air base in Singapore. The reason for this war is the challenge to European eminent domain in Asia: the Indian national movement under Gandhi's leadership; the determination of China to rid the land of imperialist powers; and the commercial rivalry of Japan in China. The Anglo-American capitalist combine is determined to keep the control of the world in their hands. The extent of this control is shown in Mr. A. G. Gardiner's book, THE ANGLO-AMERICAN FUTURE, in which the author states:**

> **"They have the world at their feet. It will be what they choose to make it. Between them they rule, directly or indirectly, not much less than half the earth. They command practically the whole of the credit left in the world. Their command of the sea is not merely complete: it is without the shadow of a challenge. They have the unequalled potentiality of great armies. They possess the major part of the raw materials of our general life—wool, cotton, coal, iron, food."**

India, China and Japan are threatening England's control of the raw materials of Asia which feed English mills and upon which English industrial life largely depends. And the awakening of these countries are threatening America's chances of keeping China as a market for her goods and investments. Added to this is the fact that during the late war Japan captured 50 per cent of England's cotton markets in China and that since the war the intense rivalry between Japanese capitalists on the one hand and American and English capitalists on the other hand, has been very great. The vested interests of England and America in Asia are colossal, as is seen in India and China in particular. The importance of India's position of subjection in the scheme of the British Empire may best be summed up in the words of A. E. Duchesne, an imperialist, writing in his book **Democracy and Empire:**

> **"Britain has need of India. If it had not been for India the British Empire had never been—at any rate in its present form. India has supplied, from Elizabeth's reign onward, precisely that stimulus of which our country has stood in need. To the desire to reach India is due maritime enterprise and discovery. To the struggle to obtain India is due our naval and military supremacy as against Holland and France. To the trade with India is due much of our past and present imperial prestige. To our training, in and by India, is due our practical sagacity as administrators."**

With such a prize as this in its hands, the British Empire is not going to surrender to the Indian national movement without a bloody struggle.

Added to this is the fact that the British sphere of influence in China, which means practically British territory, consists of 28 per cent of Chinese territory, and extends from the British territory of Tibet on one end, right through the Yangtze Valley to the British port of Hongkong on the other. Although China is supposed to be free, British and American merchant boats on the Yangtze are armed. A typical example of the manner in which these

merchant boats act was seen in August of the past year when some Chinese bandits were reported to have fired upon one of these American boats. The American boat gave an ultimatum to the nearest Chinese town where it had happened, and the city, in order to satisfy the Americans, beheaded two Chinamen, although they were perfectly innocent. Then the entire American and English press in China took up the cry—not that the innocent men should have been spared—but that a search should be made further and the guilty men found and beheaded. In the same month a rebellion broke out in Canton which was then under the government of Dr. Sun Yat Sen, who for years has been the only effective force against western imperialistic powers. The rebellion was headed by the chief Chinese official of the Hongkong and Shanghai Bank, the largest and most powerful British financial institution in that part of the world. Dr. Sun Yat Sen ordered the rebels to surrender. The British Consul, however, served an ultimatum upon him, informing him that if he took action against the rebels, the British navy would train its guns on Canton. In reply to this action, Dr. Sun Yat Sen issued his famous Manifesto to the Chinese people, a part of which reads:

> **"Is it because such outrages upon a weak and disunited country are perpetrated with impunity (he refers to the American action) that here in Canton waters the British navy again threatens to fire upon the authorities of another Chinese city? But I see further and more sinister meaning in this challenge of Imperialist England. Reading it in the light of the diplomatic and moral support of the millions of the reorganization and other loans which the imperialist powers have for upwards of twelve years consistently given to the counter-revolution, it is impossible to view this act of imperialism as other than a calculated attempt to destroy the Kuomingtang government of which I am the head. For here is open rebellion against this government, directed by a trusted agent of the most powerful engine of British imperialism in China, and a so-called British Labor government threatens to shoot down the Chinese authorities in Canton should they take the only form of action which would enable them effectively to cope with a movement aiming at their own overthrow."**

In view of these and other developments, Japan began to revise her policy towards China, which for many years was marked by an arrogance and hostility comparable only to that of the Americans and British. Then on top of all this came the conclusion of the alliance between Russia and Japan, and the rumors, yet unconfirmed, are that China has finally entered this alliance. American and British diplomatic circles have not recovered from the shock yet. For not only does this mean a united Asiatic bloc with the avowed and openly stated purpose of "destroying every vestige of British imperialism in Asia," but it has far-reaching economic consequences. By the Russo-Japanese Treaty, **Japan has gained huge oil resources and 500 million tons of hard coal in the island of Saghalin to the north, and thereto has come the discovery in Japan itself of huge quantities of iron ore.** What coal, oil and iron mean in military strength need not be elaborated upon, for everyone knows. But these developments have made Japan militarily and industrially self-sufficient insofar as these resources are concerned.

In the light of these developments, a number of interesting events happened or are happening in Asia which the entire working class of America must bear in mind, for the American working class will provide the cannon fodder for this new war.

First, the American navy is holding gigantic maneuvers in the Pacific in order to "put the fear of Christ" into Japan and the rest of Asia. And 200 journalists accompany the fleet—for wars are not fought with guns alone, but by the press too. In reply to this open challenge, Japan refused to receive the American fleet without an explanation, but, instead, held counter-maneuvers in which the problem worked out was the defense of every entrance to the Island Kingdom.

Secondly, in her internal Indian policy England is making far-reaching preparations. She is building air stations and air hospitals along the northwestern frontier. And the head of the British air ministry is now on a tour for the purpose of constructing an all-British air route from England to Egypt, and from Egypt to Palestine, over Mesopotamia to India; from India to Singapore and from India to Australia.

England is also never-endingly working to divide the Hindus and Mohammedans in India and thus prevent any united consciousness which might lead the national movement to unite with the new Asiatic combination. In the Near East, for example, England is trying to form a so-called independent Arabian Federation which shall guard the holy places of the Mohammedan faith, form the seat of a puppet Caliphate (much like the Pope of the Catholics) who will be dependent upon England's good will. Since the Indian Mohammedans are most fanatical about the action of Turkey in destroying the Caliphate and expelling the Caliph from Turkey, England plans to reinstate some Caliph whom she controls and who will issue "Fetwas" (orders) to the Mohammedan world, to support the British government in time of need. This so-called independent Arabian Federation is supposed to furnish the English bulwark against new Turkey which, in co-operation with Soviet Russia, forms the clearest and most conscious anti-English influence in the Near and Middle East at the present time.

In view of rapid Asiatic political developments, Lord Reading, the Viceroy of India, has been called to England for consultation. And all those who have followed English political maneuvers in India for the past half century know what this means: it means that, in order to crush the Indian national movement, a new reform bill is going to be given to India, the purpose being to win over a number of the political leaders to the side of the British. And this may succeed with a number of the leaders, who are muddle-headed lawyers who would be content with a little power for themselves. But it will not satisfy all; the plan is further, however, to give a certain measure of autonomy to two or three of the most advanced Indian provinces—perhaps Bengal and Bombay—and in this manner divide the national consciousness of India. With India divided provincially and with the Indian Mohammedans ren-

# Unite On May First For Action

By PETRUS

**WITH May First approaching, the usual amount of bull is being prepared and made ready for delivery as per schedule. Every holiday has its special brand of nonsensical bunk for a decoration, and May First not the least in this respect. We need not fear that this year will prove inferior to past years in this respect, and therefore it might be all right to say something for May First so as to secure a greater variety on the mental bill-of-fare.**

**Each holiday has its own litany and traditions adopted to the day in question. On Christmas day, we glorify the birth of Jesus and of course practice his teachings. When that is over with we can keep on sinning all we choose for the next 364 days, and still come out with a nice balance at the end and win to the pearly gates without the slightest difficulty. On July Fourth we must be patriotic, but it is all right to fleece the country all we can the rest of the year. On Labor Day the toiler ought to be honored, but when the day is over it is virtue in polite society to abuse labor to the limit.. On May First we are to say, "Hurrah for the revolution," but it is not contrary to certain established revolutionary ethics to be a contented slave producing large profits for the bosses the rest of the year.**

Now May First meant something in the labor movement in the past, just as all other holidays mentioned, which at one time were dedicated with genuine devotion to the cause for which each day was set aside. But, that time is past. The slaves used to congregate in the public squares, voice their discontent and decide upon action. May Day was then dedicated "To fan the flames of discontent." But just like everything else in society, the day was soon seized upon by the politicians and made to serve their individual purposes.

"Eight hours work, eight hours rest and eight hours for recreation" was not the slogan in the early days of modern proletarian May Day celebrations. There was a fresh and healthy demand for whose realization workers relied solely upon their organized strength directly on the industrial fields. The speakers urged strikers and the workers talked organization and after each May Day there was to be found a greatly strengthened labor union fighting hard for the demands unanimously voiced and endorsed not only on May Day but on many other days.

Those were dangerous days for politicians. Just think what would happen to them should the workers undertake to act themselves directly on their own behalf. That would mean work for the politicians, perhaps pick and shovel. Horrible! Such a calamity must be prevented. The labor politician was invented. Perhaps we should not say labor politician but proletarian or revolutionary politician. The new name did not change the nature of the politician. It merely fooled a lot of people, and incidentally, it fooled a lot of those politicians themselves, temporarily, at least. Soon they found from actual experience what proletarian politics really amounts to. They found that it was exactly the same as other politics. The juicy porterhouse

steak which the labor politician could afford but not the laborer, had exactly the same effect on this new type of lawmaker as on the old ones. It created a pot-belly, a fleshy neck, content instead of discontent, and a keen sense of what was needed to maintain the new diet. Of course a holiday was required to celebrate the new gospel which was the new brand of politics. May First was the logical day. The new millennium for the new skates was saved.

### The I. W. W. and May First

The Industrial Workers of the World have restored May First to its original importance. Just take in a May Day picnic in the People's park at Seattle or any May Day picnic in the I. W. W. and you will find the old spirit of the day. The speakers preach the old gospel prevalent among the early days of the movement. They say **organize.** They **do not** say vote. We find an abundance of literature urging the workers on in their struggle. There are tables where the delegates are stationed behind piles of supplies, calling upon the workers to align themselves with their industrial union for the purpose of fighting the battle directly on the industrial field. Shall we continue in our established order or shall we deteriorate into a clan using this particular day or some other day for a glorification of our past deeds and forget the present struggle? Let us hope not.

There is no particular day set aside upon which the emancipation of the workers is to be consummated. The new order will not be rushed in by some spectacular demonstration. Not any general strike, nor any mass insurrection shall accomplish the work. At the very most, such actions shall wipe away some formidable obstacles in our road forward. But the task before us is constructive. The building process is slow, laborious, hard and continuous. It is work, nothing else; good, earnest, hard work that cannot be done either in a day or a year.

Of course we all like holidays. I know I do. I know that every day I don't work for the boss, he loses quite a nice sum of money, while I have nothing to lose and always manage to live somehow; and when I cannot live any longer I shall die satisfied that there is no profit in my death for my master. Only when I slave for an employer do I create profit for him. On these grounds I was almost inclined to join the Catholic Church at one time as I figured out that there were about 50 per cent more holidays in that church than in the Protestant sects. But when I happened to discover that there, as everywhere else, when a church law stood in the way of profit, the law was neglected. It is all right for Jehovah or any other deity to issue some command about a holiday. It will be observed so long as it does not interfere with the master's profit. But when it is discovered that the copper smelters or the steel mills must run steadily in order to pile up the necessary profits, they will be run literally "in spite of hell" which threatens those who violate the commandment of the holiday. A railroad fireman or a street car conductor found with an engine minus steam, or a trolley car standing at the end of the line with those slaves obeyed the laws of God would soon find out which laws are most important to obey, whether the laws of God or the laws of Wall Street. If the slave works, the priest may send him to hell for working. If he doesn't work, his master will send him to a hell of starvation by discharging him. It is hell for the slave whichever way he turns.

There is only one way out of it, and that is by organization. Join the I. W. W. and enforce your demands directly on the job. Don't waste a perfectly good day by just listening to some would-be leader proclaim the great program of salvation he has in store for you. Don't waste your time listening to some orator glorifying our past deeds. Use this day and every other day upon which we come together to lay your plans for action. We are not living in the past nor in the future; we are living in the present. Our needs must be satisfied now if there is going to be any value to our movement. Those who have sacrificed themselves for our great cause in the past can best be honored by action instead of talk.

Our present problems can be served only by immediate action. They must not be put off to some other time for solution. Future generations will benefit by our organization only insofar as we act and act today. Ten thousand new members in the I. W. W. on this May Day will accomplish what all the simon-pure revolutionary and other bunk peddlers throughout the history of labor organization have failed to do. Let's try to get these new members.

### Philadelphia Waterfront Awakening

This is being written in Philadelphia early in April. They speak among themselves on the waterfront about bringing back the I. W. W. 100 per cent strong on the job. They are going to do it.

During the last week of March we lined up 50 new members and almost the same number during the first three days in April. A few more weeks and the work shall be done. Then onward for the hide—no, the pocketbook—of their masters. Philadelphia shall go a long way towards furnishing the quota of new members on or before May First. New York sailors are lining up fine. Eight port delegates are sending in big reports each week. The longshoremen look on and claim that the I. W. W. is great and that we "have their sympathy." Wobbly sailors answer, "Don't be a sympathizer, but get into the organization and be an organizer." The time is approaching when they are going to come to the union hall and take out red cards.

Today they are thinking; tomorrow comes action. Make our May Day celebrations what they were originally intended to be, an incentive to action on the part of the workers themselves. Everybody get in line for the big organization drive.

**Ten thousand new members in the I. W. W. before May second, and then hit the boss on the job.**

# This System – Swedish Section

By C. G. ANDERSON

SINCE the last article that appeared in The Industrial Pioneer dealing with happenings from this part of the globe lying close to the arctic circle, and labeled Sweden, several things worth mentioning have taken place. Relating such events, and those now transpiring here, with a view to throwing them on the screen of nationalism would be misdirected energy, and would result in a distortion of facts. Likewise, trying to explain them through a nationalistic code of characteristics is out of date and an unscientific way of doing things. It is no longer useful to the working class of the world.

To begin with: the capitalist productive mode today is in its process of rapid industrial evolution; the quick creation of labor-saving machinery. It is in the process of massing and pooling capital, both circulating and constant or stationary, and it must have, among basic materials, metals and paper. Sweden has the raw materials for these two products. A liner run by Diesel engines needs steel for its construction. Sweden contains a lot of good ore. In order to be able to run profitably the same liner needs passengers and freight. The trust or shipping combine that owns her stands in need of paper as a propaganda medium that is intended eventually to result in the ship getting the patronage required. In other words, the paper is needed to create a market, and Sweden has some of that paper in whichever stage of production needed, as pulp, sulphate, sulphide and finished paper. Lumber, another product of the woods, no longer as important, perhaps, as paper for capitalism, but still needed in construction and mining purposes is produced here in great quantities.

Just to give an idea in what proportion the two products of the woods and iron ranges stand to the rest of the products exported, let us use the 1922 statistics, which show that they were 86.3 per cent of the total export. Figures for 1913 show that 37 per cent of the then employed 352,000 industrial workers in Sweden were occupied on commodities for export, the two principal ones being iron and wood products. Fifty years ago the workers employed in these industries were so few that they were not considered of sufficient numerical importance as to be worth the attention of statisticians.

The following facts will show that industrial evolution follows the same course everywhere, and the only difference has to do with the rate of speed. On the iron ore ranges of Malmberget and Kiruna thirty years ago it took thirty-five to forty men with hand tools to mine as much as is now produced by three men with machinery. The next step in the productive process, transporting the ore to the smelters, was at that time greatly hanpered due to the lack of an ice-clear port. The only port then largely used, Lulea, was ice-bound five months of the year. That obstacle has been removed by electrically driven trains to the North Sea port, Narvik, which is open the year around.

What has been the direct effect in the workers employed of the iron ranges? It is that where the labor of 1,800 men was formerly needed, working a full-time week, 800 are now employed, and they work a three day week, eight hours a day. If added to that fact is the richness of the iron in the ore we can readily understand why 1925 is predicted to be a banner year in the export of iron ore from the Swedish ranges.

We shall clinch this by mentioning that the ore is transported from the port of Narvik to Philadelphia and Sparrow Point, Baltimore in the most modern Diesel-motor-driven ore carriers. The crews are cheap and sail under the Swedish flag. Wherefrom we draw the conclusion that the American steel trust is not a stranger under the heading 'Swedish owners.' The above should furnish thought matter for our job delegates and organizers in these three industrial unions—210, 440 and 510. Because, when the workers on the iron ranges of Minnesota and on the lake carriers are organized in the I. W. W., I think we shall have the workers on the Malmberget and Kiruna ranges, as well as the workers on the boats taking ore from them, also united in the I. W. W., and not before then. Without uniting both little good can be accomplished.

## THE MACHINE IN THE LUMBER INDUSTRY.

While the machine in the first operation of lumber production — logging — has not made its entrance it is solely due to the geographical condition of the lumber area. The standing timber is not the kind growing on the Pacific slope, but more comparable to that in the state of Maine—of small size in diameter. All logging is done by hand, and the loading is also performed that way on sleighs carrying from five to eight logs to each load. The sleighs haul the logs to river banks where they are made into large drives.

From the time the logs arrive at the mills, however, the production loses its antiquated features and becomes as modern as anywhere. Automatic machinery and electrical energy is in use generally. The paper and wood pulp factories are modern in

One of the Immense Anchovy Factories

every particular. Consider, for illustration, just one branch of the lumber industry—match making. With the modern machines now in use one worker produces 20,000 match boxes a day. The match making industry in Sweden is practically able to furnish the whole world with safety matches.

Employment of the improved machinery in the lumber industry has resulted in a decrease of the forest area of the timber fit for lumber export. This has increased the struggle between the different lumber companies, forcing out the smaller and m[illegible] ing a combine of the larger. The latter have g[illegible] after the few remaining small farmers who own some standing timber, and, by hook or by crook, they have got the timber away from them. The larger capitalists in the combine have penetrated to the still untouched and more nearly virgin fields, so that by this time they have maneuvered themselves into a position to prepare for putting on the finishing touches to the last standing timber in the country. In line with this the former owners of small farms, and the charcoal burners, are together being forced to do the logging and hauling for a starvation wage under the most rotten conditions imaginable, and they are in revolt. These farmer-loggers unable to exist on farm products alone, are now fighting the lumber barons tooth-and-nail. As they have never been clear-cut industrial wage workers, but more like a feudal, remnant class, they are bitterly contending against being flung into the submerged slough of the proletariat. Swedish syndicalists have given them a new idea and some form of organization. Also, some advice about how to use it, and they are using it to the best of their ability.

## METAL AND MACHINERY INDUSTRY AND ITS WORKERS.

Technically, this industry has not had the same opportunity as its counterpart in Germany, England and the United States. But despite this the industry boasts of having what amounts to a monopoly in the world market for such products as separators, kerosine stoves, Aga light buoys, and so forth. The percentage of the export taken by all these products in 1913 was only 4.4 per cent of the whole export.

By this time it seems that the large foreign trusts and industrial corporations are competing with the small Swedish manufacturers not alone in the world market, but within Sweden itself, and the result points to a forcing out of these smaller Swedish capitalists. Of course the Swedish bosses are using the same stale, old argument that the wages they are obliged to pay the workers makes them unable to compete with larger capitalists. Lately a committee on customs and tariffs has been probing into this most vexed question—the high wage. They have arrived at the conclusion that it is not the high wage of the worker that is the cause of the inability to compete but rather it is due to a lack of standardization and specialization in the processes of production. The committee indicates the large number of small shops engaged in turning out any and all kinds of metal products and each of them trying to beat the other on the market.

The committee claims that this condition has put, and is continuing to put, obstacles in the way of an industrial reform in production in the form of standardization of commodities turned out, and specialization in the mode of production itself. Of course, the committee does not show the cause for that condition. But if we analyze this phenomenon a bit we shall understand that the cause lies not solely in the mental status of the Swedish capitalists. Rather does it lie in the past evolution of industry, bound as it was with strong ties to a feudalistic state. No doubt it has grown organically from the handicrafts to machine industry, but the fault rests in that the fitting environment for its evolution has been deficient.

Large scale production under capitalism needs large possessions of raw materials, and large markets, which the feudal system did not possess. The

# Jerusalem Redestroyed

By T-BONE SLIM

THE saddest words, on tongues of men, are these——perhaps——"It might have been."

Perhaps, indeed! For . . . .

For sadder words are spoken. Words that defy description. Words that denote all the agony of failure, defeat, retreat—aye rout and despair, "I HAD A CARD."

Can you imagine anything more heartrending? "I HAD A CARD—I was a man once't. I fought for freedom. I was a Wobbly—Now, I'm nothing . . . . . nothing . . . nothing. . . . The road is long, the way is rough—I am weary. I'm alone. Nothing. Nothing in my pocket . . . (to pull out and look at)—**How many times of yore** I used to **pull it out** on the lonesome trail, "you my pard—while the owl wondered who . . . who . . . who am I—**I wasn't alone then!**

Gosh no, there was four of us——

A jungle fire, a chew of snuff—and thou . . . . my card . . . . and I. Four? Now? Nothing, zero!

**I will rise and go to my father's house.**

There are Wobblies. There are fellow workers.

I will leave this mental edifice that is falling about my ears—I will go back.

I can't go back? Why not? The trail is lost? No, nor I. . . . . The hell I can't. . . . . Stop me!

I'm on my way. And . . . . .

I will eat that fatted calf, Capitalism—a lumbering cow by this time. . . . . I would dine. I would feast—the tougher the better. I'm hungry——my spirit yearns food.

The banquet awaits, my lords.

# Chinese Seamen Prepare To Fight Shipowners

By OUR CHINESE CORRESPONDENT, FROM HONGKONG

**"Long live the solidarity of the workers of the world!" writes the secretary of the Chinese Seamen's Union. We cherish this May Day greeting and convey our heartiest response to our Chinese fellow workers. They have shown a fine militant spirit in dealing with employers, and one of common cause with us directly in boycotting California products. They are organizing for proletarian freedom. More power to them!**

**THERE is a growing discontent and indignation among tens of thousands of Chinese seamen at the shipowners' non-observance of the agreement concluded between the Chinese Seamen's Union and the Shipowners' Committee as a result of the seamen's victorious strike in 1922. The agreement, containing three clauses, was signed by R. Sutherland, Chairman of the Shipowners' Committee, A. Jamiesen, British Consul-General at Canton, Luk King Fo, Secretary to the Commissioner for Foreign Affairs at Canton, and Chak Hon Ke, Delegate of the Chinese Seamen's Union. It was further guaranteed by Sir Robert Hotung. Be that as it may, the shipowners and the British Colonial government in Hongkong have violated every one of the three clauses, while the Chinese seamen in the person of the Chinese Seamen's Union have kept faithfully to the agreement ever since its solemn conclusion. In order to substantiate this statement, the agreement is reproduced here in full, followed by iron proofs of the flagrant violations deliberately committed by the shipowners in coalition with the British Colonial government.**

AGREEMENT:

It is hereby agreed between the undersigned parties that the following are the terms of settlement on the matters in dispute between them:

I. The scale of wages paid at Hongkong and in force on the 12th day of January, 1922, shall be increased as follows, and shall apply as from the 1st of January, 1922:

| | Increase |
|---|---|
| 1—Chinese river steamers | 30 per cent |
| 2—Other Chinese steamers up to 1,000 tons deadweight | 30 per cent |
| 3—Hongkong, Canton & Macao Steamboat Co., Ltd. | 20 per cent |
| 4—Other British companies' steamers taking the scale of the Hongkong, Canton & Macao Steamboat Co., Ltd., as a basis | 20 per cent |
| 5—Coasting steamers | 20 per cent |
| 6—Java Lines | 15 per cent |
| 7—Pacific Lines | 15 per cent |
| 8—European Lines | 15 per cent |
| 9—Australian Lines | 15 per cent |

II. A date will be fixed for the general return to work. From the time of leaving until such date, men will receive half pay according to the new scale. Men may be reinstated on any of their own company's vessels, or such other vessels as may be mutually agreed upon. If positions are not available for men ready to return to work as above, it is agreed that half pay shall continue for such period as the men are not employed, but not exceeding five and a half (5½) months from the date of the general return to work. This half pay will be administered from a fund under the control of a duly appointed administrator.

III. The owners agree to assist in inaugurating a system of engaging crews which will minimize as far as possible any irregularities which may exist in connection with the pay of seamen.

Signed at Hongkong this fifth day of March, One Thousand Nine Hundred and Twenty-Two.

R. SUTHERLAND
Chairman of the Shipowners' Committee
A. JAMIESEN
H. B. M. Consul-General at Canton

LUK KING FO
Secretary to the Commissioner for Foreign Affairs at Canton
CHAK HON KE
Delegate to the Chinese Seamen's Union

1—In gross violation of Clause I, the Blue Funnel Line of the Butterfield & Squire Company in April, 1923, decreased the wages of the men in its ships to the former scale. The British Colonial Government, a signatory to the agreement in the person of H. B. M. Consul-General, ignored the protest lodged by the Chinese Seamen's Union. Moreover, in violation of Clause III, stipulating a minimizing as far as possible of irregularities connected with the engaging of crews, the Colonial government abetted the B House Union thus enabling the replacement of the original crews of the Blue Funnel Line by strikebreakers from the organization. Again, abusing its military authority and extending its iron rule to the water surface, the Colonial government authorized the strikebreakers in the ships to carry arms.

Cases of similar violations are too numerous to be enumerated.

2—For the sake of convenience, let us discuss Clause II before Clause III. The shipowners have not only violated Clause III and have no desire to assist, as they are duty-bound to assist, in inaugurating "a system of engaging crews which will minimize as far as possible any irregularities which may (rather, do!) exist in connection with the pay of men;" but on the contrary, in conjunction with the Colonial government, it maintained a B House Union, an organization of labor contractors, whose service to mankind is mercilessly to fleece the seamen. Thus the Colonial government, in collusion with the shipowners, prolong the exploitation of

labor by labor parasites, which should have been abolished by the Chinese seamen immediately after their victorious strike, barring the interference of the British Colonial government and the shipowners. This is not only a grave violation of the agreement, but also a sinister act of provocation. As already mentioned, the Colonial government does not even refrain from openly supporting the labor exploiters by allowing them the extraordinary privilege of carrying arms in the colony. Further proof of the violation of Clause III will be superfluous.

3—The shipowners have **completely** violated Clause II, stipulating that "if positions are not available for men ready to return to work, it is agreed that half pay shall continue for such period as the men are not employed, but not exceeding five and a half months from the date of the general return to work."

Lest it should seem that the first and second clauses are much too liberal on the part of the shipowners, it must be explained here that, firstly, the said pay for a period not exceeding five and a half months is no more than a beggarly compensation for the victorious strikers whose positions had been taken by the Philippine and other strikebreakers called to Hongkong by the shipowners. (Be it understood that the Chinese seamen have no grudge against the strikebreakers, for they know that unemployment is an inevitable characteristic of capitalist society and unemployment is the mother of strikebreakers). Secondly, these clauses were won by the seamen as a result of a victorious life and death struggle for fifty-six odd days. Settlement was delayed just because of the shipowners' reluctance to accede to these very clauses, thereby prolonging the unheard-of hardships and damages suffered by the seamen and the common masses of Hongkong.

However, up till now, not a cent has been paid by the shipowners, in spite of the agreement in black and white! Where is "fairness" in the hands of the capitalists! Where is the "sacredness" of agreement with the capitalists! And where is the "law" in a colony!

The Chinese Seamen's Union in 1923 referred the matter to the British Colonial government in Hongkong, but the latter washed its hands of the matter despite the fact that His Majesty's Consul-General was a signatory to the agreement. The Chinese Seamen's Union presented to the Chairman of the Shipowners' Committee, R. Sutherland, a list of the men entitled to the half pay, together with the amount, but he claimed that the list was not in proper form and that money would not be paid to the men without producing the names of those who had taken their positions. Such an impossible condition can not be found in the agreement and can not be considered. Besides, how was it humanly possible to know then and how is it humanly possible to produce now the names of the strikebreakers filling the positions, who escaped with the ships under **military escort in the darkness of night!** Such pretexts are too obvious to baffle the seamen, who have seen the world and who have been through thick and thin.

The Chinese seamen know full well the shipowners' unwillingness voluntarily to carry out the terms of the agreement as well as their cunningness and conniving with the British Colonial government. The Chinese seamen have not lost sight of Sir Robert Hotung, whose failure to keep his word will further expose him as a useful instrument, acquired by the allurement of the knighthood, and otherwise, to serve colonial rule whenever things come to a head between the rulers and the ruled.

The Chinese seamen demand that the shipowners forthwith pay the half pay and carry out the other two clauses. They demand that the British Colonial government, signatory to the agreement, besides protecting the shipowners, heed the seamen's demands. They demand His Excellency Robert Hotung, a British knight who has been proclaiming a so-called peace conference professedly in the interests of the Chinese people, to fulfill his duty as guarantor ere he speaks again. They demand the coming British Prince to investigate into the scandalous deeds of the Colonial government and the shipowners, and to mete out due punishment, lest he should reveal princely imperialism.

Several thousand Chinese seamen are entitled to five and a half months' pay, the total sum far exceeding $200,000. They are clamouring for their rightful compensation. The Chinese Seamen's Union, representing their interests, will never neglect its duty and will realize at any cost the conditions won by the victorious and heroic struggle. These conditions were by no means gifts from the shipowners. Those who will recall the fifty-six odd days of a life and death struggle in 1922 of more than sixty thousand seamen and eight combatant unions, the sacrifices of the workers and the panic caused by the blockade of Hongkong as a result of the interruption of communication, will agree that whatever was acquired, was acquired by the united gigantic power of the workers themselves. There is no need to recall the machine gun patrols of the Colonial government, ready to massacre the workers at any time!

The whole body of Chinese seamen, 100,000 strong, are prepared! They appeal to their brother workers in China and in all countries, particularly the seamen and their organizations, to help their Chinese brothers in their present just demands, hand in hand, in a glorious industrially-united front they have every reason to expect the day in the immediate future when the British Colonial government and the shipowners must redeem what they have hitherto atrociously violated.

Silhouette model for wall and ceiling painters, to be used only in paid-up Klansmen's homes. This shows the Klansmen in action, giving one of the dirty foreigners the "100 per cent American Rush Act." Klansmen should order their copies of this stirring scene without delay, as the supply is sure to be soon exhausted.

# The Myths of Capitalism

By JOHN A. MacDONALD

WE are told that the belief in ghosts, banshees, witchcraft, disembodied spirits, unless they are angels, demons, or gods, is disappearing in this new age of science, investigation and printing presses. But myths and mythomaniacs are still with us; the old mythology is rather transformed, has a new reincarnation, and that the printing press is one of the means of general enlightenment without regard to what is printed is itself one of the current myths of this modern age of myths. Science, the enlightener, is made to cover with its mantle a Christian Science which is neither Christian nor scientific, the charlatanism of spiritualistic mediums and other tomfoolery which is given to the public as science, although entirely foreign to the methods of scientific investigation. The world is filled with the prudery which passes for morality, the nonsense which passes for science, and the myths which pass for history.

Part of the myths of the present time are due to the system of capitalism directly, and others to the general ignorance which that system nurtures, or finds of value, and which furnishes the soil for thousands of myths, with none of the sheer poetic beauty of the mythology of Greece or Rome. The myths of the present are based on a worship of the present, to shackle the live body of the Future with the dead carcass of old abuses and old deceptions.

The old Granny who used to tell stories of ghosts to the children by the shivery light of an open fireplace until their backbones quavered at each word, is disappearing. She did not know the higher artistry that is necessary in our blase present, or the methods of the new psychology. But she also has been reincarnated, and Granny reborn now occupies a desk on the capitalist daily. She is omnipresent in the halls of legislation, in the courts, in the literature, in the life of the present. She explains to us as economist the myth of free labor, as politician the myth of democracy, as biographer the myth of heroes, dragons, demons and white knights come to the rescue. As teacher she inculcates into the young that George Washington was that ghostly thing, a superman. He could not tell a lie, but from the fact that he could not lie, the children are not to draw the conclusion that he was the only man in history who did not deserve any credit for not being a liar. And she feeds them the myth of Americanism, the holy, decided to destroy the black magic of slavery after supporting it and profiting from it for generations and trading rum for negroes, as the facts of the civil war. If she is a Canadian Granny she tells of how the Canadians burned Washington in 1812 to 1814 and mixes this truth with myths of her own, showing the heroism of her own national ghosts. If she is a U. S. Granny this is not part of the history myth. Her national ghosts have to be given the incense of the myths which pass as history there.

Granny enters the field of contemporary history

and we have the myth that Great Britain is in Egypt to civilize the natives, the demons, and to bring within the full meaning of British freedom, than which there is none greater, if you live in Canada. Granny in the United States is explaining the heroic battle of Right and Wrong, Good and Evil, with Evil represented by certain islands in the Atlantic and Pacific and the white angels of love and democracy by marines who are bringing to the benighted islanders the full effulgence of American democracy, heaven-born twin of British freedom, until there is a war which makes it necessary for each to prove that the other is instead the hell-born child of Satan and Chaos, that an American cannibal ate the toe of an English aristocrat in Hoboken, or that a British vandal stole the suspenders that elected Calvin Coolidge, or his electric horse, in an effort to find something the Prince of Wales could ride.

The old Granny was a back number, the new Granny is up to the day after tomorrow, as one might expect who has studied the modern science of Theosophy. How pale were her old stories to the children compared to her stories in her reincarnation of 1917 to 1919 to her children of "thirteen years of age or less," in the United States. She showed them the white ghosts of U. S. Soldiers and Marines clad in the garments of God and freedom under the Espionage Act, and carrying the weapons of God's anointed, the U. S. Munition Trust, unsheath their swords and poison gas against the Devil ghosts of Satan clad in the armor of God also—the half of the Christian God that was not on the side of the allies—and clad, of course, with the weapons of the German munition trusts, for Armageddon, the war that was to bring the millennium, establish world peace and democracy, and the magic temples of the League of Nations. These were the days of myths of dragon slaying, and no dragon of the other dark ages could compare with the dragons of Germany that the white ghosts of the allies went forth to conquer for the freedom of capitalism to exploit. And now we have the myths of democracy and prohibition, and a thousand others to show that Granny is still on the job.

### Eureka; And This Is Morality!

Our present system must have its myths. It is actuated by myths, holds its power through myths. Without its myths it would perish. Why then cavail over myths. It is immoral to seek the naked Truth. Its very nakedness is an insult to the prudery which is morality. Puritanism dictates that no respectable person can associate with Truth while it—or worse, she—is naked. Shall we dress the conceptions of artists with calices, keep insisting on putting petticoats on the marble of Milo's Venus, use licentious, suggestive fig leaves on marble and allow the public to associate with naked Truth? Most assuredly not! It would cause a scandal. Our censors would not consider permitting the demoralising effect of naked Truth. They would never consider being found in a compromising position anywhere near truth. They avoid the naked Truth, and force others to do so. Thinkers associating with the naked Truth is unthinkable. Thinkers are noteworthy for their lack of consideration for morality. It might cause a scandal, it undoubtedly would, and censors avoid all scandals for others at least.

What is morality? Philosophers have disagreed on this, although it is surprising how well they avoided it without being sure what it was. Poets have tried to define it. No one expected that they would be successful. Yet what morality is, is simple. Puritanism tells us that God made man and woman after his own imagine and then misguidedly said that all he had produced was "very good;" it is noticed that he did not say "Excellent," because he may have had suspicions. Now we know that man and woman were vile until they put on their clothing. The image of the creator was utterly vile until it was covered with the latest style, and the work of God was sanctified and ennobled, and moralized by the conceptions of clothing designers in the "wickedest city in the world," Paris. Can there be further doubt, as to the definition of morality. Morality is clothes.

This is also part of the Divine plan perhaps, because there is no profit in making human beings, they are the cheapest meat on the market; but there is big profit in clothing. The inevitable conclusion that clothes are morality leads us to some peculiar conclusions, including that having a bath is immoral, but it has justified itself by showing the absolute morality of dressing the naked Truth so that she will not be visible to seduce the young, and the bald-headed row away from the morality of capitalism. Truth naked would be a menace; Truth fully dressed, in fact completely covered, is no longer Truth; she is the reincarnation of Granny. Her clothes are the clothes of Granny, and this is all we can see of Truth, her clothing.

### A Few Paragraphs on Clothing

We find Truth dressed, as she always must dress for chilly weather, slinking through one of the blind alleys of our papers and magazines, with a writer in her pocket, not because he is in love with Truth, but because he wants to describe the clothing she is wearing at the particular time. The result is a story in which we are told that our rich men are rich because they are moral. If they had been dishonest they would have ended in the jails or the penitentiaries, not in Wall Street. They worked hard all their lives, and their wealth is the reward of honest burning of midnight oil, continuous study and deep thinking. Getting rich through midnight oil through some association of ideas suggested John D. Rockefeller to the writer in pursuit of truth, and we are told that we could all be rich as Rockefeller if we were willing to make the same sacrifices, practice the same frugality, the same self-denial, been capable of working so hard and thinking so deeply of our work as did he. This lesson is reinforced with the statement which suggests that this particular ghost used his brains so much there was no blood left for his

### A Few Paragraphs on Clothing

We find Truth dressed, as she always must dress for chilly weather, slinking through one of the blind alleys of our papers and magazines, with a writer in hot pursuit, not because he is in love with Truth, but because he wants to describe the clothing she is wearing at the particular time. The result is a story in which we are told that our rich men are rich because they are moral. If they had been dishonest they would have ended in the jails or the penitentiaries, not in Wall Street. They worked hard all their lives, and their wealth is the reward of honest burning of midnight oil, continuous study and deep thinking. Getting rich through midnight oil through some association of ideas suggested John D. Rockefeller to the writer in pursuit of truth, and we are told that we could all be rich as Rockefeller if we were willing to make the same sacrifices, practice the same frugality, the same self-denial, been capable of working so hard and thinking so deeply of our work as did he. This lesson is reinforced with the statement which suggests that this particular ghost used his brains so much there was no blood left for his

stomach, and it died, with the result that John D. has had ever since, as the result of his immense mental and physical labors, to live on crackers and milk. If we were all equally willing to sacrifice our stomachs we are left with the inference that we also would all be rich. And then—? Then, we could all go into the oil business, selling oil to one another at a profit, and eat, sleep and be merry without stomachs, with no one to produce the crackers and milk, no one to produce the homes, or to make the beds, and no one to furnish the entertainment. And it is entirely logical that they would furnish themselves. They do for Rockefeller.

And then, just as we were satisfied that this rag of the garments of truth as capitalism had dressed her, was Truth herself, came the issue of the Hearst's International—Cosmopolitan for April, and we find that W. C. Forbes, one of the greatest experts on this continent at dressing Truth in the garments she should wear on the financial page, instead of having his eyes closed during the performance, thoughtlessly opened them for a second and saw truth instead of her clothing. His act was reprehensible, but if the censors permit this one lapse from the morality of capitalist writers to go unpunished, I am sure it will not happen again. That this one lapse is responsible for the following shows what a lot of trouble Truth might cause as a destroyer of idols, myths and ghosts if permitted to go nakedly her shameless way.

### A Loafer; Others Made His Wealth for Him

"Let me tell you a secret about John D. Rockefeller."

(A secret about John D. The nerve. We know all about John D. already, or is it the John D. myth we know?)

"Ever since my early manhood I have been a loafer," Mr Rockefeller confided to me several years ago during an intimate chat while we were playing golf. "While the newspapers were picturing me as the slave to business, working day and night, the truth is that I wasn't working at all—at least not at business. I was working hard very often, but not at 26 Broadway or at any other place of business, but at my home, near Cleveland, where my special hobby was the transplanting of trees, and where I did a lot of gardening.

"There was a private wire from the office in New York to my home, and they kept me posted on what was going on, but" — here Mr. Rockefeller laughed and his eyes twinkled . . . "I left others to do the hard work. After middle age I rarely ever visited the office and it is many years since I did any work whatsoever there."

When I asked Mr. Rockefeller to what he chiefly attributed his success, he instantly replied, "To others."

John D. Rockefeller made his money by transplanting trees on his own grounds without selling any of them, or others made it for him. His wealth is not based on hard work except by others, and the others, poor boobs, think that John D. was losing his stomach working hard finding work for them, when he was getting rich exploiting them, with others, workers also, to do even the exploiting for him. Is it to be wondered at, that naked Truth is immoral when one glimpse destroys one of the fundamental myths of capitalism? They speak of riches being made through hard work. They use correct although **produced** is the better word, but they do not explain who does the hard work, and that the man who has been a loafer reaps the benefit of the production of the workers.

### It Was Your Stomach John D. Lost, Not His

"Ill bet that guy did not work so hard or think so hard that he lost his stomach, although when the Standard laid me off I lost mine last Winter, because it thought there would be no further work for it to do as long as I lived, "I hear one of the pipe line stiffs mutter as he reads this. And he is closer to the truth than is convenient for the myths of capitalism. Forbes continues:

"Let me explode another myth about Rockefeller. You doubtless have heard and believed that he worked so hard that his stomach ceased to function properly and for many years his diet has consisted of milk and other invalid foods." (Certainly we have all heard that. It is one of the most prevalent of the John D. myths).

"I have dined often with him, and let me assure you that on each occasion he made disappear enough food to keep a ditch digger going."

### When Truth Got Into the Wrong Well

And this is all the result of one peep at truth. Is it to be wondered at that we are told that the naked truth lives at the bottom of a well. She got into an oil well by mistake some time ago, and there was a cry of horror went up over the possibility that we would be forced to live without the illusion of the honesty of legislators and politicians. But the politicians and courts saved us from such a contingency, by getting her dressed before too many were demoralized by a vision of her ankles as the Republican party was dragging her into seculsion by the hair.

And this reminds me that the politicians also dress the truth up and down, even if it is necessary to administer knock out drops in the process. When the politicians have truth properly clothed, she is dressed in the crazy-guilt of democracy, a method of making the public think they are free as citizens, in the same way that the bosses make the workers think they are free although slaves to the capitalist system, robbed by loafers, and sandbagged by financiers.

### Politician and Capitalist Have No Respect for the Nakedness of Truth

But trust the politicians to have no respect for the nakedness of truth. They have seen the naked truth often, but they are not telling. I do not mean that they are in love with truth, or have a kissing acquintance with her. They hate her, wish she did not exist, but they know her, and are not telling what they know.

The capitalists know her. They keep their eyes open and their mouths shut except when they are talking to one another or to newspaper men.

om they trust, because they own them. But old and famous newspaper editor, writing for e same issue of the Cosmopolitan on "The Kind of Letters Celebrities write" makes public what should for the safeguarding of the myths of capitalism be held confidential and inviolate, as the morality of myths with which capitalism clothes truth.

I have merely given a few of the methods in which truth is sacrificed, mauled, distorted, clothed, chloroformed and prostituted to maintain the myths on which a system of slavery rests. But to deal with the subject comprehensively would take a book, and already I can hear the workers murmuring in their slumbers:

"Do not take away our illusions of freedom, our illusions that money instead of our labor power is the basis of wealth, our illusions that poverty and rags are better than fine raiment and good food. Do not destroy for us the ghosts and illusions and myths that capitalism has built for us out of nothingness. Let us sleep, and dream, and hug our slavery to our bosoms. Let us have our hunger rather than destroy the false gods that have been built for us. You want to wake us to reality and action. We want the new mythology, the fairy tales of our childhood, our empty dreams and sleep. We are chloroformed with myths, but we do not want to face realities even if by awakening and facing them together we could achieve a civilization that would not be a myth and a culture that would not be a delusion."

Sleep on poor chloroformed things; well have ye been called the sleeping giant, a giant ye are but as yet a giant deadened by myths, a giant kissing the shackles ye could break, unfitted for freedom because satisfied with myths, unworthy of freedom because you have not the manhood to fight for it and organize for it—not yet!

# Two Book Reviews

By ROBERT GRAYSON

IN the matter of military efficiency Germany, during the war that began in 1914, excelled all belligerent governments. Maximum destruction is the warfare ideal, in whose quest all the powers crowded one another. They all wanted to be the greatest destroyers. Germany took first prize, and was defeated only by a union of many less efficient powers, including the United States of America. But the effect of militarism on the German populace, both physically and spiritually, is fastened on the reader's consciousness in Bernhard Kellermann's wonderful book, "The Ninth of November".

There are glimpses of trench horrors, but most of the story is laid in Berlin, and in unique manner the author takes you from the extremes of hysteria in bourgeois revelry to those of terrible fear and starvation across the city in the warrens of the poor. You can feel the gripping force of patriotism, and you are shown those for whom the illusion no longer holds. A general who has been removed from the front for committing what the general staff regarded as a tactical blunder, dominates the Prussian motif, but he, too, is fearful. He is followed by a cripple, old man, dried up and relentless, whose son fell on the hill where the general's military engineering failed.

Kellermann speaks of this little man as "The ulster." He contrives to get an audience with the general, an unheard of thing for two so different in social rank. The general humors him, tells how he has also lost a son at the front, and shows the visitor a map of the hill where the ulster's boy was done to death. Enraged the father calls the general a murderer. He is drunk. Then the effect of the drink leaves him, and he kneels to apologize and to beg forgiveness.

Another scene worth relating is where a soldier from the front, acting indirectly in the general's service, walks through the wrong door of the ponderous commanding ogre. He feels the cold sweat that reminds him of frightful experiences in the inferno. The general does not like his appearance. He is annoyed. Later he tells his secretary, another soldier of some directing authority, of the incident. Merely tells him that he has been bothered by the fellow's presence. An order goes out, unknown to the general, and back to the worst sector goes the unfortunate, back there to repair telegraph lines, and be a proper target. He is running across the fields pursued by sharpshooters. Then an airplane tries to run him down. He is almost crazy with fright. The draperies of mercy close, and we are carried to a Berlin cafe of the most exclusive sort. There sits the general sucking asparagus at the precise moment when the soldier falls into a mud hole and saves himself from the eagle that would annihilate him.

You see, too, cripples worming along on their bellies through the streets of the Prussian capital.

The revolution comes and you see spies run down. The general marvels that such a thing could be—these troops and people marching in honor of their solidarity and not for the honor to the withered arm of Potsdam. The general has worn the "king's coat" since he was ten. Now this habit is dangerous. He affects a hunting garb. He grows ill. He dies. The debauchery is over, the discipline is smashed. The ulster is avenged.

Kellermann's style is truly great, but we regret that he did not go more into the post-armistice developments. The end is truncated, it seems. However, it's a good book to read. Instructive to note the corruption that festered even in the most highly systematized warring government, and the unutterable horrors of war among a civilian body. America is taking the imperial stride with characteristic vigor. America is doomed to be defeated some day as Germany was, unless the workers' revolution saves it and humanity.

**THE NINTH OF NOVEMBER, By Bernhard Kellermann. Robert MacBride and Company, New York. $2.50.**

POPULATION in America has been moving steadily from the wide places on the land to the pavement-bound confines of cities. But there are so many millions of us who still remember the soil that any fine attempt to bring back its fragrance, pungency, color, sound, peace and struggle is sure to meet with a warm response.

Van Doren has done this very thing. You read his lines and live again in the odor of freshly-made hay; you can hear the horses' whinny, the cry of the lark. The owl weirdly hoos once more. You sense approaching rain, and after the shower you can see the pretty faces of flowers lifted tenderly to catch the caress of sunlight or to invite the bee's passionate, fiercely lingering kisses. The first poem, which gives the book its name, is inexpressibly beautiful to me.

Listen, the wind is still,
And far away in the night—
See! the uplands fill
With a running light.

Open the doors. It is warm;
And where the sky was clear—
Look! the head of a storm
That marches here!

Come under the trembling hedge—
Fast, although you fumble . . . . .
There! Did you hear the edge
Of winter crumble?

There are other industries in the country than those of the birds, bees and animals. The poet scatters his homely and vivid images of farm industry through the pages. Wheat is waving in the sun and smoke rises lazily from

"The kitchen chimney then, and supper is waiting . . . "

You'll like that sun, that blending of tones; the high-lights on windows as the fiery ball drops in the west, and the soothing, purple, gathering night descends. The book of poems is not large in size—69 pages—but it is great in beauty and spirit.

**Spring Thunder and Other Poems. By Mark Van Doren. Thomas Seltzer, Publisher, New York. $1.50.**

# Greetings From Australia

**From the Australian Administration of the Industrial Workers of the World at Melbourne, this letter was received:**

Fellow Worker:—The first batch of the FEBRUARY PIONEER arrived this morning, and it is just what we want at the present time, as it deals with Centralia and Wheatland.

This branch has started to advocate the boycotting of the American fleet on its arrival in this country, as a protest against this demonstration of armed force by a nation whose ruling class jails and persecutes workingmen and women for their ideas.

We circularized every trade union in Victoria, and our speakers will ask them to send resolutions to the President of the United States and the governors of Texas, California and Washington.

We are hoping for results. The labor fakers here are the same as anywhere else and will only take action when forced to do so.

We have rented a hall during the last month and also had some printing done.

I think that if we can stir the rank and file we will get some good results. I will send another letter as soon as things start to move a little.—Yours for Industrial Freedom—**Noel Lyons**, Sec'y.

**READ**

# 'Tis Fear

By COVINGTON AMI

Then, "Whither goest Thou?" Unto what End
Do you, or I, the Curve of Life ascend?
Unto what Purpose, winning or in rout,
Ascending or descending,—What about?

There Ninety Hundred Thousand Young Men lie
With stark, unseeing faces to the Sky:
They who rest Dust in Dust, what means to Them
Yon tinseled Marshal's laureled diadem?

For what the senseless slaughter of the Young?
Tell why their Souls to Erebus were flung?
They, to the cold, grey State's men, were but Tools,
And You, who speak of "payment"—**You** are **Fools.**

I **know** Her breath is sweet, Her breasts are warm,
And more than passing fair my Heart's dear form;
But He whose heart to Dust is blown, and Clay,
Ah! neither He nor She can Love's word say.

Through Phantom Realms pursued by Phantom Huns,
From his own image Man forever runs;
And by whatever name the Gods are known,
Fear is the Power on the Heaven Throne.

'Tis Fear that Nature's wondrous beauty blights:
By which we are self-driven from the Heights,—
Down old worn ruts,—by Superstition schooled,—
By Ghosts deluded, and by Gnomemen ruled.

Its figure gianted by Moon and Mist,
Fear is a Pigmy playing Terrorist;
And, strange, it is of Courage brother-twin,
The Strength by which the Victory we win.

'Tis Fear that holds the Hero in the Line,
And Fear that fills the Prison and the Shrine;
'Tis Fear that keeps the Slave enchained, unblest,
And Fear that is the Anarch's alkahest.

'Tis by our Fear the march of Right we stay,
And keep the World so long from Life away;
'Tis Fear that starves the Faith that Truth would nurse,
Fear murks the Lovelight of the Universe.

'Tis Fear by Nobler Fear fanned into flame,
'Tis This by which we conquer Sin and Shame;
'Tis This that holds us to the Higher Trust,
And This that lifts the Race Soul from the Dust!

**Owing to the large number of manuscripts and drawings submitted during the last days of the contest, it is impossible for the judges to make their decisions in time for us to run the winning story and cartoon in this issue. We shall do so in the June number.**

**Ralph Chaplin reports that he is unable to finish the review of Upton Sinclair's MAMMONART as we go to press. For this important literary and artistic criticism see the JUNE INDUSTRIAL PIONEER.**

# "My Country 'Tis of Thee"

THE Industrial Pioneer medal award, made up of the discarded shoe of a hopeless idiot, to which is attached a solid piece of ivory, crudely carved in the shape of a bone, is this month awarded to the Rev. Father Alexis Cuneen, C. P. of St. Patrick's Cathedral, New York, for the following **blurb** handed his congregation in a sermon, as reported by the N. Y. Times:

"During the war many of us asked why God permitted such a calamity. There was only one reason: He sent it in punishment for the horrible sin of race suicide. Many of the boys who died on the battlefields were born in spite of their sinful parents. God waited until they were grown to visit punishment on them."

---

THE great game of plucking the U. S. Labor Goose!

Osborne C. Wood, son of the Maj. Gen. Leonard Wood, who startled two continents with his financial dealings and kept the world agog for a year with his wild extravagances at the gambling tables of European resorts, in which time he dissipated an enormous fortune won in Wall Street at long distance, recently returned home. "I have returned to the United States mainly to rebuild my fortune," he declared. "It won't be long before the old bank account will be traveling up again. The United States is the one place in the world to make money. You go abroad to spend it."

Which leads us to remark: "Will young Wood work?—or will he work the workers? What do you think? .... **Exactly.** We think the same.

"EASY, OH, SO EASY!"

# Labor and the American Empire

By ROBERT WHITAKER

III.

**WHEN the Great War closed in November, 1918, for a moment there appeared to be reasonable prospect that the United States of America might lead the way in organizing a United States of the World. The very make-up of our own government and its historical background seemed both to favor it, for ours is a Federal Union, that is, substantially a union of nations, and our Federal Union was achieved in 1787 under circumstances which were hardly more disposed toward it, apparently, than was the world situation of 1918 to the realization of a World State. Very few of us understand now how hostile to each other were many of the original thirteen American colonies, and how exceedingly difficult was the task of bringing them together under one law. It was thought by many hopeful people that it would be quite as practicable for the leaders of our day, with the advance in human contacts and human intelligence and human engineering in general which these one hundred and fifty years since the Declaration of Independence was issued have realized, to do for the war-weary world as a whole what the fathers of our Republic did for the war weary American colonies in that less humanized and less organized age. Moreover, Woodrow Wilson's position in relation to the world as a whole was hardly less triumphant and influential at the end of 1918 than was George Washington's at the end of the Revolutionary War. Many who had not voted for him, and were by no means greatly enamoured of him nevertheless felt that it was altogether within the possibilities that he might be the First President of the United States of the World as Washington became the First President of the United States of America.**

### Presidents Lackeys to Economic Superiors

Here and there some people still imagine that the failure of this dream was due to the insufficiency of Woodrow Wilson himself. "He was not a big enough man for the job," they say, and when they dwell upon what might have happened had Woodrow Wilson only been so and so. Others, still his ardent admirers, are sure that the failure was not his, but rather that of those who opposed and thwarted him for personal or partisan ends, the grasping, unscrupulous prime ministers and diplomats of Europe, and the "wilful few" in the United States Senate who would not co-operate with him for the better organization of the world, lest he or his party get some advantage at their expense.

Those of us who no longer read history in terms of personal and incidental romance know that there is little consequence to either of these claims. Woodrow Wilson might have been a far bigger man than he was, but if he had been so he would hardly have been President of the United States. Men do not just happen into that position, and no one has actually achieved that high place who had not proved himself in advance a politician, and very much of a child of the age and a servant of its controlling interests. One need not apologize for either European or American "statesmen" who were in opposition to Wilson in order to recognize the fact that they also were mannikins who danced or failed to dance according to the music furnished them by the master class. The American political state stayed out of the League of Nations because there was as yet no economic interest on the side [illegible]such world organization sufficient to drive it in. The great financiers of America were not ready then, and it is doubtful whether they are ready now, to merge their manipulations of the world's markets with the manipulations of the big financiers on the other side of the sea. American Big Business is still a thing quite apart from Big Business elsewhere in the capitalistic world.

### I. W. W. Is Industrial and International

And the same is true of American labor. Some folks may see little significance in the fact that Labor Day in Europe is May First, while Labor Day in the United States is, for the vast majority of the organized workers of our country, the first Monday in September. But the fact is one of primary meaning and importance, and when the Industrial Workers of the World stress the world's Labor Day as against our local labor memorial they are only making plain the great gulf which as yet yawns between them and the craft unionism of the A. F. of L. The Industrial Workers of the World are **industrial** and **international** in their emphasis. The great body of organized labor in the United States is neither industrial nor international, but opportunistic and patriotic. The most they seek for the workers is a larger share of the labor product **on their way to become capitalists.** That is, most American workingmen, in the unions and out of the unions, would like to be capitalists, and hope to be capitalists, and want **as good a wage as they can get until they can climb out of the wage-earning class and sit on the backs of the workers themselves.** Their ideal is not that of an industrial society, where every man and woman does a decent

share of the world's bread and butter getting, and where that labor is so organized so that it will burden no one, but their ideal is that of getting themselves, or at least their children into places of privilege and power outside and above the working class. And they are not concerned for the world as a whole, but are entirely content to play up the "America first" philosophy along with the patro-maniacs of the profiteering class. May First means nothing to them because the common interests of the working class of the world, conceived as one great international unity mean nothing to them, and they want the welfare of the workers **even in America** much less than they want the "initiative" and "thrift" and "enterprise" of especially skilled workers who can climb into the band wagons of social superiority for themselves.

### Individualism of Americana

If this seems a harsh way of putting the matter it is true to fact, and the harshness of it is in the conditions itself, and in the necessarily brief statement of the matter here. Were there more space it could be shown that our whole national history, especially since the great westward "trek" began, has tended to make American workers pronounced individualists and would-be capitalists, and therefore explains on natural lines the prevailing labor psychology of the day in American labor circles. This psychology is the product of the pioneer emphasis in American life.

But the days of the pioneer have passed, and the American frontier is a thing of yesterday. Whether the American workingman wants to be an internationalist or not he is going to be, because we are chained hard and fast to the chariot wheels of world business now. If we do not keep May First and make common cause with the workers of the world in their effort to create a world industrial order we shall be forced to make common cause with the money masters of the world in their defense days, their fleet celebrations, and the rest of their military parade and festivals. Labor Day here in California comes close to our State Anniversary, September 9th, and gets hardly as much attention as "The Native Sons" are able to rally to their aid in boosting California. The nation over America's Labor Day gets less attention than Fourth of July, or even Armistice Day. Labor plays second fiddle all over America to business and politics, because it refuses to take the world view and really to believe in labor.

What will American labor get for this betrayal of the cause of world labor, and this capitalistic reaction to the whole idea of labor as **something to be used only until a place in the ranks of exploitation can be won?** What has American labor gotten thus far? Let the story of the last one hundred years make a reply. Has the status of the working class kept pace with the progress of American wealth? Grant that the black slave has been made legally free; grant that wages are higher than they were a hundred years ago, and goods more abundant for the workingman; grant that the right to labor to organize is more widely recognized than it was in 1825. What then? Are the workers of the United States of America any nearer to owning America than they were then? Are they any less subject to the call to be cannon fodder for the master class? Are they getting actually a larger share of what they produce? It cannot be proven that with respect to any of these points they have made anything like the progress toward power which has been made by the money masters of the land. Never did they give such tremendous tribute to the loot-takers as they are giving right now. And never were they in fact such utter slaves as to their press, as to their pulpit, as to their schools, and as to every avenue of the information they get and the ideas they have.

If all American capitalists were to become Henry Fords tomorrow and cooperate in a universal campaign of wage raising in the United States, a thing which will not happen of course, American labor would still betray its own interests by standing in with them for the exploitation of the rest of the world. There is a limit even to world markets, and this would soon be reached with such a combination of creative power, even though the other nations were not competitors for the world's markets. But they are. And the more the labor of other nations is depressed the more their competition for world markets is to be feared. Why should American capitalists long continue to pay high wages here for the making of goods for outside markets when they can get cheaper labor in the vicinity of those markets themselves? And how long will the labor of the rest of the world consent to starve in the interests of favored workers here? Do we want to create world alliances against ourselves even as Prussia did, until such alliances are powerful enough to deal with us as the Allies have dealt with Germany? If we do, all that is necessary is to pursue the present policies of organized capital and organized labor here in collaboration of world plunder. For a while the plunder may yield American labor in favored sections and especially open periods known as "periods of prosperity" a modest amount of loot. But even in such "good times" the capitalists will be the real gainers both in plunder and power, and the eventual subjection of labor here to the master class will be only the deeper and more desperate.

American independence is a fool's dream. The master class here knows it is not independent of world resources and world markets. The sooner that American labor learns its interdependence with the working class everywhere, and keeps with them the Labor Day and gets into step with a world program of industrial solidarity the sooner we ourselves shall be done with armies of unemployed, with panics from overproduction, and with international competitions of robber tariffs and the ever darkening threat of the overthrow of all civilization in another world war.

# Was Morgan Wrong?

By VERN SMITH

(CONTINUED FROM APRIL ISSUE)

SECTION IV.

## CRITICISM OF THE "NEW SCHOOL"

THE first thing that we observe, when reflecting on the New School of Anthropology, is that its founders and adherents, true to their specialistic tendencies, have concerned themselves almost entirely with savage man of today. This has a serious disadvantage. Since "the world do move," contemporary savage and barbaric man is pretty well pushed back into the high hills, and is infected with alien customs, and has felt the influence of the bible shark and the powerful forces of capitalistic trade, rifles, schools, and legislators, slave hunters, etc., which have very much modified his original reaction to his environment. The environment itself is frequently changed, and since various different cultural groups of primitive man are driven helter-skelter over the same road, to the same temporary fastnesses, their customs, arts and apparatuses get confused and mixed. In time, the effect of all this will be to produce one homogeneous civilization over the whole world; meanwhile savage tribes are broken loose from some of their ancient reserve, and because of their violent uprooting and general manhandling, they adopt strange ways, modify them, adjust themselves partially to white and yellow civilization, and in general make it difficult for anyone to understand their former life by a study of their present life.

THESE PEOPLE, NOT BLESSED WITH CIVILIZATION, KNOW HOW TO LIVE.

Just for example, there is a most interesting article, "The Autobiography of a Winnebago Indian" to be found in **Publication of American Archaeology.** This Winnebago lived in the wilds of Wisconsin about the turn of the century, and had the very devil of a time trying to compound his tribal traditions with modern American culture. Thus, when he and two others of his tribe decided to go on the warpath, and had picked out the objective—a certain Pottawattomie group—they found that the country in between the two tribes was no longer suitable to the old and traditional method of skulking up the forest paths, and dashing across the unfenced plains. There were now too many farms in the road, and **they had to take a train in order to get near the scene of action!**

Similarly, I have heard of a case in which a University of Washington anthropologist had brought an Indian into a seminar for observation and analysis, by the class of eager "New School" advocates. The old buck did pretty well towards maintaining a fine and savage air of primitiveness, until the class was over. Then he forgot that he was the noble red man of ballad and tale, and also that according to Boas and company he was the product of a unique culture, and **he whistled for his chauffeur!**

I really believe that Morgan in his day had more opportunity to get at the keynote of savage attitude, character, and custom despite the fact that his knowledge of the Dyaks and the Banks Islanders was limited. Perhaps the Iroquois and the Northwest Coast tribes of America have changed more in the last half century than the "New School" suspects.

But there is a more important result even than this, coming from the fact that the "new" anthropologists concentrate their attention on primitive peoples surviving now in the nooks, corners and byways of our earth. Most peoples are not now savages, in the sense that the Melanesians are, though we have incontrovertible evidence that they were at one time. Morgan spent as much time and space on the progress of the Greeks, Romans and Chinese as he did on the living savages and barbarians, when he defended his theory. Later Morganites have worked over other peoples who have advanced

now to a fairly uniform degree of civilization, from Boston, Mass., to Yokohama, Japan, both ways around the world. The big main stream of humankind advanced along the route rediscovered by Morgan, and nothing that the recent anthropologists have done has seriously affected that part of Morgan's theory.

In fact, the evidence of the later archeologists is a further substantial evidence in favor of "evolutionism" in general, and some of it is all to Morgan's advantage. In this same matter of copper implements which was mentioned in the preceding section, to take up only one phase of the question, any one can get from any good library, W. M. Flinders Petrie's book, **Tools and Weapons.** Petrie is **the** authority on ancient Egypt, and has done valuable work in other fields. His book is published by the British School of Archeology in Egypt, and is a remarkably comprehensive and complete work. You will find, on glancing it over, that Petrie, and his army of assistants, have collected and classified thousands of ancient axes, adzes, spear, arrow, and halberd heads, daggers, hoes, awls, etc. The dates of many of these can be easily told, either from actual inscriptions on them, or from the strata in which they were found. And there you have laid out for you the **evolution** of tools, for several thousands of years, in Europe, Asia and Africa. You see how the rough stone gave way to polished stone, and that when the first metal was used, it was merely hammered virgin copper. The early artificer in metal probably tried to chip it, as he had been in the habit of chipping stone. It didn't chip, but it did beat out into shape, and what shape did he try for? Why, he made his metal axe or adze or hoe just the same shape that he had been in the habit of making his stone tool. Since it is difficult to make a socket in a stone, the handle of a stone tool is lashed to the point or blade. So the first copper tools were lashed to their handles. After long experimentation, the smith began to make sockets. The first copper tools were hammered, as I said before. That gave a peculiar shape, with thick centers and shinner edges, both sides about alike. Then it was found that copper could be melted and poured into moulds. That gave a peculiar shape again to the blades, for molds cannot make "pillowy," or thin-edged tools with both sides the same, unless a closed mold is used, and of course, that was not the easiest sort of mold to invent. Eventually they managed it. Moreover, they learned to harden the copper, at first by accidental mixtures of arsenic and copper oxide, and then, because it smeltered better, with tin.

Then they discovered iron, probably not in Egypt for it was imported there from Asia Minor and Crete, and the Egyptians did not like it at first, though finally they adopted it. Now we know the use of copper preceded iron even in the ancient countries where iron appears first because the first iron tools were made on the model of the hardened copper tools. Even the hardened copper or bronze was soft compared with iron, and bronze tools could not be made to flare much. They were straight, bolt-shaped axes, chisels, hoes, etc. After a long time, axes and such like tools of iron were given the beautiful curved and flaring edges which the nature of the metal made possible.

You will see that this is **evolution,** based on successive discoveries. Along with it went the evolution of society, as Morgan has outlined it. Nowhere do we find the iron before the bronze, or the bronze before the cast copper, or the cast copper before the hammered copper, or copper before the use of polished stone, or polished stone before the use of rough stone. But we do find that occasionally whole stages are skipped in some particular backward locality. All parts of Europe did not necessarily go through all of these successive stages. It was possible for one group to make two successive discoveries, and export bronze, say, into a stone age culture, allowing them to skip over the copper culture altogether. Of course, in modern times we find the same thing. Steel was introduced to the North American Indians, and used by them before they had a chance to invent bronze.

And this is what we mean by evolution. Probably if we trace it far enough down, it is always one or at most a few men who make each invention. The others learn from them; first their immediate tribe learns, and then, after a time, if there is communication, other peoples learn. The better communication there is the faster progress goes on, if this communication does not mean that

**TUNGAS OF SIBERIA**
**The "New School" Claims that Because He Rides Reindeers Morgan Was Wrong**

FIELD AGRICULTURE BROUGHT SLAVERY

there is no security, and too much war. It is quite probable that a part of the backwardness of the people who are still savage and barbaric is due to the lack of communication.

Anyway, the emphasis of Goldenweiser, Lowie and Boas on the non-historical peoples has caused a distortion of perspective. Their failure even to attempt the refutation of Morgan in the history and pre-history of European, North African and the present civilized Asiatic nations allows us to use Morgan's classification and Morgan's theory of evolution as a defense of the doctrine of the materialist conception of history. All we have to do is to accept the "New School" doctrine at its face value, as far as it touches the still existing savage and barbaric peoples which they say do not fit Morgan's classification, declare these to be exceptions, and go merrily on.

It would not be surprising to find exceptions. Anthropology and ethnology are not exact sciences, any more than are botany, zoology, economics and sociology. What we look for in the inexact sciences are trends, laws, types, averages—and not arithmetical precision.

But if we abandon so large a field as this to the Columbia school we are doing Morgan an injustice, and granting more than they deserve to the pluralists. Let us scrutinize them still more carefully, within this relatively narrow sphere to which we have limited them, with the idea of still further limiting them. Let us consider again their method and their theory, and let us take up their method first.

In an inexact science, the personal equation counts for more, and in a more fundamental way than in an exact science, like, say, astronomy. The personal equation in astronomy might give you an error in the calculation of an eclipse, but in ethnology it might lead you to yourself eclipse and hide from sight whole natural laws, as important to you as is the law of gravitation to the astronomer.

Just to show how this can be done: Every pea in a pod is different, from every other pea, and like every other to one type of man the differences will seem most important, and to another type, the resemblances. To the seed grower the peas are infinitely different, to the cook they are alike. Similarly, every calf is unlike its brother, and the farmer, interested in cattle breeding, can hardly be brought to realize that after all, they are about the same—they are all bull-calves of a certain breed. Similarly again, every tribe in any of Morgan's stages, is unlike any other tribe there, and the modern college anthropologist, both because he is soaked in a pluralistic, liberal, individualistic atmosphere, and because he is an anthropologist, which means a specialist, will certainly emphasize the slight differences, and can hardly be forced to take any cognizance of the resemblances. Morgan, with his wider classical and historical education, and because he was active before William James got busy with his pragmatism, escaped this tendency to distort. Lowie, Goldenweiser and Boas did not so escape, which is why I have devoted so much time in the second section of this article to a discussion of their personal history.

(Continued on page Thirty-two)

*NOTE: Under capitalism, where commodity production prevails, herded cattle are not milked because the milk can not be carried so far to market, so our milk comes from artificially evolved farm-fed Holsteins and Jersies kept on small, highly cultivated farms close to the big cities. The distended udder, weak physique, and tremendous appetite of the diary cow of modern times makes her also unsuited to range life. But in pre-capitalistic societies, where the milk is not sold but used by the herders, range cattle are the source of milk, and only peoples who have herds develop a taste for milk.

# About Free Speech

**R. F. Pettigrew served in public life for half a century. He represented South Dakota in the United States Senate. Then he wrote a book that all should read: "Imperial Washington." What he thinks about free speech is pointedly presented here.**

By R. F. PETTIGREW

YOU ask me to write an article for your magazine on the subject of freedom of speech. That question was supposed to have been settled so far as this country is concerned, by the amendments to the Constitution—the first ten amendments.

I wish you would read the chapter in my book, "Imperial Washington," on the Constitutional Convention and on the Supreme Court. I consider it entirely useless to agitate the question of freedom of speech or freedom of the press, for the reason that this government has abandoned all semblance of freedom and has become an autocracy of artificial persons. The capitol is no longer in Washington. It has moved to New York, and a band of exploiting scoundrels absolutely run, not only the President, who is their rubber stamp, but the Supreme Court who are their attorneys, and also both houses of Congress.

We are a government of, by and for the corporations. To discuss the question of freedom of speech is utterly idle.

The only remedy there is for existing conditions is for the people who are engaged in useful occupations, to unite politically and take possession of the government. I would like the platform to consist of eight words, "Every man is entitled to what he produces." "All power to the people who do the work and produce the wealth." Then as a slogan, "The exploitation of man by his fellow man must cease." That is the issue and the only issue.

The exploitation of everybody who toils getting out of all the products of their toil but a bare existence, has destroyed the moral character of the American people, not only the moral character of those who are exploited, but the exploiters themselves, and this moral character can be restored only by those who do the work and produce the wealth taking possession of the government and administering it in the rights of man rather than in the rights of property in the hands of the men who do not produce the property.

I wish your organization would take up this issue. You do in a way, but it is indirect. You should take it up directly and appeal to the men who do the work and produce the wealth to join you. You could declare that you would receive only those as members who were engaged in some useful occupation, and that would exclude all those people who are engaged in the criminal business of practicing law.

By THE EDITOR

WHAT Mr. Pettigrew says about the denial of alleged civil rights is so glaringly apparent, so widespread and violent that no one can take issue with him on that score. The highest government officials, presidents, secretaries of state, supreme court justices and others have expressed opinions supporting his contention. They have said that the corporation character of ownership of the United States government has abrogated that modicum of liberty, to which the people in pre-war and inter-bellum periods were accustomed, so thoroughly that there is no indication of a return to the more democratic forms. These eminently respectable, patriotic gentlemen say that the repressive policy emanating from economic control by a minority is bound to lead to grave friction. Translated from the solemn language of diplomacy this means to social explosions—rebellions, insurrections and revolutions.

Mr. Pettigrew has long observed this development with discerning eyes. It is, however, strange that one alert to the economic nature of the blocs dictating political government should advocate **parliamentary** endeavor by the producers to achieve their **economic** deliverance. But before proposing this perfectly innocuous plan of attack he brushes aside the free speech matter as utterly unworthy of discussion. Let us examine the mettle of the question.

For capitalists in control of industry to discuss free speech for themselves is as unthinkable as to hear them arguing about their right to eat. They are eating and living as well as they can according to their tastes. Creature comforts are secured to them, and taken as a matter of course, just like breathing fresh air or swapping wives half a dozen times a year or oftener. They regard their power of untrammeled expression in the same matter-of-fact way. They have free speech; why talk about it?

The proposition assumes a very different aspect when related to the workers. They are members of a subject class. Advancement of opinions by them rests on their ability to exchange ideas freely. It is absolutely essential to revolutionary labor that it be not prevented from forwarding its thoughts through speech and press and assemblage, if it is to mold proletarian conceptions to arouse their class for the fight against wage slavery.

Free speech, then, is not an abstract principle for us to consider. We are wholly mindful of its utility. We do not care for it as a liberal sentiment. We are interested in its application as an instrument, a weapon, a means to an end. Free speech must be fought for and defended by the workers because it is a lever upon which their economic status rests. Permit it to disappear and the level of our existence is lowered.

In closing it may be pertinent to remind my opponent that the I. W. W. appeals directly to wage workers for economic direct action against capitalist exploitation. None but wage workers are eligible to membership. This excludes both large and small capitalists, and keeps the organization confined strictly to men and women who work for wages. Given the circumstances a powerful, industrially organized proletarian vanguard situated in strategic industries can achieve human freedom. We have no rights that we cannot maintain. The things given to us are gifts. Free speech as a right has never existed for the workers in America. In every military crisis, and in the more prominent economic outbreaks between the masters and slaves it has failed to hold its own. As we organize industrially it becomes more secure, and when the war of the classes is over it shall be the common property and right of all individuals.

# The Shame of California

By HENRY GEORGE WEISS

This is the shame of the orange state
That sits by the western sea
Where the tide comes in through the Golden Gate
And the great ships go out free;
This is the crime of a sunny clime
That I write for the years to read,
So the babes unborn can visit their scorn
On the fruits of the System's greed.

Now the land was fair, and the land was broad,
And rich in timber and soil,
But the Masters came and they fenced it all
From the hands of the men that toil;
With only the right that spoilers have,
And ruthless to maim and kill,
The seal of their brand was set on the land
And held it to their will.

They reaped the fruits they had never sowed,
They pillaged the forest glade,
From the sweat of slaves beneath the goad
Were their ill-got dollars made;
And their power grew as their fortunes grew
And bought laws served them well,
And in fifty years the state was theirs—
And they turned it into hell.

Blood, blood, blood, and an ocean of tears.
And a long, long, lonely road,
With a crucified worker at every step
And a slave beneath the goad;
Red, red, red, on a harlot's bed,
Living a life of shame,
Magdalene Marys spacing the miles
And a mother to curse their name.

They worked in the hop, and it was their brawn
That turned the hop into gold,
But the Master's bins were filled to the brims
And the bit they got—was doled.
They worked in the hop, till a voice cried Stop!
And they stood on their feet like men;
Then the gunmen's lead took its toll of dead
And their best went to the "pen."

In Folsom Jail where the convicts pale
Go hopeless to and fro,
The bars are strong and the days are long
And the hours things of woe,
And there are done beneath the sun
Sadistic deeds of shame
That would appall the hardest hearts
And make men curse its name.

II

In a city great by the Golden Gate
Where the winds blow damp and keen
The workers toiled and the workers moiled
For their wages small and mean;
That the wheels might turn and the street lights burn
And their Masters' fortunes swell
They guided the cars and shifted the bars
And jangled the signal bell.

Then the call went out, and they answered the shout,
And organized with a will:
"Shall we work like dogs and be housed like hogs
And feed on the packers' swill?
Shall our children starve and our wives grow old
And our girls go the 'easy way'?
—By the Union, No! We've earned it, so
More pay—we want more pay!"

Now the lust of greed is a murderous lust
And it has a heart of hate,
So the hired hand threw the flaming brand,
And a man went to his fate.
They builded the gallows and stretched the rope
And knotted the noose with a lie,—
But the sailors of Russia cried their threat
And Mooney did not die.

Bars, bars, bars, and an ocean of tears
And a tale of lust and greed,
With a shackled worker on every page
And a murdered one to bleed.
Beg, beg, beg, with hardly a rag
To cover the naked back,
Desperate men out of a job
And twisted on the rack!

In Pedro town where the rusted-brown
Big freighters come in from sea,
The men on the docks went out with a shout
In the name of liberty;
But the Masters' pugs and the Masters' thugs
With their clubs and guns were there,
And they herded the men in the shelterless pen
That stretched one on his bier.

White, white, white, in their hooded robes
But black as the fiend beneath
Are the cowards who came under cover of night
To bring a woman death.
Tools, tools, tools, and morons and fools
And yellow to the core
Are the dastards who came without pity or shame
To wallow in children's gore!

This is the shame of the orange state
That sits by the western sea
Where the tide comes in on the rugged strand
And the great ships go out free;
This is the crime of a sunny clime
That I write for the years to read,
So the babes unborn can visit their scorn
On the fruits of the System's greed.

# The Saddest Strike

WRITTEN IN AUSTRALIA By BETSY MATTHIAS

IT WAS IN 1917. That year of the big general (?) strike in Sydney, when men, who sold their labor power to industrial bosses of that city, were battling, per medium of strike, for better conditions.

It was a memorable strike—a sad fiasco—still they tried.

To you mockers of its failure let me tell you that because they failed doesn't prove they were wrong.

But this strike I want to tell you about is an even sadder strike. It happened at the same time.

It was a strike of a section of women who plied their sex machinery and sold their sex power to the men of that city of Sydney. Women, quite dead to natural sex selection, who just trafficked their bodies to earn a living of cheap food, clothes, and slum shelter. Driven to it because they had no training or inheritances as artisans, or any profession, or economic luck in the marriage market.

Mrs. Errieson, known as "Auntie" amongst a certain I. W. W. clique led me to this saddest of strikes that I've ever witnessed.

She had heard that a poor maiden sweet old lady, who had a little "tin-pot" grocery business was very ill and had to be removed to a hospital; so "Auntie" volunteered to mind the shop and home, until the patient came back. The shop was in Wooloomooloo, (Wooloomooloo is Australia's lowest and most degraded proletarian district) Sydney, corner of a narrow lane and Forbes Street. I visited "Auntie" there and this is what I saw and heard.

A crowd of women, excited, all of similar type, were gathered together in "mob" style at the entrance of the lane. They were hurling curses, reprimands, in language neither classical nor pretty at one of their own clique—a frail young woman. A few men were sitting on the curbstone, who, by profession, were "bludgers" on these women—or "runners up," keeping "nit" when likely police were about. The men were very quiet—having enough "savvy" to keep docile during this wild female jangle of wild, wild women.

"Garn, yer scab—fancy taking half-er-crown. You'll be down to a 'bob' soon. How the hell do yer think we can live while the likes er you are about, selling your carcase to blokes at two bob a time. I suppose when all ther soldiers come back, yer'll be patriotic enuff to offer yerself fer nix, fer yer country's sake. "There was a shuffle amongst the mob of women—they were rumbling and snorting with anger.

My heart felt sick, my senses reeled to see my sisters of Australia in such a condition—forced to fight thus for food and shelter. It was my first real experience amongst the prostitutes of my own sex.

The accused girl—womanlike—slunk back in fear. One never knew the moment when she'd be "scruffed," and beaten, and hair torn by her angry pals of the "pavement profession".

"Let me alone," she blubbered, half defiant, half mad, like some scared animal, as she beat the air with her long, slender, shapely arms, trying to get away from the mob of women who had her hemmed in.

"Let yer alone? Fer two pins, I'd kick yer gutts in—anything I hates is a scab. Gord, I believe he's worse than a cop; and a woman scab—Gord, she's lower than a female D——, and, strike me fat, she's less than mud." One of the "bludgers" excitingly interrupted: "Nick, here's a couple of cops." Things were a bit quieter for a few minutes. I did not see any "cops" (policeman) appearing, so jumped to the conclusion that the "bludger bloke" was a shrewd diplomat, and understood a psychological moment to a perfect poise. Fearing for the attacked woman's chances if the fight boiled over too much, he attempted to quell it with the auto suggestion that the "cops" were in close vicinity.

Another woman in the crowd stepped forward. She had such wonderful eyes—large pools of human understanding, flashing experience and tolerance. She spoke placidly, firmly and sadly. "Let her alone, girls. She ain't all ter blame. These are hard times. There's a big strike on. My old man's in it. He talks about economic circumstance stuff. I don't quite get the hang of it, but still I have horse sense, and in me own way I understand. Tell yer the truth, the men ain't got the money—so what's the girl to do? Don't suppose she'd sell herself fer two and six if she could get more. She's out o' work at the factory this long time. She's pretty yer know—if the cash was flush she'd get it alright."

The beautiful-eyed woman glanced severely—challengingly—and continued: "God knows, we women have a hard enough time in this world of queer happenings—a world of idle rich who rob the poor workers—a world bossed by men who are always forcing war, misery, and conditions as in these slums. 'Tis men's unemployment makes this girl accept a small toll. Let's get at the cause—the real cause—and never mind downing the poor devil of a girl who is in dire straits. Blame the big bosses of the world, who work the workers at low wages, and then throw them out of employment when all the goods are piled up."

Some of the women, hard-faced, lined with care more than with age, screwed up their eyes, pondering, as though the logic of their neighbor was dawning upon them. In the meantime, the two and sixpenny scab had flown while she was lucky. I saw her in the distance, standing, trembling, in the doorway of a shanty in the lane. She looked like a hunted, beautiful, untamed deer, quite unfit for her surroundings.

There is lots more I could tell you of that district, but it hurts too much to linger long on such gruesome truths of my birthland—sunny Australia.

Then they ask me: "What do you want a revolution for? What do you want another system of Society for?"

# Women and War

By ELLA LUTTERMAN

**To our women readers: Do you think this writer has the correct grasp of the subjects she has touched on in this short article? A discussion is sure to be enlightening. You are invited to send in your opinions. A larger number of manuscripts should be submitted by our radical women. Here's hoping that they deluge the editor with some really excellent thoughts.**

IN his treatment of the editorial in the Dearborn Independent, "Child Labor vs. the Amendment," we have Mr. John Hammond (in a letter to the Des Moines Register) to thank for acting as spokesman on the right track when he attacks the malicious abuse of a humanitarian division of our citizenship.

That a new construction is being brought to bear upon the theory of government, in general, involving the cleavage of property rights and human rights, and the sifting of issues to their core, is not to be minimized.

When delegates of nine women's organizations convene for six days in august deliberation, for the purpose of determining the causes and cure of war, it means a protest of the line of least resistence.

True to the custom of masculine psychology, Real Admiral W. W. Phelps of the navy general board speaks to the women's auxiliary of the American Legion in terms of commerce and British intervention, citing the inadequacy of "your navy to keep open our trade routes."

Discussing the war department's study of "woman power," Maj. Gen. John L. Hines, chief of staff, told the auxiliary before a George Washington birthday meeting that the time for maneuvers on a large scale is here, and that the first of three possible solutions is, "To wait until war came and then pay the price in full."

Secretary Wilbur of the navy corroborates the cold-steel view when he stipulated before a body of women the express purpose of the navy, i. e., to fight.

In the light of logical sequence as applied to present-day developments, can these summary answers be acceptible to women as final? They can not?

For if the franchise grants to women any voice whatsoever in the shaping of policies, this will be swayed by the human angle, as compared to the traditional thinking in terms of material gain under a competitive system that knows no other cure than demanding the lives of their sons and fathers.

The crux of the thing to be solved, as pitted against the prospect of a modern war, is not vested in the proposition of military defense at all, and women know it. They have risen to the class designated by Lincoln, that cannot always be fooled.

When trade expansion, foreign investments and loans rise to such significance as to jeopardize the very safety of any nation or nations—when prosperity reverses upon itself as the victim—the rational viewpoint of directing international policy is not, in the minds of some, scientific warfare, but scientific adjustment, respectively.

There is a solution! But it is not to be found in defending the overlapping claims of imperialistic expansion by methods of competitive force in armaments. Considering chemical, aerial warfare, the issue falls to the negative, when a crazed, embittered, poisoned world becomes the price of self-defense. Let sovereigns be grave—there is no self-defense in that, not even on the sacred altar of protecting property rights and where, then, is the honor? The peoples of the world do not demand it.

"The more I study the world," reflected Napoleon Bonaparte, "the more am I convinced of the inability of brute force to create anything durable." When official authorities become broadened to accept the fact that the tension of international affairs will respond to a recognition of mutual service as above material profit, then we can focus on something constructive besides speculating on the "next war."

Certain it is that, if commissioner of education of Maine, Mr. C. Thoms, applies his declaration that students in the schools should be taught to study world news and to think in world terms, there must also be a world language to make it effective in an international sense.

Here Europe has preceded us in foresight. As the official, auxiliary language, Esperanto is rapidly gaining favor and has already been made a regular study, in at least four nations. Many of the leading international associations have adopted its use, and as an effective peace measure it will only be a matter of time before America too shall see fit to equip her students with a knowledge of this auxiliary, which promises to be the future means of world communication by radio and aviation.

# How Marx Studied Economics

By CARD No. 4306

PERHAPS your readers may be interested to learn of the incident that led Karl Marx to write his three volumes known as "Das Kapital," and the reason that made it even possible for him to do so.

Marx, having had the advantage of a university education, and also having a natural inclination to study various sciences, among them political economy, of which he was considered somewhat of an authority, used his influence as editor of a German newspaper to create interest in this science among the readers of his paper by inviting them to discuss various economic problems of the day, as well as ask questions to be answered through the columns of the paper.

At that time, Germany being the only real rival of England for the world's trade, it was only natural that considerable discussion of this nature should take place in a paper that adopted and encouraged such discussion. It finally resulted in Marx getting three economic problems presented to him for solution by an interested reader, and Marx found himself unable to give a correct solution. Therefore, like a true scientist who forms theories from facts, and not facts from theories, Marx retired from his editorial chair to devote his time to discover why he could not correctly answer these problems.

After some time he discovered that the definition of the term **Capital:** "Wealth used to produce wealth" was like salt that had lost its savor, by no longer containing the essence of the thing defined, and while it had been applicable to the savage with his bow and arrow, and even to a system of barter, was entirely out of date when applied to machine production. So he sought for a definition that would contain the essence of the term, and found it by making an addition to the old definition, so that the change was substantially this: Capital: wealth used to produce more wealth by means of exploitation.

It was this definition that both gave him the keynote to his work "Das Kapital," and to the correct answer to the three problems already presented to him. It also enabled him to predict the trend of capitalism in its future course as accurately as an astronomer can predict the time of an eclipse of the sun by the moon, and even the section of the world in which the eclipse would be visible.

Like all true scientists who discover that old theories do not conform to facts he was denounced and vilified by those whose interests would be jeopardized by the acceptance of the new, and by the political economists of the old school possibly through jealousy.

It is quite within the realms of reason to assume that some of them had discovered shortcomings in the accepted theories of the science, but could not discover the remedy for them, or had not the courage that Marx had to attempt the job, knowing what they would be up against.

The fact that some people prefer to fit facts to theories rather than to found theories from facts reminds me of getting some years ago from the Seattle public library a book on logic, written by Professor Jevons, a Jesuit priest. This book was written solely with idea of proving the logical existence of a God, which of course comes in the later part of the book. Now all priests have an economic interest to serve, in having the human race accept the God idea, hence the above work by Professor Jevons. Logicians of course make the best sophists when it answers their purpose in accomplishing the object they seek to attain.

**To Such As These—The Tool-Using Millions In Every Part of the Earth—Marx Said, "Unite! You Have Nothing to Lose But Your Chains, and a World to Gain!"**

There are still plenty of such logicians in capitalist universities, and they have a peculiar interest in misinforming people about economics, the science that most directly concerns the master class they serve. But the workers, whose interests are not at all jeopardized by true answers to those three questions, the study of Marxian science gains ground daily. They are also learning to apply what they learn by joining industrial unions.

# Was Morgan Wrong?

(Continued from page Twenty-five)

Australians—They Are Uncivilized

Now we have reached this point in our argument: It is admitted that there may be a few exceptions to the Morgan classification, but it is proven that as long as these are not numerous, the fact of their being exceptions does little damage to the theory. It is likewise proven that the field to which these exceptions are confined is not large enough for sufficient exceptions to vitiate Morgan's theories. Moreover, we have laid a theoretical foundation for the belief that within this field, the "New School" has found exceptions which do not exist, found them by a process of exaggeration of differences and overlooking of resemblances, for which indeed they are **not** looking, because of psychological reasons, which are in turn a product of their environment.

Let us take up a few of the cases which they consider exceptions, not with any idea of exhausting the list, but for the sake of example. (I do remember the Pioneer has only forty-eight pages).

See in Section III Lowie's statement that the Chinese do not drink milk, although the Zulu's do. Lowie says this shows a difference of reaction by two peoples to the same environment and argues for uniqueness of culture.

Seriously recollect, for a moment, have you ever heard of a Chinese cattle herder? No, the Chinese are not cowboys, or even foot herders. They are not a pastoral people at all. They have an intensive agriculture and they have a petty bourgeoisie of traders, and a class of skilled artisans or handicraftsmen. Cow's milk is for them something rather unfamiliar. It is in about the same category as mare's milk would be for us. Or, it is like the "love apple" my grandmother used to tell me about, something considered to be poisonous, because unfamiliar, and with a prejudice against it. Nowadays we call these "love apples" **tomatoes**, and here in Chicago we pay thirty cents a pound for them.

The inhabitants of the western grass lands of China are not essentially different in race, previous history (if you go back far enough) or even in language from the Chinese, and they drink milk and make butter. Theirs is a cow country.

Observe that Lowie urges it (Section III, above) as an argument for the uniqueness of each tribal culture that the Tungus rides his reindeer while the Chuckchee harnesses his to a sledge.

But both these peoples, so Goldenweiser admits (**Early Civilization**, p. 295), got their knowledge of domesticated animals from the Turks (the Chuckchee got it through the Tungus) and they got it in comparatively recent times. Their own culture was considerably lower, and they modified the use of the only big animal they could domesticate, to suit their own previous ideas of things, and also to suit the unchangeable natural conditions. The Chuckchee live right up in the north-eastern tip of Siberia where conditions are about like that of any other part of Eskimo land. Sledges are the mode of transportation, and the reindeer was substituted for the dog, which the true Eskimo still use. But the Tungus people live in central Siberia, and part of them well towards the south—they could use sledges part of the time, but it is also natural to ride horseback over the plains, or in this case, reindeer-back. Perhaps it never would be as convenient for the Chuckchee to ride on animals forging their way through snow as to have them pull sledges, but if the Tunguses are given time, they

will surely develop reindeer-pulled sledges for the snowfields in winter, and then there will not be that argument left any longer. Then the civilization of these tribes will be surprisingly alike, in that respect at least.

Here is another example, from Goldenweiser's **Ancient Civilization**, p. 309: "In both cases (in New Ireland and in the North-West Coast region) the art objects in question consist of decorated poles. The carved decorations to which color is applied represent animals intertwined in various ways. In both localities, finally, these poles have a symbolic religious significance and figure in ceremonies. Such are the similarities. But there are differences. The totemic poles of New Ireland are small ceremonial objects, some three to five feet high; the carved decoration is in the form of open work or filigree, the whole carving producing a light lace-like effect. The totem poles of the Northwest Coast, on the other hand, are gigantic posts looming above the roofs of the houses, while the the carving is in high or low relief, but not in open work, the total effect being ponderous and massive."

Now New Ireland is clear across the Pacific Ocean from the Northwest Coast, and is in the tropics, while the Northwest Coast is way up near Alaska. The mere fact that both these people, in nearly the same stage of material development should have both used totem poles, carved of wood, with religious connotation, etc., would seem significant enough to some people. Goldenweiser sees the difference in the sort of carving and size of the pole as the important thing.

When Goldenweiser is expatiating on the fact that the culture of the five tribes he uses as test cases in his **Early Civilization** are peculiar to large geographical stretches, he makes statements like this: "There is the limitation of the power of the chief, a characteristic of North America." His argument is that this limitation is one of the things which marks of North American culture from others. That, of course, even a casual reference to Ratzel or Keane will show to be a mistake. There is a council of elders, and decided limitation of the power of the chief in many African tribes. In the case even of the Zulu monarchy, the first great king, Chaka, overthrew the power of this council—another case of the Morgan theory of the war chief seizing complete power during the transition stage from lower to middle barbarism, which is what the Zulus were doing. Even the Baganda, who had made a still farther advance had traces of a former check on the authority of their king. The fierce Ashanti of the West Coast of Africa were also in the transition stage, and had kings who habitually acted with authority, but who were still bound in times of peace by unwritten law, custom and a council of petty chiefs or headmen (ELLIS, **Tshi-Speaking Peoples of West Africa**).

It is true that in these relatively advanced African tribes, there were hereditary elders, or petty chiefs, but then, there was a strong tendency in that direction among the American Indians—even among the Iroquois. The Africans went a very little farther.

Furthermore, the chiefs of most of Malenesia, Papua, Borneo, the Bismark Archipelago, where the people are all in similar stages, according to Morgan, as the American Indians, have very little power except in times of war, and in some cases are limited by the actions of a formal council of petty headmen, or of elders.

Even in parts of Polynesia, where the people when the whites came were in general in the higher stages of savagery, and where, for special reasons we shall consider soon, the power of chiefs and nobles was quite large, there were formal limitations by act of council on the chiefs. "It is the family that is the unit in the Maori clan or tribe as far as the possession of land is concerned . . . . the council of elders or representatives is the final appeal in all matters of dispute, and has great influence over the actions and decisions of the ariki or chief. On the other hand, once war has begun the chief is supreme, although when it is over he lapses into not more than the member of the oligarchy, or even the common member of the democracy. He has no more right to the land than any other in the family. . . . There was scope left for the rise of a minor, and the council of elders and the general community had as much to do with the selection for the chieftainship as heredity . . ." (J. MACMILLAN BROWN, **Maori and Polynesian**, page 74).

Goldenweiser and Lowie complain than the gens and clan are too much lumped together by evolutionists. True to their pluralistic training, the followers of the "New School" insist vigorously on the difference between them. They admit that these organizations exist in much more than half of the primitive tribes left with us—but they point out that the functions of the organizations differ, and especially that in Negro Africa; they tend to become owners of certain crafts and trades.

But the gens as a subdivision of the social body, based on kinship, and acting as a restriction on marriage, has that function at least. To the ordinary person it would seem very significant that the American Indian, the Pacific Islander, the Australian native, to say nothing of the ancient ancestors of modern civilized Europeans and Asiatics have all developed such kinship groups, which affect marriage, and form a basis for social organization, if they do not entirely compose that organization. When it is shown, as it can be shown, that this condition exists while people have a pre-metallic culture, and that it disappears as soon as a culture developed on metals really unfolds itself, then this fact of the widespread gentile organization becomes still more important. Much more important than the undeniable fact that sometimes the gens is maternal (the clan) and sometimes paternal; sometimes it is totemic, and sometimes not, and that sometimes certain gentiles are restricted to certain occupations, and sometimes not, etc.

Usually where it cannot be shown than the gens developed out of the clan, some reason why not can be found, some exceptional obstacle which deviated the main line of progress. Likewise, most gens which are becoming castes (occupational groups) exist in Africa, among nations which, like the Baganda, are getting to that stage of the game—becoming feudalistic, setting up master class religions and elaborate courts, etc.

Boas thinks that if Morgan is right pottery should be found among the African Bushmen because of their development in other ways, and they don't have pottery. In the first place, it is very doubtful whether this people is ready for pottery. The Bushmen are rude, wandering people who have bows and arrows, but do not come up to the level of the American Indian in any other respect, except possibly in art. They do not build huts; they have practically no clothing; they have no baskets, except a very poor sort, almost a net, in which they carry ostrich eggs, the shells of which serve them to a very considerable extent instead of pottery. Perhaps they did not need pottery, on account of just these eggs, but still it is probably better to class them in Morgan's third stage of savagery, the pre-pottery stage. The reason the "newer" anthropologists object to that, and claim the Bushmen do not fit Morgan's classification, which is therefore wrong, is that in the Bushman country there are excellent rock drawings, showing a fine sense of art. The argument is that people who can draw as well as this are very advanced indeed.

Well, the Morganites can make two answers. The first is, that these rock drawings in the Kalihara desert of Africa are remarkably like the ancient cave art of Cro-Magnon times in Europe. Is there any proof that it is not the same? Is there any reliable proof that the Bushmen drew the best of them, or if they did, were they not simply copying photographically and without understanding some ancient drawings?

And the other answer is that art, least of all human activities, will serve as a measure of human progress. Morgan never claimed that art, mere skill and an eye for beauty, followed his scheme of human progress. No one will seriously deny that Chicago of today is more civilized in material ways and farther advanced in social organization than was Florence of the Renaissance. But does that mean that Lorado Taft is as good as Michael Angelo? Where is our Benvenuto Cellini, our Raphael, our Leonardo di Vinci? We are higher in general culture, and even in the science of architecture than the Middle Ages, but where are our beautiful cathedrals—our rose windows equal to that of Rheims? Art is the worst of all possible gauges of general cultural progress, for it depends so much more than other things do on individual genius, individual emotion, individual skill, and so much less than other things on scientific progress. We Morganites are not absolutely denying that the Southwest Africans may have a fine artistic hand. We are merely asserting that they are probably not far enough advanced according to Morgan's classification to be ready for pottery, and on account of the ostrich eggs, might not invent it very soon even if they were.

Again, Goldenweiser says (quoted in Section III, above) that localized industries are characteristic of the American culture area, distinguished from the others. But I call your attention to the fact that in Oceana, large sections of which are peculiarly like the Northwest Coast of America in native culture, there is even a localized arrow industry in one of the Solomon Islands (Buka), and that in the Fiji Islands there is a localized pottery industry, restricted to a part of the group, that in some places kava drinking and manufacture is a highly developed occupation, and in others does not exist—that some of the island groups make bark cloth, and some make only mats, etc.

Practically all of these islanders fit into either Morgan's third stage of savagery, or first stage of barbarism, the same as the American Indians. Why not say that specialized culture is a characteristic of these two stages, rather than of any certain geographical area? As civilization comes nearer, culture becomes more complex in each tribe, communication between the tribes or peoples is better, and all are more alike—you no longer find so much specialization, though there is still some, due to different natural resources, mainly.

Now in regard to this iron in Negro Africa. There is no evidence of a copper age in Negro Africa. Many of the peoples who use iron there are in the condition of emergence from second barbarism to third; that is, they have gone as far as they can without the use of some metal. When the Europeans reached this position **they** had available both copper and iron, and they all took up copper first. But if copper was scarce, and if rich iron ore was freely exposed, as it is in some parts of Africa, it is just possible that they might have developed an iron industry without the use of copper. Morgan knew this. He explicitly deprecates the emphasis which former anthropologists have placed on the "bronze age."

"The invention of the process of smelting iron ore created an ethnical epoch, yet we could scarcely date another from the production of bronze." (**Ancient Society**, p. 8.)

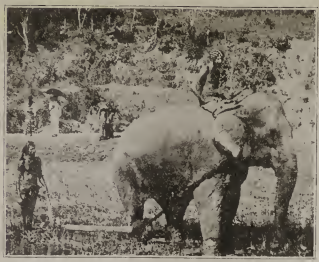
But we are not ready to admit that the African Negro actually developed an iron age without a bronze age. It is extremely probable that Negro Africa got its iron from the same sources from which it got its white blood, and all ethnologists are nowadays ready to admit freely that nearly every tribe in Africa shows admixture of white blood, and some of them are very mixed. Negro Africa had contact with the iron using Egyptians, with the iron using Arabs and Berbers, and probably with very ancient, iron using Jews, Arameans, or Phoenicians. Who will explain Great Zimbabwe? What about the Phoenician circumnavigation of Africa? Are the Abyssinian rulers really descended from the kings of Israel, as they claim? Where was the Biblical

Land of Ophir? Let some of these questions be answered before Lowie so readily contends that the Negroes developed iron before they did bronze. If the art of smelting iron was taught Negro Africa while they were still in the stone age, they would probably not bother with copper, and would be like the ancient Britons, who also, according to Morgan, had iron imported before they had evolved to the point of discovering it. When that happens, there is progress, but not proportional progress. The typical iron culture, field agriculture, stone buildings, political government, etc., does not develop at once. Morgan placed the iron using ancient Britons in the Middle Stage of Barbarism, among the non-iron using people.

Godenweiser protests against placing the Australians down below the American Indians in culture, where Morgan puts them because they have not invented the bow and arrow, and some other material things, like houses and tents, etc. Goldenweiser and the others of the American School are always saying, "What a wonderful invention is the boomerang—and what an intricate and ingenious class system have these Australians! Doesn't that prove they are really advanced in culture, in this respect, and therefore not to be classified with the other non-bow using peoples? Unique are they, like all other primitive "civilizations"!

Here is another case where the answer **might** be that in the second stage of savagery, which is where Morgan put these Central Australians, there may be the same sort of unilateral and specialized development of one art or craft that we find in the third stage of savagery and the first of barbarism, the real reason being largely lack of good communication.

But this is probably admitting too much. The boomerang isn't so much. The returning boomerang is a toy, useless in practice as a weapon. The boomerang that is used is merely a peculiarly shaped throwing club, not any better for throwing, probably, than the South African knob-kerrie, and not half so good a weapon for close fighting. Australian social features like the power of the aged, are very primitive, according to W. H. R. Rivers, (**A History of Melanesian Society**, Vol. 2, Page 59). The gerontocracy is an obsolete and nearly abandoned system of social control of the now much more advanced Banks Islanders, and many other Melanesians. Mere complexity means nothing, Herbert Spencer to the contrary notwithstanding, for the whole clan or gentile system is more complex than the first arbitrary autocracies which come much later.



Private property exists in all stages of primitive life, say Goldenweiser, Lowie, and Boas. Well, who said it did not? But what the Morganites do say is that private property in land and cattle, that is, private property in the sources of sustenance, comes into existence only at the grand turning point—in field agriculture, or in pastoral existence, with certain important but easily explained exceptions, to be touched on later in this magazine. Morgan admitted that there was in primitive communism, private property in ornaments and dress, and in the tools which men could make for themselves, as individuals. Very likely there will also be such private property in the communism that is to come. When we say, common property," either past or present, we mean productive property such as land, machinery, pasturage, hunting grounds, etc.

If there were time, we could go into the land question in Africa, and show how the same thing is taking place in the present day nations that took place in ancient Greece and Rome, the war chiefs and the upper class of headmen, through the use of slaves, and by representing the nation in times of war, and assuming authority, creating "private property and the state."

The same thing is true of the Igorrotes of the Philippines. This article is illustrated by pictures of Igorrotes doing a wild dance, and looking very primitive. The dance is one of the social survivals of a really primitive time, when they had no iron tools, lived in kinship groups, without any authoritative chiefs, and had group marriage. Now they have iron. It was introduced to them by the Malays, and resulted in a composite, forced development, such as the African Negroes show. The Igorrotes, in spite of living in kinship groups, with such savage survivals as the dance pictured in last issue of the Industrial Pioneer, have a society that uses irrigation, one important domestic animal, the water buffalo, pottery, weaving, and field agriculture, of a sort of gardening—intensive variety. That is, with the exception of the iron, which is an importation, and which has not free scope for instituting large scale field agriculture, such as did exist in Greece, Rome, and other lands, the Igorrotes are in the second stage of barbarism, about where the Incas and Aztecs were. The one thing they lack is the masonry house, and they make up for this with terrace walls for their rice fields.

We would expect, as Morganites, to find developing hereditary chieftainship, private property, slavery, and monogamous marriage in this sort of a situation. It is exactly what we do find, with a tendency for chiefs to acquire private property in land, and also a tendency for peasant proprietorship to grow up. The mixture of kinship groups, powerful chiefs, and monogamous marriage, shows the transition stage. As the chiefs grow stronger, the kinship groups will die out. Within historical times, the chiefs have grown stronger, and the kinship groups weaker. According to A. L. Kroeber (**The Peoples of the Philippines**) the **barangay** (a feudal type of village) system is stronger and the kinship society weaker near the coast, where wealth is most easily acquired from the soil, and from slavery. We should expect to find in such a people a transference from maternal to paternal descent, and we do find, that among the Igorrotes there is **both** maternal and paternal descent.

This brings us to the subject of the family. The "New School" says there is no group marriage, and that "the family of parents and children has existed from time immemorial." We may as well admit, as Morgan undoubtedly would, that since men are not

GREECE AND ROME EVOLVED A MASTER CLASS

like the Hindu god Krishna, who could consort with many milk maids at the same identical moment, all mating has to be between **two** individuals, for a longer or shorter time. The Punaluan family did not prohibit men and women from living in pairs and recognizing the paternity of the child on occasion—but it meant that paternity counted for little, and that the brothers and sisters of each of the married pair could come into the domestic life whenever they pleased and claim conjugal rights, without any violation of morality or loss of prestige. This situation existed in Hawaii within historical times. When you find that the people no longer allow such rights to brothers and sisters, and that a moral code has grown up to separate them, then you consider that the Syndyasmian family has grown up, as it did in North America, the South Seas, and in Asia and Europe, in each case leaving a relic of the former system in an incomplete change in the nomenclature of relationship. Morgan's argument in this connection has never been refuted. In fact, Rivers' charts of South Sea Island relationship terms seem to add proof, though they are too long to repeat here.

Enough for the moment of this American School. Let us consider a European. L. T. Hobhouse (**Morals in Evolution**, pp. 54-57) says that kinship is the basis of social organization among the lower hunters and authority (of chiefs or of kings) among the pastoral and higher agricultural peoples. He agrees with Morgan.

Furthermore, though the marriage groups do not result in promiscuous relations within the group in every case, they are always restrictions on the choice of a wife. and within the groups wives are as a general rule, traded, lent, pawned, and also, on the occasions of great festivals, commonly enjoyed by all the men in the group. When it is considered that there are all sorts of restriction of magic, custom and taboo on the intercourse of even the "married" pairs within the Punaluan or other group, this is a condition that may, after all, properly be called "group marriage." The rights of the husband seem to be authoritative rather than monogamous, the relationship is that of a boss, rather than that of a modern husband. There is a tendency to countenance the right of unmarried women to promiscuity within the group of their potential husbands and the right of women to change mates, within the proper group. To the layman there doesn't seem to be a great deal of difference between what Morgan thought of group marriage, and what the modern English and German schools think it consists of.

Furthermore, Hobhouse gives tables showing the proportions of the tribes in each cultural stage which trace descent through mother or father, which have clans or gentes. Among the hunters (savagery and lower barbarism) the vote is in favor of the clan by thirty-seven to eighteen. Among the pastoral people (middle barbarism), it is in favor of the gens, ten to one. In upper barbarism, of course, both disappear, and political organization takes their place.

Hobhouse agrees with Morgan, that slavery and nobility are the product of the herd and the plow, usually. (We shall find later on, that the same things which made pastoral life and field agriculture favorable soil for the development of slavery and despotic chiefs, also introduced these things among the island dwelling, canoe and fish cultured peoples.)

Of all possible peoples under observation, Hobhouse finds that seventy-eight per cent of the higher agriculturists (field agriculture but not civilization —Morgan's upper barbarians) hold slaves, and that seventy-one per cent of the pastoral people hold slaves. Only two per cent of the observed tribes of lower hunters (Morgan's second savagery) hold slaves, which is what a Morganite would expect, but is rather hard on the doctrine of "no-evolution."

Hobhouse likewise gives a table with regard to noble classes. The lower hunters have no nobles. Eleven per cent of the higher hunters (upper savagery and lower barbarism) have a noble class. (In a note he explains that most of these instances of slavery and nobility among hunters come from the Northwest Coast, the reason of which I shall explain later.) In the higher agricultural and pastoral stages (Morgan's midde barbarians and perhaps some of the upper barbarians) about a quarter of the peoples under observation have noble classes. This again is an agreement with Morgan, and shows slavery and a noble class developing in common, starting with field agriculture. Hobhouse's book is recent, being written in 1921, and Hobhouse has as good academic titles as anyone.

(TO BE CONCLUDED IN NEXT ISSUE)

## THE INDUSTRIAL WORKER

**You should read this important I. W. W. publication that contains exclusive news and stories of the industries of the West. It also carries news of the world labor movement and is a powerful force for working class betterment. A fighting semi-weekly that deserves your best support.**

# I Stand in the Shadows

By JACQUELINE PERREAULT

**It is dark without**
**But light within;**
**I stand in the shadows**
**And see all.**

The young immigrant boy, bright-eyed and smiling, entering the gates of the land of the free. The same boy, no longer young, dull-eyed, gazing listlessly, hopelessly, through prison bars. The state's attorney does not understand Italian—"What's one Wop more or less anyway?"

The little child whose clothes are stained—with blood—creeping beside the young mother who has fallen exhausted from the agony of the operation she has performed.

The little child just entering school, his mind to be filled with the ideas of war.

The older boy in khaki, armless, a box of pencils suspended from his neck.

The churches filled with seeking ones listening to the political speeches of their pastors: poor, helpless ones crippled in mind and body, waiting for their God to touch and cure their **bodies.** They do not know that he is a sightless god. He is made of silver and gold and his eyes are precious stones—more precious even than the streets in heaven on which the poor, helpless ones will be permitted to walk—but he can not see.

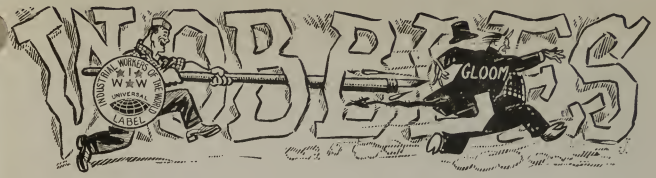
The young inventor being spirited away after perfecting his marvelous invention. The government of the few will not investigate this case. I know. I saw all.

The men in solitary confinement—political prisoners, long after the war—fighting with the rats for the white bread that is thrown them. I shudder—but I must not cover my eyes. It is my tragic fate to see and to moan. The rats win; that is why they do not die from the white bread. . . . They win.

Little children offered on the altar of Hate. Young lives blighted, fatherless, motherless. The prostitute judges and press piling tragedy on their heads. Like the cheeks of a harlot the press is painted pink. But they do not deceive me; I know they are dirty yellow underneath.

If you, too, have seen you must also feel. You must help to right these wrongs. Organize; keep together through the coming storm.

# Sanity of Art



By G. BERNARD SHAW

THE claim of art to our respect must stand or fall with the validity of its pretension to cultivate and refine our senses and faculties until seeing, hearing, feeling, smelling, and tasting become highly conscious and critical acts with us, protesting vehemently against ugliness, noise, discordant speech, frowzy clothing, and rebreathed air, and taking keen interest and pleasure in beauty, in music and in nature, besides making us insist, as necessary for comfort and decency, on clean, wholesome, handsome fabrics to wear, and utensils or fine material and elegant workmanship to handle. Further, art should refine our sense of character and conduct, of justice and sympathy, greatly heightening our self-knowledge, self-control, precision of action and considerateness, and making us intolerant of baseness, cruelty, injustice and intellectual superficiality or vulgarity. The worthy artist or craftsman is he who serves the physical and moral senses by feeding them with pictures, musical compositions, pleasant houses and gardens, good clothes and fine implements, poems, fictions, essays, and dramas which call the heightened senses and ennobled faculties into pleasurable activity. The great artist is he who goes a step beyond the demand, and, by supplying works of a higher beauty and a higher interest than have yet been perceived, succeeds, after a brief struggle with its strangeness, in adding this fresh extension of sense to the heritage of the race.

We are driven so terribly in the struggle for existence that we have little chance to know or to appreciate art. Shaw's remarks on art suggest many thoughts of a better, a nobler, a happier life; a life still unknown to the teeming millions of workers.

Paulo Veronese's painting "Industry," is one of the exquisite masterpieces of artistic genius. We are striving to bring about human relations so that all can enjoy economic security and learn the greatest of all arts, that of enjoying life in industrial freedom and plenitude.

## SPLITTING EVEN

A sausage manufacturer in Milwaukee built a reputation for a certain brand of sausage.

A sanitary inspector called one day for an analysis.

"Don't you use some horse in this make of sausage?" asked the inspector.

"Yes, I use some," was the reply.

"How much?"

"Well, I make it a 50-50 proposition—one horse, one rabbit."

## HOT AIR L. A.

Will Rogers says that the biggest gas bag in the world that came across the Atlantic from the Zeppelin works was christened **Los Angeles.** California canned fruit boosters and climate peddlers, take notice.

## A PIONEER'S DARK AGE

A faded old clipping just brought to light tells the story of the difficulties of a pioneer newspaper.

"We begin the publication ov the Roccay Mountain Cyclone with some phew diphphi-culties in the way. The type phounder phrom whom we bought our outphit phor this printing ophice phailed to supply us with any ephs or cays, and it will be phour or phive weex bephore we can get any. The mistaque was not phound out till a day or two ago. We have ordered the missing letters, and will have to get along without them till they come. We don't lique the loox of this variety of spelling any better than our readers, but mistax will happen in the best regulated phamilies, and iph the ph's and c's and x's hold out we shall ceep (sound the c hard) the Cyclone whirling aphter a phasion till the sorts arrive. It's no joque to us —it's a serious aphair.—From **"The Booster,"** Denver, Colorado.

**Extension Handles Will Be Necessary When the Parasite Goes to Work.**

## AMENDED COMMANDS

Never play slot machines before breakfast—make sure of the breakfast first.

It isn't a sin to eat sausage on Friday; it's nothing but sawdust anyhow. Use your "own discression."

Don't watch the clock—it's three minutes fast mornings and seven minutes slow evenings. . . . .

**—T-Bone Slim.**

## HIGHER MATHEMATICS

A man went to a newspaper to insert a death notice.

"How much do you charge?' he asked.

"Two dollars an inch," was the reply.

"My God! He was six foot, four!"

## IT'S OIL RIGHT

Rockefeller says he is thankful for the chance of being of service to his fellow men. You've noticed the stations, of course.

## A HORSE'S DEATH

Sir: Yesterday I saw a dead horse on Morgan St. He appeared to have a tag fastened to his lip. "He has slaved himself to death," thought I, "and now he is tagged for the soap works!" When I drew nearer, however, I saw that I was wrong. Overwork was not the cause of the old plug's death. His lip bore no tag but held between his teeth, and tilted at just the proper angle was the cause of his demise — an empty whiskey bottle.

"What," I hear some hootch-hound saying, "do you mean to tell me that booze would kill a horse?"

I assert that it would, and I have proved it—with regular murder trial evidence.

and from our souls the fetters of capitalist slavery, and from our backs the social leeches that cling there. We are making ready to destroy every last vestige of capitalist power over society. And we know that there is but one way in which to accomplish this purpose. It can not be born by fine mouthings of politicians, nor by the madness of insurrection serving the will of a new school of political fakirs. No matter that they exploit revolutionary phraseology, and drape their bureaucratic ambitions in crimson folds. Revolutionary industrial unionists refuse to bow to their neo-regal pronunciamentoes.

No individual, great or small, no group or faction or class outside of the working class is going to free us. The workers must free themselves. We want an industrial communism and we are organizing on the jobs to get it. We need your aid, fellow workers. Line up in the I. W. W. and be active industrial unionists.

**BUMPING THEMSELVES OFF.**—Bishop Nicholson, whose flock is in Chicago (not in the stockyards), says that wealth does not make people happy, and that many of the rich are so disgusted with living that they are shocking Christendom by ending their lives. In effect he says: "Poverty is the happy state." Then he tells us that there were 20,000 suicides in this country in 1924. Of this number he says 75 were industrial captains, 23 were rich women of social distinction, and that 36 were millionnaires. The bishop then wound up with this solemn conclusion, "Wealth will not satisfy the human heart."

Let's add his figures of rich suicides. The total of millionnaires, employers and female parasites rolling in wealth who ended it all is 134. But the cleric said there were 20,000 suicides. In what class were the 19,866 the bishop failed to classify?

They were in the working class. They were poor dupes of workers who went into military service to escape unemployment; prostitutes who had tired of their terrible bid on the bread of existence; wornout mothers; desperate fathers of families they were unable to feed and clothe; ignorant victims of passions that run riot in this riotous scheme of affairs that is euphoniously called capitalism.

Wealth can not satisfy the human heart—perhaps. But excess of wealth, the race for power and social position, and the debauchery festering in an existence of indolence causes some of the rich men to crack under the strain. Still Morgan, Carnegie, Stinnes—these did not die at the average age that workers pass out their miserable lives. Ford threatens to live to be very old, and John D., Sr., is swinging a wicked mashie as a nonagenarian.

Give the workers security, and a chance to learn what life really means in love, education, common work and play, and suicides are sure to diminish and ultimately to disappear. To live is the natural law. It is strong. But despair forced by this rotlaw system is even stronger—it was for 20,000 last year, and don't forget that only 134 had any chance for the Who's Who.

**"NOT ALL WERE KILLED BY BULLETS**—No, not by any means," is a line from one of Joe Hill's famous anti-war songs. You recall, no doubt, the scandal about embalmed beef being sold by the packers for Teddy's heroes in Cuba, and for the other heroes gently mopping up the Philippines with Aguinaldo's independence-loving followers. Time passed and Sinclair wrote "The Jungle.' Did the packers reform? Well, just listen.

Carl Haessler of the Federated Press has a story in their news sheet dated April 7, showing where an army chemist stationed at Savannah during the war found that beef in cans dated 1898, and preserved in thick lacquer, was being sold to the government for the boys "over there" in 1917 and 1918. Capitalist corruption certainly stinks to the skies. And the thought that we are all thinking is: how old is the Tutankhamen beef that they are selling now, and that we consume? Packinghouse science advances Swiftly.

---

**STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUGUST 24, 1912**

Of Industrial Pioneer, published Monthly at Chicago, Ill., for April 1, 1925.

STATE OF ILLINOIS } ss.
COUNTY OF COOK }

Before me, a Notary Public, in and for the State and county aforesaid, personally appeared Geo Williams, who, having been duly sworn according to law, deposes and says that he is the Business Manager of the Industrial Pioneer, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management, etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor and business manager are:
Publisher Industrial Workers of the World, 1001 W. Madison Street.
Editor J. A. Gahan, 1001 W. Madison St.
Business Manager Geo Williams, 1001 W. Madison St.

2. That the owners are:
The Industrial Workers of the World, 1001 W. Madison St., Chicago, Ill.

3. That the known bondholders, mortgagees and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages or other securities are:
None.

4. That the two paragraphs next above, giving the names of the owners, stockholders and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company but also, in cases where the stockholders or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stocks and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

(SEAL) Geo Williams, Business Manager.

# The Coming War Against Asia

(Continued from page 6.)

dering their allegiance to the puppet Caliphate, it is expected to make the country impotent, even if not loyal, in the coming war against Asia.

In the meantime England is constructing the great Singapore naval and air base at the cost of at least ten million pounds sterling. That it is not directed only against Japan is seen from the fact that Singapore is 3,000 miles distant from Japan, and is one of the strongest strategic centers in Asia, guarding the Bay of Bengal on one side and the South China sea with the approaches to China on the other. And it most effectively hems in the French possessions in Indo-China which, when the war breaks out, will be overrun and added to British dominion—painting the map a British red from the Suez to Hongkong.

What Singapore means is shown by Mr. W. H. Gardiner, Vice-President of the Navy League of America, in an article in the November issue of the **Fortnightly Review**, of London, in which he said:

> **"It may be well to recall that, in 1923, the external trade of the British Isles—upon which most British labor there lives directly or indirectly—amounted to nearly two billion pounds sterling, of which about half was carried by the Pacific and Indian Oceans, while in the same year the external trade of the United States, which has been increasing most rapidly in the Orient, was about four-fifths as large as that of the British Isles. With such IDEALS (!) and interests at stake, it would seem potent that the practical and peaceful way for America and Britain to maintain them would be for each to hold its pivotal position and dependent possessions in the Far East with such evident firmness as to make obviously futile any attempt on the part of the Japanese to carry out their southward trending marine plans.**
>
> **"Whatever idealism (!) Europe and America may each indulge in at home, the fact remains that modern Asia is at least as much a realm of realism as was ANTE-BELLUM Germany—a realm in which practical conditions must be met by America and Britain, etc. . . .**
>
> **"The American fleet is not as strong as it permissibly should be. . . . The British fleet is without an adequate and permissible base in the Pacific. . . . It would seem to be to the interest of Americans as well as of Britons that the construction of such a British base as that planned for Singapore he delayed as little as possible."**

Mr. Gardiner then states that he has interviewed the authorities in the Dutch East Indies and has learned that they are all depending upon the Singapore naval base. In Europe we see Holland, accordingly, increasing her military and naval budget. Mr. Gardiner then reckons on the number of battleships America can accommodate in the Philippines and on the number of British battleships that can be depended upon from Singapore. Of course, he says, India will try a revolution, and many of the battleships from Singapore will have to be used in Indian waters!

Writers in **The Nation** and the **New Statesman**, of London, say that the Singapore base is built against Japan. British statesmen speak of the necessity only of using the base for the repair of British cruisers. But **The Nation** asks, "In what circumstances do we imagine that our battleships may be operating in Far Eastern waters? Do we not use battleships to protect our commerce from raiding cruisers or submarines?" The **New Statesman**, after quoting from the Japanese press on the Singapore base, says that "the Japanese anticipate a racial war with its dread consequences, owing to America's vast resources in wealth and munitions of war."

There are many ways in which America and England are preparing for this terrible slaughter. One of these is the propaganda now being carried on for "white world solidarity." Many books, with huge circulations, have been published on "The Color Conflict," the "Rising Tide of Color," etc. In this last book, by Lothrop Stoddard, we, the "white race," are told to "shake off the shackles of an inveterate altruism, discard the vain phantom of Internationalism, and reassert the pride of race and the right of merit to rule."

In Europe, particularly, in Germany, Americans and Englishmen are carrying on a ceaseless propaganda on the color question. Every attempt is being made to keep Germany from uniting with Russia and Asia and forming a block from France right through to China. For, because of the Anglo-French conflict over the control and exploitation of Africa and the Near and Middle East, France is bound to throw in her lot with Asia. Although Germany has not yet recovered from the World War, she is being told in the press and from the platform, that her interests lie with the "white world" against Asia. Visions of Asiatic invasions" are concocted, and it is carefully omitted to mention anything of the European invasions of Asia which have gone on for three centuries and which are going to culminate in this racial war.

The issues are clear, however, to those who wish to see. Capitalist-imperialism, of which the chief standard bearers are the English and American governments, has decided to fight for its life, which means holding in its possession the sources of the raw materials which feed European industries. The Asiatic national movements threaten to destroy the system altogether, or, if not that ,at least to drive out European capitalists and concentrate the economic life of that continent in the hands of its own newly arisen capitalist class. But the chances are that in the great events before us the system will be destroyed altogether. But that which interests us most of all is that the working classes of England, America and Japan, in particular, are going to be asked to wage the most terrible war in history for the sole purpose of guarding the financial and economic interests of the governments and capitalist classes concerned. The war is going to be more easily precipitated because, after all, it is easier to arouse primitive passions such as sadism, hatred and fear, against a people of another color and race than it is against our own race. Asia will be completely devastated in this struggle, for, outside of Japan, it has not the machines or implements of war with which to protect itself. It has human material which will be wasted like powder. There is but one living force which can stop this coming slaughter: that is the united action of the working class of Europe, America and Japan,—particularly of America. The American workers alone—who will be expected to be the chief aggressors in this mass murder—hold in their hands the power to stop this war.

# The Reforging of Russia

REVIEWED By J. A. MacDONALD

DESPITE its shortcomings, due to that its aim is to tell what publishers, knowing what the American public wants to know of Russia, will print, "The Reforging of Russia" is a human document on present day life in Russia. It deals as fairly as possible, when one considers the audience, with the government, social institutions and life of the average Russian of today.

Mr. Hullinger, as representative of the United Press, went to Russia with a knowledge of the language, and remained there until he was deported by the Russian government for dealing with conditions which they did not wish to have revealed, especially as the representatives of that government were then going to the Genoa conference and wanted to make two deuces, or at least two nines, appear to be a royal flush.

To the student of Russian development it will serve as a means of checking up the other side of the stories reaching the United States and Canada through official Russian sources, or given us by the self-elected Russian ambassadors of the Communist party of the United States and Canada. And these stories require checking up. There are evidently things which they do not want us to know, for on no other supposition can one explain the orders that a book criticizing certain actions of the Russian and other communist movements by Leon Trotsky is not permitted to be issued in the United States or Canada. Naturally the very efforts to hide facts whet the appetite, a psychological result which those censoring this book by Trotsky, and other information regarding Russia, do not take sufficiently into consideration.

"The Reforging of Russia" first deals with the conditions that arose as the result of the change of the government of Russia from the efforts to apply communism, to a modified capitalism, becoming less and less modified as the result of economic laws beyond the control of any man or group of men. The writer does not know what these economic forces are, but he depicts for the Marxian, with his knowledge of the motive power of history, the conditions that resulted from their operation in Russia. He shows changes in the government resulting from changes in the economic base of society which political government must reflect.

The scope of the work is suggested in the opening paragraphs:

**"Upon the ruins of two Russias—the Russia of the Tsars and the Red Russia of Communism—a new Russia came into being, a Russia as different on the surface from the Russia of Communism as the latter was from the Old Empire which it superseded.**

**"This new Russia, which dates its origin from the abandonment of Communism as the national economic system in Russia by the Bolsheviki government in 1921, is a strange national anomaly—and as fascinating as it is strange."**

Mr. Hullinger was in Russia when the change to what is designated as the New Economic Policy, a modified state capitalism, so far as the large basic industries are concerned, as these remain the property of the state with a partial operation by the state, or sub-leasing to private capitalists. The rest of the field of industry and commerce is in the hands of private capital.

The manner in which these changes are outlined is fair. Every credit is given to the Bolsheviki for their genius for organization, their discipline, and that they knew what they wanted, and for their skill as propagandists. The author did not have the knowledge of the Marxian key to the understanding of history which made a going forward—not backwards—to capitalism inevitable. He did not know that the establishment of industrial communism, while possible in a nation of smokestacks, is impossible in a nation of straw stacks. Neither genius for organization, discipline, knowing what they wanted, or skill as propagandists could avail to overcome the laws of human developments which follow feudalism with capitalism, as capitalism in turn must be followed by industrial communism.

The lack of this understanding outlook on the necessity of capitalism, and its development in Russia before communism could be possible is one of the limitations of "The Reforging of Russia." But this lack of knowledge of the meaning of the phen omena with which he deals is not to be wondered at, when even Marxians in the stirring period between 1917 and 1921 too often forgot their Marx and permitted their emotions and their desires to overcome their judgments. When in March of 1917, I wrote editorially in the Industrial Worker that a political revolution had occurred in Russia, but that any industrial revolution other than from feudalism to capitalism was unthinkable, Marxian students agreed. Then they read of the second revolution, some of them saw a ship bearing the red flag in Seattle (or read of it), and their feet were swept from under them. They were blinded to the fact that capitalism, as one of the stages in human development, could not be jumped, and that a political state, of necessity reflecting an economic condition, could not dominate the industrial forces; that industrial communism must come not from the top but from the bottom, changing the foundations of society and consequently its superstructure, and destroying the state, of necessity an instrument of class rule. The great man theory, economically unsound and contrary to the verdict of history, was the basis of this unscientific emotionalism which is only now subsiding.

**"From the viewpoint of evolution of world social thought, it seems unfortunate that the great essay could not have had more favorable circumstances, so that the final issue would have been a little more clear-cut and the merits and demerits of communism as a human system determined to t**

satisfaction of all sides and for all time. Certain it is that civil warfare, intervention, economic isolation by all the neighbor nations, are colossal handicaps for any system, good or bad, to start off with."

This and dozens of other paragraphs show at once an effort to be fair, and at the same time a lack of knowledge of economic factors far greater in moulding the development of Russia than all the handicaps which he could perceive, and which not even the "master mind" of a Lenin could overcome.

This bourgeois writer, like many of the communists, are at their best—and worst—when the picture is shown of the great man dominating destiny.

"Red soldiers could keep the people in subjection, and keep the streets of Moscow free from disorder. They could compel respect for the Kremlin's authority. But they could not make the wheels of factories turn around. They could keep the peasants from rioting, but they couldn't make them plant crops. . . .

"Fortunately, the Communist Party had at its head a master mind which was able, after three years of blood and strife, to see sufficiently clearly to grasp this great fact and to act upon it. True, the discovery came late, but late as it was it came. With his usual decisiveness, Lenin set himself to the task of swerving the great current of the revolution . . . and turning it into a course which he hoped would save all from being swept into the maelstrom of things lost. It was too late to save communism as a cause. But Russia had an established order and a national discipline which three years of martial law had imposed upon the land. Russia had a government capable of enforcing its domination . . . political order based on force was still intact. Perhaps it was not too late to save these. Lenin thought it worth trying, and on that historical day in March, 1921, called together the congress of the party to ask it to take the first step towards what proved to be the abandonment of communism.

"The original resolution, strictly speaking, went no further than to sanction the resumption of small trade on a limited scale inside Russia, under governmental control. It was expressly advertised as only a slight retreat from communism, a temporary compromise in the face of great obstacles.

"But it was not a compromise; it was a surrender. Life is primitive and intense in Russia, and in any primitive life struggle, it is usually the first yielding that is decisive . . . Once in motion the force of events could be stopped only by a tremendous effort. The rulers in the Kremlin evidently concluded they would rather go along with the current and remain masters of the ship, than risk wreck again by trying to turn back."

The process of return to capitalism is described. The cobwebs were removed off the desks in the banks, the stores were reopened for trade, commissars became capitalists, and the process of the upbuilding of the new bourgeois class is vividly portrayed. The government, now one of opportunism, caught in the economic current had to change to conform with a developing capitalism. A currency system, a system of banking and a system of written laws that were necessary to a capitalist economy were devised, as the need for them arose out of the change in the economic method of making a living. Then followed other results of capitalism such as unemployment and strikes. Siberia again became the place of exile of political prisoners. The system of espionage and the making of stoolpigeons for the Tcheka, with the change of name, but no change in purpose, was instituted and developed to such an extent that the present Russia has an espionage system superior to any nation in the world. The writer describes its operation and its wide and deep ramifications from intimate personal knowledge.

A chapter on "Propaganda, Red and White," shows the same willingness to be fair. He characterizes the white propaganda emanating from Reval and Helsingfors as "notoriously vicious." Another illuminating chapter deals with the "Communist Party as a Military Order." In this chapter is also contrasted the difference between the radicalism of the Third International and the opportunism which is now the fundamental characteristic of the Russian government.

The Red Army is described, given credit for its literacy, its fighting ability, and the high standard of its efficiency. Then follows the description of the lives of the peasants of Russia at the present time, written from personal experiences, but written as a newspaperman, not as a student of social forces, would write it.

In the chapter on "Marriage, Divorce and Morals," there is none of the puritanical attitude which is so usual with American writers in dealing with customs that are new to them. "Old Evils Return" deals with the growth of unemployment, repression, strikes and strife—such evils as are inevitable under capitalism, and which are growing as capitalism grows. The writer recognizes these are capitalistic evils, but holds forth the comforting hope that they can be cured under capitalism.

There are other chapters dealing with various phases of the social life and industrial activities of present-day Russia, and an estimate of the probable future of Russia, which is seen in glowing colors, with Russia as the greatest capitalist nation of Europe. Then there is an appendix, "Lenin, the Man, Personal Recollections," which is a sympathetic study of the dominant personality of modern Russia. His methods of oratory are analyzed, and an effort made to account for the power which he was able to wield within his organization and in Russia.

In "The Reforging of Russia" there is much that will challenge the attention and demand the further investigation of the student of Russian affairs. There is also much to which the radicals of America must adjust themselves. With its limitations, it presents an often convincing and human interest description of the greatest single nation on the European continent.

# This System – Swedish Section

(Continued from page Ten)

This Is The World's Largest Match Factory; It Is In Sweden

only thing feudalism, and the vestiges of that system still remaining existent under the new name of nationalism, could give the small capitalists engaged in production for the open market were protective tariffs, and the preference in supplying the domestic demand for social and other government owned institutions and industries.

This has tended to create what amounts to a sort of paternalism over the small capitalists, which, in turn, has built up a laissez faire attitude among them, and the only thing that they all are convinced of is that the workers are drawing too high a wage.

The recommendations of the committee on customs for the solution of the problem is large scale production, standardization of products and specialization in the mode of production. This will result in giving more horsepower to each worker. It will make the same worker more productive, and his wage will rise. At the same time the profit rate will also mount for the capitalist owner.

For a time the worker engaged in the industry will enjoy a higher real wage at the expense of the workers in agriculture and other industries where his necessities of life are being produced, until they, too, get into the stride of a higher productivity.

Needless to mention that this will create unemployment at a rate never before known in this country, which must aid in lowering the much expected and short-lived high wage. Then the vicious circle will be complete. As I mentioned before, the capitalists in Sweden are in complete accord in denouncing high wages for workers in their employ. However, statistics, that are not biased for the working class, reveal that the workers in this industry receive in wages only between one-third and one-fourth of the value of the products. According to statistics in the United States, where the workers on an average, get from one-fifth to one-sixth, it would appear that the share falling to the Swedish workers is larger. Still the standard of living of workers in the United States is usually much higher than that of the Swedish workers, and the only explanation of this condition is that the industry here is in a backward stage.

In nowise can the workers be blamed for the existing situation. They don't own any machinery, or any part of the industry, and to blame them, as do the capitalists here, because they insist on eating and wanting to live, is worse than foolish.

## THE RAILROAD TRANSPORT INDUSTRY.

Before ten more years have passed railroads will be completed in the extreme northern part of the country as far as the borders. The only parts still lacking railroads are those most frigid and sparsely settled. The mid-section and southern part of the country is well supplied with railroads, both cross country and from north to south. At this time work is going forward on the electrification of the state-owned line from Stockholm to Gotenburg. A committee, working under government supervision, has been probing into the possibility of electrifying all roads from the middle country to the southernmost part of the country, which are, mostly, privately owned and short line roads.

This committee has demonstrated that the idea is bound to be a profitable one when carried into execution. It points out that the plan is quite feasible to take power from the hydro-electric government owned power station, and, if necessary, a part of the power generated for privately owned power stations situated in the lower northern part of the country.

It is reasonable to look for this advance in the near future. It will result in a lowering of productive costs on an average for all production. The effect on the railroad workers will be a displacement of the skilled workers by the semi-skilled and the unskilled. Also, a reduction in the number of workers required, and greater unemployment. To what degree this is going to effect coal miners, either in England, Germany or the States, is difficult to figure out, but it is safe to say that it certainly will not make for more employment on their part, to say nothing of the possible effects on other groups necessary to the production of coal—marine transport and other workers.

In another article it is my purpose to show what effect it will have on the now existing organizations of the railroad workers.

In this industry Sweden ranks if not highest in tonnage owned, quite at the apex of its technical evolution with regard both to tonnage and horse-power. She has more Diesel-motor-driven ships than any other country and she does not intend to vacate that position in a hurry. Practically every month a motor ship with an average 6,000-tons displacement is leaving the ways at the shipyard in Gotenburg, not to mention the ones that are being built in Germany and England for Swedish ship owners. The very latest addition to this large fleet is the passenger liner "Gripsholm," a 17,000-ton vessel, and the next largest Diesel-motor-driven passenger liner in the world.

The other day two ships were launched from German shipyards, each one being of 23,000 tons. These boats were built for Swedish owners, but they are already chartered for 20 years to run between Chilean ports and those on the North Pacific as ore-carriers. Whether for the steel trust, the copper trust or any other trust is immaterial because either one will be just as hard for the workers to buck. Although hardly a million tons of shipping is owned by Swedes, still it will not be long before half of that tonnage will be motor-driven.

Naturally such an introduction of labor-saving machinery is not confined to ships. The quays and docks are being fitted out with electrical cranes and other machinery designed to displace labor, thereby sending some of the longshoremen on their way.

Throughout this industry the onward march of the machine is very much in evidence, and daily it tends to become more accelerated. Though the big shipping companies, backed by Swedish or international capital, are active in acquiring motor tonnage, the majority of the ships, being of smaller tonnage, are still steam-driven.

Many of these craft could be termed "floating coffins." And it is just that part of our merchant marine with its primitive machinery, that is used to prove that the merchant marine cannot stand any more strain in the form of higher wages, shorter hours or better conditions for the marine workers.

In the next article I shall attempt to demonstrate what effects this industrial evolution has had upon the working class in the country, and upon its organizations, the causes for the different wings on the political field, the symptoms that a decaying form of organization show, and the way out to a better world for the workers of the world.

# Converted

By G. Tveit

He was hungry, ravenously hungry. A shiver ran through his lean frame as an icy blast swept around the down-town corner and drove the chilling rain in his pale face and through garments already sodden. Yes, the rain and cold was bad, but that incessant, gnawing pang under his belt was worse. Loudly it clamoured for good, steaming hot food and vast quantities of it. And food was displayed on all sides, warehouses, shops, eatinghouses seemed bursting with it. Tempting odors assailed his nostrils from restaurants, and the tantalizing display of big brown and white loaves of bread and delicious pastries in bakery shops made his mouth water.

But,—and life held so many "buts"—his pockets were as empty as his stomach; he was penniless and friendless,—a stranger in a strange land. Also, the sacredness of private property had been inculcated in his mind too well to be flouted in a moment, even if fear of the law had reared no barrier against the instinct to satisfy his hunger at all costs; and a certain stiffnecked pride of family and education would not allow him to beg. And here he was, in the "promised land of plenty," with a good education, youth, willing to work and no mean ability—and starving.

Reminiscently he visualised the past. Happy years at home and schools until that fateful day when a financial crisis crashed his happiness into ruins. His mother had never been strong, and the shock broke her proud heart. Within a year his father had followed her to the grave and left him alone, heavy hearted and empty handed. He wanted to escape from an environment that could awaken so many sad memories, so he came here. But misfortune seemed to dog his steps. A panic occurred shortly after his arrival, and the ensuing wave of unemployment swept the length and breath of the country, bringing in its wake such need and suffering as he had never known existed. He was caught in the whirlpool and had struggled in vain. Try as he might, no work could be obtained, he seemed to have applied everywhere but to no avail.

Dimly he sensed that somehow his old standards and ideals had proved inadequate, unable ever to rationally explain, let alone meet, exigencies of life such as those now confronting him. Biology had shown him the struggle for existence but as a mere adumbration. Here—bereft its mantle of theoretical abstractness—it stood forth in naked, primitive, reality, grim, terrifying. Scenes he had witnessed in employment agencies and other places where work might be obtained had made

an ineradicable impression on his plastic, sensitive mind. He had been taught that diligence, thrift and integrity would inevitably lead to success and had accepted it dogmatically. But now,—how could he or any of the thousands in similar circumstances practice those estimable virtues, when the right to work was denied, when they were penniless and starving?

Immersed in thoughts, and weak from hunger and cold, he failed to dodge a big man who hurriedly tried to enter an adjacent doorway. The impact threw him off his balance and he staggered up against the wall. The big man steadied him and with an apology for his clumsiness turned to go. But something indefinable made him change his mind and subject the other to a searching glance. "Sick buddy?" he asked. There was kindness in eyes and voice. The other shook his head. "No, just a little weak." But the big man had diagnosed the case. "How long since you had anything to eat?" he inquired abruptly. The answer came simply but there was a ring of truthfulness in it, that he did not fail to notice, "Three days." The big man said something under his breath, grabbed the other's arm and started to lead him up the stairway, at the foot of which they had been standing. "I've got a housekeeping room here," he explained, "and was just going to eat before I met you. But then I had forgotten the bread and ran out to get it. Come along and we will have supper together."

Never would the starving, friendless stranger forget that simple but substantial meal and the kindness and tact displayed by his host during it and after. The big man, who acknowledged the name of Edward Brown, but insisted on being called Ed, on learning his guest's name to be Jack Wilson, promptly addressed him in the same manner of comradeship. A mutual liking speedily broke down the barriers of reserve common to so short acquaintances, and elicited their respective life stories and ideas. Conversation naturally drifted on to the prevailing unemployment, and in discussing the causes behind, Ed found a willing listener. He spoke well too, and in his exposition of this and other social phenomena, Jack found answers to many of the questions and problems that had baffled him before. Not that he accepted them without a searching, critical scrutiny! He had done so in the past, believed blindly, implicitly what he was told to believe, but that should not happen again. Yet keenly as he probed and analyzed, no flaw could he find in the other's reasoning.

Even so, it was not easy to assimilate doctrines so fundamentally opposed to those formerly entertained, nor pleasant to have one's most cherished images and idols so rudely shattered and annihilated. A few months earlier it would have been possible only in a very gradual manner; but since then life had taught him many and bitter lessons; lessons not included in the curriculum of any school or college.

But when Ed casually mentioned—not without a touch of pride—that he had been a member of the I. W. W. for many years, Jack received a shock. What fragmentary "facts" he had gleaned from the daily press and various magazines about that organization were not reassuring. Incredulous astonishment was apparent when he began: "But, I thought members of that organization were—," he hesitated, visibly embarrassed, and Ed laughingly supplemented:— "bombthrowers and assassins, burners of haystacks and bridges and so on and so forth; was'nt that what you thought? Well you will be able to judge for yourself after investigating us a little further. Your present idea of the I. W. W. is really the boss' idea; he merely passed it along to you knowing that it would be to his advantage to alienate your sympathy and support from an organization he hates and fears. Tomorrow I will take you up to our hall and make you acquainted. Read our literature, listen to our speakers and then decide for yourself. I am confident, that when you realise what the movement represents, its aims and objects, your former environment and upbringing, in the light of your far from being an obstacle—rather be an incentive to join our ranks."

"And in the meantime you can stay here; that bed was my partner's, but he got a job and left town yesterday, so you can use it now, and we'll manage somehow till we get work. Now, don't argue; I have made up my mind and besides, you can do as much for me some other time."

During the following week Jack took a new lease of life. When not hunting for jobs they would spend a great deal of time in the hall, where he talked with many of the members, listened to speakers and read voraciously from the library. More and more he learned to appreciate the sterling character of his benefactor and roommate, and the acquaintance—so strangely begun—ripened into a friendship that years failed to efface or destroy. And when they finally secured work, the first payday brought developments. After paying a month's room-rent and restocking their depleted larder, Jack disappeared one evening on some mysterious errand and would not allow Ed to accompany him. Some time later he returned, and with one of his infrequent smiles, showed Ed his latest purchase. It was a new, red card, liberally "decorated" on both sides and the front page bore the name: Jack Wilson. Ed rose with extended hand. "Shake *fellow worker*" I knew *it* was only a question of time, you could not do otherwise. And from now on, whatever the future may hold in store, you have something to work and fight for—a goal to achieve, a mission to fulfill." And as Jack's hand clasped that of his friend, he knew beyond a doubt, that this time also had Ed spoken the truth.

# The Social Forces

By JOHN CANNAVAN

## CHAPTER VII.

**"It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the everyday struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old."**

THE human race, like every other species, has been compelled to struggle for existence. Man from the beginning has enlisted means outside of himself to aid him in his struggle to survive. He is the only species in the animal world that uses tools.

The invention and employment of tools were necessary if the race was to perpetuate itself. The tools of a period—its means of production and distribution—determined the form of human society; and the institutions by which it was supported and its affairs administered. As tools are only humanly valuable when used, society has at all times been dependent upon its tool-users—the producers.

There was unquestionably a time when man stood in the world and faced nature without any artificial aids—bare and naked—and found himself in an environment that threatened his destruction. Then necessity, animal necessity, drove him to discover and employ things outside of himself that would serve as tools and weapons. With these he was better equipped to wrest from nature a living than had hitherto been possible. Man advanced along simple lines in the employment of tools and eventually arrived at the discovery of fire. With this discovery, mankind was in a position to go forward more securely in possession of means of subsistence. The race was winning its way to permanent security, and its security depended upon those who provided and used the tools. It has ever been so.

### Racial Survival Assured

In feudal times, agriculture was the basic industry but there had developed within that system an element which devoted itself to hand manufacture, and the products of this element grew to proportions when they made the means of social subsistence more plentiful. Mankind turned to this element and the feudal system was gradually superseded by capitalism, until now capitalism administers to society everywhere and provides means of subsistence in such ample measure that the survival of the race is no longer in doubt. The survival of the human race is assured. Present day society, like all previous societies, is dependent upon the productive element—the working class.

As capitalism developed from the comparatively simple tool system to modern machine methods, there grew up an element in society—the capitalist class—which takes no active part to assist the race in its struggle to survive. On the contrary it has fastened itself upon society and lives parasitically. A parasite has no independent means of existence and exists only by attaching itself to and feeding off some other organism.

The human race in its struggle to survive must select that element which is indispensable to it, i. e., that element upon which it must depend for its means of life. The capitalist class is not that that element notwithstanding its dominance in human affairs. Our present civilization depends not upon the owners of industry, but upon those who operate the industries. When, in its morning prayers, society says, "Give us this day our daily bread," the working class must answer its petition. All that society has and all that society is, it has and holds by the grace of working class effort. If the workers do not make and use the tools of modern production, our civilization would wither and disappear; and the race would become extinct. There is no danger that this will happen; though all the forces which the capitalist masters of society can muster are employed to stay further progress the pressure of a threatened species will prove irresistible.

### Progress Is With The Workers

In every species there goes on a struggle between its fit and unfit members. The fittest survive because they are necessary to the survival of the species. So, too, in human society there is going on a struggle between two elements—the capitalist class and the working class—and the fittest will conquer the unqualified. With which of these two elements can society dispense with the least disadvantage or the greatest advantage to itself? Manifestly, with the

capitalist class which, by and of itself, could not prevent the collapse of society and the elimination of the race. The capitalist class at the present stage can only function in an anti-social way. The working class, on the other hand, for its own preservation must preserve to society the means that will enable the race to survive. The abundance, which is available even to superfluity, is the product of the working class. The tools whose production and use are confined to the working class are the guarantee of social security, only while the working class attend to and produce and reproduce them. In the struggle between the classes, the social side of the contest is taken by the working class and the anti-social forces are controlled by the capitalist class. The working class stands for human progress. The capitalist class strives to hold mankind stationary.

There was a time when the capitalist class stood for human progress; when it functioned to carry the human race forward on its destined course, but having performed its mission, it is now ready for the discard. To fulfill the social destiny of mankind, the working class, which is now pre-eminently the indispensable social factor, must assume the responsibility of social guidance and administration. It must do this, not because it covets authority, but because it is imperatively necessary that it assume this responsibility.

The working class, the labor of whose hands and brains creates super-abundance, amidst which it suffers privation, must move in its own behalf. So far as it is conscious of saving society, it is only that it must save society to secure itself. It has behi it all the pressure that the human species can exe This pressure is not evident, yet it is there.

### "The World For The Workers"

But the working class must prepare itself to take over the social means of subsistence and to administer them. The workers must organize themselves as they are arranged around the machinery of production. From the highest executive to the last laborer, they must unite to construct the new social organism. As stated earlier in this article, the manual workers, as the greatest sufferers under the present regime, must take the initiative to bring about the revolutionary social change. As the industrial proletariat organizes and conquers power, it will compel other working class elements to associate themselves with it. It will draw to itself all the essential productive elements and mold them into the new industrial society. This society, the Industrial Workers of the World, is the only organization in the world which has envisaged and constructed it in embryo. Because of the forces behind its program, the I. W. W. is potentially the greatest labor organization of all time. Never before have workers essayed as daring a social role. The future belongs to the workers through this organization or science is a fraud and history a lie.

"The world for the workers."

# Preamble of the Industrial Workers of the World

The working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

The conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike of lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

**WHERE—**

"Justice is a harlot
Upon a throne of Gold—
Where Liberty is auctioned
And truth is bought and sold."

IN CALIFORNIA they have an act known as the Criminal Syndicalism law, under which over one hundred and forty men have been convicted solely because they were members of a labor organization.

IN CALIFORNIA today, by the mandates of predatory wealth, eighty-five of these men are serving long terms in prison because of their membership in a union that is opposed to the greed, lust and misrule of Industrial Pirates.

IN CALIFORNIA countless hundreds of men have been imprisoned in county jails, held long periods of time and forced to endure the most vile conditions thinkable.

IN CALIFORNIA women have been beaten and little children, too, have been deliberately scalded, beaten and trampled under foot by howling mobs that raided the workers' hall during an entertainment.

IN CALIFORNIA men have been tarred and feathered, slugged, murdered and driven insane by the alleged "guardians of law" in the name of "JUSTICE," simply to satisfy their atavistic whims and to gain favor with the Industrial Overlords.

IN CALIFORNIA an Appellate Court has ruled in a recent decision that anyone found mingling with members of organized labor is guilty of violating this inhuman statute.

IN CALIFORNIA the Supreme Court has been guilty of considering evidence that was not to be found in the trial transcript, in order that they might affirm the conviction of twenty-six innocent men.

IN CALIFORNIA this same Supreme Court a s s u m e s the right to change its mind at will, holding in one case that they see "nothing inherently wrong with the organization," and in another case exactly the same, they rule that the organization is guilty of violating a statute.

IN HUMANITY'S name, use no California products until these innocent men are freed.

## Editorials

**BRYAN THE MODERN BEAUVAIS**—Our champion marathon campaigner of the long-eared party was in Florida recently where he was employed by real estate sharks to "bark" for them. These crooks brought suckers out on a pier where the Nebraska Commoner regaled them with stories about Florida soil, climate and future. He made a big "killing" at this game and severed connections with the side show. Then the garrulous ape looked around for another graft and a chance to keep himself in headlines.

"It's an ill wind that blows no one good." Tennessee passed a law against teaching evolution in the schools of that advancing commonwealth. A man named Scopes violated the statute and he is now on trial at Dayton before "a jury of his peers." The grand jury's presentment was:

> **"That John Thomas Scopes, heretofore on the 24th day of April, 1925, did unlawfully and wilfully teach in the public schools of Rhea county, Tennessee, which said public schools are supported in part and wholly by the public school fund of the state, a certain theory and theories that deny the story of the divine creation as taught in the Bible, and did teach instead thereof that man has descended from a lower order of animals, he, the said John Thomas Scopes, being at the time and prior thereto a teacher in the public schools of Rhea county, Tennessee, aforesaid, against the peace and dignity of the state."**

That the judge is admirably qualified to sit on the case may be gathered from the fact that he called in a minister to read a prayer in opening the trial. This Methodist Church North medicine man's invocation ran:

> "Help us to be humble in thy presence this morning. We acknowledge our ignorance this morning. Give us light. Help us to quit arguing about so many things that are not important, not to question so many things not needful for us to know, but that we may know the Christ by simple faith. Bless this court. Lead us by thy spirit."

The powers of darkness did well when they chose Bryan as special prosecutor because he can certainly keep them in the ignorance they crave. He represents medievalism, the age of inquisition, autos de fe, rack, rope, block, witch burning and perpetual imprisonment for religious nonconformity. Victims of that system were not atheists. The Tennessee incident furnishes a good parallel. Scopes, like many others, has reconciled his Darwin with the maker who had no maker. But he has meddled, and it is sufficiently criminal to shock Fundamentalist Tennessee, and to bring Bryan to the scene on a trot with his Bible, swindle-sheet and fagots. Genesis must not be gainsaid. It must stand inviolate despite science, reason and the

By CALIFORNIA PUBLICITY MAN

MODERN society fairly teems with tales of the Horatio Alger type, built around the lives of men such as Carnegie, Ford and Edison, all of whom are styled "self-made men." These tales, so adroitly constructed that even the most skeptical will be misled, are whispered into the eager ears of youth. They have been created for but one purpose: to increase the desire to amass riches that is born in the breast of the younger generation.

The ruling class of this age of super-capitalism has caused these stories to be fashioned and carried to the far corners of the civilized world so that they, the rulers, might continue to receive the full benefit of the efforts of all workers. Youth is told how these "self-made" men started on their career, "poor but honest;" how they strived and forged ahead until, today, they lead the world in riches, These millionnaires are held up as examples for youth to follow, even though it is a well known fact that every commercial field is owned and controlled by the trusts. But youth blindly attempts to follow.

Just such a story is to be found in the "Memoirs of Robert Dollar," the three volumes of which he has had printed for private circulation. We shall try to show the true conditions as they actually exist and compare them with Dollar's version.

Perhaps a few words about Captain Dollar might not prove amiss. Dollar was born in Falkirk, Scotland in 1844, of Scotch parents. At the age of thirteen his mother passed away and young Dollar immigrated to Ottawa, Canada, with his father. There he found work in a stave mill and continued at that task until sixteen years of age, when he turned to the woods for a livelihood. Due to his manner of driving the French-Canadian lumberjacks he later became foreman for a logging company.

### Dollar Goes Into Business

In 1872 he formed a lumber company in partnership with a Mr. Johnson. This venture proved somewhat disastrous because of the dollar madness which ruled, and in the following year the concern went bankrupt. Three years later he again entered into a partnership. This time he furnished no capital; he drove the workers and his partner furnished the funds.

With this second start Dollar began his campaign of exploitation in earnest. He began purchasing standing timber in Eastern Canada at a pittance from farmers who were too poor to hold it for a

better price and were forced to sell for whatever Dollar offered them. The same advantage was taken of the men who worked for him. Because of the severe winters it was practically impossible for a man in a logging camp to quit work once winter had set in, for he would perish in making a lone attempt to reach the outside world. Therefore, men were forced to stay in camp until spring and very often were paid off for an entire winter's work with a red flannel shirt, a plug of tobacco and very little money; while Dollar received in exchange millions of feet of logs and square timber.

In 1882 his business ventures took him to the United States. With the money stolen from the lumberjacks in Canada in unpaid labor he bought up large tracts of timber land from the government at $1.25 per acre and built a sawmill at a place called Dollarville. The year 1888 found Captain Dollar in California, attempting to get a corner on all the unsold merchantable timber in sections of that state.

Four years later he ventured into the shipping world, becoming the owner of several ships. In 1901 he entered foreign trade and has since enlarged his holdings to such an extent that he has practically cornered a great portion of the shipping business with China and the Far East.

Dollar claims that one of the reasons for his seemingly remarkable advancement in the commercial world is that he is a firm believer in God. According to his words, he is a man with all the ardent zeal of an apostle and one who proves to the world that he is religious beyond reproach by donating to the Y. M. C. A., erecting churches among the "heathen" Chinese, and keeping several Y. M. C. A. secretaries and ministers on his payroll. He preaches the gospel of brotherly love between the Chinese and Americans, but for some unexplained reason fails to mention that the same policy of non-prejudice should exist between all other races. We have yet to hear this good gentleman raise his voice in protest at the race riots which have occurred in this country between the negro and white races.

In eulogizing himself, Dollar also professes t be a super-patriot, a pacifist, and one who would not condone hypocrisy. All of these qualities, together with his Scotch thrift and efficiency, have made him what he is today—so he claims.

### Economic Changes

Captain Dollar begins one of his volumes by saying: "These memoirs were intended for my family and some immediate friends, but at the urgent request of others, I have decided to make them public. I have but one reason in so doing, and that is that they may be of benefit to some young men who are starting at the bottom thinking the difficulties confronting them insurmountable when they look up to the top of the ladder."

He holds up his own life as an example, yet fails to explain that sixty years ago there were no such monopolies as the Standard Oil Company, the West Coast Lumbermen's Association, the California Fruit Growers' Association, and the Ship Owners' Association, controlling all these industries in this country. He does not tell them that American capital has run out of resources in the United States and has been forced to spread to other countries for further fields in which to exploit labor. He does not tell them that such men as he control the United States government and dictate their orders to every public official, from the lowest county constable to the president of the United States. No, he paints a very hopeful picture for the eyes of innocent youth, so that every young man in his ignorance will make a special endeavor to be an efficient wage slave, thinking that some day he may become a second Captain Dollar.

When we compare the early years of Dollar's life with the present day, we find that a drastic change has taken place in the economic situation. At the time of the Captain's first plunge into business we know that there had been but very little development west of the Rocky Mountains. It was about that time that Horace Greeley said, "Go west, young man, go west." It was a time when the west held unlimited opportunities for a young man, for there were thousands of square miles of land upon which white men had not yet set foot. Every industry was open to all comers and the strongest survived. Lands covered with virgin timber could be had for the taking, as could vast grazing areas suitable for cattle raising.

The East, too, was not altogether devoid of opportunity. Many fields were open as at that time the machine had not been developed to its present standard and many of life's commodities were still handmade. Capital had not been organized into the gigantic corporations and trusts of today, but instead, capitalists were fighting and competing with one another. Consequently the young man of that day did have a possible chance to advance in the commercial field.

On the other hand, when we look at the situation today we find that the entire United States is densely populated; every industry is now run by machinery, replacing man power; and capital is combined in a solid unit in each industry. For instance, in the lumber industry we have a trust which owns practically every foot of standing timber in the United States. This trust is dominated over by one Weyerhauser, who has as his aides men such as Humbird in Idaho, Dollar in Canada, and Hammond in California. All of these men have very large holdings of timber, having acquired the same by robbing the government and the small landowners. These few men absolutely control the lumber industry. Yes, even the government timber. When they wish to secure a parcel of timber belonging to the government and the price is higher than they wish to pay, they merely order one of their henchmen in the government office to see that the price is reduced. If that is

not accomplished soon enough, then a forest fire breaks out in the reserve; the timber is condemned and is then sold for a song to the trust; all very simple, and the government admits it. (See Industrial Relations Committee Report).

So it is with shipping and all other industries and commercial products from oil to baking powder: a few own and control all. If a man starts an independent concern and the trust does not want him to conduct the business, they merely stop his credit; or, if he has a little capital and can pay cash for his supplies, the trust conducts a sale of that particular product, underselling the man who is trying to work up a trade, and soon put him out of business.

**Capitalist Control of U. S. Shipping Board**

Shortly after the United States entered the World War, the Ship Owners' Association took drastic steps to have the government establish a merchant marine owned and operated by the government. Captain Dollar was one of the leading lights in this campaign. Needless to say, it took but little effort. On every hand ships were being built for the government service. After the war, hundreds of massive wooden and steel hulks, termed ships, were lying in the different harbors of the country, some unsafe for use, others safe but no use for them.

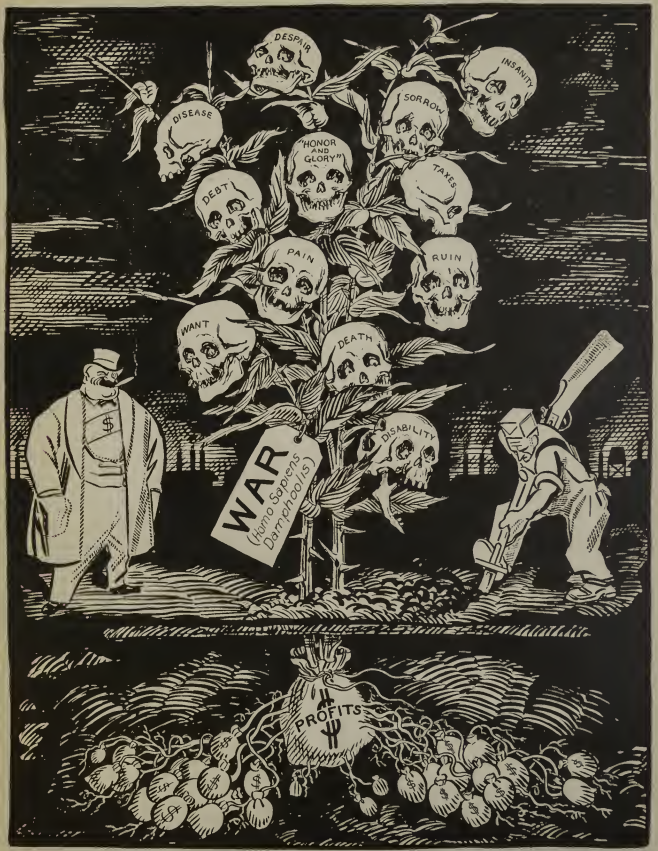
Some of these ships were leased to private concerns to be operated for the government and under the control of the United States Shipping Board. Five of them, from which the government was making a substantial profit, were being operated by the Pacific Mail Company on the west coast. Recently orders were given that these ships were to be sold. The Pacific Mail and the Dollar companies were the principal bidders. Dollar got the ships. Dollar's bid was a bit higher, but there was a catch. The Pacific Mail would have made a larger payment down and finished paying for them in a shorter period of time. As the matter now stands, Dollar is to operate the ships and receive all the profit without investing five cents for a period of two years.

At the head of the U. S. Shipping Board is a man by the name of T. V. O'Connor who recommended that the above five capital ships be sold. Incidently, this man was once president of the International Longshoremen's Union. When he resigned from that position to accept the chairmanship of the Shipping Board, the members of that union gave him a ten thousand dollar car, for which he later thanked them by breaking several of their strikes. O'Connor is a henchman of Robert Dollar, and Dollar can give him credit for the share he had in the sale of the above ships, for he cast the deciding vote that gave them to Dollar.

There is another peculiar incident connected with this same sale. A temporary injunction was granted the Pacific Mail Company on April 3rd by Justice Hintz of the Supreme Court, restraining the Shipping Board from selling the ships to Dollar. On April 20th, Hintz dissolved the injunction, thereby giving Dollar the ships. There is perhaps a reason for this which we will mention a little later.

With the facts summed up, it would seem that Dollar is one whose orders are obeyed, whether the orders are given to a messboy on one of his ships or to the President of the United States.

The International Seamen's Union also protested the action of the government in selling these ships to Dollar. They based their protest on the ground that Dollar was unfair to organized labor. From the following facts we shall see that their objection was well founded.



**Robert Dollar and Labor**

Fully forty per cent of all the ships operated by the Dollar interests are sailing under the British flag—this in spite of his self-proclaimed patriotism. **All of these ships are manned by coolie sailors who are paid at the rate of thirty-five cents a day.** Their living conditions are impossible to describe. Just last year one of Dollar's slave ships, the "Harold Dollar," was in Sausalito Bay, adjoining San Francisco, for four months. We will give you a few of the comments made at that time by the San Francisco Daily News and you may judge for yourself:

"Thirty-five yellow men from the Ning Po district in China have been virtually prisoners aboard the "Harold Dollar" for more than a year. Born into peonage, they were coaxed aboard the vessel with the promise of 'plenty money' wages dangled before their eyes; thirty-five cents 'gold' a day was to be given them, and they bound themselves under a two-year contract through Chinese 'headmen' in Shanghai. Formal signing on of the men through the British consulate followed. . . . For four and a half months the ship and her Chinese crew have been festering in the sun of Richardson's bay waiting for a cargo. Crazed because of the enforced inaction, fearful that they never will get back to China but will continue to sail the Pacific water 'until the sun dies,' the men have begun to fight among themselves. They are without money to buy clothes or shoes; their food contract with the company, by which they bargained to buy and cook their own grub out of the thirty-five cents a day wage, has run out and they are being fed by the Dollar people with the possibility that their few cents is being taken from them daily. . . . . But she lies in the bay, American-owned, under British registry, with an Oriental crew, awaiting cargo, ready to underbid for business against any vessel manned by white sailors."

On the Dollar ships that are manned by white sailormen, we find similar conditions existing. The wages are always below the union scale. Conditions are deplorable; they are even below the coolie standard. Dollar's own words uphold us in this statement. In an address made to the elite that were aboard the **H. F. Alexander** on her maiden

(Continued on page Thirty-Eight)

**BIG BUSINESS (to Labor, generously): "My good fellow, you'll be well paid for your patriotic action in 'tending this glorious plant; you shall have all the fruit above the ground—I'll take ONLY the roots!"**

# Organize to End War

By FRANCIS J. MALLOY

**COMPARATIVELY few people defend the institution of warfare, although we have with us at all times those peculiar sadists who, in the name of God and Nature, extol slaughtering of humans and say that the shedding of blood on fields of battle rehabilitates the human stock and weeds out the weak. We may dispose of this monstrously ridiculous contention by asking why the young and healthy part of the population are always taken for wars. If warfare acted like nature, then the old and infirm would be mowed down instead. Killing millions of the best human stock; causing terrible plagues, like tuberculosis, typhus, cholera and syphilis is not exactly beneficial to humanity. Whole populations are enervated by diseases peculiar to periods of armed conflict.**

There are always monsters and patromaniacs who gain prominence by the romantic gush surrounding their personalities. Theodore Roosevelt, of unhappy memory, was one who commercialized his reputation as a fighter, but was never in danger, and the nearest he ever came to personal encounter in war was when he sneaked up behind three Spaniards and shot them in the back. He told about it in his "Rough Riders." The people will vote for a character like him, but this is no sign that they like war. They are ready to take glory from their national, **vicarious** exploits in war. When it comes to enlisting they are not there. This is a hopeful sign. As a matter of fact most Americans will agree with Sherman that "War is hell."

How, then, are the people made to respond to the call for wars? Long ago Benjamin Franklin said there had never been a good war nor a bad peace. He was correct, but phrase makers have outshouted this and all other voices of reason. Whenever it suits ruling class wishes, persistence of propagandizing accomplishes the necessary consent. In the main there are three great agencies for moulding opinion and they are the church, platform and the press. When these are ordered to say that the holy church, the holy state or holy civilization must be saved from barbarians, the papers run blazing headlines to that effect; pulpiteers spout and politicians rave. The nation must be defended. Christ's image is ripped from the cross and used to deck a saber hilt. The people go wild. War is declared.

### Surplus Value Makes Modern Wars

Workers used to be sent into battle for king and church. Economic masters used the uniformed mob to pull chestnuts out of the fire. Nowadays the masses go to war for kings and democracy. In the last war—I mean the one before the French-Riff struggle, and before the Chinese mix-up, and before the offensives against the Russians by Denekin, Wrangel, Yudenitch and the Japs, just to mention a few—Germany, Austria, Turkey, England, France and the United States were the foremost belligerents. The chief executive of the last named power made a large noise about saving democracy, but when one observes the ambitions of these various states is there any real difference between them?

Germany was the most thoroughgoing of all, and its rise to world prominence in just a few decades caused its rivals to fear it. After all, the ambitions of governments are those of the dominant capitalists of those governments. Capitalism in all those states was strongly imperialistic. This simply means that the big bosses of the states had so well robbed their workers of surplus value that they were looking for foreign fields in which to invest this capital. They were seeking world markets and colonies. Naturally, conflicts arose. There is constant competition for these markets and for these industrially backward but rich territories. Wealth robbed from workers furnishes the sinews of war, for it gives capitalists resources to invest abroad.

The photographs with this article are more impressive than anything I could say, or that anyone could say in damnation of warfare. They were sent from Germany in a book containing hundreds of others, some of which cannot be described. The book is called "War on War," and it is the most powerful anti-militaristic work ever compiled. These pictures show just a few of the effects of war. One picture shows the hanging of civilians, two men and a woman. That was just a small part of the deviltry. In the Austrian army alone there were 18,000 gallows. The French and English shot down their own men whenever an officer deemed it proper to do so. While drunken tsarist generals slept in the arms of whores their ammunitionless troops were being fed to the German artillery. In France—gallant, La Belle France—there was not a pure girl over sixteen throughout the war zone.

### Some of War's Fruits

Driven to war because they were too ignorant to fight for themselves, and because the socialist snakes lied to them for over a generation, and preached voting instead of industrial organization, the masses were easy prey. They went out, boys of sixteen, seventeen, eighteen, men of thirty, forty, fifty and even sixty. Single men went and those with families. They made good fertilizer where fertilizer was not needed except to prepare a golden harvest for the bourgeoisie. They slashed, tore, bit, smashed, kicked, shot, gassed, tanked and fired their way into each other's guts. Rats came and got so fat on human carrion that they could scarcely waddle.

When it was over millions had been killed, millions more were crippled and still more millions were diseased. But, thank God, the schoolmarm's democracy was saved. Humanity was rescued from the Huns. The kaiser was sent into exile while

SOLDIERS EXECUTING CIVILIANS—NOTE THE WOMAN IN CENTER

French-German iron and steel corporations harmonized to squeeze the last bit of surplus value from the workers in the Ruhr. In England the "sons of the bulldog breed"—what was left of them after the Marne and Vimy Ridge—tramped in droves looking for jobs that were not to be had and then got a "dole." France passed laws prohibiting the police from arresting French soldier-beggars. La Patrie had been saved! While German workers bowed in sweated labor beneath the doubly-hard oppression of defeat, their masters grew richer than ever before. Starvation was in the land, there was no milk for babies and mothers' breasts were dry from malnutrition. Bosses feasted as they never did before.

Then there was America. Our own great country here had been going on a wild orgy of heretic hunting. The executive, legislative and judicial branches —especially the latter—joined to open the season on radicals and unionists. The population had been whipped to frenzy by tales of German atrocities, by banners showing Germans as helmeted gorillas, and all that brand of dirty propaganda. Radicals and union men were pictured as belonging to the same tribe. Union halls were wrecked; speakers and organizers were beaten, imprisoned and lynched; lawyers who came to defend them were tarred and feathered and smashed. The judges, to quote G. Bernard Shaw, "went stark raving mad." They sent hundreds of men and women to penitentiaries for long terms simply because these men and women continued to carry on the work of labor organization. Free speech was tossed into the gutter and ground into the mire. In short, a general system of patriotic terrorism held sway, and was not stopped until 1919 when a band of union loggers, I. W. W. members, defended their hall and their lives at Centralia in Washington. They went to prison for their manhood, their courage, their intelligent militancy. They are still there to rot away their lives from 25 to 40 years. What a fearful indictment of warfare, and what a shameful one against the workers of this country who could send those men back to their loved ones and friends in one day if they united for that purpose!

Immediately before us is a situation that has not been as ominous since the spring of 1914. American and British business interests are out for spoils with greater rapacity than all others. This government has made appropriations for gunboats to patrol Chinese rivers. China is rich in natural resources and the potential factory and farm labor of 400,000,000 slaves. There are 7,000 American soldiers in Hawaii, but an increase to 20,000 is being agitated, and, after the Hawaiian waters maneuvers by the United States fleet there is no doubt about this being realized. An extensive, vitriolic campaign against the Japanese race is being pushed by a large section of the American press, and the Hawaiian Islands are sure to be fortified so that they shall become the "Pacific

Surgical Triumph! A Soldier's Life Saved!

Gibraltar," to use the language of militarists.

The last great war ended just before more fearful instruments of destruction than any employed were released. These were being prepared in laboratories and there is no doubt about their being used in the next struggle to save democracy, culture, civilization and other sacred fetishes. I refer to disease germs. It is impossible to estimate the number who died in all countries just from one plague—influenza—during and after the last war, and it is at least very sobering to think of what must be the result when militarists **release** disease germs on the population.

Seventy million men were mobilized in the world carnage. In the next one we may expect to see twice that number under arms. This is sure to give surgery another matchless opportunity to heal men torn by bullets and shell fragments, burned by liquid fire, and eaten by gas. We shall have a large element of surviving heroes with sheep jaws, metallic hands, arms, legs, dog foreheads, pig snouts, and perhaps rabbit eyes. And buoying up this synthetic monster shall live the soul. So all's well, God's still in heaven, and the boss keeps the industries.

### More Savagery Shown

Getting back to the boys over there, it is noteworthy that all atrocities were not made in Germany by Germans. In a certain fight large numbers of German prisoners were taken by Canadian soldiers. One of the prisoners, maddened by war horrors, managed to get hold of a gun with which he shot a Canadian. The Canadian commanding officer then ordered that every one of the "Huns" taken that day and for days to come be mutilated by driving a bayonet through the right palm. This was done.

When the American troops were advancing in the Argonne they took many prisoners. Their officers ordered them to escort these prisoners miles to the rear "and be back in ten minutes," under pain of death. Well, it just couldn't be done, so the Fritzes were bumped off about a hundred yards to the rear, and the men were back in less than ten minutes. It's a fine business, this war game. And the people put up with it only because they do not know what makes wars, and the horrors of war.

Did they but understand war's economic causes a revolution from capitalist misery to proletarian happiness would be achieved, and speedily.

### Another Conflict Is Being Prepared

There isn't much more to say, except that another great war is being prepared. Look to the Orient for its theater of action. China is the great undeveloped area that appears appetizing to all the imperialists. The United States and England will join to keep Japan from winning over China. Then the "Anglo-Saxon" states must have a fight to decide on mastery. American workers must kill other workers and get slaughtered in the action. There are many angles that we cannot discuss in this brief article, but other writers have spoken of them in previous issues and I trust that there will be succeeding articles demonstrating the numerous phases of this immense subject.

### Anti-Militarists of Church?

Before closing I would say that workers should place no dependence in the pacifistic mouthings of churchmen and other parasites. When the last war came they were similarly opposed to war until several hundred shysters passed the war declaration. Then they got up on Woodrow's band wagon and shouted themselves hoarse about "getting" the kaiser, and killing Teutonic barbarism. It so happens that Wilhelm and his numerous progeny still live and

Soldier's Face Partly Shot Away—Gangrene Has Set In.

flourish in castles, though not, of course, at the end of Unter den Linden. The preachers still live, or have passed away naturally, while over one hundred thousand American soldiers lie on "Fields of Flanders," in mass graves. Their loved ones were given flags with gold stars. Glorious!

Many of the boys who went away as heroes amid music and cheering came back broke and they couldn't find jobs. Industrial crises have no respect for uniforms or heroes. In many cases the American Legion used some of these soldiers to break strikes. Employers have grown richer than ever before; capital has concentrated to a phalanx hitherto undreamed; and there are over twenty thousand new American millionaires. Wars are good for employers.

The workers must organize industrially to take the machinery of production and to operate it for themselves. They cannot trust any other elements in society. In truth, there are no others capable of ushering in a system of human justice, equity and its consequent happiness. When it comes to social problems the most ignorant people in the world are the "educated classes." Bricklayers and truck-drivers organize to get living wages, while school teachers exemplify individualism and get just what they deserve. The working class has progress with its march. Its feet are sounding a steady advance, and it alone can resolve order from the tangled web of social derangement that is all around us and that periodically bursts out in flames of war.

**Take the Industries!**

Unite on the industrial field to take the world we have made by our class labor! Be class conscious!

**Another Survivor of War**

**From Trench Mutilation To Industry With a Steel Arm**

Every worker is your fellow worker; every boss is your worst enemy. We are of many races and tongues, but labor is one, and we know the same sufferings and aspirations. We respond to the same factory whistle whether we are black or white, yellow or brown in color. The boss robs us whether we are Irish, Greek, Bulgarian, Swedish, German, French, English or members of any other nationality. And capitalism is not bounded by nations. It is international, with balances of power ever being arranged by contending governments which do the will of their masters—the banker-industrialists—because we, the workers of the world, have not learned our class position in the rotten scheme; because we are divided and fearful and ignorant. Let us learn the way. Everything rests upon the most submerged social group. Let us get together on the jobs and break a way for the air and the sunlight. Let us rise to break our bonds and with the same great thrust smash into smithereens the seats of the mighty, of all parasites. Then there shall be no wars among men. There shall be a world of leisure and labor shared in by all mankind with "life secure and free." That is the vision we hold and cherish. With solidarity, and a will that refuses to be broken, we shall realize our ambitions. We shall destroy this war-making, hunger-making, misery-making, degrading, enslaving, unsocial, unscientific and inhuman capitalism. It is up to the workers. They must make their own future; they must build it on revolutionary industrial unionism.

# Industrial Research

By KRISTEN SVANUM

THE first time any general national labor organization went through an industrial depression without being disintegrated was when the American Federation of Labor passed through the depression culminating in 1893.

Samuel Gompers stated in his report that the reasons the International unions had been able to retain their membership was that the mutual benefit features had made the members unwilling to lose the money already paid in for that purpose, and that it was for that reason the members had struck.

Admitting that it was a superficial reason for staying, he pointed out that it had nevertheless kept the unions in working order and enabled them to take up the real union activities again after the depression was over.

The drawbacks connected with a system of mutual benefits are so well known to the members of the I. W. W. and other workers interested in the labor movement that there is no necessity for dwelling upon them, but the problem suggested here is: Is there any other manner of getting your membership to stick during hard times? And would it necessarily have the same undesirable features as the mutual benefit system?

### The Anarchy of Production

The anarchy prevailing in the industrial system under capitalism makes it possible that while there is unemployment in one part of the country and in some industries, there will in other industries be a labor shortage.

This is not only a theoretical possibility, but an actual fact as well. The writer of this article was, during the heavy industrial depression in 1921, working in the anthracite mines of Pennsylvania that were operating continuously, and at full capacity all during the depression, and where there was a labor shortage throughout the depression's duration.

In last year's depression the rubber industry was working full blast on account of the balloon tire that created a demand for more tubes and tires that individually needed more labor for their production.

During an industrial depression, when prices decrease, gold is increasing proportionately in value, and the gold and silver mines are working full blast. Whenever some big construction project is going on in an isolated community there is always a shortage of labor, even in the case when an industrial depression is creating unemployment in other parts of the country.

These instances here are of course picked to show the most extreme and sweeping cases; but besides cases of this kind we all know of instances of one industry decaying in one part of the country, while it is prospering in other parts.

### Utilizing the Fluctuations of Industry

The reason that such conditions can exist is that the workers cannot, by the nature of their position, be in possession of detailed knowledge of the industrial fabric.

They must, to a great extent, rely on chance when seeking employment, and no advice is offered them that comes from a reliable source. Here is a job for an Industrial Research Bureau.

If every member of the I. W. W. at any time could get information through the organization of what industry and district would offer him the best opportunities in his line of work, it would be possible to place our members in such a position that an industrial depression would have only a slight effect on them.

It would be possible to have every Wobbly in as good a position during hard times as a non-member with the same amount of training would have during good times.

In that manner we should be in a position to offer something to our membership that would benefit them individually by improving their economic position, and at the same time benefit the organization by keeping its membership steady in crises of unemployment.

Where the member before would ask himself, "Can I afford to pay dues in these hard times?" he would now be asking, "Can I afford not to pay dues?"

The necessary information for that purpose could easily be gathered through the bulletins of the national and state governments, publications of employers' associations, supplemented and checked up by information gathered from the membership through questionnaires sent out in each special case, besides the information that may be volunteered from members working in the industries. If the material were indexed in an efficient manner it would be a mere matter of routine to answer any question submitted from a member.

### The Immigrant

The material gathered in that manner could easily be supplemented so as to be sufficient for giving imigrants the information they may want.

The immigrant, when arriving here, is the product of certain traditions, differing according to his nationality and previous occupation, making him well adapted for certain lines of work, while less adapted to others.

He would greatly benefit if he could get information about where he could best find industrial conditions that he could the easiest adapt himself to. Instead of getting that he becomes the victim of em-

ployment sharks, boarding house keepers, open shop scab herders, and others of similar character. These scoundrels are fleecing the immigrant and playing him against the workers who have already become wise in the ways of the country. In that manner they are making them both losers.

Well systematized information of that kind could be given to the immigrant through a branch office of the Research Bureau. It could easily have all the advertisement it wanted in the labor press of foreign countries, so that all labor unionists that immigrated would know of its existence. Those that were not unionists in the old country would hardly be a fertile field for organization anyway.

In that manner the policy of the employers of attempting to flood the labor market with cheap foreign labor might prove a boomerang and have just the opposite effect of the one aimed at.

### Vocational Guidance

The worker who is today looking for advancement is depending on two things: his own individual efforts, and the good will of his employer. This makes quite a great percentage of the most intelligent workers very poor material for unionism, for loyalty to the employers spells disloyalty to one's fellow workers and the union. In that manner the most strategic and the best paid positions in industry are going to workers that are indifferent or hostile towards unionism.

If the employer had a free hand in selecting the men for these positions nothing could be done about it. But he has not. He must choose those who can do that kind of work best, or go under in competition. For that reason it has been possible for radicals and labor unionists to hold important jobs in labor-baiting corporations; not because the corporation loves them, but because it needs them.

The continual changes taking place in industry are reflected in a continual change in personnel and in a change of relative importance of the different groups in the working force. While in a steam railroad the important group is the train crew, they are of relatively small importance on an electric road, where their strategic importance is transferred to other groups.

Whenever a new industry is developed, or changes of a radical nature are made in an old one, the best chances will be had by workers who are specially adapted to the new strategic jobs in these industries. But who can see the changes? A boy learns a trade, and by the time he has learned it a machine wipes that trade out. A man is an expert in some industry today and a back number tomorrow.

Very few are paying, or can pay, attention to the changes taking place in industry. They have no time to study the field as a whole. They have got to cultivate their own specialty. Their isolated position gives them a one sided picture of conditions, until a change does away with perhaps over half of their earning capacity.

It would be a great advantage to workers of that kind if they could get such information from the Research Bureau. In that manner they would be more dependent on the union for advancement than on the employer, and we should have the strategic jobs in industry occupied—more than is the case today by men loyal to the union, instead of men loyal to the bosses.

### The Price Curve and the Labor Movement

When industry is expanding prices go up and labor is in demand. But wages follow prices only slowly. For that reason unions are formed and growing during a period of industrial expansion, and many local strikes take place. Whether won or not the strikes usually result in a wage increase, because the bosses need the men, and because they cannot afford to have production interrupted while the market is good.

The connection between an increase in prices and industrial expansion is so close that by looking at a price curve indicating the change taking place in the purchasing power of money anyone can tell whether industry is expanding or contracting.

When industry is expanding the curve goes upwards. When it is contracting the curve goes downwards.

Looking at the price curve for the United States since 1800 one will see an upward movement until 1815 caused by the Napoleonic wars. During that time the first labor unions were formed. In the thirties an upward movement took place. During that time the first central labor unions were formed. In the sixties another upward movement took place and the first national unions were formed, together with a National Labor Union that united most of them into one general organization. During the following depression the national unions were most of them forced to dissolve, and the National Labor Union degenerated into a political organization. In the 'Eighties during another upward movement the Knights of Labor, as a national organization, and the American Federation of Labor were formed.

Another peculiarity that we notice is that practically all great and hard fought strikes that have taken place happened at a time when the price curve had started on its downward trend.

What we learn therefrom is that in time of industrial expansion, local strikes have a good chance to bring results, but that in time of industrial contraction it takes strikes of much wider scope to accomplish anything.

While the price curve gives a general idea of the industrial trend, we must remember the previously noted fact that there are exceptions. One industry may be expanding while another is contracting, and vice versa.

An industrial Research Bureau could examine facts of that kind and bring them to the attention of the membership. In that manner our policies could be based on fact and not on fancy. We should know how to obtain the best results, both under favorable and unfavorable conditions.

This would necessitate several kinds of investigation. It would necessitate an investigation of

# A New Society in its Making

By P. J. WELINDER

**This article was submitted in the Pioneer-Solidarity Literary Contest. It was not chosen by any judge voicing an opinion. It is run here because of the many excellent ideas it expresses and the thoughts it stimulates.**

THE Industrial Workers of the World is not a subject that can be dealt with in an article limited to a few thousand words, no more than it would be possible for a writer to tell his readers in such a limited space just what the present form of society really is. The best we can possibly attain by an article of this kind is to give some suggestions as to the numerous subjects that are to be found within the scope of the I. W. W., each one of them well worth a thorough-going discussion, and then trust that those who are capable of dealing with them shall, in due course of time, take them up for such a discussion. It is with such a purpose in view that this article is submitted.

It is now generally agreed upon that our present form of society, capitalist society, had its origin in that particular form of production we experience today. It found its birth in the old feudal form of society, but its parents were not, as all too often claimed, the accumulated wealth in feudal society and the almost spontaneous outburst of intellectual forces manifested in science, sculpture and literature and generally known to us under the term "Renaissance," On the contrary the renaissance as well as the downfall of feudalism were caused by the growing power of capitalism. The factors that brought about capitalism are industrial in nature and not either economic or spiritual. (Please note that economics in this connection is taken as a science and as such its development conditioned by industrial factors).

We may take for granted that the accumulation of wealth and power, that had taken place during feudalism, by necessity, must culminate in an enormous suppression of the toiling masses—the serfs. We may also presume, quite logically, that those slaves, like human beings of today, engaged themselves in a constant struggle with their oppressors in order to survive. That this struggle, then as today, should develop numerous new ideas in regards to securing the necessities of life is equally certain. One of these ideas was capitalist society as we experience it today, and that idea was the one that proved itself triumphant and the only one that could become triumphant because it was the only one that corresponded to that stage of industrial possibilities.

The foundation of capitalism is wage labor. Capitalism cannot be either conceived of or exist except in connection with the wage system. With the abolishment of wage labor capitalism is abolished, although we might grant that mankind thereby might not be liberated. The liberation of mankind depends not upon what form of society might be destroyed, but upon that form of society which will be established in its place.

When that fugitive rebel-serf, who hitherto had sustained himself by barter of goods that either he produced himself or else picked up on the seashores from some wrecked sailing vessel, came upon the idea of hiring another serf to work for him for wages, producing that particular commodity for which he found the best market, capitalist society was started. By this method it was found that both of the parties involved had established a greater security in life than had heretofore been their lot. No longer did the barterer need to worry about how to get the goods wanted and needed; no longer did the laborer need to be in fear of not having his next meal secured. The one could continuously devote himself to the task of securing a market, the other to the task of producing what the market called for without any fear of not being able to dispose of the product.

This wonderful discovery proved itself to have almost limitless possibilities of development. If a man could be hired at so much per day to produce a certain product, certainly another man could be hired on a similar basis to go out and dispose of the product. The one who hired the parties, the promoter, placing himself in the center, became the capitalist. Both of the parties hired were to render him the product of their labor power, for his service in promoting the deal and keeping it functioning. As a result, at the rate he was able to employ more men, his fortune and thereby his power, rose.

### Division of Productive Forces

The method itself proved to be conducive to

further division of the work at hand. New trades arose and a general tendency of specialization on the industrial field took place. The result of this specialization was a greater amount of products from a given quota of labor power. In other words, labor became more productive. It was this increased productivity of labor under the capitalist form of society that determined its success as a new form of society.

Under the capitalist form of production people have been forced to adopt an entirely new mode of social and individual life. Instead of a life of isolation, scattered over vast areas of land, people were forced into close proximity to each other. The mode of production being co-operative, each individual producing only a small part of the product, huge factories had to be established in order to facilitate this new form of production. These factories, in turn, are responsible for the modern cities, our present-day centers of civilization and culture, as well as of vice and degradation. Capitalist society was established.

Little needs to be said to sustain the claim that environment determines our development. Even those who have never studied and have never given any thought to social forces or any kind of scientific discoveries or theories are aware of this fact. We constantly hear people make remarks about their fellow men, such as "he looks like a farmer," or "small-town people," etc., thereby, perhaps unconsciously, indicating that there is a difference both psychologically and physiologically to be found among the rural population as compared to the city dwellers. That there cannot be any other ground for this difference, mental or physical, than the different environment in which they live we also find generally admitted in the fact that whenever a youngster is sent from the country into a large city, his own folks watch closely for some manifestations of the influence of city life in his conduct.

### How Ideas and Institutions Are Made

It is, on the basis of the above-mentioned facts, obvious that our mental activity should change corresponding with such enormous changes as those which signify the converting of the whole civilized world from a feudal state, where its inhabitants lived an isolated life, into our modern capitalist state with millions crowded into a city of only a few square miles. Our whole literature, our art, science and culture in general are products of our mode of living, just as much as the manifestations of medieval art and science are a true reflex of their form of society. To put it bluntly: due to our present capitalist mode of production we have capitalist science, capitalist religion, capitalist art; in fact a capitalist civilization.

All that we find today in the form of social activities is only a reflex of our present capitalist society. All the various societies we are blessed with, our churches, our red cross and other crosses, fraternity orders, craft unions, schools and educational institutions; in fact, all social institutions of today are only so many auxiliaries to the capitalist state. Each and all of them have been brought into being with a purpose of healing some wounds on the body social caused by the present decaying form of society. Our politics and statecraft as well as the whole machinery of state has likewise no other object than to assist in keeping capitalist society in the saddle. Where persuasion fails coercion is brought into play in the form of militarism duly sanctified by the present judicial system which is likewise a part of the system itself.

Can we, on the basis of the above, depict the future society and determine what the I. W. W. really is? It goes without saying that the I. W. W. must be something more than a mere labor union corralling those forces in society who are on the market as sellers of labor power, with a view of trustifying this commodity and thereby gaining a higher price for it. If that be the case, then the I. W. W. itself would be nothing but a capitalistic institution and its significance as a social factor rather negligible.

The tendency towards trustifying factories, plants, mills, mines etc., into solid units embracing a whole industry, and to still further specialize production wherever that is possible or to bring about such specialization in those industries which are yet operating on a more or less individual basis, is so obvious to all who care to notice it that a mere remark as to this fact is sufficient. That this process of solidifying industries, of bringing about still greater specialization and thereby enforcing still more cooperation in the mode of production will continue in the future as far as we can at the present time ascertain with any degree of certainty, is also a point upon which we shall all agree. That such unification and consolidation within the industries much bring about a form of social activities and social life corresponding to such a mode of production, and that this form of society must be industrial and not national in its scope, is beyond doubt. To be instrumental in building up this new industrial form of society is the historic mission of the Industrial Workers of the World.

### The Backbone of Capitalist Society

Capitalist society today is living on its last resources. What is left to maintain it are those remnants of the industries that are still operated on the old and wasteful method of the individual, non-specialized form of production. The most significant of those remnants within the industries is the agriculture industry. By far the greatest part of that industry is still in its infancy so far as industrialized farming goes. As yet the individual farmer produces the major part of our agricultural products, and on that account he is also the most patriotic of all the citizens. To him there is a "country," a "fatherland," although his land might be, and in most cases is, heavily mortgaged.

It seems almost an irony of fate to find the last shred of the feudal society being the chief and last mainstay for that very society, capitalism, which was the cause of overthrowing feudalism itself. Because a serf is really what the "independent" farmer of today is. Not perhaps in the classic sense of the word, but so much more in reality, he is a serf under the moneyed vassaldom of the combined financial interests of the world and must, in order to be granted the privilege of being a farmer, first render tribute to them in the form of interest, taxes and profits before he can touch the product of his own toil.

It is interesting to note how fast modern capitalism with its specialized form of production is invading the agriculture industry. At the rate the capitalists find themselves unable to invest their surplus value in manufacturing industries they turn to new fields and apply their method of specialization and large scale production. In the cities the "home" industry is well developed and will soon be completed as an industrial unit. There it took the form of large hotels and apartment houses, operated directly by their owners, as contrary to the "home-building programs" established by the money lenders with the mortgage on the home and its so-called owner a serf to the holder of the mortgage. In addition the various functions of the home were also industrialized and specialized, and the former "home serf"—the housewife—was made a wage earner in the restaurant, the laundry, the kindergarten or some other industry flourishing on account of the wrecking of the home.

### Industrialized Farming Tendencies

On the agricultural field the process is similar. Instead of the small farm, operated with such primitive tools and implements as its owner's finances permitted him to use, we get modern machine farming. Modern engineering, chemistry, scientific cultivation of flora and fauna, are combined and constitute modern farming. Against this form of operation the independent farmer is no more able to compete than a housewife is able to compete with a modern steam laundry. Soon we will find the farmer a wage laborer within the very industry in which he was previously the independent producer, and the more prominent ones of his class will be superintending his work. He will be forced to work in cooperation with his fellow farmer, not in some utopian cooperative farming society, but as a wage slave under the whip of hunger held by the moneybags who also control all the other industries. When that last of the industries has been industrialized capitalism has vanished and with it nationalism, and we will behold the **industrial form of society.**

Whether this new form of society shall render any higher degree of liberty to the toilers than capitalism has done depends upon other factors. So far we have been able to trace the development of society upon industrial factors alone. To ascertain what such a form of society will hold in store for the workers depends upon the working class itself. The best we possibly can say for those evolutionary forces which bring about the changes in our social structure is that they are conducive to action on the part of the workers. How the workers will respond to their urges remains to be seen. The development and the form of society depends entirely upon industrial factors; the equal distribution of the products of labor depends upon the workers' ability to organize themselves and take what they produce. To bring about this form of organization is the task confronting us.

In accomplishing its task of building the new society the working class must rely upon its own resources and its ability to create its own instruments needed in the work. We cannot hope to gain either the instruments now used by the capitalist class and convert them into use for ourselves in creating that culture and social life which will eventually signify the triumph of our ideal, or to use them for such purpose should we ever take them. Capitalist instruments of coercion or persuasion can only be used to retain and maintain capitalism and not industrial communism such as revolutionary workers have in view. We must have new instruments by which to build our new society and we must make and perfect these instruments ourselves.

### In "The Image and Likeness——"

Looking back a little into history we will find that capitalism itself also created its own instruments to suit its own purpose. Its statesmen, warriors, authors, artists and scientists were busily and enthusiastically engaged in creating such instruments as were needed firmly to establish the new form of society. Need, and nothing else, is the driving force behind all labor and all art. The needs of the new capitalist state brought about the science and art significant for that form of society, just as previous forms of society had created their own art and science.

So far as the true artist, or true scientist is concerned we will admit that the art or truth sought is the aim in itself and he does not concern himself with the result it may have upon the people. But we must also admit that the power either of imagination or research is limited by the material conditions under which the artist or the scientist live. Thus the ideas evolved by the hellenistic artisan could never expand any further than hellenistic slave society permitted. He strove towards expressing perfection as he conceived it, but his power of conception could not extend beyond the limitations of that time. Hence perfect hellenistic art signifies how far society could develop intellectually during chattel slavery.

Nationalism triumphed in hellenism and tribal society went down in defeat. The stable form of society which nationalism affords was necessi-

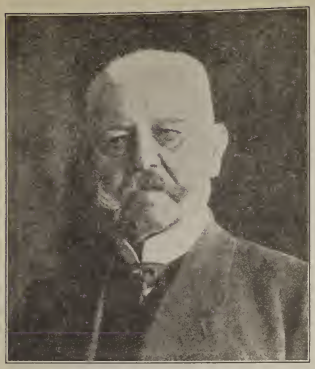
# Poems



By LAURA TANNE

## Waitress

IT'S funny——
I can't seem to remember anything
Except 50-cent checks and customers
Who give a smile
On the silver plattie of their belly-full good nature.
I can't seem to remember anything
Except omelettes and torrents of sweat and dish washers——
They keep sprawling all over the place
Greasing my thoughts,
Clogging them with ugliness.
God! I'm tired. . . .
My feet have a spinster's grudge
Against the laughing gold of my young hair.
God! I wish I could remember
Where I once saw a nest of honey-sweet eggs
In a tree where a strong wind blew.

## Growth

I USED to think pretty thoughts
All dolled up in crinoline and lace
The color of my little-girl dresses
Matched my pink and lavender thoughts
As they strolled along nice roads
Where the wind was polite
And the sun never said heated things to one. . . .
. . . But now . . . I am a factory worker
Listening for silence amidst the dark roar
Of a hundred machines
Thrusting black-beast shapes before the sun.
Sometimes my respectable memories
Go into convulsions of horror at my thoughts.
My respectable memories go running
Down the street of the past
To hide in yards of crinoline and lace. . . .
Because my thoughts are smoky and grimy,
They are garbed in red and black;
They speak blasphemy and feel a strange, fine hate.

Paul Von Hindenburg

# Hindenburg the Figurehead

By LOUIS BARTHA

(Editor of "Bermunkas," Hungarian I. W. W. Weekly.)

**EXCITEMENT runs feverishly high in political circles about the presidential elections in Germany. Loud cries have been raised to the effect that Hindenburg is a chair-warmer for the kaiser; that he has been elected by the treason of the Social Democracy; and that even the "grace of Thaelman" (communist candidate in the German presidential election) can be thanked for the success of the war lord.**

**Let us see if "Old Hindy" is really the cause of so much fear and excitement. The German presidential election, like similar elections in all other countries, is a political circus. None of these elections will ever decide the fundamental questions of society. The German electoral contest is nothing but a sham battle; a fight for positions of advantage by parties, which are headed by "great leaders." No matter which party succeeds, the fundamental conditions of society will not, can not, be changed by such success. The change is merely one of personnel, a switching of cliques in rulership, These are surface matters, just like fats in a bucket of dishwater, which are always on top no matter how the water is stirred, nor how many new forms the fat spots assume, The point is that they do not alter the basis of things, nor do they change the form of the bucket.**

Just that business is necessary. It is imperative that an alteration be made in the social bucket, or in other words, in the economic structure, without regard to the position or shape of the surface fats. The bucket is not controlled by the elections, but the contrary holds true: elections are controlled by the economic buckets. There is no difference between Germany and the United States in this respect. Industry is developed in the former country nearly as well, and in a qualitative sense even better. What Wall Street is to the United States Wilhelmstrasse and Friedrichstrasse are to Germany. Political power of the feudalist group, the Junkers, landlords, slipped away from their grasp. This Junker caste or class was the dominant power in politics, in the state, only as long as they were economically supreme.

### The Real Rulers

But there are more efficient, progressive elements in the economic arena, and a far greater power has grown out of the fields of factory production, which is wielded by German Big Business in the personnel of a financially mighty set of industrialists. Not the Hindenburgs, Stressemans or Loebles are the real bosses, no more than is the moribund aristocracy that has faded into the background of impotency. The German Morgans and Rockefellers —the Stinnes, Thysens and Krupps, incarnating Big Business, are the dictators of Germany. Those who win elections in Germany are taking their orders from German Big Business, just as the mannikins who go to the White House bow obediently to their masters' voice in America. In Germany, as in America, this voice is that of the

capitalist class, the industrial monarchs and emperors.

Since the kaiser fled from his country, from his beloved people, the owners of the industries have become the sole executive power in Germany. Previously the power of the state had been held by two classes in a kind of combination. Junkerdom and Big Business ruled jointly. Junkerdom, the military force, carried out the wishes of the German capitalist class. Therefore, before the world war, Germany had been a combination of two ruling factions, compromising to one another and complementing the needs of each other. Kaiserism remained from the feudal period, and took its strongest impetus from the time of Frederick the Great. It became necessary for it, in a society that had developed a powerful capitalism, to make concessions to the capitalists. Members of the aristocracy became involved in business enterprise. The chief Hohenzollern was himself a stockholder in numerous concerns. For parade purposes they still sported their brazen and shining titles. They still held aloft their feudal traditions. But in secret they were speculating in the stock markets. And this gambling in the fruits of sweated working class labor was not confined by the aristocracy and the royal house to Germany. It was indulged by them in the bourses and stock exchanges of all other countries.

### Compromise With Junkers Ends

The kaiser quit Germany and the capitalist class no longer required a compromise with Junkerdom. It rid itself of feudalism's remnants, which, though failing even before 1914, was a hindrance to capitalist development. Kaiserism by its very character owned too many traditions demanding strict observation, and capitalism has no traditions, holds nothing sacred except profits.

Big industrial capitalism is very much in favor of abolishing the useless, nonsensical and expensive kaiserism. The capitalists wanted to be on the political field what they were in the industrial arena. They have conquered. They are absolute dictators over the life and death of the people. They are the exploiters of the millions of workers; bosses of everything and everybody in Germany. Where one kaiser was dethroned dozens have been raised in his stead.

This situation differs none from that obtaining in the United States, in which country the coal, iron, oil, steel, lumber, shipping, transportation, foodstuff and money kings hold infinitely more power than any kaiser ever possessed. Capitalists do not care to share power; they must be absolute, to give the final orders that all must obey.

Modern German industrialists are strong not only in their own country, but they have influenced the economic powers of the world. The kaiser could only make the German people pay taxes to him, but the industrial kaisers tax the whole world. It is foolish to believe that the kaiser made the world war, and most thinking people know better. He acted merely in behalf of the capitalists. This action was for the capture of the world market, or as large a part of it as they could grab, just as it is the object of the capitalist class of any country to strive for this market. And political governments have been so many rubber stamps in the hands of their own capitalist classes. So far as the working class is concerned it is of no consequence who is in control of the governments of such industrially developed countries as the United States, England and Germany. The executive power of the governments is quite limited. Their business is to expedite the mandates of Big Business. "Old Hindy" must serve the German Morgans and the American Morgans also, since the Dawes plan is operative. Should Hindenburg fail in his service to the Morgans and Stinnes he must go into the discard. Retire or bury himself he must, for he will not be tolerated unless he performs his tricks as the ringmaster cracks the whip.

### Field Marshal Not Dangerous Monarchist

Hindenburg is not a dangerous monarchist. All this is talk used by opposing business interests in such countries as the United States, England and France. They all fear a revival of German industrial competition. England and France have the African markets that used to be exploited by Germany, and they also have part of Asia's. The United States wrested the German South American markets and some of Asia's. German revival in industry signifies regaining the prizes over which the less efficient powers united in arms to deprive Germany of. Therefore, allied capitalists would lose the advantages secured during the war and thereafter. The poppycock about kaiserism is another bugaboo in which the former kaiser is made a scapegoat once more to suit the propaganda purposes of rival capitalist groups. The German capitalists got rid of the social democratic political leadership. This was not because the socialists did not serve them well, but because they failed to marshal sufficient prestige, and this is based on the power to command obedience. The socialists were lacking in authority.

Then the communist party tore a great gap in the erstwhile united socialist front, causing the socialists to lose much of their influence upon the masses. The large body of people did not have anything but hate for the deceased president, Ebert, for Scheidemann and Noske. The workers of the Left never forgot, nor will they forget, the murdering of thousands of revolutionaries. They remember Rosa Luxemburg and Karl Liebknecht. Through their agitation the social democracy became very much discredited in the minds of many workers.

The capitalist class needs authority in government. It must create respect, no matter how prompted. It must gain implicit obedience to its brands of law and order. This the social democrats were not successful in compelling. What they did accomplish, however, was to save the capitalist class of Germany in the hour of its trial, its moment of most fearful peril. For this service it lost the re-

spect of the masses. The two-edged sword cut its own throat.

### What Hindenburg Represents

Hindenburg's personality combines authority, respect for law and order, and the "fear of God." He is the idol of German youth and the hero that thoughtless millions worship. The Germans, as a whole, are law-abiding people. The war made little difference in this respect. But the German workers in large numbers had so much disrespect for the Scheidemann and Noske type of socialist that their disrespect leaped over personalities and included the offices they held and the party they represented. Hindenburg's election proves that they wanted a different kind of ruler, one that is less hypocritical and that personifies authority. They did not want the kaiser brought back from Holland. However, the industrialists will not hesitate, if it suits their purposes, to welcome him back, should the Hindenburg brand of ruling fail to enlist the support they require. This is based on abject obeisance as an attitude of the German people before the altars of German industrialism.

The conditions of the wage slaves in Germany are very sad. Political parties, Right and Left included, gambled away the harvest of revolution, and all that was grasped in the bitter battle of the revolution has been lost on the green baize of parliamentarism. The working class has been defeated in these political circuses.

If the German people would save themselves from utter slavery, and strangle in the bud the monarchical coups d'etat they must again resort to the weapon that they used against the Kapp monarchists to such excellent effect. This weapon of the working class was, and must ever be, its economic action —the general strike!

Germany has had all varieties of political movements from Noske of the extreme Right to Max Holtz at the extreme Left. Noske served as hangman for the bourgeoisie who owned him, while Holtz demanded money at the point of a gun in the name of the revolution. The Noskes and Holtzes had their day. They tried their weapons. Both failed, absolutely.

The workers must go back to their real power, their effective instrument, the general strike. This is the only power that counts. It is the only one that is fundamental. It is the power to change the forms of the bucket. If that be changed—the bucket—the economic structure of society changes and the rest is clear sailing.

### Industrial Control

In order to effect industrial changes workers must have industrial organizations. Industrial control must grow out of the successes of these industrial organizations. For power lies in the control of things, as with the elements. It is nothing to have plenty of water, steam and electricity. These are useless in themselves. They may be dangerous, destructive of human life, if running wild, unchecked. But these forces serve humanity when men and women harness them to do their will. This is control, and in the control of modern society, based as it is on the industrial system, those who would command must possess and direct the industries.

Read the I. W. W. preamble and you will get the real answer to the social questions and seeming enigmas that are in the maze of life. Abolish the wages system, is what the preamble says the workers must do to establish their own destiny in freedom. All else is superficial: politics, religion, and the other circuses. Abolition of capitalism means our emancipation from wage slavery and we must do the job ourselves as an industrially united working class.

# The Paver

By MARY CRITTENDEN PERCY

**A mighty Juggernaut!**
**Epitome of mind and will**
**And one far-reaching arm**
**With power to spill**
**The elements, with which its yawning maw**
**They constant fill.**
**A crunching awesome sound . . . .**
**With gnashing force that's quickly sped**
**The rocks . . . . digested grist**
**Outpour to spread**
**With masticated mash,**
**The road's foundation bed.**

**Rolls on the mighty Juggernaut!**
**Then flows on all a black and steaming mess,**
**On this the Juggernaut**
**Its power will press! . . . .**
**And lo! . . . . another day**
**The Juggernaut has rolled away!**
**For all, the highroad gives access, . . .**

x x x x

**Now , . . . passerby on foot or wheel, —**
**Finds roadway smooth and hard as steel.**

Written in deference to the criticism . . . that the poet ignores the marvelous devices, which are primarily works of imagination, and are so large a part of the mechanistic world in which we live. I have watched this great machine for several weeks, do the work of ten men, with incredible ease and a grace of its own!

# Sailor Boy

By MARY HOPE

HIS eyes were stained with the glint of sea winds; his face shone with the strength fostered by kinship with masts touching high skies and waves struggling toward warm sunsets. Striding across the neat grass of the City Park this sailor boy seemed all the part he played in navy posters: a laughing boy astride the back of a yellow tiger or lighting the fire of a Spanish señorita with his smiles, or touching buoyant shoulders with picturesque Hindus, Arabians, Siamese. . . .

But when he spoke, a raucous, grating accent to his voice focused my awakening observance upon ears, red and obvious; eyes, shadowed and unhealthy, a mouth with youthful hinges broken and drooping in the wind of vulgar scorn—a harbor of blatant voicings.

"Hello, kid, how's things goin' tonight?"

Under the glimmering roof of the city, were dark, dark ponds of people restless under the stars, and bright with lily-faces. We slipped into the crowds and moved toward narrow streets, where corner lamps, unsteady as broken masts, sent hysterical flashes of light upon the houses, gray and age-eaten. Houses, lamely-bent as old women, huddled together, gaunt, vengeful, the secrets of the centuries locked within. The sound of night birds in the air . . .

The tripping of light taps signalled us to glimpse corn silk limbs going up stone steps and into a dark hallway. Quickly she went but not before she had flashed scarlet lips and rude black eyes at both of us.

"Some cherie," whistled Sailor Boy.

Beyond the dark hallway a further light gleamed and out of it came two of Cherie's ten thousand sisters of a trade. Their coats were wrapped tightly about slimness and their shoes seemed pitifully frail. But even in the distance, jewels and feathers consorted loudly with their fetid jabbering and unquiet laughter.

We reached the next corner where four street lamps exchanged glances intimately and cast their yellow glow upon a huddled form, a blindman lifting vari-colored pencils hopefully and giving the chilling darkness a whiff of plaintive reality. Perpetual cats in starved gray skins ran swiftly to the refuge of black alleys, the escape of bounteous ash cans; and in the silence sounded the pitter-patter of someone running in the distance. In the dusk of the shadow-spun street, little strange birds floated on the wings of imagery into my thoughts, and petals of dark flowers from sleep-poet-hearts were blown by winds of fantasy out of the pallor of the past to scatter in the moment's rosy conjurance.

"Where are the golden roofs?
Where are those who dared to build?"

Only silence answered the query of the beauty-loving, and

"The owlet's solitary cry,
The night-hawk flitting darkly by,
And oft the hateful carrion bird,
Heavily flapping his clogged wing,
Which reeked of that day's banquetting
Was all she saw, was all she heard."

But Sailor Boy was seized with visions of the flesh.

"Say, where d'ye think you're goin', walkin' around spoutin' dat poetry-stuff like you was sick? I gotta hit a joint pretty fast and dey ain't got no eatin' dumps around here. Ain't you hungry? . . . No? . . . . I lived at home onct. . . My old man worked in a shop makin' wheels for baby carts. Cripes, all dey made in dat town was hair for rockin' hosses and red and yellow wagons for kids and all dat. My old man goes on strike just before Christmas and I couldn't take his place when I got the chanct. Jesus, in a week dat town was mobbed with guys lookin' for jobs. The old man didn't have a chanct. I didn't either. What'ye gonna do in a case like dat? So I joined the Navy."

The Elevated crushed his voice as we passed through less mysterious thoroughfares leading to a hill upon which the container of my garret-abode stood prim and solidly.

Sailor Boy continued, "The Navy's alright onct you get used to it. But I'm gonna put up a kick soon. I ain't gonna sleep with a guy caught so bad with siff you get sick lookin' at him, me washin' in the same water with him, and almost kissin' . . ."

From the edge of the sidewalk I saw my garret-window slant stained eyes invitingly, urging the severing of the evening's companionship. But my splashing a few cool words and questions upon his crude insistence was unavailing . . .

"Say, you ain't no Jesus-singer and you ain't no—.

"What da hell are you, anyway?"

I tried to tell him. But in the dark sky of Sailor Boy's mind, no sun or moon shone bright, only gray clouds, old and heavy with impotency . . But did I see somewhere a lonely star flickering bravely?

For as I unlocked my door, Sailor Boy called after me, "Maybe if I was a workingman I'd understand your lingo . . . ."

# The Denver Post

By J. A. Van DILMAN

What is said here about the Denver rag can be said, substantially, of hundreds of daily liars throughout America. The capitalist press is noisome. In other words it stinks. Support the I. W. W. press and read the truth!

**ADD to the World's Seven Wonders that paragon of ocherous perfection, the Denver Post, which proudly boasting a paid circulation commensurate with its greatness, points likewise to an invitation blatantly written across half its front windows reading as follows: Justice, expelled from other habitations, make this thy dwelling place.**

Evidently the lady in question, although blind as a bat, has keen nostrils and is sensitive to pungent odors, since, to the best of our knowledge, she has consistently made herself conspicuous at the Post by her absence.

It is to giggle! Of a surety Jake, the circulator would extend her warm welcome even to a "Flop" in the mailing room did she but consent to hustle sheets on some downtown corner, he being partial to people handicapped as to other occupations for reasons we shall touch upon later.

The Post functioning along smooth paths of professional pay-triotism vaunts, with splendid abandon, its position as "Champeen of the Peepul" and standing defiant blares loudly its faith in the citizens of Colorado, more especially those who reside in Denver's environs.

Likely it subscribes to such slop as is shamelessly fed the public by a Chamber of Commerce gone propagandically crazy (like the proverbial fox!) to the effect that it should think no evil, hear no evil, etc., of Denver or the state of Colorawdough. Just what assumptions such bughouse slogans are based on lies beyond the pale of our knowledge, unless because of the wonderful climate and scenery we have begun to sprout wings, and are as free from warts, carbuncles and consciences as we are of real money; though all the rest of America, even to its hundred percenters, may be riddled with imperfections.

The Post, great and bilious, syndicating all the prostituted intellect obtainable, is widely read by deep students of the want ads and "Bringing up Father," while other elevating characters such as "Abie the Agent" and Dr. Frank Crane do their share towards educating its readers.

Barnum was right, and whether he said it or not, he should have, while to the Greatest Newspaper of the U. S. A. (they admit it themselves) ought to be delegated the task of broadcasting: Give 'em what they ask for; it puts 'em to sleep!

The foregoing could easily lead to the hasty conclusion that the Denver Post devotes no space to world progress but careful analysis must dispel such illusions. To prove our contention we have only to point with pride to that expert mental gymnast, Arthur Brisbane, who in one breath blasts a system based on inhuman exploitation and in the next boosts "Calvin the Scissorbill" and "savior of Wall Street and Gary, Indiana," for a footstool on high—without losing his balance. It is with pleasure we note his large and intelligent following, which unable to distinguish between apple sauce and bitter philosophy, chooses the former as more easy to swallow. Oh! for the brush of a master, that we might depict in a few bold strokes ten million jackasses in happy procession following their prophet through intricate mazes, mouths agape and ears gaily flapping, until, floundering helplessly, they stand mired in dumb admiration.

Arthur, no doubt, derives a few solid chuckles and much filthy lucre from playing with what passes for gray matter in the heads of his admirers.

While on the subject we must give credit also to Post Punches" which strike us at times as worthy the effort of Bernard Shaw (with his brains removed). They have a habit of reaching out suddenly to sock our intellect square in the vision, blackening its outlook and causing sweet conscience to burst into flame. The brilliance of their logic amazes, while for sheer sarcasm no word could describe them.

Take, for example, the following culled from an edition we found in a refuse can.

**Denver police have been rounding up the gentry of leisure and vague pursuits, in an attempt to rid the city of bandits. Their clean-up of the rooming houses was a commendable piece of business, and if they will now contrive to get rid of them, either by sending them to jail or hustling them out of town, the crime curve will doubtless slump. The police and everyone else knows quite well that, in general, the man who is idle these days is needlessly so. If he is honest and wants to work he can find work. If he is loafing around a rooming house or pool room, the chances are very strong that he is waiting for the devil to find some mischief for his idle hands to do.**

Oh, Justice! Make this thy dwelling place! Personally we should choose a clean box car in preference, or even the "can." Gentle spirits of capitalist philanthropy who, by applying salve to the cracks

and haywire to broken parts, mend and smooth over with glib-tongued hypocrisy a system of cold greed and aggression unparalleled in the history of man.

Out of a heart full stored with blue vitriol and blazes, words leap to our lips which, while impotent to express our contempt, might lead to the belief that it was our intention to designate the writer of Post Punches as an abysmal ignoramus, or perhaps something more shameful, when we but wish to indicate that a facile pen guided by a mind more or less capable is at times dangerous to useful society. This is really a delicate subject and one which like a hissing copperhead should be taken care of with a long handled club.

It comes as a shock, nevertheless, that such an eminent journalist should try to insult the semi-intelligence of a well insulated public, by maintaining that men are needlessly idle these days.

No doubt this so-called editorial writer (we almost said lickspittle) might be accused of having more plain guts than mentality when out of a benevolent soul he so gracefully recommends jail for men out of work.

By all means put the criminals to work. We feel certain the writer of Punch and Judy will cordially endorse our suggestion that the first to be chosen be parasitical "limousine lizards" and their upholstered, overstuffed consorts" in the art of living on the workers backs. A man of his fine perceptions could not be in accord surely, with the irony of a system built on injustice—whose only remedy for injury is to inflict further wrong or to heap abuse on its victims, who, made passive law-breakers by virtue of a lop-sided reasoning, are put in jail for having been robbed at the point of production. He must know, of course, that capitalism, based on legalized theft and hocus-pocus is responsible for the filthy mess which clinging to its skirts offends even its own berkshire tastes. Naturally the most obvious way to clean up such unavoidable by-products of a system of waste is to stuff it out of sight since it cannot be efficiently destroyed except on occasion. This desire to avoid its own offal makes easily possible such statutes as the vagrancy law—that typical illustration of master class logic—by which hunger is made the violation of a pretext at safeguarding society.

We sometimes wonder just what kind of a jolt it would take to rouse the average worker who smiles vacuously on, in the face of assertions flung in his teeth that might be expected to make a jackrabbit howl with rage, but which he swallows at a gulp, willing to be hypnotized into believing that his belly is full of "lobster a la Newburgh" when it humbly craves "pig snouts and cabbage" at fifteen cents a throw.

Reverting again to this Shakespeare of journalism or is it (liver and) Bacon, who, making a noise like the Spanish inquisition, mentions the man out of work in such terms of good will.

Admitting that neither pool rooms nor lodging houses make attractive lounging places, what in the name of Jesus of Nazareth can a man do besides loaf when a job is denied him, or where can he do it outside of such places, unless the burglars of surplus labor should throw aside the doors of their own nicely appointed hangouts and bootlegging joints, such as clubs we might mention? Perhaps "Post Punch and Shears" has something practical to offer. A nice dirty alley for instance; since streets are crowded with traffic; or perhaps the drawing-rooms of Denver's elite, with the Brown Palace and Shirley Savoy thrown in for good measure.

Oh! The nawsty beggah! The veh-ry ideah! Bring in the salts—no—not the Epsom—we have THAT already. Frankly one of the signs of tottering empire is the fact that a man can draw pay for scribbling opinions beneath the contempt of an honest cur dog.

Take, for instance, the assertion brazenly made that men are idle from choice when two-legged humans are working in Denver for their meals. Thousands thrown out of employment by closing of seasonal occupations, head for the only city of size in this vast territory to become a drug on the market. Still, what would the expounder of "Punch and Tomatoes" or his ilk advise them to do? Hibernate like a bear or crawl into some badger hole conveniently placed on a windy prairie there to starve patiently and in discomfort while waiting for work? We have been granted the much touted privilege of "existing" in this fair city for quite a while, but never have beeen accorded the sight of employers of labor tearing their hair for lack of wage slaves. Just at present we might say without stretching truth that the market is flooded to unfathomable depths.

Most workers in the hotel and restaurant industry, exclusive of cooks, receive from seven to ten dollars for a seven-day week, with fourteen dollars a high wage. The hours run anywhere from eight for women to fourteen for men, nor are employers sometimes averse to squeezing out just a little more time from the women than the law allows.

In saying "most" we mean just that and nothing else but; for though some do get more, many get less, and quite a percentage receive, beside a meal or two, as we said before, exactly one dime less than ten cents a day. Should anyone doubt this we are ready to produce startling proofs which are itching for public consumption.

That such conditions obtain and misstatement of facts regarding them is possible can be evidenced by an offhand glance at any capitalist sheet between the two coasts, and the saddest part of our tale is that it is openly done without fear of arousing resentment from a people who, either dead from the collar bone up or putrid from unprincipled scheming to "get by" at any cost, are blind to everything but chasing after the elusive nickle.

It seems almost useless to reiterate that in this day of high powered industry and modern machinery, more workers are being constantly displaced and in an ever increasing ratio; nor to aver that although all were employed, it would be impossible under a system gainful to the employer to receive in

wages the full of their product. Such being the case must not the surplus be stored against future or foreign markets, and lacking those, is it not plausible that the actual creators of wealth must be laid off because they, a majority of consumers, cannot purchase the surplus value stolen from them? Unable to buy back all they create, while yet on the payroll, let us ask of, say, the writer of "Pancho Caramba," just how much purchasing power these workers retain once they are rudely divorced from all connection with wages? The editorial writer we speak of "and everyone else knows quite well" that such as he, with a mind overburdened by its load of poison propaganda will scarce find room in it for these few simple facts, clear and apparent to anyone capable of honest reflection.

Is it not logical (we address human beings, not the high priests of Mammon or their kowtowing Scribes and Pharisees whose credo reads Get the Gelt honestly, if you can, but by all means get it), that wage workers and especially those who are migratory and having no families to sponge from; forced to pay transient prices all out of keeping with their earning capacity, must drift into pool rooms and lodging houses and later the streets, for nowhere else are they welcome?

The police and everyone else knows quite "strongly" that real thieves live quite comfortably while the imitation brand, addicted to red ties and long legged "Shebas" are meat for even the quasi-intelligence usually found among policemen. Between these latter and the unfortunate "Ding" who limits his crime to begging a rare dime to keep from starving, our dungeons are usually filled to satiety, with the latter in a heavy majority.

Crying for justice amid ravening wolves would be an occupation conducive to optimism compared to the chances a victim of the system of exploitation has; dependent on the mercy of its profit mongering exponents; swelled up with their own importance and viciously selfish as no beast on earth can be but the so-called human.

Knowing all this why pick on the Post, which although a yellow sheet is only a trifle worse than most? We have nothing particularly against it more than the rest, nor shall we more than allude in passing to a matter on file regarding the trifling sum of several hundred thousand dollars loosely connected with its policy during the Teapot Dome scandal. Still, being in position where data is at hand, we are forced to use it as a concrete illustration of capitalism on the rampage and the style of its machinery (1925 model) smoothly at work.

Nor does the Post, which brings us back to Jake the Circulator again, deal entirely in money by hundred thousand lots. Indeed no! It watches the coppers as well.

Many sorts, ages and conditions of men, women and babes, who selling this paper, help swell its paid circulation. Whether the fact that some are old, paralytic or blind has anything to do with its policy in employing them, we are not prepared to say, but to a man up a tree it does look as if the Post takes into consideration the average person's sympathy for those suffering one handicap or another in business like fashion and it might further be added, whether this great daily purveyor of rot is conscious of it or not, that such unfortunates usually make most submissive slaves.

We do know, however, that it affords less protection for its "hustlers" than any newspaper we have ever come into contact with.

If in any city but Denver any newsboy infringed on territory allotted another the revolution would be on but here "wild catting" newsboys are deliberately turned loose like a swarm of bees to sell whenever and wherever they may. Not only that, but this would-be "harborer of Justice" goes to pains to place its issues on sale on stands, in department stores, etc., and the sight of boys and girls competing for business in the middle of blocks, before and inside of office buildings is enough to make a real newsboy go stark raving crazy.

Take the case of a man who, maimed and unable to secure other employment, bethought himself of earlier experience as a newsboy and who because he knew how to sell was soon given what were supposed to be fairly good corners. By persistent effort this fellow increased his sales by about fifty per cent, yet rarely did they net him more than a few pennies over two dollars a day, while at times it amounted to less. Working for any other big city daily and under fairer conditions he might have averaged on ordinary days fair pay but hampered by the grasping policy of a circulation department which considered nothing but increased sales this was impossible.

To illustrate, let us point out a certain downtown corner where sales are slow until the closing of a large department store. The trade from this latter might have easily balanced a number of hours spent in nursing unprofitable patronage in all kinds of weather, had it not been that about twenty minutes before closing time each evening a plump, well-fed lad just out of high school passed staggering under a load of Posts with which he entered a door through which some moments later hundreds of employes came milling out. There, comfortably ensconced, he sold more sheets in fifteen minutes than the regular news vendor whose territory he intruded on disposed of in five hours of hard, steady effort.

For a solid quarter hour the wide paving would be jammed with men and women most of whom carried newspapers purchased inside while the regular man, trying to keep a stiff upper lip, made hopeless attempts to catch an odd straggler or two. His sales to these hundreds usually reached in the neighborhood of seven or eight.

Nor is this the only count against this daily in its greedy race for circulation.

Its regular newsboys take out "night extras" about 3 p. m., striving manfully to dispose of them before the supply truck rolls round at 5. If, as often happens, when around 4 o'clock a new headline or extra is released, it usually reaches the

# Was Morgan Wrong?

By VERN SMITH

## SECTION V.—AN APPARENT EXCEPTION TO MORGAN'S THEORY

(Continued from May Issue)

THE READER will no doubt remember that in Morgan's classification slavery and nobility, hereditary kingships and divisions of the social body into ruling and subject classes take place late in the middle period of barbarism, and do not develop well until the third period of barbarism is nearly passed.

The problem which the anti-Morganites are never tired of posing for us is this: How do you account for the prevalence of both slavery and a noble class among the Indians of British Columbia, who most certainly are not barbarians, even of the lowest stage, according to Morgan's definition? And how account for the Hawaiian absolute monarchs, and class of nobles, when the people there have, according to Morgan, barely advanced to the middle status of savagery?

TARO PLANT
This plant is one of the reasons why Pacific island culture is different from others.

This is the most serious "exception" to Morgan's theory, that the whole field of anthropology affords; all other "exceptions" are so minor in comparison with it, that it seems to me that if we are able to explain away this apparent contradiction, the others may well be left to their own fate, in the assurance that someone with more space and time at his disposal will soon deal with them.

I have used the two cases, of Polynesian kingship and British Columbian nobility, as though it were one single problem, advisedly. There is a strong resemblance between not only this feature of their life, but many others, and many men before have observed it, and given it different explanations. Ratzel, Niblack, and even Boas, as well as others, have commented upon the resemblances. W. H. Dall, writing "On Masks, Labrets, and Certain Aboriginal Customs" (**Pub. Bureau Ethnology**, V. 3, Washington) states that there is an amazing identity between the general culture, the use of masks, and ornaments stuck through the lips and cheeks of the British Columbia Indians with the people of Oceanica. Some of these customs, according to Dall, have spread down from British Columbia all along the west coast of North and South America.

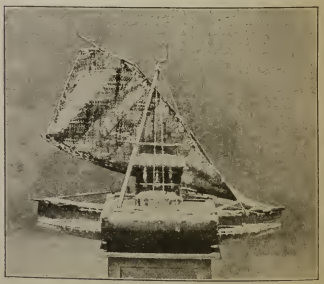
Most of these anthropologists are inclined to think that there was some direct connection between the Polynesian people and those of British Columbia, either through drift of canoes across the Pacific to the western coast of North America or through travel along the coast of Asia, and up to Bering Straits, and down the coast of Alaska. If this is true, then some, at least, of the "uniqueness" of the British Columbia culture is done away with, and Goldenweiser is that much refuted.

While not wishing to deny absolutely that there could not have been such a physical connection between the two areas, it is only necessary to point out that we have never claimed that social organization can be transplanted in this way, and imposed upon a material culture that is not ready for it, and if the material culture IS ready, then the introduction of a new form of social organization, such as hereditary nobility, will be merely a speeding up of an event that would take place soon, at any rate. The problem for us is not much aided by such an hypothesis as Asiatic or Oceanic migration to British Columbia.

I have already hinted at what seems to me the main part of the solution of the problem, namely, the peculiar physical surroundings of the inhabitants of British Columbia and Oceanica, giving rise to similar aberrations from the normal course of development. In order to bring out just how much the Northwest Coast and Oceanica resemble each other, and just how far their native cultures vary from the continental type of progress, I will give a brief description of typical British Columbia and Pacific Island tribes, especially of their material development and social organization.

NORTHWEST COAST: Haida, Tlingit, Tsimshian, Kwakiutl tribes (American Indians). Habitat: a row of small islands along shore, a narrow strip of heavily wooded shore with high, almost impassable mountains back of it, and an utterly distinct climate and flora across the mountains. **Mate-**

**rial Culture:** bows and arrows, spears, plank armor, club houses, big dugout canoes, stone tools, baskets, nets, domesticated dog, gardens of squash, pumpkin, corn, carving of large wood figures, excellent woodwork, boxes, bowls, etc., skin clothing. No pottery, no weaving, no metals, except sheets of native copper. **Chief Occupation:** hunting and fishing and gardening. **Social Structure:** maternal, exogamous, totemic clans with female descent and inheritance. Nobles, commoners, and slaves, who could be killed by masters. Secret societies with considerable power, using masks in rituals. Potlatch. **Property:** none in land. Potlatch kept personal property in constant circulation. **Marriage:** syndyasmian.



HAWAIIAN ISLANDS: Polynesian people. No formal tribes. **Habitat:** several large islands not far apart, but nearly isolated from other groups. **Material Culture:** sling, spear, club, shield, and armor, large double canoe with platform and sail, thatched houses on stone platforms, baskets, bark cloth or paper, wooden bowls, spades, etc., nets, mats, cultivation of taro, yam, banana. No pottery, no loom, no metals. Bow and arrow little used. **Chief Occupation:** fishing, gardening with rough irrigation. **Social Structure:** feudal. Noble class of great power, upper ranks of which were divine, could impose taboo. Higher nobles or kings ruled over lesser, taxation, feudal rents, aids, tolls. Descent chiefly in female line, though sometimes in male. Chief had absolute power over own people. **Marriage:** 9 kinds of ceremonial monogamous marriage among chiefs and chieftainesses, with easy divorce; chiefs allowed any number of concubines from lower classes; punaluan marriage among common people. **Property:** common property except for personal weapons for common people. Land common in fact for lower ranks, though theoretically belonging to some chief. Conquered territory apportioned as feudal fiefs, but tenants were free to use as much as they could.

EASTER ISLAND: Polynesians. **Habitat:** fairly large island, 2,000 miles from coast of South America. **Material Culture:** throwing stones, spears, clubs, stone tools, houses on platforms. Fiji type of dugout with outrigger, baskets, nets, mats, ropes of hemp and bark, gardens of potatoes, yams, taro, tomato, tobacco. Use banana, gourd, mulberry. Great carved rock images of important persons recently deceased. Crude hieroglyphics as memory aid, carved on wood or stone. No bow, metal, pottery, loom or sling. **Chief Occupation:** fishing and gardening. **Social Structure:** numerous and powerful clans, hereditary king, supreme and not concerned with clan fights. Hereditary chiefs of clans, but succession can be vetoed by king. Privileged class of brave warriors, carvers of images, or anybody who performs public service. **Marriage:** perhaps polygamous, and certainly with loaning of women. **Property:** theft not immoral, land held by clans and families.

MAQUESAS ISLANDS: Polynesians. Group of small islands, tropical climate, and not easily cultivated except by gardening. **Material Culture:** sling, club, spear, large double platform and sail, houses on stone platforms, with wooden doors and carved posts, baskets, nets, wooden boxes, taro and fruit culture, stone tools, bark clothing, big stone images, bow and arrow as toy only. No pottery, no loom, no armor. **Chief Occupation:** fishing and gardening. **Social Structure:** tribes, headed by chiefs of little more than ceremonial power in times of peace. Tribal confederacies. Organized priesthood, very powerful, human sacrifice, tendency in northern Marquesas to deify chiefs. Class of skilled craftsmen and great warriors. Rank: hereditary chiefs, inspirational priests, ceremonial priests, temple assistants, warriors, skilled craftsmen, commoners. Classes not rigid, but customary. **Marriage:** general promiscuity of young unmarried people, punaluan marriage afterwards, with tendency towards syndyasmian. **Property:** owned in theory by king or chief, but really land was for all who could use it, and personal property consisted of tools, weapons, ornaments.

TAHITI (or Society Islands): Polynesians. Group of small islands. **Material Culture:** clubs, spear, armor, thatch and mat house (on stone platform in old days, but not recently), plank canoe, baskets, nets, gardens of taro and other plants, bark cloth, cut and polished stone slabs and adzes, bow is considered toy. No pottery, no metal, no loom. **Social Structure:** feudal organization, divine chiefs, well organized priesthood. (But Encyc. Brit. says that when Capt. Cook came, each district was independent, and feudal structure was built up through guns and other aid he gave the chief of Papeeti, who conquered the rest of the districts.) **Marriage:** punaluan. Promiscuity of unmarried. **Property:** land held in theory by chiefs, actually by user. Private property in tools, etc.

SAMOAN ISLANDS: three moderately sized islands, eleven very small. Mid Pacific. Polynesians.

MODEL OF POLYNESIAN DOUBLE CANOE
**Large Boats for making ocean voyages. The Polynesian migrations explain much that seems to contradict Morgan.**

**Material Culture:** clubs, sling, spear, armor. Houses on stone platforms, plank canoe, with outrigger and sail, wooden boxes, bark cloth, rough stone tools, baskets, nets. Cultivate taro, yam, etc. Bow and arrow considered toy. No pottery, no metal, no loom.

**Social Structure:** whole group of islands one political unit, with divine priesthood which had little other than ceremonial power. No organized priesthood, but much power in hands of inspirational priests. Vestiges of clan, mother's brother and father's sister equally honored with real parents. **Marriage:** arranged by man's father's sister. **Property:** land controlled by those who plant it, private property in weapons, etc.

CHATHAM ISLAND: Southwestern Pacific. Fairly large land area with very poor flora and fauna; no building stone, no trees big enough for canoe, poor for cultivation. Polynesians. **Material Culture:** spear, club, flint knife, bone dagger, quarter staff; houses without walls, poor wattled canoe, baskets, many varieties of nets, fish traps, etc., polished stone tools, seal skin and mat clothing. No metal, no loom, no pottery. **Chief Occupation:** fishing. No agriculture. **Social Structure:** tribes, with fairly well marked territories within which each is migratory. Hereditary, heaven born chiefs, with much ceremonial and little temporal power. Tribal assemblies. **Marriage:** made by relatives, polygamy, Levirate (marriage of brother to dead brother's wife —relic of punaluan marriage). Evidence of something like clan in the past. **Property:** private property in tools, etc., not in sources of food supply.

NEW ZEALAND: large island near Australia. Polynesians. **Material Culture:** clubs, spears, armor, bark cloth; houses without stone platforms, good dugout canoes with plank sides, wood boxes, large images, rough stone walls, etc., polished stone tools, nets, baskets; bow formerly. No pottery, no metal, no loom until very recently. **Social Structure:** tribes, chiefs hereditary, divine, powerful especially in time of war, but limited by rigid custom and tribal council in peace, priest chiefs and wizards, but no organized priesthood.

TIKOPIA (Barwell's Island): small island, alone. People seem to be mixed Polynesian and Melanesian. **Material Culture:** houses, dugouts with outrigger and sail, bows and arrows, clubs, nets, stone tools, baskets, gardening of taro, etc., bark cloth, mats. **Chief Occupations:** fishing and gardening. **Social Structure:** four territorial, totemic clans, not exogamous. Chiefs with great power, revered. Women of chief's family cannot marry commoners. Commoners crawl in presence of chief. Succession in male line. **Marriage:** recently polygamous. Father's sister chooses wife. Simulated capture of wife. **Property:** private control of planted land.

FIJI ISLANDS: group of moderate sized islands. Melanesians. **Material Culture:** varies on coast and in interior, and island to island. Bow and arrow. Dugout and outrigger. Gardening, fishing. Bark cloth, houses. Stone tools, pottery. No loom. **Social Structure** (in interior): small groups, endogamous phratries and clans, totemic, and totemic animals are taboo. Common men live in one club house and chiefs in another. Chiefs have privileges, but not real authority, at least in time of peace. Mother's brother has much authority over boy. **Marriage:** regulations as to cousin's marriage differ. Levirate. Rigid restriction on intercourse between man and brother's wife and wife's sister. **Property:** no private property in sources of food supply.

BANKS ISLANDS: small islands, part of New Hebrides group. Melanesians. **Material Culture:** houses, some of them on piles with wood platforms, big clubhouses; spear, bow and arrow, club, gardening and horticulture, dugouts, pig domesticated, shell money; loom, bark cloth. **Chief Occupation:** gardening and tree planting. **Social Structure:** two phratries or moities, subdivided into maternal, totemic clans. Men's club, called Sukwe, in which there is gradation of rank, each rank purchased at fixed price, and with elaborate ritual. Ranks live in different parts of clubhouse, each compartment taboo against men of lower rank. Tamate, secret religious society, only highest ranks of Tamate can enter highest circle of Sukwe. Upper grades of these societies have great power and social prestige. **Marriage:** by purchase; punaluan, with tendency towards monogamy. Levirate. **Property:** private ownership and inheritance of land cleared and planted to trees. Some common land for each family. Kole-kole ceremony, during which property and "designs" are given away, expected of all rich men.

PENTECOST and LEPERS ISLAND: part of New Hebrides group. Tahau tribes. Melanesians. Rather small islands. **Material Culture:** bow and arrow, dugout and outrigger, gardening, clothing of mats. Baskets, nets, spear, club, houses of mats and thatch, pottery, bark cloth, use of loom doubtful. **Social Structure:** two phratries or tribes, with exogamous totemic clans. Society identical with Sukwe of Banks Islands, and probably another like Tamate. **Marriage:** arranged by father's sister, who also secures concubines for nephew. Levirate.

MALAITA and SAN CRISTOVAL ISLANDS: in Solomon Islands. Rather large islands. Melanesians. **Material Culture:** houses, gardening, nets, baskets, pottery, bark cloth, bow and arrow, spear, club. No loom. **Social Structure:** both matrilineal and patrilineal gens. Villages exogamous. Societies with graded rank, and chiefs with real power. **Marriage:** exogamous, syndyasmian. **Property:** cleared and planted land belongs to man who planted it. Private property in tools, etc.

FLORIDA, GUADALCANAR, YSABEL, SAVO ISLANDS: two of them pretty large islands, in Solomon Archipelago. **Material Culture:** houses, canoes, pottery, bark cloth, club, spear, bow and arrow, stone tools, stone and wooden images of dead chiefs, gardens, nets, baskets, no loom, no metals. **Social Structure:** men's clubs, chiefs have power, especially in war. Two to six clans on each island, exogamous, totemic, matrilineal. **Marriage:** mother's

OLD PICTURE OF STONE FORT IN HAWAII
Military science was the thing most highly developed by the Polynesians.

brother, father's sister, and brother's wife avoid one, or are highly respected and practically exercise parental authority. **Property:** common land for clan, but right of possession by those who clear and plant any portion of it, perhaps inheritance through male line.

TORRES ISLANDS: small islands, part of New Hebrides group. Melanesians. **Material Culture:** bow and arrow, club, spear, stone tools, arrows used for money; dugout canoe, outrigger and sail; houses, mats and nets, bark cloth, baskets, no loom, no metals, gardening. **Social Structure:** men's clubs, similar to Sukwe, powerful chiefs; two large phratries or perhaps tribes, with subdivisions. **Marriage:** punaluan. **Property:** no private property in land, but perhaps right of possession of planted land.

SANTA CRUZ ISLANDS: rather small islands, near Solomons. Melanesians. **Material Culture:** houses, bow and arrow, spear, club, dugout and outrigger with sail, bark cloth, loom, pottery, some gardening, nets, baskets. **Social Structure:** nine maternal groups (probably clans) totemic, unmarried men live together in clubhouse. Father's sister takes much of the responsibility of raising child. Chiefs with power during war, societies with graded rank. **Marriage:** exogamous. **Property:** not much private property, except tools and weapons, and shell money. Probably paternal inheritance.

VANIKOLO ISLAND: small island, near Santa Cruz group. **Material Culture:** houses, bow and arrow, clubs, spears, shell money, gardens of taro, horticulture, domesticated pig, dugout and outrigger with sail, loom, pottery. **Social structure:** Ten maternal, exogamous clans, totemic. Chiefs have power in time of war. **Marriage:** by purchase. **Property:** paternal inheritance (?).

NEW IRELAND, DUKE OF YORK, GAZELLE PENINSULA AND NORTH COAST OF NEW BRITAIN: Large islands, some continental features. Inhabited by Laur, Sulka, Baining people. **Material culture:** houses, bow and arrow, club, spear, dugout with outrigger and sail; shell money, domestic pig and fowl, gardens, pottery, use of loom doubtful. **Social structure:** exogamous, matrilinear, totemic clans. Laur have two phratries, with clans as subdivisions. Men's clubs, not graded in rank. Tendency for hereditary, powerful chieftainship, especially in southern New Ireland and New Britain. Other parts, secret society, "duk-duk," is ruler, and chieftainship depends on ability to purchase initiation and promotion in it.

YAP, in Caroline group. Moderate size. Micronesians. **Material culture:** houses built on stone platform, gardening, pottery, loom, cloth of bark, also fishing, by boat and net, baskets, bow and arrow, spear, club, stone tools. **Social organization:** tribes, territorial, slave class, which is a conquered tribe (the Pimlingai). Slaves' chief disadvantage is that they cannot be tatooed and are not respected. **Marriage:** syndyasmian, with relic of group marriage of captured women in institution of "mistrail" or common wife of whole clubhouse full of otherwise unmarried men. This wife is always brought by force, from a distant tribe, and is not a slave. **Property:** Private property of gardens and groves privately planted; money, especially large stone money.*

The above list is fairly complete for Polynesian islands, includes the most important Micronesian group, and samples from most of the important Melanesian groups. The remaining Melanesian islands are omitted for the very good reason that too little can be found out about them by a person confined to the city of Chicago. What is known of them seems to show that they follow the regular line of Melanesian culture, and may therefore be omitted from the present survey without much loss. (Churchill speaks of three sorts of Melanesian culture, and Rivers thinks there are more, but both of them are infected by the pluralistic bias previously discussed in this magazine). The most important groups not touched upon are the Louisiades, New Caledonia (one large island), Loyalty Islands, and much farther north, the Marshall and Gilbert groups. New Guinea, the East Indies in general, the Philippines, and Australia are so continental in character, either because they are such very large islands or because they are so close to the mainland of Asia as to be affected by it that they cannot come within the scope of this inquiry. Neither do they exhibit the curious distortion of Morgan's theory of the normal development of classes, nobles and slaves which we set out to explain.

It would be interesting to extend this survey to the West Indies, but, unfortunately, the Spanish were no different from the English and the Dutch; they were poor anthropologists in the fifteenth and sixteenth centuries, and they killed all the natives almost without any other observation of them than was necessary to get their range with the arquebus.

*NOTE: The facts in this chart of island culture are drawn principally from Encyclopedia Brittannica, Bishop Museum Publications, Carnegie Institute Publications, Smithsonian Institution Publications, SEMPLE, Influences of Geographic Environment; DANE, Fijian Society; ELLIS, Tour Through Hawaii; BLACKMAN, Making of Hawaii; LOWIE, Culture and Ethnology; GOLDENWEISER, Early Civilization; RIVERS, History of Melanesian Society; THOMPSON, Easter Island; WILLIAMSON, Ways of the South Sea Savages; ST. JOHNSTON, Islanders of the Pacific; LAWRENCE, Old Time Hawaians.

What little record of the Indians they have left us seems to show that the general culture and social organization of the West Indies was about like that of Melanesia.

So coming back to the question of the peculiar aberrations in the culture of the peoples of Oceanica and of the Northwest coast, let us look first at their aspects which fit into Morgan's classification. Let us disregard the Polynesians for a minute, since theirs is a peculiar case, a further and temporary deviation from the small island modification of Morgan's system. Take the Melanesians, and British Columbians. They are all people who build houses; where the big woods are, as in British Columbia, they use planks, but where reeds and vines and suitable materials for matting are more plentiful than trees, they may use these. They do not live in tents. They use the bow and arrow, which means that they are at least in the third stage of savagery. Some of them use pottery, some use baskets daubed with clay; these according to Morgan are in the first stage of barbarism. But the general culture of those who do use pottery is very like that of those who do not use it; and pottery is not so very necessary to any of them, for those who do not have suitable raw food, such as fruit, ready for them, have good wood receptacles, water-tight baskets, stone bowls, etc., and the earth oven, a substitute for cooking pots, is everywhere. None of them had advanced to the use of domestic animals with the possible exception of the pig and dog (perhaps the whites introduced these), and none of them made brick. They all have some sort of social system based on relationship, either real in our sense, or nominal.* They all have either a punaluan or a very syndyasmian marriage, or where monogamy exists, it is only preserved by drastic laws, and fierce taboos, and it is often a monogamy that has many customary or religious exceptions to it. That is, their families are either of the group sort, or show signs of having recently been such, and group or syndyasmian marriage is what is to be expected, according to Morgan, in third degree savagery, and first degree barbarism. Furthermore, there are many evidences of a communism of productive property, especially in land. Thus, Rivers says that there is always some common property among the Banks Islanders for all families, and there is never any dispute about this, though disputes over the property which has been cleared and planted with trees and is therefore in the private control of an individual, are very common. And this situation is nearly universal in Oceanica. Even the personal property was not hoarded, or desired for itself alone, but for the prestige which comes from giving it away. There was not, as Morgan says, the "passion for private property, the great ruling passion of modern times." The potlatch ceremony among the British Columbia Indians was a grand distribution of property, ceremonial and festive, and those who received the more unconsumable sorts, planned to give them away to another big feast. Ostracism and public hatred and scorn would be visited on anyone who did not give his goods away. In the Banks Islands, we have a precisely similar ceremony, the kole-kole, in which under pretense of celebrating the coming of age of a daughter, or the opening of a new house, rich people gave their goods away at great festivals. He who had property and did not conduct magnificent kole-kole ceremonies, would be thought quite unsocial, and beneath contempt. Of the Fiji islanders, the Rev. W. Deane **(Fijian Society)** says that they considered that all the members of the matangali, or clan, had a lien upon the personal property of every other member and could prevent his disposing of it freely, could borrow it, and the owner did not have the right to refuse, etc. Throughout this whole district of Melanesia, Micronesia, and British Columbia, land was common, or had very slight proprietory rights which went to the person who cleared it, or his descendants, and there was a disposition to regard personal property as more or less common, merely in the custody of the persons we should suppose to be its owners, and it was a custody which they were supposed to relax under a number of circumstances. All of this is about what we should expect of peoples in the third stage of savagery, or the first stage of barbarism, with the exception of the proprietorship of cleared land, and that is a situation that does not normally arise among the continental savages because gardening does not play so important a part in their life as in that of the dwellers on tropical islands.

Taking them all around, the peoples we have been discussing, fit fairly well into the picture Morgan draws of the third stage of savagery and the first of barbarism: bow and arrow, spear, club; practically no domesticated animals, hunting and fishing, gardening, pottery in some cases, houses to live in, boats and canoes, nets, baskets, group or syndyasmian marriage, tribes and gentes or clans, immature development of the rights of private property, village life; no loom, no metal, no field agriculture, no true writing. There is perhaps too much development of gardening and horticulture for absolute symmetry, but that is a substitute for hunting.

But in spite of this general complexion of third grade savagery and first grade barbarism which all the peoples of Melanesia, Micronesia, and the

*NOTE: Take care not to underestimate the importance of organization on the basis of sex and relationship. This organization underlies all of the division into classes of masters and slaves in the Melanesian-Micronesian-Northwest Coast area. Fiji is an example. The chiefs have power. But even here, Dean says (Fijian Society, pp. 100-101): ". . . . . the native is born into a social system, the kernel of which is the matanggali or clan. The Fijian clan is a kind of enlarged family, where all elders are fathers, and all juniors are children. Family relationships are not very clearly differentiated (so far as authority is concerned) from clan relationship. It is no uncommon occurrence for a distant aunt to beat her nephew; so long as they are of the same matanggali, it is legitimate enough. If one of the clan is ill, the members of the clan will travel twenty or thirty miles on foot to see him . . . All larger works are carried out by clan labor . . . in the old days . . . if a house had to be built, the clan did it; if a large canal had to be made, members of the matanggali or of several matanggali excavated it, and so with every other undertaking of importance."

GAMAL, OR CLUB HOUSE FOR MEN

One of the features of island life is the men's clubs, some of which are graded in rank like the Masons.

Pacific coast have, there exists among them all a strong tendency towards social rank and classes which does not at first sight agree with the Morgan classification. The critics of Morgan as we know already, point it out in triumph, and claim that it refutes his entire theory. Let us then make some examination of the social classes of these savages and barbarians. At a glance, they seem to be quite different in each area. In Southern New Britain and New Ireland, hereditary chiefs; in the Banks Islands, chief whose power does not amount to much, but whose social prestige is enormous, and is dependent on their ability to get money enough to advance from degree to degree in the Sukwe, their type of Freemasonry, or in the Tamate, which is an esoteric religious order. And then again, you have the Fiji island chiefs, who are divine, and powerful, and who are even now, under the observation of the white scientist, trying to make out that Lala, the power of calling out the clans for communal labors, is also a right of theirs when they wish personal services performed. And of course, there is the Duk Duk of norther Melanesia society, similar to the graded orders of the Banks islanders, and having the same effect, of building up a privileged, authoritative class, which also implies a degraded, submerged class, and which does not fit in with the "normal" free democratic clan organization of the upper savages and lower barbarians of continental areas. Naturally, we consider too the hereditary nobility of British Columbia, and the class of slaves there. And in most islands, there is the intermediate group of skilled craftsmen, carpenters, canoe-builders, tatooers, priest's assistants, paint mixers, or what not, invariably an organized group, tending to become hereditary, though still open to the admission of new blood.

However, we must take care not to exaggerate the importance of these classes, and not read into the word ,"slave," "noble," etc., the meaning that long acquaintance with the institutions in very modern times has placed there. The slaves of the British Columbia Indians, were not worked, in most instances, much harder than the commoners, nor, for that matter, the nobles. They had certain disadvantages: they were likey to be sacrificed, and the nobles had certain advantages, places of prestige at the feasts and ceremonies, and a freedom from the danger of being knocked in the head to provide a pagan holiday. The Pimlingai of Yap worked very little more than the freemen of that colony, but they were not considered of good social standing, and they could not be tatooed, and part of the job of barbarism consists in having pretty pictures punctured into one's skin. The Banks Islands' lower class had very much the same sort of disadvantages: their only alleviation being that they could advance if they could get the shell money with which to purchase rank.

But this gentle sort of slavery, and ceremonial rather than remunerative type of nobility, is just the normal type of both institutions. If any of the primitive peoples had been brought face to face with class exploitation in the forms in which it exists in modern times, they would have shied away from it as from the pest. Neither institution started in full force, both were comparatively easy to take in the beginning—sweetly innocent and picturesque, little tiger kittens whom no one would expect to grow up in the course of the years, and demand full rations of human flesh and blood. Slavery and nobility, division of society into classes, was essentially the same in the Pacific basin as it was, in its origin, on the continents. The difference lay in the fact that slavery and nobility came earlier in island society than it did in continental society—two whole ethnical periods earlier.

Is it necessary to look far for the reason? Is it not a truism of anthropology, though the fact was first stated by Morgan, that slavery on the continents developed when there was something for the slaves to do, that they could do without being placed in a position where they could run away? Hunting tribes could not send out slaves to hunt because they would never come home, if they had any sense. But with field agriculture and pastoral life, there was a chance to use slave labor in gangs, with armed guards standing over them, if necessary, which it usually was not, for there was usually no place for the slaves to escape to, the country being thickly settled. Ships meant that slaves could be chained to the oar, and used without danger of their escaping. Mines and quarries were best of all for the masters of slaves—as useful to ancient Greed exploiters as to modern Americans. Field agriculture, herds, ships and mines did not exist in the lower stages of barbarism, and there was nothing to take their place on the continents; that is why, in the continents, there was a classless society during that period.

But on the islands there was something to take their place. Fishing with boats and nets and fishing with traps is gang labor, which slaves can do, under guard, if necessary. So is gardening with hoes and wooden spades, provided there are no friendly forests to escape through. Not only does such gardening play a much more important part on the tropical islands than it does on the continents (forty square feet of taro will support a man—**Blackman,** Making of Hawaii, p. 10—and many times that area of maize or pumpkins will not support him), but likewise there was no good in running away to the forest: the slave could not get off the island, and would be recaptured. True, the Tlingit and Haida slaves could go over the Rockies—to the barren wastes of what is now Saskatchewan—they preferred to stay on the milder Pacific Coast and be slaves.

There is no rejection of Morgan in this; this is the very essence of Morganism, and the thing can be carried further, to abolish the few remaining difficulties; for instance, the apparent individuality of the island cultures in this respect, that some develop their social classes through societies, (primitive Freemasonry, or Knights Templar organizations), and others through the growth of the power of the hereditary chiefs. Rivers takes note of the fact that the secret societies are strongest on the small islands, and the chiefs weakest there, and that the chieftainship is more likely to be hereditary and authoritative on the large islands, and the secret societies of small importance there.

What could be more natural? The economic and climatic conditions make for classes—but the two sorts of ruling classes are antagonistic. A great family of warrior kings looks with extreme disfavor on the relatively democratic secret societies, in which any clever person who can acquire personal property can advance, and hinder the free use of royal authority. The orders of priesthood, the secret religious orders especially, must come under his influence. So we have the absolutist chief making himself a god, demanding that the priests serve him, etc., as long as the people will stand for him, and in the large islands they will, because military science is of more importance there. There is room for military maneuvers, armies count, and an army has far more chance of winning with a single absolute commander at its head, than with a secret society or some superstitious priests trying to run it. Needless to say, such chiefs are also antagonistic to clan rights, also.

This brings us to the question of the Polynesians, an essentially military and within recent times, a very migratory people. Their social system represents a temporary modification of the typical island society. Their material culture, except for stone walls and platforms, of military significance, is distinctly lower than that of many of the Melanesians and Micronesians. They are by Morgan's test in second degree savagery, near the top of that division. They have no pottery, and they do not use the bow and arrow, though they know about it. They do not have the clan or gens, but have extensive feudal states, with kings, great lords, lesser lords, a permanent hereditary noble class, and a great class of commoners, with divisions into craftsmen, priests and peasants. The kings are absolutely divine, sacred, untouchable, and have complete authority—their will is law—at least in all the larger divisions.

Their family is punaluan, except for the nobles, while the family of the Melanesians and Micronesians is punaluan with strong tendencies towards the syndyasmian, or is syndyasmian, with relics of the punaluan, in general a higher form than the Polynesian. The marriage of nobles in Polynesia is a queer mixture of the consanguine, the punaluan, and the monagamous. How then shall we explain this complex without doing violence to the Morgan classification?

The history of Polynesia gives the clue. The Polynesians were a Caucasian, or mixture of Caucasian and Mongolian people, living up to about 1000 B. C., in the East Indies. The Malayans came down on them with the sword of the Lord, which is to say, with iron and steel weapons, and a generally superior culture, and drove them out, village by village, out to sea, eastward.*

Perhaps the Polynesians had a clan system, in their original habitat, we cannot say; if so, the clan system would disappear within one generation, for the clan is a military unit as well as a social unit, and clansmen fight together, take ship together when beaten, and then, there being no other clan to contrast with this one, the clan loses its significance and is forgotten.

They would have time enough to carry but few women with them, the women of their leaders perhaps, and of these women, the descendents, being of pure Polynesian stock, would be whiter and taller than the commoners, who descended from dark-skinned Melanesian women captured on the way, would maintain a pride of ancestry and a purity of race which explains the peculiar marriage regulations of the chiefs, as well as the difference in appearance between the nobles and the commoners of Hawaii, Tahiti, and other such islands, a difference mentioned by many observers. The Polynesians fought their way straight through the whole Melanesian territory, and settled the islands farthest East, North and South. They went no farther because they had come to extraordinarily wide spaces of ocean, or if any did go, they found the American Indian culture, and were either merged in it or destroyed by it. In Tahiti, Samoa, Hawaii, Easter Island, and New Zealand, they faced about, with their backs to the impassable sea, and fought it out, and won. Their career was then

*NOTE: All authorities agree on the migration, though not on all the details. See CHURCHILL, 'Sissano," Carnegie Institution Pub. No. 244; RIVERS, History of Melanesian Society; ST. JOHNSTON, Islanders of the Pacific; S. PERCY SMITH, Hawaiki.

an extremely military one, and the military sciences, and the military structure of society, were enormously developed. Pride of race among those of pure white or white-yellow descent, was much fed by the fact that they had added to their superior physical development likewise military and religious prestige. The gens and the clan were either never allowed to develop, or if they had existed once, were destroyed. The **Melanesian** moieties and gens of course, such a brotherhood of conquerors would despise. Even the absence of a serious interest in the bow and arrow and the use of slings instead is understood by a knowledge of the military nature of their careers—for where armor can be used (armor of pliable materials such as matting, bark, or skin) the arrow is stopped, but the stone hurled by the sling can still give quite a blow. Also, where footmen can advance in close order, arrows are ineffective. On the other hand, the spear is always a good weapon, especially if there is a boat on which to rest the shield, or sufficient open territory for military strategy. The spear, in the form of the bayonet on the end of a rifle, is still used in war. Battles are still decided, wherever the terrain permits, by what is fundamentally a mass of spearmen charging forward in close order. Where conditions do not permit or stimulate the science of tactics, wherever armies are largely secondary in importance and individual dueling or surprise attacks are the rule, the bow is the best weapon. War was not so necessary for Melanesians, and they kept the bow and arrow.

But even in spite of all these reasons for a Polynesian reaction to the environment different from that of the other island dwellers; the environment was winning, was dragging the Polynesian culture into conformity with the normal island culture, at the time when the Polynesians were discovered and nearly eliminated from the human race.

The military structure of feudalism was preserved in its purity only in the large islands of the Hawaiian group. In the Marquesas, Linton (Material Culture of the Marquesas) says specifically that the power of the chiefs was not nearly so great as in Hawaii. In Easter Island, where there was not so much room for maneuvering, warfare had degenerated into clan fighting, and the chiefs although they were hereditary, were ornamental rather than despotic, and though they were respected in formal ways, they were not feared as were those in Hawaii and Tahiti. In Easter Island armor had disappeared for the bow had been forgotten and not yet reinvented. In Tahiti also, family fighting was developing, the bow and arrow were in use, and the chiefs, though extremely powerful, as compared with those of Melanesia, were beginning to depend more and more on the "spiritual gendarmerie"—there was a complex hierarchy of priests who themselves had great power, and the power of the chiefs depended on their getting themselves revered as gods. Fiji and Tikopia showed mixed cultures.

Likewise the triumph of the environment is shown in the punaluan family, which we must suppose to have developed out of the first common property of all the warriors in all the Melanesian women captured in their raids. And, as Morgan says, the punaluan family has the germ of the gens in it. The gens could not develop as long as the chiefs were so absolute, but in the prevailing stage of material culture, the chiefs were sure to gradually lose out, and the gens was sure to gradually develop, once the great migration was over, and the Polynesians began to forget it. Indeed, the process was carried along pretty far, in the outlying portions of Polynesia, Easter Island and New Zealand, for instance. This new gens growing up here, perhaps for the second time among the same people, might not be exactly like the North American Indian gens, but its main features would be the same, and it would result in a form of social organization based on relationship and sex, and with somewhat democratic features. (One might remark here that Morgan himself thought the gens to be such a neat and well-thought-out institution that he could not believe it to originate in more than one place, and supposed it to be transferred from there, from tribe to tribe. This is an in-

MAORI CHIEF

ternal contradiction in his own theory, and is not true, except for minor details of gens structure).

Feudal land tenure in Polynesia was gathering around itself a body of custom and peasant rights, which drove it towards communism again.

Given time, it is almost certain that the Polynesian problem would have disappeared, and there would have been one general, Oceanic culture, not quite like that of the savages and barbarians of the continents, but not so different as that of Polynesia. What is there in all of this that violates the principle of social evolution, or the theories of Morgan?

It seems queer, just at first, that anyone should doubt that societies evolve. How can they doubt the general theory when they have before them all the time the undeniable facts that European and Asiatic historical society evolves, and is still evolving? There is a steady change, similar for each great people, within recorded times, from nomad hordes through a transition period of slave states to feudalism, and then from that, through a three-hundred year transition period to capitalism. And of course though they may not admit it, we claim there are signs of an earlier old age and quicker demise for capitalism than that which feudalism had.

If the historic peoples of Europe evolved socially, why deny such evolution to the more primitive, and non-historical peoples? Especially when we know the Germans, the French, the Scandinavians were primitive and non-historical themselves once? There is in the beginning then, a presumption against the non-evolutionist argument, which can only be removed by some evidence that there is something in the physical or mental structure of the present savages and barbarians that prevents them from reacting to their environment in the way that others have done But surprisingly enough (a pleasant surprise) the school of Boas argues just the opposite, and he and his followers deny that there is any such difference in the races of mankind, which leaves one wondering just how they can explain their strange stand. As far as I can see, they don't try to explain it. They do not say so in plain words, but one gets the impression that they infer that it cannot be explained. They point to the "facts," and say, "See, the Digger Indians lived in California for centuries without raising oranges, or mining gold, whereas the country is suitable for both occupations, and the white race did both, within a short time after it came to the state. But the Indians are psychologically and physically equal to the whites. Cultures are just different, etc."

It will be remembered by the reader that Morgan's scheme divided the course of progress so far into three stages of savagery, three of barbarism, and two of civilization, each of which was set off from the other by certain typical or extremely important inventions; each new tool in fact creating the new stage by making possible a new way of obtaining food, and thereby through materialistic determinism (Morgan does not use the word, but describes the process fairly well) creating a new sort of society, a new sort of family relationship, and in the long run, a new art, philosophy, and religion; insofar as any parts of the old culture were ill adapted to the new material environment created by the new tool, they were modified or abandoned.

When this basis of Morgan's theory is once thoroughly understood, the difficulties and apparent exceptions become explainable. I have already pointed out that communication, if it does mean insecurity, does speed up evolution, because evolution depends on invention, and inventions are made by individuals. I do not wish to be understood as arguing that inventions come by chance, or by the grace of God or great men—inventions seem to spring from the relationship of men to their environment—a similar environment bringing **sooner or later,** the corresponding useful tool or weapon, with all the consequences that follow in its train. But geographical conditions, flora and fauna, and weather conditions, are never quite the same, and social environment also does react on the power of invention, to hinder it, usually. Churches and priests have always fought innovation. For many reasons, then, a people may be delayed in making the typical reaction to its environment, suitable to the tools it possesses. It may make inferior substitutes for new tools, and may fail to adopt the best types of organization for long periods, and this is especially true when communication is bad, and especially true among the most primitive peoples. Probably this accounts for the already mentioned tendency of peoples in the lower stages of barbarism and upper stages of savagery to specialize somewhat (not as much as the American School of Anthropology would have us believe). But sooner or later, if they are left alone long enough, they make the right inventions. Usually they are not left alone; especially nowadays the great capitalist culture flows on and over them, the Indian becomes a wage slave in the orange orchards; the Hawaiian islands blossom with modern capitalistic civilization, and resound to the roar of the guns of the dreadnaughts.

Lest I be accused of mysticism, of belief in "life forces" perhaps, let me make one thing clear now. When we Morganites speak of "typical development" or "normal development," we mean the usual development. Mankind had for his home principally continents with large animals roaming about on them, and a sub-tropical or temperate climate. Communication was not especially difficult over the greater part of these continents, and inventions followed a fairly regular course, even where there was no (or little) interchange of culture, simply because conditions were very similar over most of the area in which men lived. This, then, we mean by "normal development."

But the Eskimo, the inhabitants of equatorial

forests, and the inhabitants of small islands in the sea, develop slower, because they have fewer importations of culture, and **their** "normal development," because of their different physical surroundings, is somewhat different. It is not entirely different but different only insofar as the environment is different. Morgan, developing his new theories, paid most attention to the resemblances, to the "normal development," and did not bother with the slight variations of it. Anti-Morganites have used this fact as a weapon against evolutionism in general. By a process of holding the Morganite to the letter of the law that Morgan discovered and disregarded its spirit; by insisting that the reasons for Morgan's particular division into cultural stages shall be disregarded, and all peoples shall be measured by the "normal" standard, from the Eskimoes to the Papuans—the standard of course to be rejected altogether if any discrepancies are found, they have built up their case against Morgan.

It seems to me that the discrepancies are neither as great as the American School maintains, nor as hard to explain. We need to develop Morgan's theory a little, in the manner in which he developed it as far as he went, and not to abandon it. To show how this can be done, I have in this section taken the most important of the "discrepancies" and shown, that, after all, it is not so hard to handle. Let others do likewise.

## SUMMARY

1—Morgan's conclusions are evidence of the accuracy of Marx and Engles' Materialistic Conception of History, though the Materialistic Conception has plenty of other proof besides.

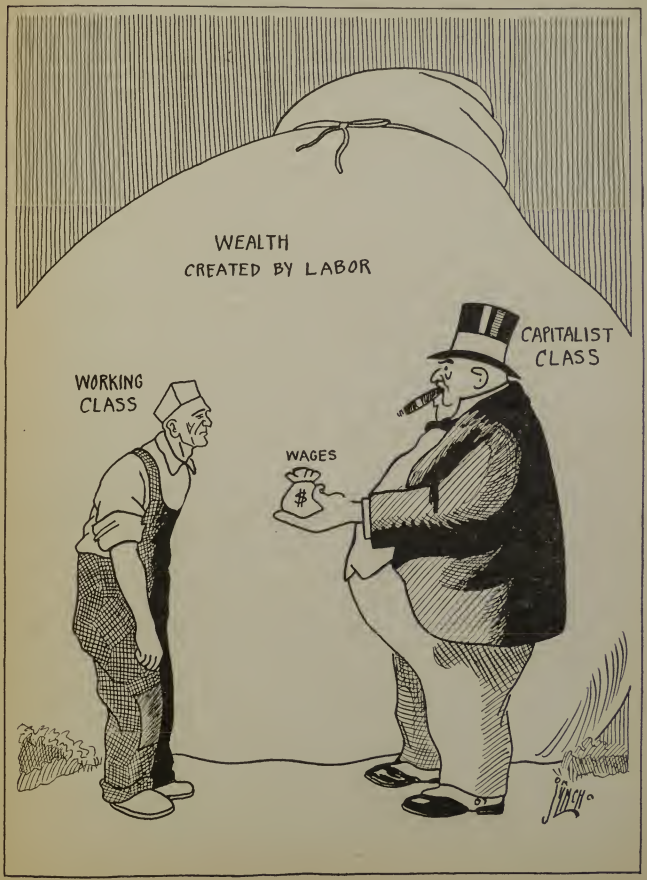
2—Morgan's theories are challenged by a group who express the ideology of American petty bourgeois and professional classes, particularly the group of college professors and students, whose reaction to their environment causes them to adopt a theory that there is no theory.

3—An inspection of the writings of this "New School of Anthropology" shows that they have confined their criticism to that part of Morgan's evidence based on a study of living savages and barbarians, which might allow us to consider Morgan's theory proved by the evidence of European and Asiatic pre-history, merely declaring the cases given by the "New School" of present-day savages and barbarians, to be exceptions.

4—But a closer scrutiny shows that the criticism of the "New School" even within the field to which they have confined themselves, is faulty, and the exceptions to Morgan's theory are not so many as the "New School" claims, the reason for which claims is again the psychological attitude of the members of the "New School."

5—And a still closer scrutiny of the facts in the case shows that the most important of the exceptions which really do exist, is but an exception to Morgan's "normal" classification (which Morgan himself admitted was tentative) and is a justification of the **principle** on which his entire theory is based.

6—There is a presumption that the other, and minor, actual exceptions are of the same nature.



— THE END —

# Credo

By VIOLET RAY

Tremble not 'neath tornadoes of dark life,
Their fiery blasts invigorate the soul
Over the bleeding barricades of strife
Let your fierce challenge like the thunder roll!
I laugh at bells of doom that loudly ring,
And care not for the pain of human fears
For, even Death is not a dreadful thing
To one who writes his words with blood and tears.

# Organize and Take the Big Bag!

# Food Trust, Board of Health and the Undertaker

By PASQUALE RUSSO

**JUST now the daily newspapers are making a great fuss about the reckless drivers of automobiles, claiming that hundreds of persons were killed during 1924, and predicting that the casualties for the coming year will be even greater. Every person of the least sensibilities, of course, deplores such indiscriminate slaughter as the newspapers complain of, but in their anger they seem to overlook the many thousands of persons who are slowly poisoned to death each year by the food trust.**

In fact, the undertakers are befriended best by the meat packers. The selling of rotted meat increases the business of the undertaker to an extent little realized. The Board of Health, upon which Chicago people annually spend thousands of dollars, has been designed to prevent the death and consequent profits to the meat packers and undertakers. In short, the Board of Health, is generally regarded as the sentinel that guards the health of the citizens.

But the Board of Health, like all other similar institutions is maintained to further the interests of a profit-taking class and in place of guarding the health, really functions in the interest of the food barons. Many workers, owing to their meagre information, assume that the Board of Health safeguards the welfare of the public. Nothing could be farther from the truth. The Board of Health is the servant of the hotel and restaurant owners, and if one examines their publications closely it will be found to be sophistry which efficiently misleads the masses.

Health Commissioner Herman N. Bundeson, frequently issues warnings and advice. Sometimes he warns against the eating of oysters, explaining that they contain disease germs; other times he warns about colds or mosquitoes. Such statements are of little value and are similar in character to emanations of politicians. The only purpose they serve is to maintain the particular writer or speaker in office.

It is quite well understood, in and about the City Hall, that to be successful one must stand well among the politicians, and it is very evident that Dr. Bundesen finds it more advantageous to be a good politician than a good doctor.

In Chicago there is much work that could be done by a real genuine Health Commissioner. In fact, his entire time could be employed in looking into the filthy conditions now existing in the kitchens of the hotels, restaurants and cafeterias. Right at this very moment, patrons of the various eating houses in Chicago are being fed such food as to cause serious stomach ailments, ptomaine poisoning and premature death. How many persons annually, even daily, are killed in this manner it is impossible to estimate. Perhaps we will never know unless the workers, en masse, decide to abolish this diabolical system of capitalism.

### A High Class Hostelry

One of the leading hotels in Chicago, the LaSalle, makes a daily practice to serve food, disregarding all sanitary regulations. In its kitchen are to be found soups, cream sauces, gravies and parts of meats standing in open vessels standing on the floor from morning to night. During the day sawdust, flies, pieces of soap and dirt fall into the vessels. There, also, they have a large vessel into which bones covered with sawdust are thrown. Insects, mice, cockroaches and other species of vermin fall into the pot and contribute their share to the food that comes forth. Seldom, indeed, is the stock pot cleaned.

The cooks at the hotel find it difficult to procure clean towels. As a rule they receive a piece of a shirt or some other rag. Even such rags are few and hard to obtain and soon from much use become filthy, and hands wiped with them shape the omelettes which patrons eat. The management is not uninformed regarding such conditions but their motto is, "Business is business".

Another revolting practice at the Hotel LaSalle is that of gathering up the discarded remnants of food left from parties and banquets and reserving them until entirely disposed of. In this way everything is saved, celery, cheese, lettuce, olives, radishes, meats, cream and bread.

### Broiled Spring Chicken Au Cresson

If chicken is decaying it is handed over to the night-chef who is an expert at removing the bad odor. He seasons it well with salt, pepper and dry mustard after which it is served without a blush of shame. In this way are the patrons of the hotel misled.

Bread Dressing is scraps of bread saved from the tables. This bread is not clean. It frequently contains ashes, butts of cigars, cigarettes and the sputum of angry employees. This bread is dumped into a greasy sink often used for washing pots and pans, and left to soak. After a given time the cooks add onions, sage, thyme and a few chestnuts. The following Saturday in the Chicago Tribune one will read an advertisement of a $2 dinner thus: "Roast Vermont Turkey, Chestnut Dressing."

It appears very tempting, but this item in and by itself leads to many cases of sickness.

Owing to lack of space we cannot give further instance, although they are numerous. However, the conditions in the Hotel LaSalle are sufficient, especially when it is realized that Ernest J. Stevens, its president is thoroughly acquainted with what is done each day. This applies also to Ferdinand Karcher, the famous strike breaker and expert in the serving of rotten food.

Stevens is but little concerned about the poor quality of the food. The main issue with him is profit, and as long as the patronage of the hotel remains other matters are of no consequence.

But these are matters that vitally concern the working class. They can expect little else so long as they permit the capitalists to rule them. They cannot consistently expect nor demand of Dr. Bundesen that he rigidly enforce the law respecting the Hotel LaSalle, since indirectly he holds his job at the behest of the food barons. Our purpose in this article is to banish one more illusion, one more item of faith. The Boards of Health of the various cities are only adjuncts to the functioning of capitalism and are maintained for the benefit of the ruling class.

This adds another reason to convince us that the only avenue open is organization of the workers so that may be able to take possession of the food industry and abolish the evils now existing in the hotels and restaurants throughout the land.

# On Sincerity

By ELLA LUTTERMAN

IN the average person, I believe, sincerity is a relative property. That is, sincerity is there in a primitive form, so long as it is not eclipsed by some stronger impulse. Human traits are born of instinct, first, and only become refined through visualization by the intellect.

But there must be a happy balance. Some propensities are far too gross and primitive, in certain cases of individuals, to come under their mental jurisdiction; while, on the other hand, an aesthetic, creative mind may take the other extreme and evolve concepts of which its own moral nature falls hopelessly short.

Hence the normal being is the one who learns to think and feel in unison. The essential factors indicated to accomplish this are, primarily: an inherent love of truth, and the corresponding **courage** to live it. These two forces must be joint products both of the physical and intellectual, for concerted action. At this juncture, insincerity may often become apparent. Moral conviction may be not quite equal to animate a mental concept, which means courage—where a great many people slump; inertia has the right of way! Hence, the effect of insincerity.

While, on the other hand, where sentiment is unbridled by reason the feelings sway to impulses here and there, inconsistence results, actions conflict, the victim succumbs! And the sensitive critic cries, "Insincere!"

Living means thought and practice in proper proportions. What per cent of the race, we wonder, is very vitally concerned about the proportions should this interfere ever so lightly with its primitive desires?

Man has not risen very far above the the scale where the things that dominate his carnal wants, first, are what control human actions, largely. Until he can summon his resources for a more complete self-mastery, where he shall be willing to subordinate his primal wants, in part, to greater ends—so long shall man ever be the victim of his own slavishness.

There is nothing low or useless in the human realm, it remains but the part of the race to learn a proper correlation of the whole, and this spells EMANCIPATION.

# Industrial Research

(Continued from page Eleven)

the general trend of industry to enable the Bureau to give forecasts of the general industrial situation to the organization.

Besides that special investigations would be needed in any industry, where the organization was operating or contemplated operating on a greater scale. Such questions would have to be investigated as: "How much stock is on hand in an industry where strike is contemplated?" "How long will it last according to the demand of the market? Can foreign products be imported to such an extent as to influence the success of the strike? To what extent will the industry be crippled by a strike under I. W. W. auspices according to the best estimates?" etc., etc.

**The Question of Ownership and Competition**

During a strike the question often comes up whether to settle with the employers separately. The union—in some cases—settles with one or more of them only to find out that those regarded as individual employers were only strawmen for the big corporations that held out, and in that manner defeated them.

On the other hand, there are cases where corporations and other employers are fighting each other for control of the market, and where the union can take advantage of these conditions. A refusal to deal with the less hostile employers in that case would tend to create solidarity where there before was strife among the employers.

A good example of how to utilize conditions of that kind was shown in Philadelphia where the Jarka Stevedoring Company was fighting the rest of the stevedoring companies and the Marine Transport Workers of the I. W. W. used the situation to their own advantage.

One of the classical examples, of a somewhat different kind, happened when the United States Steel Corporation was formed in the beginning of this century. The promoters did not want any disadvantageous publicity, and the Amalgamated Association of Iron, Steel and Tin Workers for that reason thought it the best time to start an organization drive and secure recognition. On account of unskillful handling of the situation not much was accomplished, though.

**Conclusion**

The employers ascertain facts of that kind. Their Babsons, Moodys, Bradstreets and others compile and classify these facts and they are in that manner able to construct policies based on facts. The I. W. W. must do the same thing. Instead of basing our actions on guesswork, we must know the facts, and then base our policies on them.

For that reason industrial research is so important a factor in our educational propaganda. We are thereby teaching ourselves not how to work better for the boss, but how to work better for ourselves by increasing the strength of our organization.

# The Denver Post

(Continued from page Twenty-Two)

streets via the horde of school boys (and girls) with whom the regular sellers are forced to compete. Unable to leave their corners the latter must perforce await the supply truck for the later edition. This gives them an unwilling choice of cheating their patrons, many of whom are hard won, steady customers; or should they be conscientious, they may, in circulation parlance, eat their stock.

Even the supply truck does not solve their dilemma for unless the original quota is sold out (usually a hard matter under the circumstances), taking more papers even of the later edition would be worse than useless nor are they permitted to trade in the old.

Thus competing with dozens of wild catting boys, all of them crying the latest sensation, the regulars usually find themselves stuck with unsalable sheets and scarce daring to call them. In this manner they not only lose the commission on unsold copies, but must pay the cost of them out of their earnings pitifully gathered on earlier editions; for the Denver Post loudly boasting its paid circulation fails for all sufficient reasons to inform its readers that part of it is squeezed from paupers, cripples and children whose helplessness is such a happy circumstance for the stockholders of this bulwark of American democracy.

In conclusion: although habitually a betrayer of truth and justice, like all capitalist phrase mongers and self-glorifiers, the Denver Post correctly states that it is a privilege to live in Denver. We say correctly, because it is a privilege, when starving would be so much easier in this city of 300,000; which likely counts such numbers because many among them cannot raise funds to get out of town, while others no doubt have become so stupefied from reading the smooth propaganda of which the Post is such an able expounder that they are no longer to be considered more than victims of a deplorable habit.

# The Harvest Drive

HUMAN life depends first of all upon food, and the most inspiring spectacle in the American labor movement is the annual harvest drive of Agricultural Workers' Industrial Union No. 110, of the I. W. W.

Never in its history has this industrial union planned more carefully and with greater determination for a successful organization drive than this year, which must be a record-breaker.

When the July Industrial Pioneer reaches you the drive will be in full swing. Get this issue and read the great articles that are to be sent in from the field by competent revolutionary writers.

# Strikes

By JAMES LYNCH

IN ONE of his Hearst editorials Dr. Frank Crane wrote on the subject of strikes with all the unfairness and lack of intelligence that is characteristic of apologists for things as they are. "Strikes are pure barbarism." "They are an application of force." "Not force on the guilty party, but force applied to a third party who has nothing to do with the case." "But when labor and capital fall out they each begin to abuse the public and hope by this means to secure their rights."

Such contentions are not new, and reveal a total lack of knowledge of the present organization of society. They lead to no true understanding of the nature and causes of industrial struggles.

Strikes are modern. They are the outcome of the Industrial Revolution—of the capitalist system, and the concentration of industry. The number of men and women forced to sell their labor power is continually becoming larger and larger. The use of expensive machinery and steam and electric power make it impossible for the workers to carry on production in their own establishments with their own tools. The tool has been displaced by the machine, and man-power by natural power. Instead of working for themselves, the workers must now give their labor power to the owners of capital and get in return a small part of that which they produce. They owe their right to a living to the owners of the machinery of production. The great masses are wage slaves, and not one in a hundred has a chance to become an employer—a member of the capitalist class. A wage slave practically is a wage slave for life.

Thus we have society divided into two classes with a great gulf between them, and with nothing in common. Millions of workers living in poverty and want, and a few capitalists enjoying all the good things in life. Many who toil and slave, and a relatively small number who benefit by the products of labor without themselves engaging in production. Those who own and those who work face each other. The workers demand a return for their labor, and the owners demand a return for their ownership. The capitalists reduce wages to the bare animal existence and lower the standard of living wherever and whenever possible. Hours of labor are prolonged as far as the physical conditions of the workers will allow.

The Thoughtful Phiz Of A Hearst Paper Prostitute—Dr. Frank Crane.

The result is that the workers are forced to fight not only in order to improve the unendurable working conditions, but also to get back more of the products of their labor. The inevitable struggle will continue, and there will be strikes and economic wars until the workers of the world become class conscious, organize into industrial unions, take possession of the earth and the machinery of production, and abolish the capitalist system.

# Memoirs of a Modern Pirate

(Continued from page Four)

voyage the Panama Canal, Captain Dollar said that fifty cents a day was more than enough wages for a seafaring man.

As an example of how he regards organized labor and, incidently, bearing out the contention of the California Branch of the General Defense Committee that the Ship Owners' Association is behind the persecution of organized labor in California and is directly responsible for the imprisonment of seventy-eight men in her "Twin Hells," we will again quote Dollar's own words. During the dock workers' strike in San Francisco in 1919, it seems that the authorities were hesitant about arresting strikers when asked to do so by the ship owners. They hesitated because the strikers were doing nothing in violation of the law. But orders from the ship owners were eventually obeyed, as you will note from the following quotation from none other than Captain Robert Dollar:

"Our merchants jammed one of the police courts where several of the strikers were to be tried. The Judge of the court had right along been dismissing the charges against every striker brought before him . . . **With such a body of prominent men in court, the Judge was forced to sentence the strikers brought before him. They were the first, I am sorry to say, but anyway we had gotten something started.** The newspapers praised us too, and that was good... Three of us who were the leaders in the citizens' fight went before the official and laid our cards on the table. We told him that because of his reluctance to prosecute we had found it necessary to form a vigilance committee and if the serious conditions along the waterfront did not stop at once, **our first official act would be to take him and string him up to a telephone pole.** I can see that official yet. He could not believe we really meant it, so he said to me, "Mr. Dollar, do you mean that?" I answered, "I was never more in earnest in my life." My reply brought him to time and he promised to cooperate with us, and he did."

This quotation needs no comment; it is self-explanatory. It also explains why Deputy District Attorney McCarthy of Los Angeles County said, **"We don't want to put these men in jail; but they must leave the shipping in this port alone."** He was speaking of eleven members of the I. W. W. who were then in jail in Los Angeles charged with the strange new crime of Criminal Syndicalism. Perhaps Justice Hintz of the Supreme Court also heard that he "would be taken out and strung up to a telephone pole," causing him to discuss the injunction and let the five ships go to the Dollar interests.

What else is necessary to prove that capital owns and controls every public official from the lowest to the highest? If the officials do not willingly obey, then threats of force are used. Just imagine what would have happened if a member of organized labor had told the district attorney that, unless he prosecuted "capital," he would be taken out and hung. Needless to say, there would immediately have been wholesale raids on all labor congregating places and all active unionists would have been thrown in prison for long periods of time.

### Dollar's Patriotism and Brotherly Love

At the time that Dollar was fighting to obtain control of the aforementioned five U. S. Shipping Board vessels, the San Francisco **Examiner** carried an editorial stating that the Dollar Line was American first, last and always. This was written to create sentiment in Dollar's favor. The facts show that this is not true, but that money comes before patriotism with Robert Dollar.

As previously stated, practically all the Dollar ships, with the exception of those running coastwise and round the world, are under British registry. Why? For the reason that under the British flag they can ship coolie sailors and Filipino quartermasters and watertenders. Their maximum wage is not over five dollars a month. Under the American flag they must ship a white crew whose wages will at least be fifty dollars per month. Cargo rates on the ships under the British flag and those under American registry are the same. Hence, Dollar's profit is much greater when shipping coolies than when shipping a white crew.

Another point: during the late war it was to Britain that Dollar hastened to offer aid and not to the United States, and it was under the British flag that the bulk of his ships sailed. The fact that he is a naturalized American seems to trouble him

**One of Robert Dollar's Steamers In China**

not in the least when he has to choose between the United States and the country under whose rule he was born.

We will now go back to the Russian-Japanese war and ferret out an item dealing with the hypocrisy of this man. During this war Dollar leased a ship as a cargo runner to the Russians. This ship was taken as a prize of war by the Japs. Not long after that a delegation of American business men, headed by the Captain, went to Japan in the interest of American business. They were greeted on every hand with tremendous ovations. Dollar always responded by telling the Jap people of the great love and respect he had for them; how he was working for the mutual interest of the Japs and the Americans; and they, the Japs, would do well to place their trust in him and his associates. On one hand we see him aiding the Russians in the war against the Japanese and, after the war, we see him going to the Japs to bid for business. The Russians offered gold for the use of his ship; he let them have it. After the war, the Japs offered a vast commercial field, and he started business relations with them. Was not that hypocrisy, which Dollar has many times preached against?

Comes now the question of brotherly love. As already started, Dollar is a "Christian," to such an extent that he retains Y. M. C. A. secretaries and ministers on the payroll of his company. He causes religious edifices to be built and named after himself, all for the glory of God—so he says—but it is the god from which he takes his name, DOLLAR. He preaches the gospel of brotherly love between the white and Oriental races. There is a reason, an economic reason, at the bottom of this philosophy which we will here endeavor to show.

"Missionaries pave the way; business follows. Americans must remain in China and hold their own." With this statement, Dollar has explained the real reason as to why he preaches this brotherly love. In Wuchang, as also in many other towns in China, he has built Y. M. C. A. buildings and placed the secretaries of these associations on his payroll. They are Y. M. C. A.'s owned and controlled by Dollar. The Chinese children are there educated as he wishes them to be. In this regard he says, "I hold that it is far better for the average Chinaman to possess a good public school education than a college education. I have often obsrved that young Chinamen who receive higher education become dissatisfied with their lot and lose all sense of proportion regarding work." Thus we learn just to what extent these Chinese are educated by Dollar's tutors. They are only educated to the point where Dollar can take them and use them to his own advantage by exploiting their labor power. For instance, we find that he pays thirty-five cents a day for the services of these Chinese on his ships.

Times have occurred when the Chinese resented the activities of the Dollar Company on the Yangtze River, where this company had stolen so much of their trade. Formerly the Chinese plied as rivermen there, rafting all the trade in their crude boats up and down the river. Dollar changed this; he stole the trade and drove the Chinese from the river with his big liners. The very livelihood of the Chinese became endangered, so they retaliated by attempting with armed force to stop Dollar's ships from entering their field. U. S. Marines with machine guns were brought in and promptly subdued any and all Chinese who had nerve enough to fight for what was rightly their own. Had a war been the result of this conflict, the newspapers of this country would have lauded Dollar, prating about the wonderful work he was doing in "civilizing" the Chinese and that the ungrateful Chinese had chosen war as a means of thanking him. The government would have, of course, backed Dollar and thousands of young Americans would have been butchered, all for the personal glory of one man and advancemen of his fortune.

We have shown you where he said that "Americans must hold their own in China," but he did not stop there. He also said, "It is of the utmost importance that Singapore stay in the control of the English for all time". He is a man who supports two flags, British first, then American, and he advocates that the two nations take China. He is one of the strongest white competitors in the race for that country and he means to get it all, even though he has to use the U. S. Marines and possibly a British gunboat or two and take it by force.

What attitude will the Chinese take if he continues in his efforts to enslave and rob that nation? Surely the ideas and sentiments of Confucius are too strongly embedded in their minds to allow them to go on without making greater efforts to rid themselves of this robber. He has used every known means to blind them and instill fear in their hearts so that he might take what he desired for little or nothing. The question remains, will they allow him to continue in his self-seeking ravages.

We will mention one more of the Captain's remarks: "I have something to say of the men who stir up class hatred at home, and especially those who do their best to stir up animosity between our nation and the Orientals. They are vipers and, like rattlesnakes, should be exterminated." We agree with the Captain in that statement and recommend that he apply it to himself, for there are few individuals who are a greater menace to the welfare of the classes than he. He has done more to bring about race hatred between the Chinese and the Americans than any other man alive today, and yet he has the audacity to make the above assertion.

Today we find Dollar at the age of eighty-eight describing himself as a "hard working ship owner." He is one of the world's greatest capitalists and might properly be called the dean of Pacific Coast shipping, as well as being the owner of vast timber reserves in this country and Canada. He is a man who has stolen millions from the workers and has taken their lives and snuffed them out as one would a candle; a man who contemplates taking over all shipping, even as Bonaparte thought of taking the world; who will first use the vampire ways of Cleo-

patra and if they fail will use the ruthless violent methods of Tsar Nicholas. All this he dreams simply because he is demented with lust for power and gold.

He is now living a life of ease and affluence in San Rafael, California, surrounded by every convenience and luxury. Three miles from his home lies San Quentin prison where sixty-five members of the I. W. W. are confined, forced to waste long years of their lives under unmentionable conditions. They were sentenced under California's infamous Criminal Syndicalism law, a statute which was passed at the behest of the Ship Owners' Association, of which Dollar is ex-president. They have committed no crime but have merely protested at such conditions as Dollar and others of his type would impose upon them.

Our story is told. Think it over and decide whether you are willing to seek blindly for the pot of gold at the foot of the rainbow, or whether you prefer to work for your own interests by joining the Industrial Workers of the World, with the ultimate goal in view of receiving the full social value of the product of your toil.

# Plute Conscience Stricken?

By COVINGTON AMI

JUDGING from the flood of anti-Russian, anti-Communist, pro-capitalist propaganda that has been pouring through the news columns of the kept press the past month or so, our dear old friend Plute is not only resting uneasy on his laurels, but is conscience stricken, to boot.

It may sound queer to those who have not watched closely the recent trend of events to speak of Plute being "conscience stricken," but what save a guilty conscience can account for his present feverish international effort to prove that there is really nothing at all wrong with capitalism, internally or externally; that it is still, as of old, "the best system possible," and that all attempts at common ownership of industry, whether it be the State Capitalism of Russia and Queensland, or the Co-operative Movement of Britain, Denmark and other countries, all, all are "total failures".

Something surely is troubling Plute these days and nights, so what is it if not a guilty conscience?

Yet it seems strange that with **ALL POWER**, industrial, political and financial, to say nothing of religion to fall back on, in his hands that Plute should today be so badly worried over the future of the world, and worried he is.

What hurts the Fat Boys so? Haven't they just swept the elections everywhere, especially in the United States and the British Empire? And don't these two empires today absolutely rule the world, morally, financially and everywise, especially financially? And can't "Money do anything?" Sure it can! Then with **all** the money and **all** other **power** in their hands, **why don't they get busy and prove so conclusively to mankind that they have made no idle boast when they declared to the hellbound, harried nations that in them alone was incarnated the "brains" and "ability" to "efficiently manage the world" for the general welfare, that the "damned radicals" would never again have a look in at power of any kind?**

But may be it is just this beast coming home to roost, and not a stricken conscience, that is now worrying them so much; for I observe that though they loudly proclaim that the "radicals" are in any part of the world, right in the next column, and sometimes in the next sentence, they rage out that all would soon be well with "this best of all worlds" if only these "damned radicals" would quit "stirring up the people" against their "masters, gods and governments."

Just think of a "ruling class" with omnipotent power in its hands; with the two richest and mightiest empires earth ever knew their loyal and obedient servants, laying its failure to **make good** on a handful of busted and hunted "rebels"! Never in all the range of history has a cheaper bunch of pikers ruled the world than the bunch that now lords it over mankind, nor a more cowardly. Just look at them! Look at the millions of men, women and children they have slain, and the billions of treasure they have looted, and then listen to them whimpering and complaining that "the workers are not producing enough" and demanding under threats of further slaughter and starvation "lower wages, longer hours and less liberty" for the toilers of the world! Just look at them!

And, God help us, just look at the working class! Slaying, starving and slaving itself for a gang beside which the dog in the manger was an archangel of generosity!

## INDUSTRIAL UNIONIST NOT AN I. W. W. PAPER

**A paper known as the "Industrial Unionist" is now being sold. Although this sheet usually carries the I. W. W. preamble, and the three stars and the letters "I. W. W." on its front page, it is not an I. W. W. publication, and poses as such without any authority from the Industrial Workers of the World.—ARTHUR COLEMAN, General Sec'y-Treas.**

(Continued from page One)

Constitution which forbids any state making a law to abridge free speech.

But as no one except radicals will pay any attention to this part of the nation's organic law, a little thing like that doesn't heckle Tennessee. Whatever the trial's outcome, those standing for fundamentalism and all that rot shall be aligned against those who concede, believe or know that there is nothing immutable, that all things are forever changing. What the jackass community where Scopes is held need to convince them is for an amoeba to develop into a whale during the forty or fifty years their bosses let them live in semi-starvation.

Those who accept the theory of evolution in astronomical, geological and biological matters are very likely to behold sociological changes which are more apparent, and which are demonstrable even in our brief span of life. Capitalists can not afford to let the idea of machine evolution get a footing among the masses. Capitalism is to last forever, and the profits are to be good throughout. At this time wages are deplorably low in Tennessee industries, and most of the farmers are renting their land or have it mortgaged. They must be given some solace, something to balance their spirits and keep them from too deep immersion in the sink of wretchedness. So they are given "pie in the sky" and they cling to this. It is an escape. It is a dream. It is the opium that robs them of the sharpest pangs of misery and of the power to act against their oppressors. This trial, like wearing nightshirts in K. K. K. parades and outragings, fills them with power.

Meanwhile not only wages are bad, but commission men and stock exchange gamblers are reaping a wonderful harvest from the toil of Tennessee's lanky sons of soil. The prosecution may mark the beginning of a vigorous campaign against evolutionary truth, or it may be an act of desperation. Years ago Bishop McFall, Catholic, of Trenton diocese, said that to send our young men to college (meaning non-sectarian and Protestant institutions) was comparable to consigning their souls to perdition. And when I heard him say it he said **hell.** However, certain colleges require that those going up for examinations swear that what they have been taught has in no way undermined their belief in orthodox Christianity. But Tennessee has a superior method: it nips heresy in the bud. There is no use letting in light and then forcing students to say they have been blind for four years.

At any rate——"My Country, 'Tis of Thee"! Cotton Mather, Shay's Rebellion, Alien and Sedition Laws, conscription, penitentiaries, tar and feathers, espionage, lynchings, and now this noisome and noisy inquisitor in a territory that is just as virginally ignorant, superstitious and bloodlusting as any part of the Holy Roman Empire or the rat-eyed areas of Cromwellian Puritanism.

**VON HINDENBURG**—The election of this arch butcher, a monarchist by birth, family tradition and choice, proves that the political allegiance of any man aspiring to lead has but minor importance. The question that capitalists in Germany and any other state ask is: "How well will this person perform for US?" Tsars, emperors, kings and presidents must pledge service to the ruling bosses, and swear to support every effort in the interests of the bourgeoisie against the workers' welfare.

Hindenburg is peculiarly fitted to meet these requirements. He is seventy-eight years old, has spent his life in rigid disciplining, and he is not likely to develop any ideas not already known to those who engineered his election. If he has a middle name it is Slaughter, and his favorite food is blood pudding. His father was a lieutenant, and his mother was the child of Surgeon-General Schwichart of the Prussian troops. Hindenburg speaks fondly of his

parents, saying, among other extolling remarks, that:

"They also endeavored, by suggestion and the development of the tenderer sides of human feeling to give the best thing that parents can ever give—a confident belief in our Lord God and a boundless love for our Fatherland and—what they regarded as the prop and pillar of that Fatherland—our Prussian Royal House."

Other reminiscences about schooling at home are presented in the autobiography:

"To this epoch I trace my passion for geography, which my father knew how to arouse by his very intuitive and suggestive methods of teaching. My mother gave me my first religious instruction in a way that spoke straight to the heart."

How well the joint efforts of these devoted parents bore fruit is a matter of bloodiest history. The tenderer sides of human feeling and the passion for geography combined most efficiently under the patronage—so the field marshal declares—of the Lord God. In the Mazurian Lakes country he managed to annihilate regiment after regiment of good, Christian, Russian moujiks, and he won a place in the pantheon of killers by his previous victory at Tannenburg, to say nothing of other brilliant achievements in the western theater of war. Look to another part of this magazine for photographs from Germany showing how war acts on these gentler parts of humanity that, under parental tutelage, welled up and overflowed from the Hindenburg fraternal soul.

The general is now Big Business' cringing lackey just as he was Wilhelm's fawning flunkey a few years ago. His election speaks volumes for the level of German intelligence among the masses. These masses were taught for a half-century by the social democrats, and they cannot yet think for themselves. "Vote for me and I will set you free." That was the campaign stunt all these years, and still is. When the German workers, and the slaves everywhere, learn to rely on themselves through their economic solidarity they'll vote for no one, and they'll take the industries they have created.

In the world today there is the force for industrial freedom that attacks the poisonous philosophy of messianic redemption through political saviors, and there is also a desire among many others to pass the power of dictation to "strong men." Germany now boasts one of these alleged prodigies. His record for wading knee deep in blood is very good and romantic and it got him a lot of female votes. His sympathies for despotism also give him high rank for the office of further enslaving German wage slaves. But he is seventy-eight years old, the Dawes plan stares him in the face, and the workers are slowly learning the way to emancipation. After fifty years of voting it's about time.

**OUR WRITERS AND ARTISTS** — Since assuming editorial duties on this magazine it has been my good fortune to have enlisted the enthusiastic and talented support of a host of writers and artists, and to have held the fine assistance of those who contributed previously. These men and women —Labor's best—have devoted their intelligent and inspiring energies to advance The Industrial Pioneer to the position claimed for it—first place in the field of labor monthlies in the English language. The contributors have given their work willingly and with no other compensation than that of experiencing the joys that belong to those who strive to wipe this rotten bourgeois derangement of human relations out of existence. We owe these writers and artists much gratitude and freely acknowledge the great debt. May they persevere with us until this journal of revolutionary industrial unionism leads in circulation as it now leads in excellence.

**PIONEER COVER DESIGN** — Humanity over the great earth is shown mightily striving to break the chains that bind its flesh and hold in subjection its spirit. We regard the drawing a symbol of that struggle in which we are ceaselessly engaged and which animates our whole activity. This work was submitted by Fellow Worker Sarah Egherman but received no mention by any of the Pioneer-Solidarity Artistic Contest judges who gave opinions.

# A New Society in the Making

(Continued from Page Fourteen)

tated by the development of agriculture to the most important industry. To further develop nationalism and make it sufficient authority to insure its stay as society, art was invoked to glorify it. Hence hellenistic art is also the acme of nationalistic art. Its sculptures are modelled so as to impress the populace with the glory of Hellas, its literature one continuous tribute to the greatness and glory of the nation. Finally the nation fell, the ancient empires of Hellas and Rome were conquered by the barbarians, and upon their ruins was built the feudal society.

With feudalism follows a new code of ethics, a new intellectual era. We are told it was a reaction, or at least a stagnation in the general development of Europe's intellectual life. Probably it was nothing but a necessary absorption of cruder elements into a higher form of society in order that the progress could so much more safely continue on a much broader basis. Be that however it may, one thing is certain: Feudal art and literature is distinctly different from nationalistic-hellenistic art. Why? Our only logical explanation is that its creators developed in different environments, which changed environments were due solely to a new form of production—serfdom instead of chattel slavery; isolation instead of concentration in cities.

### The Renaissance

With the revival of nationalism at the collapse of feudalism we find old hellenistic art also revived. We behold the Renaissance. The whole Christian religion had to be modified in order to meet the new material changes that had taken place. In Northern European countries we had the Reformation, which relegated the pope to second place in matters temporal or corporeal, while the king became the most important person in the new nation. Polytheism as represented in hellenism was untenable in a religion that was to apply to many nations and where the church had to be consigned to second place or made to serve the new industrial order which could only be governed by a monarchical form of government. It would not do to have a national saint, who expressed his will through the Pope in Rome, as the supreme power in the nation. Such a saint might ordain something contrary to the welfare of the ruling power in the nation. Hence the Reformation.

In the Latin-speaking countries of the South, Catholicism had to be modified in order to maintain itself. Jesuitism proved to be the remedy needed. A sufficient amount of aggressiveness was added to the original submissiveness of the teaching of Christ so as to get a blend that could be used in class society. Aggressiveness for the ruling class; submissiveness for the subject class. Thanks to this change, Christianity became adaptable to capitalism, yes, especially fit for that form of society, and could be applied under different names in all the European countries.

The cathedrals and the monasteries, as well as all the so-called religious art from the early days of capitalism, had as its impetus not so much a burning desire to glorify God or any of the saints. Granted that the artists themselves were inspired by such a desire, the result of their work became nothing but a means of impressing the masses with the omnipotent power of the church. Those enormous buildings, great architectural works as they are, or those splendid sculptures and paintings, never did convey, and do not convey, to the visitor any conception whatever of what God is or is supposed to be. But it does make an authority of the church, as it signifies its enormous economic power, instills fear in the hearts of those who might otherwise resist it and makes an impression of authority that must not either be doubted or resisted. As the church had already been made the subservient tool of the new capitalistic order of society, its authority was used exclusively for the benefit of the new rulers. Thus art, literature and science were recreated and again made the tools and means by which the new social order would be developed and maintained.

### Monopoly Development of Industry

The new form of society, the completely industrial one, which is now rapidly making its appearance, must likewise create its own means of propaganda. It cannot be brought into being or continue its existence with the aid of capitalistic art, science, education, religion, ethics or any other capitalistic agencies. It must itself create all such agencies and social institutions or else fail in its mission. If the workers, through their new and modern organizations, such as the I. W. W., fail in this respect, those organizations will soon degenerate into nothing else but capitalistic institutions whose sole function will be to barter with the slaves' labor power on the public counter where this and other commodities are for sale.

We must cease to judge our literature from the viewpoint of capitalist standards. Our ethics must be judged the same as theirs, and previous societies, by its usefulness to the aim in view. Capitalist science, art and achievements in general are measured by their value to capitalist society; our work must be measured solely on its merit as a means by which we can usher in our form of society. The revolutionary value of our work must be the sole standard of value applied.

We must cease attempting to build up any literary monuments from the viewpoint of capitalistic literary tests. Our literature is valuable only in such a degree as it conveys to the reader the idea of our proposed form of society, and the

means and methods by which it can be realized. Our art, whether it be a painting, a cartoon, or a poem, is valuable only to the extent that it can impress the masses with an entirely new conception as to what is good, great or beautiful according to our ideal, and not according to the established code of ethics. The value of our work must be measured, not by comparison with capitalistic achievements but by the service it may render our revolutionary activities.

### Productive Modes Shape All Else

But all art, education and social activities in general are secondary in their nature. They are all based upon, and take form and expression from the prevailing mode of production. Those who control the industrial forces in society will control society itself. To establish a free art, or free form of education, or of science that is absolutely free to search the field and bring forth to the whole world its results, it is necessary that we establish such a form of society that shall benefit by this intellectual freedom. Present-day society can maintain itself only through suppression of science and art, or through prostituting it so as to make it serve its purposes instead of serving mankind by demonstrating to all, in a popular form so as to be understood by all, its discoveries or achievements. When we have established such a form of society that it not only permits full freedom on the intellectual field, but is depending upon such freedom for its very existence, then mankind is free, mentally and economically.

No new society has been brought into being by any other means than action. No sculptor has ever modelled it into being, no painter produced it on the canvas, no philosopher speculated it into reality, and no scientist brought it forth as a result of his experiments. All that such persons of talent and genius have done was to glorify what already had been done—explained to us the complicated nature of their working processes or pointed out to the masses the possibilities of the future. And this they have been able to do only to such an extent as the oppressed forces in society have made it possible for them to do. It is the toiling masses themselves, through their activities directly, either on the industrial field or on the battlefield against their oppressors, who have brought about the changes in society by which our much praised civilization and culture has been able to spring forth and develop to its present stage. It will be the same in the future.

No reactionary elements can survive; no form of society that looks for its ideal in the past will ever succeed. Only those who look to the future will gain victory. Those who fail to adapt themselves to the changing mode of society, who insist on living a desert life even after the desert has been irrigated and made to produce an entirely new flora, are bound to become extinct. Hence the future belongs to the irrigators and not to the drones who even fail to note that the desert is gone.

### Activity Is Needed

Only the really active revolutionist is the constructive builder of the new society. He is the only one who constantly adapts himself to the changes that take place in the industries. He does it because he must in order to live. Those who live the life of the parasite do not feel the need; those who devote themselves to speculations and dreams do not dare to face life as it is, as oftentimes it runs contrary to their dreams and their fancies. The only real revolutionist is the one who does the world's work and thereby also adapts himself to the new mode of living required. Out in actual life, facing the enemy in his own entrenchments in the everyday struggle for existence is where the revolutionist is developed, where the creator of the new society is to be found.

A new type of producer is in the making. It is not of the type that originated in the homes of isolation, on the farms or in the wilderness away from the great centers of our civilization. It is composed of the ones who are brought up in these capitalist establishments that have for their purpose the turning out of suitable subjects for the perpetuation of their own system of parasitism and of legalized and sanctified robbery. They themselves create that very type which eventually will establish a higher and a better form of society. For those who start life in the kindergartens or grow up in the slums, the public institutions of slave cultivation, the world will appear in a wider and broader aspect than it did to the farmer boy who found himself with ten miles distance to his playmate, no matter how great the efforts being made to mold them into fit subjects for our present-day order. They will find fewer strangers in this little world of ours and they will learn to understand each other with less effort than it took us whose world was limited to our father's backyard, and who were told that behind the hill lived strange people and that all strange people were more or less bad people that could not be trusted.

### Job Action Must Bring Freedom

This new generation of men, who, from their cradle to their grave, from the kindergarten, through the factory onward to the human scrapheap in the downtown sections of our cities, are forced to live together, work together and starve together, will eventually learn also how to **fight together and win together.** Among their fellow victims of this insane system those who have the vision of something new and something better must preach the gospel of Industrial Freedom, and preach it in a language that all of them understand, in fact, in the only language any of them know. And although that language is not accepted today as the proper one to use in good society, that language will tomorrow become the classic, because it brought about victory.

In this environment they will not only preach, but they will bring about action. There is the field

not only for the propaganda of the new, but for its realization as well. There is also the field where we can and must train ourselves for our task, our school of revolutionary tactics, our field where the new society shall be erected.

Throughout the whole world we find today that the message of industrial unionism as propagated by the I. W. W. is being accepted as the only solution for the liberation of the toiling masses, and thereby, mankind as a whole. It is advanced through various organizations operating under different names in different countries. All of them adhere to the main principle, **action on the job,** which is the fundamental principle of the I. W. W., as contrary to delegated power exercised through some agency of the capitalist state. It is through the faithful acceptance and forwarding of that principle that we shall win. Perhaps victory will not be gained under either the name of Industrial Workers of the World or any of the names under which present-day industrial unionists operate, but that does not alter the fact. One thing is a certainty, namely: **The industrial workers of the world will never gain their emancipation except through their activity applied directly on the job.**

# Upton Sinclair's Mammonart

REVIEWED By KRISTEN SVANUM

THE main thesis of Upton Sinclair's latest book is that art is propaganda. Propaganda is an expression of opinion for the purpose of converting others to it, and this is what the artist is doing, whether consciously or unconsciously.

The other thesis of the book and quite as important is that all propaganda is class propaganda, based on economic motives, and that all really great art is revolutionary propaganda.

This raises the question, if the main thesis is accepted, whether the skill of the propaganda will be a determining factor in appraising art, or whether it should be judged mainly on the purpose of direction of the propaganda.

Upton Sinclair decides that the last must be the case. He does not, in theory, deny the first factor equal importance. On p. 352 he states: "The relationship between the novelist's purpose and his story is very simple; the two things are one, and of equal importance. . . . . I have failed to mention a goodly company of artists who fought valiantly for freedom and justice, but who do not belong among the greatest for precisely the reason that their impulse to teach and preach ran away with their inspiration. That is why you miss such names as Plato and Sir Thomas More and Ferdinand Lassalle and Bertha von Suttner and John Ruskin and Walter Besant and Charles Kingsley and Charles Reade and Robert Buchanan and John Davidson and Richard Whiteing and Francis Adams and Harriet Beecher Stowe and Edward Bellamy."

In practice Upton Sinclair is not adhering to these principles. Even in the quotation cited, it is hard to agree with him when he is claiming to apply it. Can Plato be considered a valiant fighter for freedom and justice? Or do we read him today on account of his dialectical skill?

Is Ferdinand Lassalle lacking in literary skill? Is Ruskin more of a preacher than Carlyle and Matthew Arnold? Isn't it a perversion of revolutionary and artistic ideals to place the reactionary Schiller over Goethe, the author of Faust, and one of the first students of botany adhering to the evolutionary theory?

Are Beethoven, Wagner and Richard Strauss superior to Handel, Palestrina and Rossini, because they were revolutionists? Or is there some other reason?

Upton Sinclair's generalizations are not correct because they are too sweeping. While some traces of economic propaganda can be found in all art, they are not always important parts in it.

In purely presentative arts like music, architecture and the dance they play a less important part, with an increasing importance in the representative arts of sculpture, painting and literature.

We shall find great art with foolish economic propaganda in it, and we shall find bad art with excellent economic propaganda in it. The soundness of the propaganda will not determine the greatness of the art in either case.

Shakespeare and Goethe are not the best defenders of the capitalist system, and Karl Marx, I am afraid, would have cut a very sorry figure as a literary artist.

The sub-title of MAMMONART, "An Economic Interpretation of Art," suggested a problem that has not been taken up by the author: the problem of tracing the different trends in art; the evolution of the different art forms and art expressions and analyzing their connection with and dependence on the economic basis of society.

Upton Sinclair gives us a history of art from its first historical appearance up to modern days, but it is a rather un-historical history. The class struggles of old Hebrew history are retold as identical with the populist movements today. Alcibiades' biography is related under the name of William Randolph Alcibiades in a modern American setting, etc.

The idea of bringing the picture vividly to the attention of the reader is excellent, but historical perspective is lost by an overstressing of similarities.

The method of investigation and representation used by Sinclair is that of the impressionist and individualist. Actual and possible motives and influences working on the individual artist are taken up, analyzed, and presented to the reader, but these powerful forces, shaped by economic and industrial evolution, are neglected in favor of the more spectacular but less important events as the French revolution and the formation of the Holy Alliance.

Upton Sinclair is not absolutely neglecting them, but they are—to him—incidental. His history of art is a kaleidoscopic procession of individuals molded by their closest environment and the most spectacular events of their days.

The result is that we are not getting an economic, scientific interpretation of art, but an economic, impressionist interpretation of it. Instead of a history of art we have got a chronologically grouped set of essays on artists.

His sermons on Musset, Poe, les Goncourts, and others tempts one to call him a radical Dr. Frank Crane. His tendency to point a moral at any conceivable—and many other—occasions, defeats itself. Moral advisers will do better just by showing the facts and leaving it to their readers to draw their own conclusions.

Upton Sinclair has not been successful in giving an economic interpretation of art; but he has done valuable pioneer work in that direction.

MAMMONART is an interesting book from cover to cover. The sophisticated reader will refresh his memory through it, and unless he has been reading very extensively he will find much new material therein.

Readers that do not usually care about histories of art and literature will find that MAMMONART is "different." There is nothing of the pedantic professor or the hysteric male bluestocking in it. It is the book of a man that dares call a spade a spade, and, if need be, "a damned muckstick."

My only reason for not recommending MAMMONART to Pioneer readers is that I am afraid that the majority after having read it will accuse me of having done a shameful injustice to it in this review. The author publishes the book at Pasadena, and the price is $2.00.

# The I. W. W. and Why the Workers Should Join It

By VANCOUVER LOGGER

THE Industrial Workers of the World is a revolutionary labor organization, industrial in character, and international in scope. It was formed in 1905 as a result of the discontent with the inefficiency of the trade unions, which could no longer cope with the growing power of the employing classes, arising out of the industrial revolution of the nineteenth century. From its very beginning up to the present day it has successfully fought numerous battles for labor and, as a consequence, its members have paid for their activities with persecutions at the hand of hirelings of the master class. But nevertheless the I. W. W. stands foremost in the labor movement today, larger and stronger than ever. It is the only road to better conditions and the final emancipation for the workers.

The I. W. W. organizes the workers into industrial unions, instead of into trade unions. The advantage of this form of unionism over the older form of craft organization is obvious. Instead of being split up by trades, each trade with a separate time agreement, the workers in each industry are solidly welded together to show a solid front to the particular industrial trust they are fighting. The I. W. W., however, looks beyond an isolated form of industrial union. It realizes that, no matter how powerful the workers in one industry may be they may be compelled to fight a number of united bosses representing various industries. It also recognizes the fact that all industries are closely interlocked and that a victory of one set of workers is a victory to all and a defeat of one a setback to all. Therefore the toilers are not only organized in industrial unions but all the industries are solidly united in One Big Organization of all wage earners, thereby achieving the solidarity of labor when fighting a united master class.

The I. W. W. admits to membership all wage earners regardless of race, color or creed and through education welds them into one solid, class conscious working class. Not only trades and industries must be united in one organization but also all nationalities . Capital is international, therefore it is necessary to organize internationally. We will suppose there is a strike in the lumber industry in the United States. The strike would lose its efficiency if the lumber workers in Canada and other countries supplied the United States with lumber. With the present means of transportation it is impossible to achieve absolute solidarity of labor unless the workers the world over are lined up in one organization. When the master class can no longer keep the workers divided by obsolete trade unions they arouse their race hatred through the press and divide them along racial lines instead of trade divisions. Consequently the I. W. W. breaks down this barrier and organizes the foreigner so as to have him fighting with us instead of against us.

The immediate aim of the One Big Union is to better the conditions of the workers by cutting down the working hours to relieve unemployment and by raising the wages. Its ultimate aim, however, is to overthrow capitalism and to establish a co-operative commonwealth where the machinery of production

and distribution will be socially owned and run for the use of humanity and not for the profit of the few. As a revolutionary organization the I. W. W. shows its superiority over such organizations, by organizing the workers on the industrial instead of on the political field, thereby fitting each worker to find his place in production and enabling him to carry on industry after the overthrow of capitalism. There is no other revolutionary organization that has a definite plan to carry on production after the present system has been overthrown. The industrial Workers of the World can truly say that "by organizing industrially" we have formed "the structure of the new society within the shell of the old."

We have seen that the I. W. W. has immediate demands for the betterment of conditions. By joining the organization the workers will hasten the benefits of better conditions. They will also hasten the day when capitalism shall fail, and by being organized, will be able to save humanity from starvation and chaos. Therefore it is to the interest of all who are being exploited and robbed, who would benefit by living in freedom and health in a decent social system, to join the I. W. W. today and not tomorrow. Just as soon as they organize correctly and not before, will these changes be brought about.

# Ship Owners Wine and Dine Seamen Starve and Beg

By SID TERRY

THE Great Lakes have been open for navigation for a month, but the number of unemployed seamen instead of decreasing, has been steadily increasing until there are armies of stranded seamen in every port. The halls are crowded to overflowing. The ill-ventilated Lake Carrier's halls afford "flops" for the less fortunate. Vile breaths of "dehorns" permeate the atmosphere. Men can be seen in a coma, supposedly sleeping, but in reality almost asphyxicated by the foul air. Many would welcome incarceration as a relief from their misery, and the jail discipline as a happy contrast to their present plight. These men offer all they have for a chance to work. Their bodies are tired, warped and broken by toil. Some of them, as individuals, have struck out in retaliation against powerful and unseen forces which sapped their vigor and burned out their youth; they pitted their own puny efforts against the overwhelming strength of established society.

Individual effort has taught them a lesson and they are now turning towards the I. W. W. Coordination of their individual labor power with that of their class acting together is their only hope. Among these modern nomads a sense of industrial solidarity is fast taking root; the pulse of the pariah of the sea is quickening to the detriment of the present autocracy. The colorless traitor who runs the fink hall cannot meet the eyes of these men. Can it be there is danger of infection from the ideas these men nurse? Can it be that their talk, confided in low tones, will be the nucleus which will eventually develop into the force that will finally subdue capitalism?

In sordid contrast to the undernourished, sleepless seamen who hunt for work, are the well-fed, silken-clad shipowners. In expensive pews they kneel and pay tribute to the system which grinds the bones of the seamen into overstuffed lounges, expensive automobiles, and huge buildings, from which their henchmen direct the activities of the slave machines which plow the Great Lakes, giving no thought to the agonies endured by their "brother associates" of the "Welfare Plan." Is this Christianity? Are these the glories we sing of—the beauty and joy of the present social system?

Fellow workers, act! Let us join together into one big powerful union, the I. W. W. Let us unite and abolish forever the damnable exploitation of man by man. Let us do away with the system which produces paupers and makes millionaires. The I. W. W. welcomes you into its folds. The I. W. W. is an organization which recognizes the irrepressible and irresistable struggle which must go on between workers and employers. Education and organization are the weapons that will finally bring the workers to their own.

Rise in your might, brothers—bear it no longer!
Assemble in masses throughout the whole land—
Show these incapables who are the stronger
When workers and idlers confronted shall stand
Through castle, court and hall—
Over their acres all.
Onward we'll press—like the waves of the sea—
Claiming the wealth we've made,
Ending the spoilers' trade,
Labor shall triumph, Mankind be free.

## INDUSTRIAL WORKER

**Published weekly at Seattle, Washington, needs your immediate co-operation. This means bundle order increases, new subscriptions and renewals. Don't let lumber, shipping, construction and other industrial exploiters put this fighting newspaper of the West out of business! Do you want better conditions? Do you want to get the Centralia and other Wobblies out of Walla Walla prison? Are you in favor of getting out propaganda designed to smash the C. S. statutes? If you are then fight for your industrial unions and for your press which is their chief support. Send your orders NOW to the Business Manager Address Box 1857, Seattle, Washington.**

## INDUSTRIAL SOLIDARITY

**Official Organ of the I. W. W.**

**Published weekly at Chicago—the nation's center of heavy industry. Accurate news of this most important district and from all parts of the country. World news right up to the minute. Labor's viewpoint is worth reading. If you want the truth about what is going on in America and all over the globe don't delay, but send in your subscription at once. $2.00 a year. Single copies, 5 cents. Bundle orders, 3 cents. New address 3333 Belmont Avenue, Chicago, Ill. SUPPORT YOUR PRESS!**

## GAINFUL OCCUPATION

A young man arrested on a vagrancy charge was standing before the bar of justice. Looking over his glasses the judge asked, "Young man, did you ever earn a dollar in your life?"

"Yes, your honor," came the quick reply; "I voted for you last election."

## VACUUM

A delegate was trying for more than an hour to make an impression on Mr. Shears.

Suddenly Shears said, "Everything you tell me goes in one ear and out of the other."

"That's because there is nothing between your ears to stop it," concluded the delegate.

## THE MODEL WORKER

Straw Boss: That fellow reminds me of a steam engine.

Foreman: Good worker, hey?

Straw Boss: No, good whistler.

## RESOLUTION

"I'll never again work for that man Dolan," declared Casey.

"And why?" asked his friend.

"Shure, an' 'tis on account o' th' remark he made."

"An' what was that?"

"'Casey,' said he, 'you're discharged'."

## WORKING FOR FORD

The following conversation was overheard on the local "skidroad:"

"Did you ever work for Ford?"

"You bet I did."

"What you quit for?"

"Didn't quit. Got 'canned'."

"What you get 'canned' for?"

"Dropped my wrench on the floor, and before I could pick it up I was four cars behind."

## THE AVERAGE "PROF," TOO

Student: How long do you suppose, Professor, that I could live without brains?

Prof: I don't know; we can only wait patiently and see.

## REQUIESCAT IN PACE

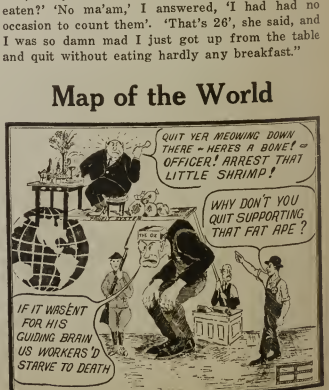
The other day an Italian nobleman, visiting our fair shores for the first time, watched the skyline of New York approach from the boatrail. The Statue of Liberty caught his eye.

"An' what ees tha-at?" he inquired of an American he had become acquainted with during the voyage.

"That," replied the American reverently, "is a statue we have raised to the Goddess of Liberty."

The personage from Italy nodded brightly. "Oh yess," he said, "in Italee we too raise monuments to our ill-ustrious dead."

## BREAKFASTLESS



The "hired man" went into the village store to cash his check.

"What's the matter? Quitting your job?" asked the storekeeper.

"Aw, the old woman there was too stingy," answered the man.

"Do you know, at breakfast this morning she said, 'Do you know how many hot cakes you have eaten?' 'No ma'am,' I answered, 'I had had no occasion to count them'. 'That's 26', she said, and I was so damn mad I just got up from the table and quit without eating hardly any breakfast."

## Map of the World

# When the Last Rebel is Hanged

By COVINGTON AMI

When Plute in his infinite wisdom the last of the Rebels has hanged,

And all of the Farmers are peons, and all of the Workers chainganged;

There in the Bankers' Elysium, where the truth it shall never be told,

Where Christ is a criminal syndicalist and justice is bartered and sold,

What a world this will be for the Bosses! how happy our Rulers will be,

With nothing to do but to feast on the fruit of the Usury tree!

But, oh for the Artists and Thinkers the mothers of Labor give birth!

And the mothers, the mothers!—what a hell of a heaven on earth!

# Preamble ot the Industrial Workers of the World

The working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

The conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

THE HARVEST DRIVE IS ON AGAIN!

# The Industrial Pioneer

*An Illustrated Labor Magazine*
*July, 1925* *Price 20 cents*

# FRAMED!

By HENRY GEORGE WEISS

HE was a down-and-outer, the kind you often see,
A sort of moral rotter, full of iniquity.

He was a down-and-outer of the vilest, lowest breed—
A product of the Bowery slum, a waif of lust and greed.

He'd done time on the "Island," and three years in the pen—
Had run his string of women and sold dope to men.

From foot-pad to porch-climber, he'd learned the robber's trade,
Had shoved the "queer" and for a year his share of liquor made.

He was a down-and-outer, though he often dressed "real swell"
And smoked real smokes and tipped the hop who answered to his bell.

But one day in a shooting fray he copped a guy for fair . . . .
The D. A. pushed the case clean through and sent him to the chair.

He was a down-and-outer of the vilest kind, you bet,
—And yet he had my sympathy and some of my regret;

Because I knew the cards were stacked on him when he was born—
Because I knew him when a kid, ragged and forlorn;

Because I saw him on the streets filled with stench and filth—
While scarce a block or two away there rolled uncounted wealth;

Because I saw him "short-change" men in selling them the news—
And running errands for the crooks and picking up their views.

On law and order, finding out what precinct cap was bought;
—Because I saw the sort of kind of teaching that he got.

He was a down-and-outer, and no damn good at that—
But ah, 'twas his environment that pinned him to the mat!

And I'm stating, and I'm saying, and what I say is no lie:
**The System killed the thing it made the morning he did die!**

**HARVESTING AGAIN**—According to reports appearing a short time ago in capitalist papers of the Middle West John Farmer was going to have things all his own way with harvest workers this year. It was announced by the associations of farmers and bankers that $3.50 a day was to be the wage. But three-fifty did not stand because the Agricultural Workers' Industrial Union Number 110 of the I. W. W. acted as one man in a demand for higher wages. Determined to get results the union forced wages up to $5. Considering high prices prevailing everywhere for living necessities it is imperative that the harvest workers continue to hold fast for common advances. By this action further wage rises are assured.

The cause for the initial wage increase is not hard to find. At the A. W. I. U. Omaha conference in May every officer, delegate and member present pledged himself to solidarity and loyalty to the I. W. W. They understand the meaning of acting together for common purposes, and they have demonstrated the efficacy of such cohesion by this very tangible jump in wages from the miserable three-fifty offered to the five dollars prevailing. This success merits careful consideration and it is entitled to the whole-hearted-support of all harvest workers. It is the better part of wisdom to get all that they can because next winter's unemployment situation is going to be worse than the one now obtaining. These crises assume so chronic an aspect that one may feel inclined to grin derisively when told that "hard times" are coming. However, all things are relative and even this bad state of affairs in the arena of industry can become worse.

The harvest workers lined up in the A. W. I. U. have learned that workers get nothing that is good for them except those things for which they struggle. A few years ago, before the union was in the field, farmers treated the "hands" with less consideration than they would broken-down mules. Wages were very low. There was a workday that began at dawn and continued until the stars were shining. Bad food and scanty rations were given to the harvesters. They slept in barns or out in the fields. These conditions have been improved by organization, by workers with sufficient common sense to stand shoulder to shoulder and battle for decent lives. The worker who turns the other cheek in a world of bourgeois wolves is "out of luck." If you give the boss your cloak after he has robbed you of your coat he'll know you for a sucker and come back to steal your undershirt.

Organize to get as much of the good things of life which you and all workers produce so abundantly. Keep organizing to secure more and more until our class has the organized power to take its own. All that we need is the world.

**CHINA'S FUTURE**—We are living in the era of business empire. Imperialistic practice is bearing out the Marxian theory on an expanding scale that is superlative for the spectacular manner of its operations. Marx analyzed the capitalist productive mode, proclaimed its fatal contradictions, and declared collapse to be inevitable due to inherent discords, to the germs multiplying within itself making for its destruction.

Looking about the world today one thinks not so much of discords, but rather of convulsions. On every side we are witnesses to unprecedented violence, to terrorism with all its murdering, its rapine and arson, its jailing and torturing, and the horrified attention of any person believing in a high future for humankind might well break in despair. The world's foremost exponents of the existing system are saying that unless stabilization of exchanges can be effected civilization is doomed to disintegration. To them civilization and capitalism are interchangeable terms. Periodically world conferences are called at which desperate efforts are made to resolve to order the chaos of our modern scheme of wealth creation.

But this cannot be done. Capitalism is

(Continued on Page Forty.)

# The Harvest Drive is on Again

By FRED MANN

EVERY year about this time unusual activity takes place in every hamlet, village and city of this country's southwestern wheat belt. Towns that were deserted a month ago are now crowded with men. The small merchant is preparing his stock of last year's goods for his usual yearly cleanup. Restaurants that were closed up all winter are doing a rushing business. The farmers are buying supplies. The blacksmith shop sends forth the echo of the steam hammer and the whiz of the emery wheel that is being used in the repairing of binders, sickles and other agricultural implements that soon will be put to use. The grocery dealer benefits most in the immediate preharvest days. The prices of food in the restaurant is too exorbitant for the majority of the workers. On the outskirts by some brook or in the comfortable shade of trees a different and more fascinating activity is manifested. That's where the "Jungles" are located. At a glance the intruder could tell that this is no vacation camp of city folks. Order and discipline of the brand known only to the organized migratory worker is immediately detected. Two fellows are in the act of washing and cleansing the "pots and pans" after their meal, while another is bringing some water from the nearby spring to replenish the amount used by him in the process of cooking. A large placard is nailed on a tree setting forth the rules of conduct, and on the bottom in large letters, "Only members of the I. W. W. are invited."

### Why These Workers Advanced

This freedom was not always enjoyed by the agricultural worker, and it was only through the militant organization of the I. W. W. that a stop was put to the interference of the greedy restaurant and hotel keeper. Some old-timers can relate divers instances how in the old days before the A. W. I. U. No. 110 came into being, and even in some places right now, in the stillness of the night, the receptacles were shot full of holes and everything destroyed.

The county agent, who acts entirely under the orders of the local bankers and the commercial clubs, plays an important part worth while mentioning. His duty during the harvest season is to

see that every farmer is adequately supplied with cheap labor, as it is to the bankers' interests that the farmer pay out as little as possible, for he wants to get it all. The agent is generally on the lookout for the "suitcase boys" who leave the city for a vacation, expecting in the meantime to make a few extra dollars. Usually they are disillusioned. They are too soft to stand the "gaff." Nevertheless, they are warned of the danger that they confront if they should happen to associate with the Wobblies—and before they can think the matter over they are packed into waiting automobiles and driven away by some farmer without knowing anything about pay or working conditions.

These "suitcase boys" are generally sent out from Oklahoma City, Wichita and Kansas City, which are the three main shipping centers supplying labor to the Oklahoma and Kansas harvest fields. The greater amount of the workers are migratory, hailing from every part of the country. Their winters are generally spent in the industrial centers and big cities. With the coming of spring, as soon as the weather permits, they set out in search of employment. These men are seasoned in the work of agriculture and are much more susceptible to organization than the "suitcase boys".

### Waiting For the Harvest

The fields of grain are ripening fast. The scorching sun and hot winds will have the wheat ready for cutting in Oklahoma on or about June 10th. In Alva, one of the biggest harvest centers of Oklahoma, approximately five hundred workers are congregated. Out of these three hundred are organized. A local committee representing these organized members looks after all things executive. Wages are to be five dollars, that is the general sum among farmers and workers alike, and no doubt as soon as the harvest gets under way, the organized workers feel confident that five-fifty will be the prevailing wage. There is no oversupply of labor, although unemployment is plentiful in the industries. The sentiment among the workers and people in general in these parts is not what one would call hostile to the I. W. W. The Agricultural Workers' Industrial Union No. 110 has gained many concessions in Oklahoma. In the past, twelve hours constituted a day's work, and $3.50 was the general prevailing wage. Contumely, jails and other forms of persecution were resorted to in the stifling of growth of the organization. All these tactics proved futile. The members of A. W. I. U. are treated with respect, as the opposition has found out through costly experience that jailing one or two members made it necessary to deal with hundreds—yes, at times, thousands. As an instance, in Enid, Oklahoma, for two consecutive years the powers that be resented the organization of the agricultural workers, and as a result jailed a score of organizers. To the surprise of many this petty form of persecution resulted in an emphatic protest on the part of the Wobblies, and hundreds of men poured into this little city of twelve thousand inhabitants. This display of inestimable solidarity brought about the release of the organizers, and Enid learned that to jail members of the I. W. W. without cause is a costly experiment. Enid has been behaving since.

### To Feed The World

The first part of July will see the Kansas harvest at its zenith. The crops are good and only unforeseen forces, such as hail and extremely hot winds, will possibly damage the grain. It is estimated that 25,000 workers will be engaged in gathering the grains in the Sunflower State. No serious persecution is expected, although in the past Kansas was one of the first states to pass the infamous criminal syndicalism law. This law has been made inoperative by many favorable rulings of the state supreme court and the economic pressure that the workers used in retaliation. Hutcheson, Kansas, has always been known as one of the most hostile towns in the state, but it recently released two members after detaining them for an hour or two. The authorities gave them back their membership cards and all their personal belongings, contrary to the custom of the past.

The General Defense Committee spent thousands of dollars on literature that was broadcast to the taxpayers showing them how their money was spent in persecuting innocent working men. This, no doubt, helped a lot.

The means of transportation in Kansas are fair, with the exception of the Rock Island Railroad. They police their freight trains. This road is one of the largest transportation arteries leading out of Oklahoma. Workers have to gather in large numbers in order to ride these trains, and they usually succeed. The worker cannot possibly pay his fare during the harvest season, for instead of making a few dollars for himself at the conclusion of the season, his meager earnings will be found in the coffers of the railroad stockholders. The wages, hours and working conditions in Kansas are about the same as those of Oklahoma, though in some spots from fifty cents to a dollar more.

### Organization Opposed By Violence

While the harvest passes its zenith in the Sunflower State, Nebraska begins operation. Conditions and wages are good. Very little persecution is anticipated, except possibly at Lincoln. In the past the railroad and city "bulls" have formed vigilante committees who have beaten up and dispersed members some five miles out of town.

From Nebraska the workers split into two large divisions, as the next center of harvest activity begins in two states at nearly the same time. The usual route followed is through Omaha, Nebraska, and Sioux City, Iowa, and it is here that they fork out. One body makes its way into South Dakota, while the other plods its way up to Central

and Western Minnesota. It is here indeed that one finds more men from the eastern industrial centers than in the South. Only about forty per cent of the workers leave the South at this time. Some of them leave the harvest; the greatest number, however, remain to do the threshing.

SEPARATING WHEAT FROM CHAFF

Minnesota never offered much resistance to organization, while her westerly neighbors have some communities that are and have been hostile to the I. W. W.

Early in 1916 South Dakota showed its hostility toward our organization.

### Getting Rid of a Vicious Element

Redfield and Aberdeen will be long remembered by many pioneers of old "400." The commercial clubs of these towns, with the cooperation of Sioux City, had organized what was then the yellow card men. In conjunction with the village and county authorities these gunman hirelings waged open warfare on members. They used their clubs and guns freely and a pitched fight at Redfield resulted in many wounded. "400" made them show the white flag. In Aberdeen, that same year, it was the general practice to take members out of town and flog them in Klan fashion. The following year as an offensive tactic against this inhuman treatment a general strike was called. A picket line hundreds of miles long embraced the state. The effect was felt. Today only Mollette and Aberdeen remain rather hostile; the latter not very vicious. Organization in this state has been on the increase in the last two years and this coming season holds forth great advantages. A definite organization campaign has been mapped out and the organization committee proposes to have organizers in all centers. Wages here last year were $5 for ten hours although in some places twelve hours is still in vogue. The petty tin horn gambler and his coworker the hi-jack are becoming less numerous. These parasites have for years preyed upon the helpless harvest "stiff." There was no use to turn to the authorities as they worked hand in hand with this despicable lot. The A. W. I. U. No. 110 in its bulletins and general literature warns the workers of these menaces. This education makes it harder for these morons to find customers, and this, coupled with the intelligent action employed when one of the characters is found, has put this menace on the wane.

North Dakota and northeastern Montana are the last outposts of this country's bread basket. Here there is no persecution on any organized scale, although in some isolated spots petty abuses are resorted to. Of course things are taken care of here more efficiently and the workers lose no time in showing their economic power. The farmer in this locality has a better knowledge of social questions, due to the Non-Partisan League and the contact he has had with that organization. He is poorer, therefore more sympathetic. The ten-hour day has become a fact in North Dakota, a benefit that is appreciated by many who remember the 14- and 16-hour work day. Transportation is unmolested as a great number of the railroad workers have become educated and some of them are members of the I. W. W. Before organization wages were $2.50 to $3.00 per day, and it should be remembered that the price of wheat was approximately the same as today.

## CANADA

Good reports are even now coming from Canada. Sam Scarlett has been very active, speaking in halls and theaters all winter. Now that the weather permits he is speaking in the open. A good sized membership will be on the ground when the harvest opens. These members are migratories who stay in Canada, so that the life of the organization will remain even when the harvest is over. For the last two years the organization has conducted what may be correctly termed missionary work in the Canadian wheat fields. This year, however, definite organization work will take place. Fellow Worker J. A. MacDonald will lend his able help in the way of publicity and in an advisory capacity, while Fellow Worker Scarlett promises to be ever busy in the field.

Tentative plans are in the making for a conference to be called in the Empress Theater in Calgary. This conference is to be held immediately prior to the fall convention of the Industrial Union. It is estimated that 6,500 members will be represented there. In Winnipeg, the easterly border, and Vancouver, the western, propaganda in large quantities is being circulated, breaking the ground for the future.

The lumber workers on the western slope are already well acquainted with the I. W. W., and it goes without saying that they will lend their support in organization work. The wages for the last two seasons was a minimum of five dollars and in some communities as high as eight per day. The

working day is much shorter due to the lateness of the year when daylight lasts only from ten to eleven hours. Some years the seasons are so late that threshing continues as late as November the 15th. The Canadian worker, therefore, needs much more clothing than his American fellow worker. Instead of light summer working clothes, he requires heavy underclothes, mackinaws, shoes and other such apparel to protect him from the biting cold northwesterly winds. The opportunity to organize these workers has never been better.

### The Past and the Future

It was in the spring of 1915 that definite plans were formulated with the end in view of organizing the vast army of workers that yearly gathered the grains, plowed and harrowed the fields, picked the fruits; in short, the workers who are employed in the nation's largest industry—agriculture. Attempts to organize these workers were made long before this, but never on a large scale. The structure of the organization was at that time in such a state of inefficiency that no constructive organization campaign could emanate either from the membership or their officials.

Instead of industrial unions with branches as we have today, we had mixed locals embracing members from all industries. The prevalent psychology at that time was divided between two elements, those of the migratory worker and the homeguard. These two could not agree on a continuous line of action as their interests with the employers differed, not fundamentally, but in the pursuance of tactics and methods of organizing. The control of these mixed locals fluctuated from time to time, now being in the control of transients, and then in the control of home-guard or permanently located workers. The result was obvious. Although propaganda was carried on, on a large scale, the workers remained unorganized. In 1914 at Minot, North Dakota there were four organizers representing four different locals. Each tried to get members, and each one presented to the unorganized worker different rules and different initiation fees and dues. This state of affairs brought about an agitation for a National Industrial Union of Agriculture Workers. The old files of Solidarity for the same year show that an article written by Fellow Worker Reese under the heading, "The Need for a National Union of Agriculture Workers," well depicts the structural condition of the organization and called for the discarding of obsolete organization methods and tactics. This was the day of mass organization with an industrial union background. Out of these conditions the Agriculture Workers' Organization No. 400 was conceived. Many looked upon this new organization with disfavor, doubting the possibility of success. They were like the old dog who refused to learn new tricks. A cry of insubordination to the then constitution was raised in many quarters and many locals at that time regarded the A. W. O. No. 400 an outlaw organization. But nothing succeeds like success. The oppressed harvest stiffs and the agricultural workers in general welcomed this new movement and it goes without saying that when the A. W. O. came into the general convention a year later representing thirty thousand workers they were accepted with open arms. This marked the beginning of a new era in the I. W. W. A complete transformation began to take place all through the organization. New life and renewed hopes were kindled in the hearts of many. Industrial Unionism, only a theory in the past, became a fact; it became triumphant.

### Those Who Blazed the Way

The handful of men that pushed the organization campaign in 1915 should be commended for their untiring efforts, their sacrifice and the privations they had to contend with. It was indeed no easy task. At the conclusion of the season a good sized membership was organized. This success made possible the famous drive of 1916, long to be remembered in the annals of working class history. With more experience as their guide and with a small amount of money for literature, one of the greatest offensives against the agriculture interests was waged. From the southern wheatfields of Oklahoma to the Canadian border the burning message of industrial unionism was carried. The commercial clubs became frantic and resorted to numerous outrages upon workingmen who accepted the I. W. W. as a means to free themselves from industrial slavery.

### With Unionism's Success Wages Rise

As a result of this activity wages began to increase, hours were reduced, and working conditions were improved. It had been a common sight to see threshing machines working by moonlight and at the conclusion of the job for the farmer to pay the men off with a pick handle. No one interfered, no one cared. These homeless men were considered anything but human beings and the wheels of exploitation revolved without interruption. The wages were from $2.50 to $3.50 per day, depending upon supply and demand. This law, of course, the masters could not control. Many of the men that flocked into the organization were lumber and construction workers who were in the harvest because unemployment was great in these industries. As a consequence after the harvest was over, agitation was carried on in these industries. In the spring of 1917 the northwestern lumber workers called a general strike. The entire active membership of No. 400 took an active part and the treasury of the organization was placed at their disposal. Contributing factors, such as war conditions and the militancy of the organized, made it possible for the lumber workers to realize their long desired dream —the eight-hour day and an increase in wages. That same spring the formation of a Construction Workers' Industrial Union took place in Omaha, Nebraska. Some independent locals on the Pacific Coast and those who followed this work who were organized in old 400, wanted an industrial union.

# It's Not Last Year, It's This Year

By CARD NO. X10591

**SITTING around philosophizing about LAST year, isn't going to accomplish one thing for the organization THIS year. Saying what should have been done last year, or what WE would have done last year, isn't going to do a thing this year. If we must talk, and with most of us it is a case of talk, let us talk to the unorganized, and show them their need for industrial unionism. Show them the benefits to be derived by joining our organization. Show them the advantages the organized workers have over the unorganized. Talk to them about their conditions. They all want better things in life, but they don't know how to get them; and they'll never know how to get them, unless we can effectively educate them. What is the sort of education they stand in need of? In deciding this question, we must look at what their education has been; sent to schools run by the state, they are taught just what the capitalist class wants them taught. As soon as they are old enough, they are put to work, and their education then is picked up in cheap moving picture shows, (the best they can afford) dance halls that cater to this particular trade, and their chief interest is in new styles, and the wherewithal to keep up with them.**

The kind of education we must propagate among them, is this: we must make them understand that they cannot advance to better wages, shorter hours and good conditions, without united effort, and united effort means concerted action. This is industrial organization. After all, there are few of us who won't move to help ourselves, once we are shown the way.

One of the conditions that we must fight, that few of us in the I. W. W. take into consideration, is the one that prevails in department stores of the various large cities throughout the United

---

Here, too, we find that the agriculture workers extended themselves almost beyond their resources. Organization flourished everywhere.

That same summer the organization encountered many stumbling blocks in all fields of endeavor. Lies of all descriptions were being broadcast that the I. W. W. was burning hay and grain stacks and resorting to all kinds of destructive tactics. Commercial clubs and many chamber of commerce organizations demanded some action on the part of the government. This resulted in the raids and arrests that put to shame the liberty loving Americans. The constitutional guarantee of free speech and press was disregarded and the "Iron Heel" of the censor was felt. The organization was branded as pro-German. In spite of the many raids and the imprisonment of the then most active members the organization weathered this storm of persecution. At its height this persecution was manifested when many states passed criminal syndicalism laws, making it unlawful to belong to the I. W. W. Yet the organization continued its existence. A. W. O. No. 400 suffered much during these years and it was in 1920 and 1921 that the intensive operations began in the organization of the harvest worker.

### The Great Annual Drive

The organization does not confine itself to the Middle West, for out in the Palouse country in the state of Washington, and in the fruit bearing areas of the Northwest and California the A. W. I. U. is extending its organization.

The usual line-up of new members is seventeen thousand. This, with the transferring members, brings the total membership welded together at the end of the drive, to about thirty-five thousand. Large numbers are lost, when the harvest is over, because they disperse in an unorganized manner through the mining, lumbering and other industries and lose contact with the organization. Tentative plans are in the making to remedy this condition of loss of membership. Delegates leaving the harvest in the fall of the year will not be required to turn in their supplies as in the past. A supply transfer system will be put in operation which will enable the delegate to transfer his organization supplies from 110 to any industrial union he transfers to, thereby not losing contact with the organization. Members who leave the harvest will find delegates functioning in the respective industries they work in, and thereby not only will the membership be retained but a greater amount of activity will be manifested in other industries. It is the aim to have organization transplanted from industry to industry and when the next harvest rolls around more and better organization machinery must function.

In this campaign the real future of the organization is being put to the test. The advantages and concessions that we gained in the past are many and there is no reason to question the possibility of greater success. The militancy of the membership can accomplish the feat that will not only put agriculture in the hands of the workers, but all of the industries. For Industrial Unionism must triumph. All power lies with the workers.

States, and, for that matter, throughout the world, no doubt. In small towns it is not so bad, but in the large cities, it is deplorable. The girls who are working in these stores, usually girls who have had little opportunity for education, are paid wages so low that just to exist is a problem for them. For instance, in Chicago a department store will give preference, when hiring help, to the girl who lives at home. Because that girl can, and will, work for less money than a girl not living at home can and must pay a regular rate for room and board. This makes it just that much harder for the girl who does not live at home to secure a job, and it is really more essential that she have one. Do you suppose that these girls who live at home, and work for less money than a girl not living at home can possibly work for, *know* that they are lowering the standard of living for that other girl? They do not. It has never been pointed out to them. Girls who have ever been affiliated with a union are never hired by these large department stores, if the management is aware of it. If one begins to spread the idea of unionism among them, there is very shortly a position vacant, and the employment bureau of the store is looking for another girl who lives at home.

The girl living at home will accept a smaller wage because she can go home and give her mother a small portion of her wages, which goes for room and board, and her parents will no doubt help her to buy clothes . Clothes are a big item for these girls. To hold their positions, they must at least be fairly well dressed. To become shabby and run down in appearance means the loss of their job, and they know it. The 20 per cent discount allowed them on clothes sold them by the store amounts to very little, and when things are marked down for a sale, there is less discount given.

The girl who does not live at home, when offered a wage ranging from $15.00 to $18.00 a week, must figure very closely to meet just her room and board. Then each week a certain sum must be put by for the winter coat, or spring coat, or new shoes or new hat, if she is to dress to hold her job. A room in a large town like Chicago, that is fit to live in, in a neighborhood that is half way safe, will run from $5.00 to $8.00 a week. Sometimes she can lessen it by rooming with some other girl in like circumstances. Meals run high as well, and the experience of the writer has been that during the first part of the week, right after pay day, a girl in those circumstances eats pretty well. But Friday, Saturday, sometimes as early as Thursday, the cash supply begins to run low, and it takes a deal of figuring to get enough for each meal, and still keep the price of the meal within the range of the bank account. Then it is necessary to patronize the soda fountains, for the tempting array of food at a cafeteria, even a cheap one, is too much. At the fountain you can get rolls and coffee, or a sandwich and coffee, without seeing all of the things for which you hunger, and while it may not be enough, it at least tides one over.

Of course there is an alternative, and some of them accept it. Many of them are assisted by "friends". When a girl arrives at work in a new dress this comment is not unusual. "Look at the new dress. Who's keeping you? And usually, if the truth were known, someone is at least assisting in that process, and—collecting for his help. This is not the case with all of these girls, but it is with many of them. It is not their fault, either. They are surrounded with beautiful things all of their working hours. Being girls, they long for these beautiful things, put there to attract the attention of women in more fortunate circumstances than themselves. When they see an opportunity to get them, often without thinking of the future consequences, they grab for it. If they were shown a better way, even though it is a harder way, do you not think they would try it? Of course to a certain percentage of them, it would be the "way of the least resistance," but many of them are intelligent, young, impressionable, seeking new ideas. If we could reach these girls, and imbue them with the idea of industrial unionism, they would assist us in spreading it. Quietly, perhaps, so as to hold on to their poorly paid jobs. But nevertheless, they would be working at it, teaching others.

If you haven't attempted to reach these workers, whose fault is it? Do you not think them worthy of consideration? Or do you think like many others, "Oh, department store help and the white collared stiffs are too hard to line up"? Maybe they are hard to line up. Maybe it is hard to jar them loose from that old idea of getting everything for themselves individually, instead of for themselves as a class. BUT IT CAN BE DONE. Let us not neglect any line of organization work that will benefit any members of our class. Whether they are white collared stiffs, department store girls, waitresses or lumber jacks, let's try to get them into the I. W. W.

## UNEMPLOYMENT AND THE MACHINE

**To be without a job is a bad fix to find yourself in. More workers are being thrown out of employment than ever before. Why is this true in the world's richest country? Read J. A. MacDonald's book and find out why it is a fact and what must be done by you to change the situation. Fifteen cents, single copies. Write to the I. W. W., 3333 Belmont Avenue, Chicago, Ill., for this timely and great work.**

# Fascism

## A Frankenstein Monster

By FRANCIS J. MALLOY

**BENITO MUSSOLINI**
**Performs the Murderous Work of the Italian Bourgeoisie. His Reign of Terror is a Negation of All Parliamentary Procedure and Humanitarian Action**

**EX-SOLDIERS who had served in the D'Annunzio army formed the first Fascist troops in 1919 and their attitude toward militant labor was fraternal. They supported the taking of factories by the workers, which caused so great a shock to the capitalists of Italy and sent a few shivers up the backs of their colleagues and kindred spirits throughout the world.**

But by August and September of the following year Fascism became neutral in the matter of class struggle, and under its silence was germinating a new force to which has been flung the vilest machinery of suppression and horror since the termination of the world war. Discovering that the workers were opposed to the social aspirations and movements of Fascism, that they were against constructing a bridge of coalition between Italian capitalism and labor unionism, Fascist leaders threw emphasis upon the nationalistic side, which is the side of the bourgeoisie.

The Fascisti has perpetrated upon its adversaries a modus operandi consisting of methodical violence. Opportunists are always present and Benito Mussolini saw his great chance for power and all that it means. He had been in the labor movement as a radical for many years and possessed some literary skill. More important, though, was his ability to show the capitalists of Italy that in him and the Black Shirts lay a force that could crush out the rising tide of revolutionary labor. How well he succeeded became apparent immediately in the tone of the Fascist Party Program which stated the objects of Fascism in terms that are not ambiguous.

The first sentence of this program says that:

"Fascism has constituted itself a political party in order to stiffen its discipline and define its creed."

The world knows by the long story of bloodshed under Fascism and by its countless atrocities how well was stiffened the discipline that means that if the leader cries to the subordinate to murder his own flesh and blood it shall be done for the sake of "duty." But what was this credo that needed definition, and that repudiated the more vague and idealistic manifesto of the movement issued in 1919?

Well, to begin with, the state is dealt with. Says the program:

"The State is reduced to those functions which are essential, the political and judicial.

"The State should confer powers on certain associations and should entrust to the professional and economic corporations the right of electing the members of the National Technical Councils."

Nothing of so comprehensive a nature was ever put into clearer language, and we see by this ingenious arrangement that to capitalists alone is conceded absolutism in productive operations. For the work of beating the labor movement the Black Shirts were to be given a free hand to receive whatever loot they could put their hands on. Employers were to be rid of troublesome unions and of revolutionary dangers. There was no place in the program for representation or voice by economic associations of workers.

We cannot give the entire program but there are various excerpts that are enlightening. Such for example is the elaboration giving an outline of the functioning by essential wings of the new scheme.

"To the sphere of parliament belong questions regarding the individual as a citizen of the state, and regarding the state as the guardian of supreme national interests; to the sphere of the National Technical Councils belong questions referring to the various activities of individuals as producers."

These supreme national interests are not the interests of the Italian masses but of parasites living on the masses, and the technical councils are purely capitalist bodies exercising control over industry. It should be remembered that members of these councils are elected by the professional and economic corporations.

Then was set down in the program the cardinal article of faith before which the world itself must bow:

"The State recognizes the social functions of private property which is at the same time a right and a duty."

It was while contesting the validity of this claim that Italian workers so shortly before managed to take over a number of industrial establishments. The state is built on private property and maintained by every sort of violence to hold such rights paramount. Whenever private property is threatened the state steps in, in the form of police and military power and stamps out the menace. When the state can no longer succeed in this capacity there shall be no more private property of social tools.

What the Fascist Party thinks about the vital matter of education is summed up in this way:

"The aim of the school should be to train persons capable of insuring the economical and political progress of the nation; of raising the moral and intellectual level of the workers and of providing for the constant renewal of the governing class by developing the best elements in all classes."

It is strikingly evident that the writers of this euphonious document did not believe that governmental participation by workers was conducive to the moral elevation of these silenced elements, and that whatever raising was to be done about their moral and intellectual levels must proceed from the ruling class of capitalists with absolute authority, to be accepted without question. Even the gentlest and wisest of conceivable paternalisms is a damnable thing because the individual comes first and individuals acting together for common objects must develop and maintain their own levels in every field. But we know by the long record of the Mussolini gang how they sought to edify the workers they regarded as beneath the right to voice either in industry or government.

The Fascisti set about with a will and prepared their drive against the unions. Sweeping like a tornado across the peninsula and from end to end of it they captured or destroyed the printing plants of the workers. Union halls and cooperative ones were taken over, and in many cases burned and demolished completely. While these outrages were being enacted the members of the unions were told to disperse and to stay apart. They were beaten and murdered. Even their children were shamefully treated, and the wives of union men were assaulted by the Mussolini idealists who couched their phrases so well for a party program, but who knew nothing in practice but the work of their capitalist masters.

The labor movement in Italy was destroyed. Benito received the smiles and the plaudits of employer, king and pope. He then predicted that his movement that scrapped democracy in practice, though adhering to certain of its forms, was destined to develop throughout the present century.

However, capitalists know that they have nothing in common with workers and when necessary they act unitedly to defeat their slaves, but there are within the capitalist class contending factions, all eager to dominate. Benito ran parliament without opposition, because he permitted no opposition. Elections were farcical even when they were not bloody, and the small bosses weren't getting just the sort of deal they had expected when they sat in the game. Benito said that parliament was subject to dissolution at his command should a majority oppose him. He relied on the Fascist troops.

But when Matteotti was assassinated by his agents the reaction set in quite definitely and all Italy seethed with discussion of the crime. Mussolini refused to permit publishers to comment on this murder in any way reflecting discredit upon Fascism, and, of course, upon the leading light of this incendiary organization. Fascism is on the decline. The ruffians composing its forces have superseded civil authority and made of themselves a general nuisance, and are nothing but privileged thugs. They are now obnoxious to the capitalists who used them so gladly to break the unions. The bosses of Italy are sure to disperse them at last, relying upon their ability to recruit force from time to time as needed for working class enslave-

ment, but it was easier to steer them on the way they took than it is to eliminate them.

The Italian Fascisti maneuvered itself into a position whereby it remained intact when the bourgeois emergency that remodelled it in its present form had passed. American capitalists of outstanding power have expressed themselves favorable to the establishment of an American Fascisti. They have an American Legion nucleus, and the Pennsylvania Cossacks to make a good start. It is probable, however, that they would know how to keep the agent from becoming the boss of the situation.

It is significant that the International Chamber of Commerce convened its 1923 congress in Rome, and that Gary came back here from banquetting with Mussolini sounding his praises and advocating a similar movement in this country. Gary knows the value of gunmen to keep his slaves in their place. It is about time for the workers to be even a tenth as alert to their own interests. There is a decline in Italian Fascism, but the soil of this land is favorable to a growth of anti-union terrorism beside which the one in Italy may appear to have been of small consequence.

# Man and Monkey

By JOHN H. DEQUER

**Bryan May Think Descent From the Apes An Absurd Theory, And He Is Making Money by Fighting the Truth. Physically He Rather Resembles the Anthropoids.**

THIS article may be of small consolation to Bryan, and at the same time it may add to the merriment of our professors. Unfortunately I cannot control the mental reactions of either. Modernist and fundamentalist alike may take umbrage at my dreams. I should worry. I do not live in Tennessee. What I have to say, I say, and having said, I rest and let others masticate the fabric to their heart's content.

I have a parking place in the camp of the evolutionists. I have studied their domain sufficiently to be absolutely convinced that Charles Darwin did not write Tarzan, and that Herbert Spencer did not evolve the monkey gland idea. But to be honest, I must say that I am not completely at home in the Evolutionary Temple. There are nooks and crannies in it that I do not like. For instance, the idea that man and apes originated from some common ancestor has always seemed a little bit overdrawn to me. It literally gets my angora, which is American for goat, to have some bulge-brain Prof tell me that there is evidence that the soft-eyed gibbon, and the soulful orang-outang, together with the kindly-souled chimpanzee, are even remote causing to a Los Angeles landlord, or a Long Beach oil promoter. It manifestly is unfair to these kindly creatures of the woods. For a great naturalist told me once upon a time that the apes were in no sense predatory. It even hurts me to think of them being related to certain ministers of the Gospel whom I have known and who were guilty at times of very un-apelike conduct.

Of course I recognize that for all I have said here there may be a very close connection, but if so it only goes to show how far we may drift apart in the course of our biologic evolution. Get me right, I do not say the professors are wrong, but I do say, that if they are right it is too bad for the apes.

When, however, we stop to consider the facts, we can see certain similarities which are rather striking. For instance, we know that the ape is a great imitator. He mimics a great many things he sees man do. Man when poor imitates the rich, and when rich he imitates the devil. Again I have been told that in India they catch monkeys by having them put on boots in imitation of a man. This destroys their climbing power. Man, in these days, also drinks bootleg which increases his climbing power.

But the apes in their imitative faculties do not go to such extraordinary lengths that man is wont to go. They may put on man's boots, and on occasion drink his bootleg, but they will not go so far as to imitate him in his system of property ownership, or master and slave relations. They probably are too ignorant. Probably this is another case where ignorance is bliss.

There are many things that apes do which man would like to do were it not for certain paper fences he has built around the objects of his desire. He is different from the happy apes in that he is continually ruled by the hands of dead men. Apes soon forget the dead, but with man it is not so. He goes to the graves of his ancestors for precedents of conduct, as well as for material for his high-sounding orations on liberty.

And speaking of orations, that brings me back to Bryan who, like the Gaderean demoniacs, lives among the tombs. He does not like the theory of evolution. Kinship with the apes hurts him. An artist once told me that no one could appreciate a picture when he was too close to it. Is not that the trouble with our eloquent friend? I have often noticed that a rich man is rather reticent about admitting relationship with impecunious relatives in his neighborhood. But if there be any mental similarity between apes and men, Bryan shows it most pronouncedly. The apes we know make no intellectual progress. They are what they were in the Stone Age.

Bryan is eloquent, that is true. But then, so are the vocal memnon, and the sphinx, but that does not say that they manifest growth. They are milestones along the path of evolution and not evolution itself. But what is the use! There are so many things the apes do that is above the human, and there is so much the humans do that is below the ape, that there is almost as much evidence for the fall as for the climb of man. Man must be related to monkeys, especially those who live in Tennessee.

# Farm Workers, Organize!

By EDWARD E. ANDERSON

That there is a growing inclination among farmers to get together in various cooperative associations organized along the line of the products to be marketed, and that this tendency is very strong, will be realized after reading the following editorial taken from the June 1, 1925, issue of the **Western Farmer.** Under the caption of "Cooperative Marketing Growing" the editor states:

> "While cooperative marketing is not a new idea in the United States, the greatest growth has been within the last ten years. In the last two years it has become of national importance. The following data, at the beginning of 1925, is interesting. The total number of farm organizations in the United States is now in excess of twelve thousand with a membership of approximately two million farmers and doing an annual business of more than two billion, five hundred million dollars. Seventy per cent of all the associations are in the twelve north central states. These states include the great corn producing area. Eight per cent of the organizations are in three of the Pacific Coast states. There has been an increase of nearly 200 per cent in the number of associations since 1915, according to the department of agriculture; the membership has increased 300 per cent and the estimated amount of business has increased 200 per cent as measured in dollars. Secretary Jardine is the friend of stable cooperative marketing and it is hoped that it will be possible for him to encourage the movement, giving it whole-hearted support from every angle."

That there are other reasons for farmers organizing besides the disposal of their products in the most advantageous way must be recognized. One of these other reasons is the setting of wages for farm laborers. For instance, we get the following from the American Farm Bureau Weekly News Letter:

> "You get untold benefits by joining with your neighbors in the Farm Bureau that could not be secured if you were working as an individual. In order to be more prosperous, you and your neighboring farmers must have more money. Either you must get more for your product or pay less for what goes into it. . . . It means a fight. An organization is absolutely necessary."

The average farmer knows just one way of cutting down the cost of production and that is to cut the wages of his hired man. That that is just exactly what is meant with "or pay less for what goes into it" is proven by the fact that in orchard and berry districts the association will set a price for labor, be it piece work or day wages, that is mandatory upon its members, in many instances going so far as to penalize the association members for paying above the scale set by the association. For instance, in the berry fields of Missouri and Arkansas the associations provide a penalty of 25c per crate of berries if members pay above the set scale. In other parts of the country, where they have no fixed penalty, it is customary to give the ones paying above the "going wage" less consideration than others when it comes to grading fruit, and even to use pressure upon the banker so that credits are not so readily extended to the "scabs." It is just plainly a case of the association using sabotage to discipline its members.

The fact that there are in the United States over twelve thousand farm organizations should not be taken to mean that there is no attempt at establishing the One Big Union of the farmers. The American Farm Bureau Federation is such. The general marketing counsel of the American Farm Bureau Federation, Mr. Frank Evans, told the Farm Bureau members in Minnesota that:

> "The purpose of the American Farm Bureau Federation has always been to build up the conservative institution which will be of permanent service to the farmers of America. . . . Reports from nearly all the state bureaus indicate steadily increasing membership in the organization which clearly shows that the outstanding service which it has performed in conjunction with state and county organizations is appreciated by the farmers of the country."

The division of the farmers into twelve thousand associations is merely a division along the line of product, very much similar to the division of factory workers into groups of machinists, blacksmiths, wood workers, painters, etc.; all working in the same factory but doing different specialized work necessary to turn out the assembled machine. Just as there is a growing tendency of factory workers organizing along the line of industry instead of classification according to tools used, so there is a growing realization among the farmers that local organizations, divisions made for convenience in handling local affairs, must be coordinated to the interests of farming as a whole. The American Farm Bureau Weekly states the case in the following words:

> "You get a definite tie-up with other farmers not in your particular line of farm business. The Farm Bureau is the only organiation of state and national scope that includes dairymen, fruitgrowers, market gardeners, poultrymen, tobacco, cotton, onions, grain, and all the various commodities. In principle it is like the Chamber of Commerce which represents all lines of industry, merchandizing and banking."

The ever increasing farm tenancy and absentee farm ownership has something to do with the "farmers" organizing. The moving spirits in the farm organizations in many instances are absentee owners who as a matter of self-protection are active in organizing cooperative marketing associations. First, they do it because they want to increase their monetary returns upon share rents; secondly, they do it to make tenancy agreeable to the ones farming their land, because there is the lurking fear that if tenancy is not a paying business for the tenant he may be expected either to quit farming or organize as a tenant and demand that the absentee owner accept a smaller share for the use of the land. Neither are pleasant outlooks for Mr. Absentee Owner. Hence he willingly gives his time to cooperative marketing associations. It is the one place where he may meet his renter upon a common ground—as a seller of farm products.

Even the bankers are now not only looking with favor upon cooperative associations, but are actively lending a hand. The great after-the-war crash in farm values caused the change of heart and furnished the economic reason for it. During the war, when farm products were in great demand and commanded high prices, land values rose far out of proportion to any rise in such values that could be accounted for under the heading of pressure of population, and as such be considered permanent rises in value. Farmers under the urge of the high prices and the consequent bulge in their pocket books, and also under urge of the bankers and business men who were looking for business, started deflating their pocket books by buying motor cars, new machinery, building new homes, and extending their land holdings if they were owners, or buying land if they were renters. In most instances they secured their purchases through crop liens and mortgages in the shortsighted hope that the war would last and the prices be high long enough for them to pay off their liens and mortgages. When the crash in prices came the farmers were unable to meet their obligations and the bankers had on hand a lot of almost worthless paper. To reestablish these values the bankers were forced into a position of having to assist the farmer in selling his products in the most advantageous manner. Hence we see the banker behind the move for organizing cooperative marketing associations for the farmers' self-protection.

Once upon a time the farmer believed that he could better his material welfare by joining a political party and voting its ticket straight. "Them days is gone forever." He has had his fill of politics. State owned elevators, state owned flour mills, state owned banks no longer have any appeal to him. He has seen the control of these politically obtained economic necessities slip out of his hands through a sudden turn in the political fortunes, and actually used against him by the opposition party. No more of that for him. He has learned his lesson. It is economic organizations to obtain material ends from now on.

That farmers' economic organizations have their trials and tribulations the same as labor unions is, of course, an undeniable fact. They suffer from bad or treacherous management, lack of understanding on the part of their members for the need of solidarity, and the anarchy in production and distribution of the so-called independents. The most outstanding example of this is the debacle of the Raisin Growers' Association, the fall of which was caused by a combination of the above named three factors. The association was feared by the banking and business interests, and by the independent raisin buyers and packers, and the so-called Sherman anti-trust act was invoked against the raisin growers. This placed somewhat of a curb upon their organization activities. It made it impossible to establish anything approaching a hundred per cent organization, and was done in the holy name of free competition. The high tide of raisin grower prosperity brought disaster when it receded on account of a glutted market. This glutting was brought about as the inevitable result of uncontrolled grape planting. Under the stimulus of high prices for dried grapes everyone who had a chance planted grapes. Alfalfa fields were plowed up and planted with grape cuttings. When they came into bearing at the time of the initial fall in prices they caused the bottom to fall completely out of the market. The association tried to stem the tide but was helpless in the face of intimated treachery within and the anarchy in production without. The crash came with the bankers finding themselves holding worthless paper to the tune of nine million dollars, or thereabouts. The countryside was bankrupt; the business in the raisin growing districts at a standstill. The shoe now hurt on the other foot, too. It didn't take the bankers and business men very long after the crash to realize that a mistake had been made on their part in opposing the association. They are now not only boosting for an association in partial control of the raisin market but one with as nearly one hundred per cent control as is possible with a few independent raisin packing houses in the field.

There is no attempt here made to glorify the farmer in his struggle to gain economic liberty for himself and his class. He is and ever has been, when considered as a class, a labor hater. His position in life forces him into this position. As an absentee owner he is a capitalist; as a working owner he gets the full products of his toil except, so he reasons, for what he has to give out in wages to his hired hand (that he is exploiting his hired hand does, on the average, not occur to him); as a renter he is a producer in the position where he has to turn over a share of the crop to the absentee owner for the use of the land in production. As often as not the owner pays no part of the labor cost of producing his share, so it is to the interest of the renter no matter whether he pays the whole bill for the labor power needed to produce the crop, harvest it, and deliver it at the shipping point, or only a part of it, to have as small a part of the crop as possible go to pay labor. This places the farmer definitely upon the side of capital and opposed to labor. He may deny it, which some of them do, but put him to the test and he will react in the defense of the profit system. "If I don't make money how are you going to get yours?" can very often be forced out of even an old-time socialist in response to a demand for a raise in wages. Economic interests speak louder than the weak voice of socialistic altruism.

In the past we have seen abortive attempts at collaboration upon the political field between city workers and farmers. The opportunistically inclined politicians who made these abortive attempts were poor historians and poor economists. Even a superficial study of the past, using the materialistic concept of it as a guide in the study, would have revealed that the fundamental motive in man and the building of his institutions is an economic one . A hasty excursion into the question of labor and capi-

tal as explained by Marx (these politicians claimed to be Marxians), should have proven to them the class cleavage and that the farmer, no matter what his sentiment may be at the time of the political collaboration, must react to his economic interests or go under as a farmer.. Political parties of such a nature are ephemeral. They cannot last because they are founded in discontent instead of economic interest. In Europe we have seen the peasants rise and crush the city workers in more than one instance. Why did the peasants crush out the revolutions of the city workers? Because their economic desires were opposites. The peasant wanted a piece of land and the chance to be king of his own domain, however small. The city worker wanted communal ownership and industrial democracy. In the places in Europe where the revolutions of the city workers were crushed out and drowned in blood the peasants were the many and the city workers the few. In this country, as in Europe, the farmer must be reckoned with as a reactionary, opposed through economic interests to the ascendancy of the workers into industrial control.

The only force that can hope to offset the reactionary tendency of the farmer, to counterbalance it and overcome it, is a strong industrial union encompassing all of the farm proletariat bound to organizations of the city workers by ties that brook no schism; because a split in the ranks of the organized workers must ever be accounted an act of treachery, whether brought about by paid agents of the master class or sincere fools. When a split occurs severe disciplinary methods must be used if honest efforts to settle differences fail.

In spite of the increasing introduction of machinery upon the farm a large part of the work is still done by hand labor. At harvest time large numbers of workers are necessary upon the farm. The harvest is the farmers' pay day. Crops must be harvested when in the best condition to go to market or the farmer will lose money. If he doesn't get his crops gathered he loses, in many cases, a whole year's work. This offers the workers a chance to enforce certain demands provided they have organization to back them in making these demands. To take full advantage of this situation is where unity of labor plays its important role. If there is a split in their ranks, if there be not solidarity then the workers fall an easy prey to the organized employers.

All issues that tend to divide the workers and cause them to fight among themselves are viewed with glee by the master class and it will lend active aid to any minority faction that can be used for such a purpose. Gifted so-called inside operatives are used to this end by private detective agencies. At times these detectives reach places of trust and power in labor organizations from which they are in a position to cause disruption and splits to the detriment of not only the organization immediately involved but to the labor movement and working class as a whole. To guard against such treachery is of utmost importance to the welfare of any labor organization. Not to assist in the stamping out of all attempts at duality is to put one's approval upon treachery. Even acts of sincere fools must be dealt with summarily if they lead to splits in the ranks of labor. There is an old Hindu parable that covers this point admirably. It is about an elephant that was guarding a man while he slept. A fly landed on the man's face and troubled his sleep. The elephant saw the fly and in its eagerness to please its master it stepped on the fly and incidentally crushed the man's skull. Then it trumpeted loud to the world its victory over the fly. Of course, it was just a big dumb brute and much can be said in excuse of its act; but it is evident that it would be very dangerous ever to allow it in the future to stand guard over another sleeping man.

Such is the status of the sincere fool within the ranks of organized labor. He more than likely means well, but being a fool his remedies are very often worse than the disease, so to speak. That he afterwards is proud of his accomplishment merely emphasizes that he is a fool, and a dangerous one, and must be curbed for the good of the organization as a whole. The master class in the past used the same means that are used in labor organizations to keep the farmers disorganized. Now it is leaving the farmers' organizations alone, even aiding them in becoming organized, and is centralizing its efforts upon the labor organization most likely to be of lasting benefit to the workers. It remains for the workers to frustrate such attempts by vigorous and rigorous action. Solidarity must be the watchword, and the only one. They must realize that the farmers are receiving support from the bankers and business men in forming their organizations, while they must organize in the face of all the opposing forces of capitalism—subsidized treachery included. Whenever the farm workers, and especially the harvest workers, be it fruit or grain, come to the further realization that one mighty force is in their grasp and on their side; that in their hands they hold the bread basket of the world full of ripe fruit, and that by organizing, and giving expression to their solidarity, they can dictate their own terms to the employers, things will quickly take a turn for the better, and ultimately the workers may gain not only an increase in wages but the full product of their toil. The time to act is at harvest time when the grain and fruit are ripe.

This brief study and partial analysis of the farmer in relation to cooperative marketing—his definite classification as a capitalist—and of the means used to make labor organizations ineffective, merely emphasizes the great need for the farm laborers to organize and **organize right.** In the past the farmer was considered legitimate prey for the pirates of finance. This attitude on the part of the big capitalists has now changed into one of actual assistance in organizing the farmer, and to recognize him as a power in national economy, as we have attempted to prove. The industrial debacle experienced in

(Continued on page Forty-Three)

# Dear Old Jim

(To James Whitcomb Riley)
By JACK KENNEY

WHERE the sycamores are guarding
And the pensive willows weep
In the land he lived to honor,
Dear old Jim is wrapped in sleep—
He who sensed the wistful minors,
With a master minstrel ken,
Of the fairyland of childhood,
Echoed from the souls of men,
Swimmin' hole and gopher warren,
Bogey man in homespun smock,
Autumn fields of frosted pumpkin,
Fodder bursting in the shock.

DEAR old Jimmy's simple carols,
Thrill with tender themes of life,
Which the country-nurtured toilers
Yearn for in the city's strife.
Where the rabble spawn and wither,
In the stench and noise and glare,
Where the callow plans of boyhood
Vanish in the smoky air,
Where the harvest moon is missing
And experiences mock
Memories of ripened pumpkin,
And of fodder in the shock.

WHERE the constable is handy
If a slave default in rent,
Where our parents' code of morals
Isn't worth a battered cent,
Where the crux of any function
Is a scheme to buy or sell,
Where the cockroach raids for rations
And the bedbug gives his smell,
Where the piecework-stunted shop girl
Barters birthright for a frock,
When the frost is on the pumpkin
And the fodder's in the shock.

WHEN the mortar cakes the trowel
And the brick seems edged with burr,
When the eyes are blear and gritty
And the ledger figures blur,
When the firebox is flaring
And the slice bar scars the skin,
When the hammer bangs the anvil
With a true infernal din,
When the street car rails are fusing
With the reeking pavement rock,
Now we dream of frosted pumpkin
And the fodder in the shock.

NOW we wish that every human
Held in fee his rood of land,
That the acres barred for profit
Might be adequately manned,
But we rouse to stop a crunching
Or to clamp or check or whet,
In the work that fends between us
And the bogey man of debt,
Casting one eye on the straw boss
And the other on the clock,
When the frost is on the pumpkin
And the fodder 's in the shock.

NOW we miss the sunny clearings
Where our fathers plied the axe,
And where liberty is fading
With the flourish of the tax!
For to ramble in the old scenes
We must break the trespass law—
We must prowl among the thicket
To escape the marshal's claw—
We must lurk in mushroom bottoms
Where we stalked the blackbird flock,
When the frost is on the pumpkin
And the fodder 's in the shock.

DEAR old Jimmy's honored ashes
Moulder in his native soil,
While the city-stifled exiles
Burn the city midnight oil,
And the swimmin' hole is brooding
Where the teal and curlew flit,
While the grown-up boys are straining
At the jobs they dare not quit,
For the labor mart is glutted
And the slave is on the block,
When the frost is on the pumpkin
And the fodder 's in the shock.

# Unwritten Books Reviewed

By ROBERT WHITAKER

**Our New Book Department is unlike that of any other periodical in the world. As THE INDUSTRIAL PIONEER is emphatically a "forward-looking" magazine this original book department will deal with books which have not yet been written, but which obviously ought to be written, and will be written as the new social order gets more and more control of world affairs. We can say with confidence that the author of this department is peculiarly well qualified to anticipate the publications of tomorrow, not only as to their titles, and the publishing houses which will have the courage and enterprise to put them forth, but also as to the lines of survey and argument which the most worth while publications of tomorrow will follow. Any of our readers who wish to contribute information and suggestions concerning books which they have discovered in the offing are invited to send them to this office, or write direct to Mr. Whitaker, at 506 Tajo Building, Los Angeles, California.**

## Under Freedom's Flag

By Professor Historicus Americus

Published by The Milmacken Company, New York, N. Y.

IT IS more than four centuries since such a work as this has been put forth, and the earlier publication can hardly be said to belong to the same class though evidently the suggestion for this monumental work came from the writer of the ancient volume, commonly known as Foxe's BOOK OF MARTYRS. This volume is, as the later date of publication would naturally lead one to expect, by far the more exact and scholarly an achievement. In this respect it reminds one, indeed, of a well-known work published by an American author in 1888, i. e., "A HISTORY OF THE INQUISITION OF THE MIDDLE AGES," and the later work of the same scholar on the SPANISH INQUISITION. There is, however, no need to compare this writing in particular either with the famous English text-book on martyrology or with the more scientific studies of the persecutions of the Middle Ages by Henry Charles Lea. Whatever of suggestion and inspiration Dr. Historicus Americus may have gotten from either or both of these earlier authors the work which we are reviewing has a place and character altogether its own. That it will be even more bitterly attacked than were either of its predecessors goes without saying when one takes into account the present activities of our American Defense societies, Better America federations, and similar self-accredited champions of One Hundred Percentism. It is rumored already that the Post Office authorities are being besieged to bar it from the mails, and means are being sought by which the author can be removed from his professorial position in the University of Tenkucky, and if possible put behind the bars for a long period of years. The scholarship which he has here exhibited may possibly save him from his fate, but it is to be noted that none of the standard magazines or leading newspapers have so far noticed the book in their reviewing columns, and there is an ominous silence in those circles of advanced learning to which Americans ought to be able to look with confidence for the defense of freedom of research and publication.

### The Stars and Stripes

The book itself, which is in four parts, deals with the persecution of opinion in America since the very beginnings of our national life. Indeed, it might be said that the title of the book is not altogether accurate as to the first hundred pages or so because this portion of the work deals largely with such persecutions before we were a nation, and before our present flag, The Stars and Stripes, had been adopted as the national emblem. But this

criticism is after all quite incidental. An adequate treatise on American intolerance could hardly be written without dealing at considerable length with the violence displayed toward the American loyalists, that is, those who supported law and order and the constituted authorities when first the movement was made toward establishing a revolutionary regime in America.

Although some work had been done on these lines before the appearance of the present volume we are compelled to admit that the people as a whole have remained almost wholly ignorant of the extent to which the advocates of the American Revolution, the highly honored ancestors of our esteemed SONS AND DAUGHTERS OF THE AMERICAN REVOLUTION carried their lawlessness and violence and scorn of the "better classes" in order to carry out their program of revolt. Dr. Historicus Americus deals with these details most graphically and convincingly, but unfortunately betrays a somewhat unscholarly touch by comparing these insurrectionists of a century and a half ago to the I. W. W. of our time, though he is fair enough to admit that no such violence and cruelties and utter disregard of both equity and legality can be proven against the Industrial Workers of the World as many reputable American historians have admitted concerning the mobs that dealt with those who were disposed to be loyal to government and court in the days of King George. The "spirit of '76," as Dr. Historicus Americus deals with it seems to have been more allied to our Defense mobs of today than to anything that has even been charged against the radicals of our time.

In the second part of this monumental volume the author deals with the suppression of the American negro, and the advocates of negro emancipation in the decades before the Civil War. The third part has to do with the treatment of labor in America from the earliest times, and again our author allows himself to go somewhat beyond the limits which his title suggests, as he deals, briefly but very effectively, with the treatment accorded to labor in the American colonies long before independence, national organization and a flag were realized. With more fullness he takes up the rise of the labor movement in America, and the violence with which the workers' early protests were met a century ago. In the fourth and concluding part of the volume, which is as long as the other three parts combined, the author portrays in detail the story of the last sixty-five years, since the days of Abraham Lincoln and negro emancipation. There is an extended sub-section on Reconstruction in the South, another on The Negro Since Reconstruction Days, another on The Big Stick And Organized Labor Since The Civil War, and a concluding sub-section on The Violence Of American Imperialism.

The book as a whole is an overwhelming indictment of our claim to be a civilized people. Hundreds of incidents are dealt with in such detail and with such citations of indisputable authorities, and thousands of other like incidents are suggestively massed in the background so as to justify the author's conclusion that "under our flag" there has been an almost unparalleled exhibit throughout our whole experience as a separate people of an all but insane vindictiveness against both the conservative and the radical whenever either of these got in the way of an endangered economic interest or a made-to-order popular hysteria. The loyalist of 1775, or the "copperhead" of 1861 find themselves as ruthlessly suppressed in seeking to maintain the policies only a little while before approved by all the orderly classes as do the abolitionist of 1830-1860, or the I. W. W. of the last quarter of a century.

In general the author is exact and fair in showing that American intolerance has manifested with almost equal virulence and ruthlessness toward dissentients of either sort, those who were behind their times, or those who were ahead of the age. Apart from an occasional and incidental utterance here and there his treatment of the I. W. W. is surprisingly just, and he has given an exhibit of American lawlessness and mad moronism in action in dealing with the American pogroms against the Industrial Workers of the World which is quite unanswerable and will remain for a long time to come the standard work of reference for all who are laboring to save the United States from the savagery which has thus far marked its dealings with racial, political, and economic non-conformity.

Every man who believes in tolerance and public decency will thank Professor Historicus Americus for the vast industry and the rare courage and high moral enthusiasm with which he has done this most difficult task. The title, "Under Our Flag," gives a sting to the exhibit of our national shortcomings in the suppression of unpopular minorities and economic prophets which ought to make the work tremendously effective in turning the tides of national sentiment. We cannot afford to remain the laughing stock and the scandal of the world.

# Guarding the State

**Marx said that capitalist states functioned as the executive boards of the ruling class. In his day capitalism was not the full-grown monster we see and feel in this time of excessive industrial violence. Fellow Worker Russo has sketched certain phases of police power development in the article beginning on the opposite page.**

# The Cossacks And The Workers

By PASQUALE RUSSO

**"BRING them to the prison dark,**
**That dare our mandates disobey;**
**And on their brow the Cain-like mark**
**Put plainly so the rest can see**
**That we the spector of might sway,**
**Condemning all that disgrace.**

**"Bring them to the torture hall;**
**Give them the howling third degree,**
**Hang on their feet the chain and ball;**
**That they may limp with lingering pain,**
**And in regretful memory**
**Know all their struggles were in vain.**

**"Bring them to the gallows new,**
**To drink in eagerness their blood;**
**As blowing flowers drink the dew;**
**Wrap around their necks the hempen threads,**
**Pull o'er their eyes the blackened hood;**
**Let go! We want their severed heads!"**

For some centuries now a bitter struggle has been going on between two groups, the masters and the slaves. From time to time the governmental regime of the masters has changed, but in place of it bringing freedom to the workers, it has increased their chains and refinements of oppression.

Society in its upcoming has developed through several well defined steps, such as the arboreal, migratory, hunting, pastoral, feudalistic and capitalistic. Each of these were distinct changes, yet the workers gained no advantage, chiefly because it was a change from one regime of robbers to another. The practice of exploitation remained, but was disguised under another name.

From the earliest times to the present masters and slaves have been at war; the former for the enslavement of the latter, and the later for emancipation from the former. This conflict is now known in history as the class struggle.

Karl Marx and Frederick Engels, dealing with a phase of it in the Communist Manifesto, say: "The history of all hitherto existing societies is the history of class struggles. Freeman and slaves, patrician and plebeian, lord and serf, guildmaster and journeyman, in a word, oppressor and oppressed, stood in constant opposition to one another, carried on an uninterrupted, now hidden, now open fight, a fight that each time ended either in a revolutionary reconstitution of society at large, or in the common ruin of the contending classes.

"In the earlier epochs of history, we find almost everywhere a complicated arrangement of society into various orders, a manifold gradation of social rank. In ancient Rome we have patricians, plebeians, slaves; in the middle ages, feudal lords, knights, vassals, guild masters, journeymen, apprentices, serfs; in almost all these classes again, subordinate gradations.

"The modern bourgeois society that has sprouted from the ruins of feudal society, has not done away with class antagonism. It has but established new classes, new conditions of oppression, new forms of struggle in place of the old ones.

"Our epoch, the epoch of the bourgeoisie, possesses, however, this distinctive feature: it has simplified the class antagonisms. Society as a whole is more splitting up into two great hostile camps, into two great classes directly facing each other; bourgeoisie and proletariat."

In short the history of the class struggle is the story of the bloody battles between the rich and the poor, and in very nearly every instance the parasitic minority has been able to crush the workers. This has been largely due to ignorance on the part of the workers. The masters have been able to divide them and cause them to fight one another while their own ranks were of one mind and they more successfully oppressed the workers. All during the feudalistic and capitalistic regimes the ruling class has employed the church (later adding the newspaper) as an engine of oppression.

In order to protect privileges sanctioned by the church and the newspaper, the ruling class has devised all sorts of institutions to assure and guarantee its sway. One of the most effective defenses of the divine right of private property, which, by the way, was stolen from the workers, is a new monster known as the cossack.

The policeman, like the priest, is an instrument of oppression maintained by the ruling class to protect property and goods. Property and goods are products of labor, but their ownership is vested in men who do no labor. Many workers have their minds poisoned by capitalistic ideas and therefore do not understand the policing system. It was organized to maintain the master class and to fight any inroads that the workers might make. In cases where the workers attempt to free themselves from the rule of the few, the police are used to defeat it.

Charles V, a king of France, was the first to establish a policing system and he did it to "increase the happiness and security of his people." Arthur G. F. Griffith in speaking about it said: "It developed into an engine of horrible oppression and as such was repugnant to the feelings of a free people."

### The Cossack

From France the idea spread to England, where King Edgar, in 1066, following in the footsteps of Charles of France, introduced a policing system to oppress the people. The Bull's Eye, a London police journal, commenting on this method of tyranny, stated: "Since that time the police have been, to a very large extent, simply a tool of oppression wielded by kings, lords and the owning classes against the common people." And Griffith substantiates this by declaring that "The police have become the ministers of social despotism." In other countries the police system has worked more arbitrarily; it has been used to check free speech, to interfere with the right of public meetings, and condemn the expression of opinion hostile to or critical of the ruling powers. An all-powerful police, minutely organized, has in some foreign states grown into a terrible engine of oppression and made daily life nearly intolerable.

Perhaps the most autocratic police force was that used during the time of Nicholas I, Tsar of Russia. It was he who introduced the political spy system that employed thousands of policemen. It would require several large volumes to narrate the sad stories of millions of Russian workers persecuted and killed by Russian police. While it was most severe in Russia, every other country stands convicted before the bar of humanity for having used the police to authorize the slaughter of workers who challenged the system of exploitation called capitalism.

Nor is the United States free from this stain. The cossacks of the United States have slain hundreds of workers.

All the various police departments of the United States have 100 percent loyalty records as servants of big business. In every strike or industrial disturbance the police have contributed their share of clubbing, shooting and killing innocent workers. These records in the American class struggle go back to 1850 and constitute a heinous story of brutality. In 1874, during an unemployment demonstration in New York, police clubbed the workers without reason or mercy. Three years later in West Virginia, during the Baltimore and Ohio railroad strike, the police, with militia and federal soldiers, used clubs and guns on the strikers.

In 1886 the workers employed by the McCormick Reaper Works went on strike to enforce the eight-hour day. The Chicago police were called upon to defend the right of the McCormicks in exploiting the workers.

This same group of police officials who enforce what they are pleased to call the law, violate other laws by interfering with the right of free speech. They club the workers without distinction as to sex. Many are the women and children who have had their heads smashed by the clubs of policemen.

As the strike at the McCormick works progressed, the police wounded many women and children and killed six workingmen. As a protest against the police terrorism of the time, some unknown person exploded a bomb in Haymarket Square. Several bystanders and seven policemen were killed. Immediately, the capitalist class, with its church and press began to cry "Revenge! Revenge!" This was accomplished by "framing" a number of prominent labor leaders. After a farcical trial seven of the labor leaders were sentenced to be hanged. August Spies, Michael Schwab, Samuel Fielden, Albert R. Parsons, Adolph Fisher, George Engel and Louis Ling were found guilty and their penalty fixed at death. Oscar W. Neebe, another defendant, was given 15 years' imprisonment. Louis Ling, knowing that his doom was sealed, killed himself in his cell at the Cook County jail by exploding a bomb.

Many individuals and organizations appealed to Richard J. Oglesby, governor of Illinois, to commute the sentences of all the labor leaders. To all he turned a deaf ear. However, he did finally commute the decree regarding Fielden and Schwab, who were remanded to the penitentiary.

Parsons, Spies, Fisher and Engels were subsequently legally murdered to avenge the death of the seven policemen. With this outcome the press and preachers seemed to be satisfied, but nothing was ever said or done by the prostitute newspapers or churches to avenge the deaths of twenty workingmen killed during the trouble.

This execution of four noble workingmen made Chicago safe for the Citizens' Association, the Bankers' Association and the Board of Trade from that time to this.

The activities of the police in Chicago has its counterpart in all other parts of the United States.

It would require several volumes to recount all the acts of violence and brutality practiced by the American cossacks upon the workers, but here, owing to limit of space, we must confine ourselves to the more outstanding incidents.

In the Homestead strike of 1892 the workers rebelled against the tyranny of Andrew Carnegie. Carnegie, with the aid of the Pinkertons and federal troops defeated the purpose of the strike.

Much fighting was done and much blood was shed. Among the workers twelve were killed and twenty wounded.

Two years later, during the Pullman strike, under the leadership of Gene Debs, federal troops, state militia and city police were used against the strikers. During this struggle twelve men were killed.

In New York in 1907, during the Reefmakers' strike and again in 1909 during the Waist and Dress Makers' strike in 1909, the police clubbed and broke many heads of workers.

In July of the latter year at McKees Rocks, Pa., 8,000 workers of the Pressed Steel Car Company went on strike. The strike was under the direction of the I. W. W., and as usual in such cases the cossacks were used to crush the strike and defeat the workers.

Regarding the use of police in this strike Vincent St. John, in his book "The I. W. W.: Its History, Structure and Methods," says: "The strike lasted eleven weeks. As usual the employers resorted to the use of the Pennsylvania State Constabulary, known as American Cossacks, to intimidate the strikers and browbeat them back to work. This constabulary is a picked body of armed thugs recruited for their ability to handle firearms. Every strike in Pennsylvania since the institution of the constabulary has been broken or crippled by them. Men, women and children have been killed or brutally maimed by them with impunity. Their advent upon the scene in McKees Rocks was marked by the usual campaign of brutality. Finally one of the cossacks killed a striker. The strike committee then served notice upon the commander of the cossacks that for every striker killed or injured by the cossacks the life of a cossack would be exacted in return. And that they were not at all concerned as to which cossack paid the penalty, but that a life for a life would be exacted. The strikers kept their word. On the next assault by the cossacks, several of the constabulary were killed and a number were wounded. The cossacks were driven from the streets and into the plants of the company. An equal number of strikers were killed and about fifty wounded in the battle. This ended the killing on both sides during the remainder of the strike. For the first time in their existence the cossacks were 'tamed.' The McKees Rocks strike resulted in a complete victory for the strikers."

During the year 1912 there were many strikes in the state of Massachusetts, and police brutalities were frequent. In that year Local 20 of the Textile Workers called a strike in Lawrence and here as usual the police used their clubs freely. In this time five strikes were called, and according to St. John, they involved 29,000 workers of whom 333 were jailed with 320 convictions. It was during this trouble that efforts were made legally to execute Ettor and Giovannitti, two leaders of the I. W. W.

At Aberdeen, Washington, 1912, the workers in the saw mills, under the direction of the I. W. W. went on strike. The bosses sent for the police. The police acted at once, shattering the picket lines, jailing the volunteers, and making it possible for scabs to go to work. Women with babies in arms were knocked down by the use of the fire hose, and strikers were clubbed, in some instances being maimed for life. An armed mob of business men, aided by the police, raided the homes and boarding houses of the workers, herded 150 of them into boxcars at Hoquiam, sealed the doors and made ready to deport them to the Oregon cattle plains. Fortunately the mayor stopped this last illegal act.

October, 1916, found the workers rebelling against the conditions in Tidewater and Bergen Port Standard Oil plants. This day at Bayonne, N. J., the police, as usual, were called upon, and trouble ensued. Two workers were killed and twenty-five were wounded. George Gorham of the University of Vermont said: "Lack of organization beat the strikers. But more effective than anything else was the violence and thuggery used by the Bayonne police and by the armed guards employed by the company."

The miners of the Mesaba Range, Minnesota, went on strike June 2, 1916. Carlo Tresca, member of the I. W. W., was one of the chief leaders. During this strike four were killed by police and deputies commanded by Sheriff Meinn of Duluth. A State Commission reported to Governor Burnquist in the following language: "Miners have been exploited by the contract system, cheated, oppressed, forced to give bribes to their mine captains, arrested without warrants, given unfair trials and subjected to serious injustice at the hands of the mine guards and police."

The Ladies' Garment Workers called a strike in Chicago on February 14, 1917. Here again the police demonstrated their brutality. They clubbed women without mercy and arrested over 1400 members.

The lumber barons of Everett, Washington, instructed the police and Sheriff Donald McRae to carry a campaign of terrorism into the ranks of the I. W. W. At that time the I. W. W. was fighting to maintain the right of free speech. As a result of the instruction a number of members of the I. W. W. were massacred. Five bodies were buried, but others fell into the water and were never found.

During the summer of 1917, police helped in the deportation of 1200 strikers from Bisbee, Ariz., to a desert where they were dumped without food or water for forty-eight hours.

In 1919 there was a great steel strike in Pennsylvania. It was marked by most spectacular violence and resulted in the killing of Mrs. Fannie Sellins, a trade union organizer, on August 26, 1919. This murder was committed by cossacks. Twenty workers, all told, were murdered in this gigantic conflict.

USE THIS WEAPON TO DESTROY THESE CURSES!

The Mill Workers of Lawrence, Mass., went on strike in 1919. Again the bosses called upon the police. Regarding the violence of the police on this occasion, the Reverend John Haynes Holmes said: "For weeks these strikers were outraged by every indignity and violence that could be imposed upon them. Mounted cossacks swept the streets, repeatedly, riding down women and children into the gutters; processions and meetings which were orderly and legal in every way, were wantonly broken up; leaders were arrested on false charges, run out of town and in one case barely avoided being lynched; scarcely a day went by but some striker rushed into headquarters with blood streaming from his head, where he had been beaten by the police.

### The Man on Horseback

Great violence also marks the year 1923. In San Pedro, California, the police crushed the strike of the longshoremen. The members were held in a stockade. To protest this Upton Sinclair decided to speak upon the subject. Sinclair and his party of four persons were arrested and kept incommunicado for 18 hours.

One of the many acts of violence was perpetrated upon Salvador Rose and his wife in Toledo, Ohio. Rose's statement is as follows: "About 10 p. m. August 7, 1923, while listening to my wife Mrs. Jane Rose, speaking from a public platform, I noticed a group of police in uniform jump from automobiles. They surrounded Mrs. Rose and myself and told us we were under arrest. We then were ushered by the police to a waiting automobile and whisked away to a lonely country road about 23 miles out of Toledo with two more of the kidnapping motors following. We then stopped and I was taken out of the car, a noose was put around my neck, the loose end being swung around the limb of a tree. They proceeded to lift me off the ground by tugging at the loose end of the rope and then letting me down again."

One of the first victims of cossack brutality for 1925 is Michael Kraynick, killed at Pittsburgh, Pa., in his own home, by the police. This murder was committed February 22, 1925. The cossack who killed this worker is Teofil Cavaleski. Reverend Charles P. Irwin of the Wilmerding Presbyterian Church praised the cossack for this murder. He mentioned the courage of the man in doing his duty. A silver loving cup was presented to the cossack by the preacher. The police have fought the battles of the capitalist class; they have clubbed and killed workers; they have served as strikebreakers for the masters; they have invaded homes, brutally handled women and children for no reason other than that the workers asked better living conditions. And to make their work more effective the police have been the chief agents in the suppression of free speech and peaceful assemblage.

### U. S. Commission Report

By way of proof of this charge we submit a portion of the report of the Industrial Relations Commission regarding police brutalities: "One of the greatest sources of social unrest and bitterness has been the attitude of the police toward public speaking. On numerous occasions in every part of the country the police of cities and towns have, either arbitrarily or under the cloak of a traffic ordinance, interfered with or prohibited public speaking, both in the open and in halls, by persons connected with organizations of which the police or those from whom they receive their orders, did not approve. In many instances such interference has been carried out with a degree of brutality which would be incredible if it were not vouched for by reliable witnesses. Bloody riots frequently have accompanied such interference, and large numbers of persons have been arrested for acts of which they were innocent or which were committed under the extreme provocation of brutal treatment by police or private citizens.

"In some cases the suppression of free speech seems to have been the result of sheer brutality and wanton mischief, but in the majority of the cases it is undoubtedly the result of a belief by the police or their superiors that they were 'supporting or defending the government' by such invasion of personal rights. There could be no greater error. Such action strikes at the very foundation of government. It is axiomatic that a government which can be maintained only by suppression of criticism should not be maintained. Furthermore, it is the lesson of history

(Continued on Page Forty-Three.)

# Three Word Pictures

By A Member of Butte Branch M. M. W. I. U. No. 210

## PREPAREDNESS

THE scene is main street. Flags floating. The strains of "America" wafted on the breeze. A brass band comes down the street followed by a troup of marching conscripts, one and all more or less under the influence of drugs or liquor to keep up their spirits.

Sidewalks are lined with sobbing mothers, proud tear-stained sisters, sweethearts.

In the foreground is the usual well dressed, well fed "Parasite".

The lines halt for a moment, he steps forward, grasps the hand of one, slaps another on the back, with the words, "Good-bye, Lad, God knows I envy you. Wish I was your age. If I were ten years younger—say! — nothing on earth would keep me from going over. The chance to fight for my country, the honor of Old Glory.—Never mind, we'll keep the home fires burning, and when you return . . . . " For one instant through the daze of drug and whiskey the rebel spirit flares, the conscript clinches his hand, curses him, "You hypocrite!" They march on.

## WAR

The scenes change. It is a trench, half filled with mud and water, cursing, desperate, half-crazed men. In front a steady rain of shot and shell. Behind them the knowledge that retreat is cut off by the sure aim of their superior officers, stationed at a safe distance in the rear.

Out upon the open, hundreds, thousands of bullet-riddled mangled forms. Sightless glassy eyes turned to heaven. Intermingled heaps of dead and dying. Cries, groans fill the air.

Slowly the sun goes down in a flare of red. The whirr of circling buzzard wings is overhead.

## AN AFTERMATH

Another day dawns. Armistice. Home again. We see him cold, hungry, penniless as timidly he—BEGS for a chance to BEG for a job—.

Off in the distance another. In mud-stained, faded uniform. Once again as of yore, above the cruel memory of it all the rebel spirit flares, as fiercely, defiantly he whirls on the river bank and faces the horde.

The close of day, darkness shrouds a mutilated, blood-soaked corpse on the prison floor.

## NIGHT

The bright lights flare. . . .

"The cymbals crash, the dancers walk,
With long silk stockings, and arms of chalk—
Butterfly skirts, and white breasts bare,
And shadows of dead men watching 'em there:
Shadows of dead men stand by the wall
Watching the fun at THE VICTORY BALL."

# A Story of the White Navy*

## HOW A PROUD NAVAL OFFICER WAS BROUGHT TO TERMS BY A PASSIVE STRIKE

By SAM MURRAY

**FEW men have had the satisfaction of participating in a strike aboard an American warship, so I consider the incident and circumstances leading up to it of sufficient interest to justify its being submitted to the readers of the Pioneer. Particularly when we consider that it took place over thirty years ago among a bunch of men, practically none of whom had any organization experience and it is a verification, to a large extent, of the statement I have often heard Fellow Worker George Speed make that the workers, in a crisis, will instinctively act intelligently and right if not misled by designing leaders.**

It is also well to note that the men in the navy at that time were raked up from the waterfronts of the world and were supposed to be just what "Fatty Bill" Taft meant when in Japan, about 25 years ago, he was pleased to refer to us as the scum of the earth. However, I am inclined to believe that we were fully equal in character and intelligence to the men who are being lured into the service through a scientific system of advertising among the graduates of the Sunday school classes of inland small towns, for Mrs. Babbitt's former hired girl would be scandalized to learn what the navy is doing to her little Willie in some of our naval centers in these days of bootleggers and dope rings. The most noted characteristic of the product of American country districts is the facility with which he exchanges his cow ranch psychology for the vices and customs of a new environment.

It was during Cleveland's second administration. I was a member of the crew of the cruiser San Francisco. Our captain was J. C. Watson, who boasted of being the person who when a midshipman on the Hartford had lashed Farragut to the rigging in Mobile Bay. Better known among us, however, as Granny Watson, and on account of his habit of racing around with his long nose stuck abnormally forward, sometimes referred to as Nancy Hanks, the name of the champion trotting mare of that time.

Captain Watson was a familiar combination of a strict and ruthless disciplinarian and religious fanatic. When we had no chaplain aboard he would take it upon himself to conduct religious services each Sunday morning on the forward berth deck compelling all apprentices to attend; the men being granted religious freedom in the navy he could not force their attendance. Now, a naval summary court martial is made up of the officers of a ship, and since they are the subordinates of the captain ordering the court, they are merely a camouflaged committee for the carrying out of his wishes in the matter of soaking a bluejacket a little harder than he can do himself at his daily court called "The Mast," where he is judge, jury and executioner, but his soaking power is limited to ten days' double irons. For this reason the relative severity of the sentences is indicative of the character of the captain in command, and wherever Watson was in command the severity of the jolts was noticeable. He would say: "I am sorry to punish you, but you know I have to do my duty, for if I don't do my duty God will punish me." Then he would order you before a court martial, and the jolt you would get would be a fair measure of the desire of the captain to escape the wrath of God by handing it to you. Outside of administering minor punishments and ordering courts martial the captain had little to do with the men, and although they hated the captain, the "Frisco" was a pretty good ship and the men were fairly well satisfied.

In the fall of 1893 we were made flagship of the North Atlantic squadron and ordered for a winter's cruise in the West Indies. When about one-third of our schedule was finished we were abruptly ordered to proceed to Rio de Janiero. Something seemed to be happening to American interests down there. A few years previous to this Brazil had disposed of her emperor and now—the usual fate of new republics—a rebellion was raging. Of course we were only sent there to take observations and insure an even break so long as the affair promised to turn out in a way favorable to us. In this particular case it seemed as though the triumph of democracy and civilization was in the direction of the defeat of the rebels.

We of the crew were told that the rebels were trying to re-establish that terrible thing in the eyes of the 100 per cent American, the monarchy, and there was probably some truth in it, for Portugal was harboring the deposed monarch and seemed to be anxious to unload him back on the Brazilians.

We found the rebels in possession of one fort and the fleet in the harbor, while the government had the rest of the forts and the towns. When one morning the rebel flagship tried to stop an American ship from landing an objectionable cargo we cleared for action and by a hostile gesture showed them that we would not tolerate any interference with American trade. Most European coun-

* Prior to 1898 the steel ships of the U. S. Navy were painted white.

tries had recognized the rebels, but America had not, so they were outlaws to us. Our warlike move seemed to discourage them somewhat, and besides trouble was brewing for them in the north. The Morgan line had succeeded in unloading one of their rotten ships called the El Sid onto the Brazilian government, and she had been fitted with a large dynamite tube, and with a crew of beach combers from the Bowery and Park Row, was heading for Rio. So one fine morning the "Nictheroy," as she had been renamed, came steaming into the harbor, her big dynamite tube sticking out over her forecastle head and looking, with the aid of a little imagination, like a volcano about to erupt.

However, the rebels had evidently been informed, for we had noticed that morning when we first turned out, that the harbor was full of floating small boats in which the rebels had made their escape to the Portuguese warships and other friendly craft. We were thus robbed of the means of solving the problem that had been under discussion as to whether she would be more dangerous to the rebels or the crew of human derelicts who were forced by their poverty to accept any kind of employment even to that of an experiment with dynamite. This did not end the career of the El Sid, for in 1898 when the Oregon arrived in Rio we were delegated to convey her home under the name of the "Buffalo" for someone had induced the U. S. government to buy the old can, but she wouldn't hold together, and as we were in danger of meeting the Spanish fleet, we dropped her in the first harbor we came to. They managed to get her fixed up, and she later appeared as a part of the auxiliary navy acquired during the Spanish war.

But to return to the Frisco. We had been forced to lay in Rio harbor for four months several miles from the town and nothing to do in our spare time but watch the ships and forts pepper away at one another. The town was full of yellow fever and we were allowed nothing from shore, so, like so many prisoners, we were penned up on our ships subsisting on the immeasurably vile rations that they were serving at that time. Then, one day, soon after the arrival of the Nictheroy, Admiral Benham transferred his flag to the New York and we were ordered home. We were all happy. We were expecting to arrive in New York just about the time that spring was opening up with our pockets bulging with the gold that they had been serving us regularly, with no means of spending it but for the few articles purchasable aboard.

However, we were to meet up with a disappointment. When we arrived at the island of St. Lucia we were given shore leave while the native women coaled our ships. When all our coal was aboard the marines and master-at-arms were sent ashore to round up all the drunks who had failed to show up and we were at once ordered to Bluefields, Nicaragua.

There was a tribe of Indians in Nicaragua called the Musquitoes. They had a chief who gloried in the Anglo-Saxon name of Clarence, and it also appears that Clarence, in addition to his attractive name, was in possession of other things dear to the Anglo-Saxon heart, among which was some very valuable mahogany timber which was being exploited by English and American capital. Some years previous to this the British and American governments, backed up by their navies, had made friendly overtures to the Nicaraguan government to the effect that Clarence was to be given an autonomous government. To insure that this government be stable, which in this case meant stables for the Indians and mahogany for the Anglo-Saxons, a protectorate was to be established by the three governments. The crisis that occasioned our hurried visit at this time was that Clarence had become involved in a quarrel with the small republic which was threatening his mahogany throne. I do not remember that we noted any inconsistency about bluffing the Brazilian rebels out of existence because they were supposed to be monarchist and immediately proceeding to Nicaragua to protect a monarchy against a republic; but, of course, it will be remembered that consistency is not an important part of the make-up of the American scissorbill.

We lay for several months in the open roadstead, far off the bluff that hid the town from our view, and owing to the great panic that was on we received no money while there, but were informed that the exchequer had been exhausted for the fiscal year and that no money would be served before July first. We had been given "liberty" in Bluefields and the "bomboat" had visited us every day with "bellywash" and bananas, which supplemented our ration of "slunk beef" and beans but exhausted our savings from Rio. So when in June (1894) we were relieved by the Marblehead and sailed for New York, we were mostly broke. However, as our money was piling up on the books, we expected to have plenty when we arrived in New York. Finally, early in July, we were again tied up at the Cob dock in Brooklyn Navy Yard and as the new fiscal year had begun we expected our money. We also learned that we were to take the New York Naval Reserves out for a practice cruise. This meant that all the crew but the engineer's force and a skeleton crew of the deck force was to be transferred to the guardo until we returned. Now to those of us who had to stay by the ship the prospects of having to make another trip to sea after eight months in the tropics and two weeks alongside the dock without money enough to "make a liberty" it looked rather raw for the rest, who must remain on the guardo, with nothing to do but gas a lot of rookies for two weeks it was worse.

To make matters still worse we were tipped off by the "underground" that the money had arrived and was in the paymaster's safe. On several occasions, as was the naval custom in case of grievance, we had prevailed upon the petty officers to go to the

mast and request money, and each time the answer of the captain was "tomorrow."

At last the loaded coal barges were alongside and it began to look as though our skipper had concluded that it was his Christian duty to keep us broke and away from the Bowery until after the practice cruise. By this time all hands were extremely sore, but had anyone taken the initiative in any kind of a definite protest he would have, no doubt, spent the next few years in the "brick frigate" in Boston Navy Yard.

Finally all was ready to coal and the petty officers had again been to the "mast" and they had been told that the money would be served out as soon as the ship was coaled, but the men said: "When the ship is coaled they will transfer us to the guardo and take on the reserves, and there we'll be."

To refuse meant, probably, three years, and none relished the idea of three years in the brick frigate on top of eight months in the tropics with the paymaster's safe full of their money and the Bowery only a few blocks away. That night everyone spoke low and serious, and everybody said the same thing: "We are damn fools if we coal ship tomorrow—but of course we can't refuse." "They will get a hell of a lot of coal aboard tomorrow," etc.

The next morning the shrill notes of the Boatswain's mate's pipes were heard, followed by the "word," "All hands coal ship." The men went to their stations in the barges. Immediately the shovels began to rattle and a cloud of coal dust rose from the barges that kept the officers out of sight. The flag of the Brazilian rebels had been white, so someone got a white piece of cloth and made it fast to a squeegee handle and stuck it up in the stern of a barge and soon the barge on the other side took the cue. The Frisco was fitted with coaling ports that led to the berth deck through which baskets were passed to men on the inside who dumped them down the chutes. The shovels kept going; a few lumps of coal would find their way into a basket and it would be passed to the men on the stage by the coaling port but one of the men would accidentally have his foot in the way and in their hurry to get the ship coaled they would let go and the basket would land bottom-up in the barge. Occasionally they would succeed in getting a basket inside, but the anxious men on the berth deck would neglect to dump it before returning it to the barge. The coal passers, whose duty it was to stow the bunkers, lay around the berth deck while the sailors kidded them about the good time they would have on the Bowery while the poor underground savages were floundering around outside with a cargo of seasick naval reserves.

Hour by hour the day passed. The officer of the deck would go to the side and look down into the barge. Everybody was black with coal dust; shovels were ringing and baskets were passing to and fro. Everybody was working but no coal seemed to be getting out of the barge. Then he would take a squint at the stern where the rebel flag was proudly floating from the squeegee handle and go and report to the executive officer who would report to the captain. What they said is a mystery. Some time after the men had been piped to work in the afternoon, the boatswain's mate's pipe was heard and the men paused for the word. It was: "You will get your money as soon as the ship is coaled. Go ahead with the coaling!" Wow-oo-oo! came two hundred and fifty voices from the rebel barges. The shovels began to rattle with the same result as before, and again, in time, came the officer to the side to take a look at the men "at work" in the barges, and again he would report to his superior who would report to the sanctimonious captain. Finally towards evening the pipes were again heard, and when the men paused for the word it was: "Go below to the pay office, all the marines, and draw your monthly money! Go ahead with the coaling!" "Wow-oo-oo!" came the voices from the barges.

Now it had been the custom to pay by divisions the first four divisions being composed of the men in the barges usually came first, but evidently the Lord had inspired the captain to reverse the order of procedure and begin with the marines. Then came the word for the engineer's and powder divisions followed with the command, now beginning to sound like a request, to go ahead with the coaling. However, the men were beginning to see victory in sight and were determined not to let the old man put anything over on them. One by one, the fourth, third, second and first divisions were called in from the barges and paid. However, the strike was kept up each division as it returned from the pay office keeping up the farcical coal-passing until every last man jack of the first division was paid. In the meantime quitting time arrived and the coaling ceased for the day.

We had a main boiler under bank fires to furnish auxiliary steam which was probably burning less than a ton of coal a day. That evening I was ordered by the machinist on watch to go down and get out enough coal for the fireman, and there wasn't enough coal in the main bunkers, where 250 men were supposed to be dumping coal all day, so I had to go into the reserve bunkers and get some of the coal left over from the last trip. However, the next morning when the word was passed the men jumped into the barges with a cheer and the ship was coaled in an unusually short time.

Some of the officers were "sore" and afterwards showed their spite in petty ways that befit an "officer and a gentleman," but a spirit of good fellowship was abroad among the men. Even the old shellbacks who were wont to sigh for the return of the "good old days" of wooden ships and iron men in place of these days of "iron shops and wooden men" admitted that the gang of young fellows had some of the spirit of the good old times after all.

Captain Watson's sea service having expired, he left the ship shortly afterward one of the most

humiliated officers that ever crossed the gangway of a man-o'-war.

Four years later a brutal Spanish general ordered the Spanish fleet to make a dash out of the harbor of Santiago into what was virtually the jaws of death. Thus took place the naval battle of the third of July, 1898, the truth of which so far as I know has never been really told. A carnival of bloodshed and horror where 360 Spanish sailors were torn to pieces by our shell fire, or smothered and baked to death in the water-tight compartments of their burning vessels, and twice as many maimed. Our secretary of the navy called July third a red-letter day for the American navy —red is right. After this slaughterfest the Oregon was ordered to join Watson's squadron for a proposed raid on the Spanish coast, and as I saw him come aboard one day all rigged out in the regalia of an admiral I wondered what he considered his Christian duty to do to the rest of the Spanish navy that was left after the two disastrous battles of Santiago and Manila. But the signing of the protocol stopped it all and soon we were again bound for New York where, this time, four million patriots were waiting to shower the scum of the earth with praises and lager beer, and then forget us until we were needed for another slaughterfest. For such is the glory of war.

# New Schools for New Workers

By COVINGTON AMI

LABOR is more vitally interested in free and scientific education than is any other class in modern society: all its will to emancipation, all its power to achieve it rests finally on education for workers, by workers, of workers. All class struggles are in their last analysis struggles to control education—always the ruling and profiting classes have sought to train the subject classes to accept the existing order and their subjection as part of the "God ordained" and "natural order of things," which, no matter how bitter the exploitation and degradation of the subjected might be, it was "unpatriotic" to question, "blasphemous" to deny, and "treasonable" to resist—always, on the other hand, the militant minority to which the sufferings of the subjected must always and inevitably give birth, has desperately sought to counteract and overcome this propaganda by pointing out the truth, by educating its class to the actual facts on which its subjection rested, have boldly questioned, denied and resisted the "divinely established order of slavery" in all its realms—economic, spiritual and social—and, in the end, the militant minority has won, the old order has gone down, and a new heaven and a new earth has come into being.

Although all history bears witness to this truth, it was only very recently that American labor again awakened to the menace to its interests involved in the present handling of this great necessity of life—education—and began to give it more than apathetic attention. It was satisfied to rest on the victories of the past and to hold fast to its naive belief that the "little red schoolhouse," which its militants of yesterday had done so much to establish, was a sacred institution out of which only good could come.

This attitude of labor toward education was undoubtedly due in great part to the fact that the change from an economic, social and political system based on individualistic business and agriculture to one based on a gigantic trustified, collectivistic system of industry and commerce had been so rapid in this country—the masses of the people had been so rapidly and insidiously expropriated of property, skill and economic freedom, they hardly knew what was happening and so did not have time to readjust their thinking to the new conditions confronting them in the new order. They, the masses, and especially the wage workers and working farmers, though the order in which they had been born had been swept from the earth forever, were still taught and still continued to believe that the facts and theories they had learned in the schools of yesterday were still gospel and still applied with equal truth and full force to the new dispensation, whereunder their labor power was socialized, not for themselves and theirs, but as part of the machinery of production, distribution and finance by which the Morgans, Fords and Rockefellers sapped the foundations of republics, brought kingdoms begging to their feet, ruined empires and filled the world with blood and tears and famine.

But as "Triumphant Democracy," as Andrew Carnegie hailed the triumph of his class over the American people, gained power and extended its dominion over first one domain of our life and then an-

other, militant workers, as was inevitable, began to point out the crimes it was committing in the name of education and to demand that labor take action to save its children from being robotized by and for the plutocracy They, the "rebels," demanded the establishment of a system of education for workers that would turn out of the schools men and women capable of thinking and acting for themselves and of rendering leadership service to their fellow workers instead of, as now, merely expertly trained animals to be used en masse and unprotestingly for the pleasure and profit of the leisured few.

This, of course, was "heresy" and, at first, American labor looked askance at the new schools, shaking its head and making doleful prophecies; for today American labor is inclined, due again to miseducation, to look on all heresies, especially economic and social heresies, with displeasure and disfavor. But as "Triumphant Democracy" became bolder and bolder in its assaults on the workers and farmers and their institutions and in its encroachments on and denial of the toilers' rights, more and more men and women came to see the vital importance of education for, of and by the workers and, then, that which was but yesterday a vague dream took on the form of definite reality.

### The New Schools Rise

Under the pressure of necessity and the urgings of the rebels, groups of devoted workers began, first here and then there, to establish schools dedicated to education for workers and experiment in creating a new system of teaching, one based on scientific principles, better fitted to the age in which we live, and more efficient, therefore, in promoting the economic welfare and cultural interests of the workers. Many of these schools were launched, and many died a quick and painful death; but enough of them struggled through to victory to prove that the idea back of them was sound to the core.

Among the schools to come through its experimental stage and survive was one of the first labor colleges to be established under the new urge—the great I. W. W. college at Duluth, Minnesota, called the Work Peoples College. When this great school was first established only a few short years ago the "wise ones" shook their heads and laughed to scorn the idea of a "bunch of hoboes" showing the world a new and better way to education, though this same "bunch of hoboes" had already and often shown the world the utter falseness of the popular creed which declares that "Whatever is is right."

But this great school and others won through to victory and service, and this gave other rebel bands hope and courage, and still other schools sprang up to help carry on and forward the splendid work of education for workers.

### Commonwealth College

Among these new schools is Commonwealth College, which is devoted to higher education for workers. This school was established two years ago at New Llano, Louisiana, by Professor William E. Zeuch, a noted educator who has taught in several of the largest universities of the country, and Kate Richards O'Hare, aided by an able and loyal group of teachers long known for devoted service to the farmer-labor movement. Now, in its third year, it is located near the town of Mena, Arkansas, close to the Oklahoma border, on its own 80-acre farm. The site is not only one of the most beautiful and healthful in the land, situated as it is with the famed Ozark mountains towering all around it, but was chosen with an eye to its agricultural and water-power possibilities, it being the purpose that the college community shall maintain itself while giving and receiving education.

Commonwealth is founded on two fundamental ideas: first, "To develop in its students power for leadership service to their fellow workers when they leave its halls and go out to take their places on the battlelines of life." Secondly, "To demonstrate the practicability of placing higher education for workers on a basis of **Self-Maintenance**, by which last is meant that each teacher and student at Commonwealth, outside his or her academic work, performs four hours labor daily, on the farms, in the workshops, or at communal services, in exchange for which they receive food, shelter and laundry. The only fee charged students is one of tuition, $50 per semester payable at the beginning of each semester, the first of which begins on September 21, 1925, and the second on January 4, 1926; the academic year being of 30 weeks, divided into two semesters of 15 weeks' duration each."

The college is not a "trade" or "industrial" school; neither is it a propaganda institution. It sponsors no particular religious, economic or political creed or dogma and, while it is open-minded to all "heresies," it is partial to none. It seeks always to put in the grasp of its students demonstrated facts and to develop in them the scientific attitude which challenges an unthinking acceptance of ideas and things as they are. Its study courses cover economics, sociology, history, labor history and problems, and other social sciences, psychology, philosophy, literature, journalism, French, German, Spanish and Esperanto. Commonwealth is not competitive toward the other labor schools but supplementary to them, for only students having a secondary school education or its equivalent will be admitted to its collegiate department, which covers three 30-week years of study.

It is a fascinating experiment and if it can get the support I believe it fully deserves on its past record, Commonwealth should render invaluable service to the new labor schools and the class they are educating to administer the New Society.

A PART OF NEW YORK'S MONUMENTAL SKYLINE TO GLORIFY THE MODERN PHARAOHS OF CAPITALISM

# A Tale of Three Cities

By P. J. WELINDER

## New York

**WONDERFUL New York! The second biggest city in the world, the richest city in the world, the most magnificent city in the world, the city harboring within its boundaries the most poverty, crime, prostitution, vice, degeneration and heartless exploitation of all the cities in the world—New York, the crown of capitalist civilization.**

**Way up at the end of Central Pork is the biggest museum in the world (I suppose it is the biggest in the world as nothing less goes in New York), down at the waterfront on the same Manhattan Island is the biggest mausoleum in the world. (About this latter part there is absolutely no doubt.) Up in the museum we view, in particular, the great Egyptian exposition, the old stone carvings, its sarcophagi and mummies of some 4,000 years of age or more. Down in the Wall Street and lower Broadway district one is reminded of the fact that the world changes aspect all right, but changes very slowly.**

Take a stroll through the financial district of New York early on a Sunday morning, visit Wall Street, Broadway, Bowling Green and down to the Ferry Station and Battery Place from where one can see the Statue of Liberty; recall to your mind the picture of ancient Egypt, presented to you at the museum, and then make your comparisons. Do not the pictures resemble each other almost to the minute? Of course, this new one, the New York of today, is not quite finished yet, but that is only a matter of time. The outline is there so visible that only the blind can fail to see it.

There stands the big pyramid right on Broadway. It is dedicated to the greatest exploiter of his time, King Woolworth. He is considered greatest because he was the first one who proved successfully that pyramids of such gigantic size could be built exclusively with the labor of women and children, and practically without the assistance of male slaves. Then there is the Equitable building, biggest in the world, not quite the tallest, harboring a population of more than 60,000 people, none of whom perform a single really necessary function in society. It is the mammoth hive for drones, parasites—the big parasites exploiting the small ones and the small ones sucking the life blood out of the toilers. The Sphinx in this modern stone oasis is named "Singer." From his towering height he is looking out over the world to behold the glorious sight of the millions of men and women who have been "Sphinxified" through the mind-killing process of his sewing machines.

Down on Wall Street we find the greatest of all the capitalist Pharaohs laboring hard to perfect the biggest mausoleum of all ages. He already has his sarcophagus ready; a big stone coffin with walls several feet in diameter and with heavy bars through the opening holes. Hundreds of slaves are working within the very wall of the coffin every day, and millions are working outside of it, preparing not only one but many huge pyramids of stone and steel, that will remind future generations of the similarity between man and the corals, insofar as both are working with all their might towards petrifying themselves. The Morgan monuments will live through the ages as a constant reminder to future generations of the curse of capitalism and the foolishness of our age. At the rate the building of the

Morgan pyramids progresses, we will soon see this, the last of the "big" Pharaohs, placed in his last resting place, never to be digged up again.

As a totally lost stranger in these surroundings we find the old Trinity Church. Does it not look like an Egyptian mummy who has strolled out of his stone coffin and is trying to orient himself, find out what is going on and when they all are going to a final rest? Surely, it will soon be laid to rest with all the other mummies strolling around between the pyramids.

Out in the harbor stands the Statue of Liberty, proudly announcing to the whole world that here you will find unbounded liberties in exploiting your fellow man, that you are perfectly at liberty to convert as much human flesh and blood into some pyramids for your own self-gratification and glorification as your power permits you; that no restraints based upon humane motives are to be found here that hinder you in the game of Exploit. You, as an exploiter, have all the liberties in the world; **the greatest liberties in the world.**

Thus six million men and women are busily engaged day and night in the city of New York piling up stone, to make stone monuments out of themselves, just as the slaves and their owners in ancient Egypt were doing 4,000 years ago. And just as the Egyptians of the past have left nothing behind them except some stone monuments that prove to us the stupidity and the folly of the age, so shall the present capitalist madness, petrified on lower Manhattan Island, for generations to come bear witness and warning from a time when man had no higher ambition in life than to attempt to immortalize himself in a slab of granite or marble.

Down about 1,000 feet from the Morgan sarcophagus on the same trail, called Broad Street, we find another type, the Israelites of the age, the ones who refuse to be petrified, but who insist upon a full life for themselves. They are the sons of the sea, rebels whose demands on life place them in constant conflict with the pyramid builders. These rebels are building other monuments, monuments to life and not to death; monuments in the form of a healthy and strong human race that will devote itself to the art of living and living well, and not to the art of glorifying the dead.

On the mighty oceans they are fighting their life's battle. Sweating down in the stokeholes, while the pharaohs and their tribe are lying lazily in their staterooms or in the lavishly decorated salons listening to the descriptions of the glory and grandeur of the sea that are being recited to them these rebels (their own mentality being incapable of grasping the great and the beautiful, it can only understand stone) are perfecting that instrument—their industrial union—whereby the wonders of the world and the greatness of the world will be equally accessible to all. When that day comes the Stone Age shall have finally passed away, never to return again.

## Philadelphia

"City of Brotherly Love." Sure, "brotherly." The first, and the only city I have seen where the policemen are carrying guns in plain sight and belts with ammunition. Looks "brotherly," does it not?

It is the city with a great history. In fact, nearly all the history of the U. S. A. is Philadelphia made. There is the Hall of Independence with its Liberty Bell; great bell, it finally cracked and since then we have had nothing but "cracked" liberties in this country, except for the exploiters. At any rate, the bell preserves the date when the accident happened, so we will know the date of Miss Liberty's death.

In the Hall of Independence we find, properly framed and decorated in the national colors, the Declaration of Independence. We also find our constitutional rights stated very plainly. "Congress shall make no law abrogating the right to free speech, etc.," is one of the commandments. What is more logical than right in this city, the only one so far encountered, where a man has to notify and secure from the "brotherly" chief of police a written permit to hold a meeting in the man's own hall? Other cities are satisfied with violating the constitutional provision with regard to meetings on the streets and in the parks, but Philadelphia has gone the limit. It is a true copy of old Tsarist Russia: permit to hold a meeting; bulls present at the meeting; not permitted to speak except what the bulls consider proper, etc., etc.; a very lengthy description given by the gentleman issuing the permit in question.

In the Hall of Independence is also a small collection of art, about as poor as the city's conception of free speech. There are at least a dozen pictures of Washington, and a similar number of Lincoln, and a few relics from the bourgeois revolutionary age to keep company with the cracked Liberty Bell. But America has not yet learned the art of canonizing, of making national saints, although it has certainly developed the art of making commercial saints to a perfection. Just take a look at Washington.

George Washington, evidently, if we are to believe his biographers, was a rather temperamental kind of a man. The pictures we find of him in Philadelphia, and I believe, in all museums, indicate that he was a man immune to everything in his environment. Here we find him depicted at wedding parties, on some state affairs, Christmas celebrations, and several other celebrations, and no matter in what company we find him or what the occasion may be, we find the same expression on the man. What's the matter? Was he suffering from some kind of chronic stomach trouble? Were there no pills at that time that could relieve the patient?

And Abraham Lincoln; have you ever seen a portrait of that man where he is not shown with a face that seems to indicate that he just had notice served on him that his mortgage was foreclosed and he was

unable to meet the payment? Gosh! they must be very peculiar men, those great men. Just like the pictures we see of Jesus Christ. There are probably millions of them and wherever we see them the man looks like he was on the run bumming two bits for a flop.

No, Europe knows how to make national heroes—after they are dead, of course. Take Bror Cederstrom's picture "The Remains of Charles the Twelfth Carried Over the Boundary Line." All you see is a stretcher with a canvas covering something bulky underneath, supposed to be Charlie. But on the face of the soldiers carrying the burden you can read an expression that indicates their conception of the king. When you read that expression you can make your own hero to suit yourself, and sure enough, they have made a national hero of the worst fool that ever ruled a people, so big that it will never get room in a museum no matter what size. But America cannot succeed in that line, she should confine herself exclusively to making money and building stone monuments; the biggest in the world.

Every little alley in Philadelphia is "historic." There are name plates and engravings everywhere. Nothing can be touched as it has "historic" value. As a result there are many slums and streets that have not been swept since the revolutionary war on account of the historic value of the dust. Here the children of the working class are having a happy time, breathing the germs and dust of American history.

Historic as the city really is, so are the conditions under which its workers are living and working. The hours in the factories in Philadelphia are about the same today as in the days of Benjamin Franklin, so also are the sanitary conditions, and the purchasing power returns for their labor. As the rent and the cost of living has been quite modernized—these items being the exceptions that prove the general rule of conservatism in Philadelphia—it is rather hard for the disciples of old Ben Franklin to practice his gospel of saving. The banks, however, are preaching his gospel zealously, for whatever benefit it may have—for the banks.

The workers down on the waterfront, who once were well organized, and as a result, modernized, are again lining up with an object in view of moving straight into 20th Century life. They are tired of living in the revolutionary age with their mental and physical slavery. But outside of the workers on the waterfront there is no attempt being made on the part of the workers themselves to crawl out of the 18th Century. Long hours, short pay, starvation, dirt and filth, revolutionary traditions of liberty and plenty, and a presence of tyranny and starvation constitute the life of the major part of the two million slaves in Philadelphia and its immedite vicinity.

## Boston

America's Hellas, lots of learning, universities, schools, colleges, freaks and philosophers galore. A tradition of liberty not so far back in history caused some of its inhabitants to make a protest against the chief of police inclination towards censorship a la Philadelphia. Recently a big protest meeting was held against the chief because he had prevented the delivery of a lecture on birth control, and the chief had to consent to the very "immoral" and "sinful" act of lecturing on such a subject.

The main industry in Boston is raising kids. They are not exactly "raised," but they are at least produced. In every alley one finds hundreds of them crawling in the dirt. Evidently the department of sanitation in Boston, if there is such a department, has got the terms "birth control" and "dirt control" mixed. Both of them must be sinful in Boston, there is no control on either. Garbage is dumped in the alleys and if it is not dumped the cans stand for many days until one of the scavangers comes around and "dumps" them. He is supposed to dump them in a wagon, which he also does, but usually the wagon gets filled in the first alley, or the first twenty feet, so from then onward it is just dumping the garbage cans on the top of the load and letting the refuse fall down on the ground again. Result: dirt and garbage piled up, millions or billions of flies; germs—there must be barrels of them—and thousands of kids to "play" there. It sure is sanitation.

Organization among the workers is here, as in New York and Philadelphia, taboo. All the three cities are alike. There is a vast amount of philosophy and talk, but no action. The only ones who make any attempt to get away from the gutters are the workers in the marine transport industry. In all the other industries one meets with nothing but apathy and despair.

Politics and politicians have killed all the initiative and all the energy once in action in this part of the country. The politician is like a leper, everything he touches will be infected, rot away and die. Every time the workers in a plant or on a job begin to organize, talk organization, or consider action of any kind, at once the politician is there with his advice and his offer of "Let me do it, I know how." With talk about internationals, that are no more related to the working class movement than is the man in the moon, as being the ones to solve the problem in the shoe shop in Boston, or on a little paving job in Dorchester, or for the employes on the subways in New York, these workers are constantly brought to a point where they sit down and wait for Mr. International to come and do it for them.

Everywhere there is a strong sentiment for organization; industrial organization. It could be done, and would have been accomplished already, were it not for the fact that the philosophers and the politicians have so successfully imbued the masses with the idea of waiting for someone to come and do it for them, that now the workers are waiting for Mr.

Industrial Unionism to come and liberate them. Always waiting for someone else to do it for them. Our fight in the eastern part of the United States, and in the real industrial centers, is not so much with the boss—we always have to fight him and know how to fight; neither is it with the apathetic mass of the workers—we have them everywhere and they always follow the crowd; but it is with the politician, the so-called revolutionary politician. To him an intelligent and active working class is poison, it will leave him with nothing else to do then but to work like other human beings. It will deprive him of "leadership" as the masses become their own leaders.

The main task confronting us is to get the masses to understand the real meaning of the I. W. W.; make them see the necessity for them to act on their own initiative and not wait for some particular party to come around and act for them. It will be up to us to restore among the workers, if it is possible for us to do so, their confidence in themselves, and in themselves only. Once that is done, the battle is won. To do that we can expect to come in constant conflict with the politicians of all creeds. Shall we take up the battle with them or shall we fall for their bunk of being "revolutionary" and specialists on revolutions, etc., as we have done in the past? My trip through the eastern part of the country is enough to convince me of what course to take.

But many of these politicians, in fact the great majority of them, are sincere and honest in their belief, we are told. That's the hell of it. If they were not they would not fight so hard for their Moscow or their other oracles. The old woman who carried fuel to the stake where Huss was burned was also sincere, but that doesn't change the act. Many of the inquisitors of the medieval age were as sincere as sincerity goes. And just thanks to their sincerity did they become the very cruelest. So also here. Because the politician is sincere he will make so much greater impression and fool so many more. Because he is himself fooled completely, he is so much more valuable to those who will benefit by his acts. In our work we must abandon all sentimentality and all considerations for the individuals, whether they be honest or not in their belief, and push vigorously forward our propaganda.

Industrial Unionism is contrary to political action and to all action undertaken by any or all political parties, no matter what their name or their proclaimed tendencies are. The sooner we accept this and act accordingly, the better success will we make. To instill into the minds of the masses a firm belief in their own ability to organize themselves and eventually emancipate themselves, is the gospel of the I. W. W. Let us faithfully carry out this mission and we need not fear for the outcome.

## The Industrial Worker

**America is a land of magnificent distances. It is impossible for any single labor paper to represent all the diversified interests of the working class of the whole country.**

**The Industrial Worker speaks to, of and for the class conscious workers of the West. But no matter where you are, east or west, you will not be able to keep informed on the western labor movement unless you read this virile weekly of Seattle.**

**Since the present series was begun over six years ago, the Industrial Worker has been in the front of the class struggle in the Pacific Northwest . It is the only revolutionary, class conscious, industrial union paper printed west of the Mississippi River.**

**The Industrial Worker is printed where the White and Brown races meet. The American capitalists are now busy here trying to obscure the class struggle with shouts of race prejudice. The workers along the Pacific Coast are trying to keep peace on the Pacific Ocean. You cannot keep informed of the class struggle where it is the most intense unless you read the Industrial Worker.**

**The subscription price is $2 a year. Order from Industrial Worker, Box 1857, Seattle, Washington.**

# Problems Confronting Labor

(CONTEST ARTICLE)

By COVINGTON AMI

WHO rules Serbia?" was a question put to a Serb who recently applied to a United States court for citizenship papers.

"The King," was the prompt reply.

"Who rules the United States?"

"The Superintendent," came the equally prompt but to the court surprising answer.

Needless to say the Serb's last answer, though truthful to the last degree, was unsatisfactory, and he was denied the right to become an American citizen.

But a greater man than this naive Serb has said the same thing, and here is the substance of what he said:

"The corporation is a new form of social organization that has already in many instances risen superior to and above the state."

So declared Woodrow Wilson in an article that appeared in a magazine of national circulation about three months before he was first nominated for the presidency.

This truth, that the corporation has already risen superior to the state, the great war president, like many others, clearly saw; but when it came to dealing with and solving the problems posed by the rise of the corporation to power, he, again like many others, fell back on the exploded idea that the state, if only "honest" politicians could be found and elected to administer it, could control the corporation and compel it to serve the welfare of "all the people." He tried it, and died a broken and a beaten man. The record of both his administrations, especially the second, proved beyond cavil the falsity of the idea—just as the seizure of political power by the Communists in Russia, the Socialists in Germany, the Fascists in Italy, the Laborites in England and the Nonpartisan League in North Dakota and Minnesota have disproved it, and this though the Communists in Russia were undoubtedly honest, in earnest, and sincere in their desire and effort to abolish capitalism. They all failed, and simply because they put the cart before the horse—the political before the economic—the shadow before the substance—the effect before the cause.

So far, here and elsewhere throughout the world, the capitalists have beaten back and down the revolutions of the workers and farmers, not because the capitalists were wiser and abler than the proletarians and agrarians, but because they, the capitalists, saw to it, that, come what would, **the control of the corporation, that is to say, the control of industry and agriculture, remained in their hands.** Never have they suffered the politician really to interfere with this control. In the Americas, in Europe, Asia and Africa, and on the Seven Seas, it was through making themselves masters of the corporation, of the "new form of social organization," that the capitalist class has been able to assume the dictatorship of the world.

Never since its birth has the fundamental principle on which the I. W. W. rests been so conclusively proven correct than in the events arising out of and following the World War, for the events show one long, unbroken record of the triumph of the industrial over the political, of the corporation over the state. It was because it rested foursquare on the law of economic determinism that the I. W. W. was not totally wiped out of existence by the onslaughts made on it from all directions before, during and since the world war. It will be by standing foursquare on this principle that it will finally achieve victory over all its opponents and win the real emancipation of the working class.

### The Proof

"The eating of the pudding is the proof thereof," so runs the ancient proverb. Then let us see what proof there is, in our time as well as in Marx's that the economic is the final determining factor in the evolution of human society.

To all save the simple-minded, it is clear today that the world war originated in capitalist economics, arose out of capitalist economics, and was fought from start to finish on economic issues. All the "peace" treaties signed prove this; for all, without exception, deal solely and only with the economic "right" of the capitalist class to exploit the workers and farmers of the world. Even where superficially and on their face the treaties seem to deny this assertion, the actual facts in the case will prove it true; for it can be clearly seen today that the "Great Powers" of capitalism did not set up Finland, Poland, Latvia, Esthonia, Checko-Slovakia and the rest of the chickenfeed nations with which they have cursed Europe and Asia because of any abiding love the "Powers" had for "liberty, democracy and the right of self-determination," but solely, as they at the time thought, to secure them in their "right" to exploit the economic resources of Russia and other socalled "backward nations." Everywhere, in all the treaties it was industrial power that was aimed at, economic

monopoly, and not political freedom, for which the capitalists plunged the world into wholesale slaughter.

In their very first attacks on her, Russia's "allies" sought but three things: first, to seize all her ports and thus place her commerce at their mercy; second, to grab her oil fields, not for the United States and Britain, but for the Standard Oil and Dutch-Shell Oil companies; third, to expropriate her forests, mines and other natural resources from her people for their capitalists. Always in dealing with Russia the political representatives of the Anglo-American Plutocracy have insisted that she first "respect property rights" before they would talk "recognition" to her, and exactly the same attitude has been taken toward Mexico and all other nations that have dared to question in the slightest this "holy of holies" of capitalism; and correctly, for without the right of private property in the common means of life capitalism cannot exist.

Greater by far than the State is the mighty corporation. Witness it in the midst of war, with millions of fool German, French, British, American and other working and middle class "heroes" dying by divisions on the front—witness the corporation that controls the iron mines and steel mills of France and Germany "fixing" things so that their mines and mills were not fired on by either of the contending armies! Witness the German branch of that infamous corporation, the most infamous government the world has ever known, selling annually hundreds of thousands of tons of iron and steel to the "neutral nations," well knowing it was being shipped to England and France to be used for the slaughter of German soldiers, and this when the German army was short of munitions! Witness the French and German branches of the iron-steel-coal combine exchanging metals of which they were short with each other so that there would be no let-up in the slaughter and no decline in dividends. Everywhere, then as now, the corporation was "superior to and above the state." Throughout the war, and through all the persecutions of labor since then, the state has been nothing more nor less than the "common whore" of the corporation.

"Who rules the United States?"

"The SUPERINTENDENT!" Well and truly said, O, innocent son of Serbia!

As witness the cold fact that even in war, the most inefficient of all man's activities, the politician is an inefficient—the State is incapable of managing and directing industry of any kind, even the industry of murder. For it was not until the politician, that the state was pushed aside by the great corporation leaders, not until the "Captains of Industry and Finance" took over directly the management of "their" country, that the United States made any headway at all in fighting the world war. Graft as they did it still remains true that the United States was put in the war by the corporations and that the whole business was managed by industrialists and not by politicians.

It was no accident that this thing happened here and throughout the world, either. It was merely added proof that the territorially organized, or political state, has to all intents and practical purposes been superseded by the industrial corporation as the government of nations.

In further proof of this contention, witness what is going on in Germany today under what is called the "Dawes Plan". Under this "plan" what is really happening but this—that the Corporation headed by the House of Morgan has literally taken away from the German State its railroads and all the rest of its property that is worth the owning?

What could be more ridiculous than the fact that the French and German steel, iron and coal magnates make treaties directly with each other and calmly ignore their "sovereign" governments and then to hear the politicians who make up these "sovereign" governments talking about "controlling" the masters of their grub and cash!

Look where you will throughout the earth, there is not a single instance where the corporation has not finally subjected the state to its will or crushed its congresses and parliaments. And all this the corporation has done because it IS the NEW FORM of SOCIAL ORGANIZATION—it is through its conventions and boards of directors that the peoples are governed today, and not through the politically elected parliaments and congresses; and this is so because the men now elected to the legislatures no longer represent anything or anybody—they do not come to Washington, or London, or Paris, or Tokio with a mandate directly from the industries and agriculture and, so not coming, cannot in this day and age possibly administer sanely, however honest they may be, the affairs of society.

When one pauses to consider the manner in which the great industrial capitalists like Ford and Stinnes, for instance, have recently swept aside the political government, the utmost contempt with which they speak of it when not handing out hokum for the "dear people"; and not only that, but further observes their attitude toward the banks and bankers, one must be convinced that the real governing power in society is today vested in the corporation and not in the state; for had the state any real power to govern, or the politician any capacity to manage industry, the state would not so tamely submit to the contemptuous orders given it by the "Captains of Industry."

So far has the quiet assumption of governing power by the corporation gone that not many months ago a representative of the Dutch-Shell Oil Combine appeared in Washington with power to act for the British Empire and was there met by a Standard Oil representative with like power to act for this government; and both governments then did exactly what the two great Oil Empires agreed between themselves should be done. To behold such sights as these now being done openly before all men and then not know that the real government of the world has passed from political to industrial

hands is to confess one's self incapable of noting facts and drawing self-evident conclusions therefrom.

The truth is, the state is dying, whatever its seeming appearance of power may be, and the industrial corporation is rapidly taking unto itself the administration of all the affairs of society, social, political, spiritual, and economic as well. Hence the first great problem that today confronts the working class in its fight for better conditions and final emancipation is, or should be: **How it can control the corporation and so reorganize its administration as to make it serve the workers and farmers, the interests of the producers alone.**

### Industrial Democracy

This is the first, great problem of the workers today.

Their next great problem is to achieve international and inter-racial SOLIDARITY.

These two problems solved, all of the rest of the problems that will confront the workers in their passage from capitalism to socialism, from serfs to freemen, they will be able to settle almost automatically.

Hence the writer contends, and has always contended, that the I. W. W. was, is, and always will be right in laying all stress on the necessity of INDUSTRIAL ORGANIZATION as the first effort of the working class in its struggle to better its condition and revolutionize the system.

It is here, in this contention, that the I. W. W. has differed and still differs from all other organizations and parties: It, the I. W. W., **seeks first to control industry and through its industrial organizations to become the general administration of society.**

This being true, the I. W. W. has had the good or ill fortune to clash with the politicians of all parties; and this, so long as it continues to insist that the unions, the economic organizations, shall come first and ahead of all other endeavors of the workers, will be the fate of the I. W. W. until it is triumphant over all opposition, as it is written in the stars that it yet shall be.

Out of its insistence on the all-importance of the industrial organizations, out of its great preamble, came its creed of industrial democracy—came its insistence that the workers alone had the right to say how their lives should be governed. It was the I. W. W. writers and speakers who first popularized the term "Industrial Democracy," and this they deliberately did in order clearly to distinguish the difference between the Industrial Commonwealth as conceived by the I. W. W. on the one hand and political democracy, state capitalism, state socialism, and state communism on the other.

To the true I. W. W. the workers are all in all and there is no other creator beside, and to him the industrial union is what the state is to others. And so, he seeks always to make the "One Big Union the Human Race," and to that end uses all other organizations and brings to bear the "might of folded arms" and all other force he can conjure with to achieve his end—a society of the workers, by the workers, and for the workers.

Not being able to conceive of this society as being organized outside of industry, or from the top down, the I. W. W. goes to work building up the new society at the only point where the power of the workers is clearly manifest—**at the point of production.**

This being the case, he is at once at war with all the old order, social, religious, economic and political, and all this alone is sufficient to explain the bitter persecution of the industrialists and syndicalists by all the states of the world, including Russia; for the Industrial Commonwealth cannot arise without displacing everywhere the political states—Industrial Democracy cannot come into being and power—the working class cannot emancipate itself—without building up its own machinery of social administration and, today, its only hope of doing so is through the industrial unions, by which alone it can seize and administer sanely and efficiently the industries, in which we, the workers, live, move and have our being.

This, then, is the first great problem of the working class—how to organize industry and agriculture of, by, and for itself.

Second, how best to achieve international and inter-racial SOLIDARITY, without which its hope of final emancipation is vain.

Third, how to supplant the Industro-Financial Autocracies of today with an Industrial Democracy.

But all this the I. W. W. shall yet do.

"We shall batter down their prisons,
We shall set their chain-gangs free,
We shall drive them from the mountainside,
The valley, plain and sea!"

**CORRECTIONS:** On page 28, of the June issue of The Industrial Pioneer in Vern Smith's "Was Morgan Wrong?" a serious typographical error caused the first sentence of the first paragraph in the second column to read: "But this gentle sort of slavery, and ceremonial rather than remunerative type of nobility, is just the normal type of both institutions." It should have read: "But this gentle sort of slavery, and ceremonial rather than remunerative type of nobility, is just the normal type **in the origin** of both institutions."
On page 38 of "Memoirs of a Modern Pirate" the word "discuss" in the last line, first column, should have been "dismiss."

# The Shadow of Jehovah

By WARREN LAMSON

WHEN I was a little boy, of six or thereabouts, my mother being dead, I was taken to live with an uncle and aunt. They resided in the slightly rolling country some forty miles east of Columbus, Ohio. The nearest railway station was six miles away. The postoffice, general store and small cluster of houses where we received our mail and purchased a few of our very few needs, was a mile and a half distant.

We had no money excepting the few pieces of silver and copper derived from the sale of poultry and eggs to the huckster, or from the sale of rags and old iron to an occasional wandering junk man. The huckster, whose wagon regularly passed on the road that ran a few yards from the farm house, drove a covered wagon. It was a house of wonders to us, containing many compartments filled with everything from candies and spices to figured bolts of calico. It is true that twice a year, when the hogs were fattened and sold or when the crop of timothy hay was cut, cured, bailed and hauled to the distant railway station, we had an evanescent sense of wealth; but when our yearly supply of clothes was bought and the interest upon the mortgage paid, nothing was left.

In spring the country was scented and beautiful with myriads of fruit trees in bloom and the sugar-sweet sap ran through the maple trees which we gathered and reduced to syrup.

In summer the bountiful land gave up a generous treasure from orchard, garden and farm. We children, the chores done, barefooted trudged the dusty road, romped through the orchards and dipped in the streams which traversed the land.

In fall, after school hours, we gathered the rich nuts with which the country abounded, and raked the wondrously colored leaves to make bonfires.

In winter we sometimes took our books home from school and studied by the fireside. We had marvelously illustrated geographies and hateful grammars and language books. There were histories which pictured our national heroes in thrilling poses. There was Washington, face resolutely set, crossing the Delaware. Arnold charging the British lines yards ahead of his troops; we all felt it a personal hurt that he had turned traitor. Phil Sheridan's return, where he hailed his retreating army crying, "We're going back, boys! We're going back!" was a picture over which we boys spent hours.

On holidays we trudged about the frozen snow-covered soil, applying our geographical knowledge to the hills and streams about, pointing out promontories and isthmuses here, and capes and plateaus there.

Our evenings were passed in reading the books of the school library and the few sentimental journals which reached us, "Comfort," "The Youths' Companion," etc. The school library, purchased with funds torturously raised by giving ice cream socials, etc., consisted of some two hundred books. Wonderful tales of heroism and self-sacrifice for patriotic causes, and in our young bosoms our hearts swelled with the spirit of emulation. Not one of us questioned. Not one of us but would have freely yielded our lives for our country's welfare. Of the great class conflict in the industrial world without we knew naught. The journals, usually sickly sentimental, were filled with tales of newsboys and bootblacks who slept in dry goods boxes and huddled over bake oven grates for warmth.

Nearly every home housed an organ. These were manipulated to such tunes as "Poor Joe," "One Night in June," and "Where Is My Wandering Boy Tonight?"

The folk of the community were reasonably honest and industrious. They knew nothing of scarlet crimes of passion of the outside world, nor of the mean vices of the slums of our great cities. They were generous with their limited stores. All had economic security and were relatively independent. Yet a canker gnawed at the hearts of this placid community; their contentment and serenity was muffled by a loathesome spell.

On the farm adjoining my uncle's lived a childless couple, Hiram Eagle and his wife. This man was industrious, never meddled in his neighbor's business and, as I remember, was probably the most worthy citizen in the community; but he did not go to church.

Now the folk of this rural community were extremely devout, Baptists, Methodists and Presbyterians. During certain times of the year some of these held camp-meetings in tents. Anyone passing these meetings not informed as to the nature of the gathering might well have supposed that he was in the vicinity of a perturbed animal show, or a low resort of drunken brawlers. This, of course, was only the devout shouting their praises and going through their yearly act of being saved, casting their plug tobacco away, and so on, all to the tune of a most discordant hallelujahing, groaning, moaning, amen-ing and shedding of tears.

Hiram Eagle never got saved, never cast away his tobacco only to purchase more. He quietly stayed at home and was supposed to commune with the ungodly works of Ingersoll and Voltaire.

We children, too young to think for ourselves, readily believed and passed along the mental rubbish recited in our presence regarding this non-conformist. Sometimes we passed his house in force and behaved with unrestrained insolence; but when alone we slunk by as though we were passing some mythical dragon's cave.

Hiram Eagle never, to my knowledge, covering some seven years, cast even a reproach at us little heathens, nor at his benighted neighbors, but pursued the even tenor of his ways. Thus only one discordant influence occurred to disturb the serene contentment of the community. **The shadow of Jehovah fell athwart the land.**

WILL THE IMPERIALIST HOGS FIGHT OVER THE SLOP?

# An Old Story Retold

By ROBERT WHITAKER

THE young chap had everything except a real job, so he wasn't happy. He had so much that he thought because he wasn't happy with all of that truck on hand there must be something the matter with **his soul.**

There was, but not just the way he figured it. He reckoned that as he had a cinch on this world what he needed to be wholly satisfied was to get a first mortgage on a good corner lot and an up-to-date mansion in the next world.

So he asked the soap-boxer on the corner how he was going to fix it up with the Big Boss above.

"Why, you know the rules, don't you?" said the soap-boxer. "Don't kill anybody —except when you are told to do it by the government. Don't steal — at least not small stuff, or out in the open. Don't get in bad on the women."

"Oh, yes, I know all that," replied the young chap, impatiently. "I've walked the chalk-line all my life. Somehow it doesn't fill the bill."

"Well," said the soap-boxer, "if you really want to know what's the matter with you try a turn at a man's job. Unload all that graft your dad handed out to you, and join me and this bunch of fellow workers who are out for a new deal for everybody."

But "the young man went away sorrowful, because he had great possessions."

(Continued from Page Two)

far too groggy ever to recuperate. Restoratives born of financial ingenuity and political aspiration such as the Dawes plan, to cite a single "panacea," do not revive the system but add to its vertigo.

Shanghai has been occupying the center of the world stage for several weeks because 150,000 Chinese workers and sympathizers struck against methods of excessive exploitation in factories owned by Japanese capitalists. As soon as the strike started United States marines landed, while battleships of Japan, Italy, France and England —eighteen altogether, counting those of the Dollarica — steamed up for action against the Chinese strikers. Bitterly contending among themselves for rich China's choicest morsels, these rivals united as one force to break the strike. Their uniformed assassins murdered strikers and students, thus inaugurating in China a reign of bourgeois brutality which is an old story to the wage slaves of the Occident, but a new one for the Chinese. Industrial development under capitalism means violence to workers. Capitalism is just getting a good start in the Celestial Republic.

If you understand the theory of surplus value you grasp the significance of industro-financial imperialism. Wage slaves of industrially advanced countries are furnishing the wealth which is used to keep them in subjection and to give their masters power over their fellow slaves in other countries. Bosses use workers for the purpose of taking profits from their labor. These profits pile up and are invested at home until there is room for no further domestic expansion. Then business sends its agents, among which warships are very potent, to get new markets and to find new fields in which to invest capital. In the case of all these warships rushing up to protect the "interests" exploiting China we are again reminded of Rear-Admiral Fletcher's statement before a banquet of business men some years ago. Fletcher said: "Navies are the insurance for the wealth of leisure classes invested abroad."

Central Americans understand this very thoroughly, having been educated by our brave sea dogs.

South America used to be regarded as the heaven of bourgeois investments but certain of the more important republics are going ahead rapidly with their own factory system development, and they are exporting the products of industry. This adds to the contestants for markets and reduces the area of virgin soil for bourgeois rapers. China, on the other hand, has incalculably great natural resources and a population of more than 400,000,000 which can be used to create wealth for foreign bankers. No more palatable prospect was ever set before the glittering eyes and watering mouths of world imperialists.

What is to be the outcome seems to be known by certain liberal emotionalists, for in an editorial in The Nation (June 17) we read in connection with the situation:

"For ourselves we are happy that this issue is to be forced, that China is beginning to drive out the foreigners who have so long imposed their ways upon her."

This is unadulterated bosh. The Chinese are without sufficient unity to expel these invaders. They cannot do the work with arms because they lack them, and the labor movement there, though militant and promising, is still too small to be effective.

China is to be developed by foreign capital. American wage slaves, because they constitute the most efficient of all slave groups, are destined to furnish a large part of the surplus value — profits — used by their masters to get factories in China started, mills running, mines dug, and railroads thrown across the vast territory.

And after a while the goods produced in Chinese factories are going to be on the world market. Another erstwhile backward country will have advanced to industrial prominence. Chinese workers, in common with those of America, England, France, Italy and other lands, will be given just enough to eke out a miserable existence and to keep up their race. They shall ex-

perience low wages, long working days, machine mutilation and deforming, premature deaths, speeded labor, insanitation and various other blessed features of factory economy.

There shall be wars for markets again as profits mount, and capitalists, with an industrially progressed China, shall look more searchingly for new worlds to conquer. It seems as though they'll have to get into the Congo next, and after that to the Australian bush. That is, of course, the slaves who do the work. The bosses have winter and summer resorts and all else save one very important item—numbers.

We have numbers. Let us organize our class to upset the dear boss, and to take the land and machines for our own purposes.

**LA FOLLETTE**—We have just been apprised of the death of Robert M. La Follette, Wisconsin United States Senator, who ran in the last election for the job that Mr. Coolidge secured. La Follette is regarded by many as a progressive, yet there could be nothing further from the truth. He championed the cause of those petit bourgeois forces that, though numerically considerable, are being yearly pushed from an estate of competence into the propertyless condition endured by the industrial workers, the machine proletariat.

The ambitions of this small capitalist group is to go back to a time of industrial growth and land ownership in which concentration of wealth into trusts and banking firms of national and international force played no part. The evolution of machinery, and the centralization of control which more and more aims at the elimination of competition between ruling class factions is a social inevitability, and he who seeks to retard its progress or to force back the irresistible tide is like the king who wanted to force the ocean flood to ebb before his scepter when it was on the inflow.

It is not a great number of small capitalists, all getting some of the product of the toilers and cutting one another's throat in bitter, wasteful competition, that is the way of human advancement. Machines have grown to gigantic size and the social manner of wealth creation points not to divisions of the spoils among a numerous, inefficient horde of little bosses, but rather is progress with another movement which the late Senator La Follette regarded, as a true politician should, with disfavor and hatred.

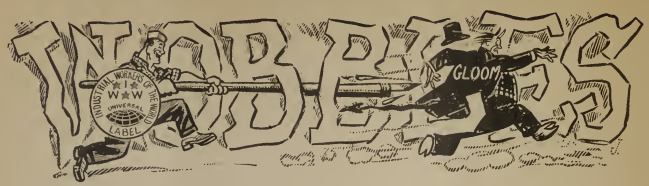
The workers must unite on the industrial field in one big union and take the machines and the land for common ends. It is slight comfort to the worker who is robbed of the major part of the wealth he produces to know that a dozen or a thousand thieves have been going through his pockets and withholding the fruits of his labor or that one great exploiter has done the same thing. La Follette represented the small robbers and the glory that was given him by poor farmers and some workers only shows how little they understand social forces, and it emphasizes the need existing for a more general reading of our literature and an extension of our educational work. It is up to us to build up our industrial unions, and to carry on the work of true education. In proportion to its dissemination is dispelled romantic gush about progressive champions who spend their lives in most direct assaults upon progress.

**NAILING A LIE**—In the March 31st issue of The Daily Worker, communist organ, Chicago, a tirade against the I. W. W. signed by Harrison George included this statement:

Gahan, editor of The Industrial Pioneer, is invited by the reactionary labor fakers of the Barbers' Union of the A. F. of L. to speak against the Workers (Communist) party to the local. He did so on March 26.

I wish to say that the barbers did not invite me to speak and I did not do so. I addressed a letter to this effect to Engdahl, editor of the paper that ran the lie, but he refused to make a correction. Since that time I have received the following letter which is conclusive:

JOURNEYMEN BARBERS' INTERNATIONAL UNION OF AMERICA



Local Union No. 548, Chicago, Ill., May 25, 1925.

John A. Gahan,
Managing Editor, Industrial Pioneer,
1001 W. Madison St., Chicago, Ill.

Dear Sir:

This is to certify that John A. Gahan did not speak at our meeting of March 26th, or at any other meeting of our local.

Yours sincerely,
W. S. LEIDIG,
Pres. Local 548.

## PROGRESS IN THE SCIENCE OF ENGINEERING

The **Professional Engineer**, a monthly journal of the American Association of Engineers, leading society of technicians in these lands, contributes the following to the advance of the scientific world: "Love is a great spiritual truth finding expression in the highest type of religion within human range, service to one's fellow creatures. All of Christ's teachings were supremely expressed in the giving of his life as a token of his love. (Omission of the reverent capitals not ours.) Whoever has missed the fact that love is the central truth of human life, has missed the most important fact of life."

## EVEN IN DEATH

It is said that a Ford slave had a dream in which Henry "shuffled off his mortal coil," as even millionnaires sometimes do. As they were about to bear him away he suddenly came to life, sat up in his coffin and looking at the six Ford slaves who had been selected for pallbearers, his efficiency wizard exclaimed, "What are you six men standing around here for?" "We are your pallbearers," they replied.

"Well," ordered Hank, "Four of you find another job to do and two of you put wheels under this thing and push it along."

## THE CLOSEST RACE

It was in a bunkhouse they were telling of the close races. Poney Pit said that his horse ran at one time in which it won by the length of his tongue. "God, it sure was a close race, and I had all my money on him."

The next story was told of a boat that had won in the last year's race and so was entered for this year's race with a new coat of paint on it, and they had won by the thickness of the new coat of paint. Admitted a close race.

A dry Irishman was in the act of lighting his pipe when he said, "I was up in the North of Scotland." Silence for awhile and then someone said, "well tell us of the race." "Well, that's the closest race I ever saw."

## OFF THE MARKET

Judge: "Do you wish to marry again if you receive a divorce?"

Liza: "Ah should say not! Ah wants to be withdrawn from circulation."

## BIBLE PROPHESIES BRIGHT FUTURE FOR COMBINE

**The Lumber World Review**, a deliberative journal of the national lumber industry, imbibes courage from the word of God. It states editorially, "If—in the book of Proverbs, and in the Gospel as set forth by Nehemiah—it has been determined that those who counsel together get the best results in the affairs of life; then the lumber industry of the United States is hovering right now on the edge of a commercial millennium."

## SPECIMEN FOR ANALYSIS

"The study of the occult sciences interests me very much," remarked the new boarder. "I love to explore the dark depths of the mysterious, to delve into the regions of the unknown, to fathom the unfathomable, as it were and to—"

"May I help you to some of this hash, professor?" interrupted the landlady.

## ECONOMIC DETERMINISM

When anyone is injured in the steel mills at Gary, the foreman in charge of the particular department where the accident occurred is usually "called on the carpet." Sometimes he loses his job.

One day a straw boss by the name of Andy was running ahead of a heavy crane-load of steel, shouting to everyone to keep from under the load. One group of workers seemed slow in heeding his warning. A look of terror spread over Andy's face as he ran towards them and screamed, "Get out of the way! Some of you damn fools will get killed, and I'll lose my job!"

## ANOTHER ECONOMIC URGE

I'se gotta git me a husband somewhuh," said a brown-skinned maid as she stood up to rest her back from "floor scrubbing; "I'se gittin' tiahed o' dis wuk."

# Farm Workers, Organize!

(Continued from Page Sixteen)

Europe is finding its lesser counterpart here in the United States. The European experience with peasants as the butchers of revolting city workers taught the industrialists of this country that the backbone of the present system is the farm population, and they now figure that it is poor business to scrape this backbone too clean. So we now see them busy aiding the farmer in order to bolster up their own regime. But this change on one front has caused the industrialists to increase their hostility towards the organizing of the workers. Open shop plans are the order of the day.

This just means that there is a greater need than ever for a really strong organization of wage workers. The strength and efficiency of such an organization of wage workers depends upon how clearly and correctly it reflects the trend of the times. There must be the tendency in it upon the part of its members to give unstinted financial support and personal service. There must be in it a strong keynote of class solidarity, or strength and efficiency vanish. The realization of class interests must come to the workers and be acted upon as speedily as did the owners and controllers of industry when they came to realize that the unorganized state of the farmer was a danger to the capitalist system. The unorganized state of the farm worker is a menace to the welfare of the working class as a whole. Organize, farm workers, organize!

## ANNOUNCEMENT OF BOOK REVIEWS

**We have arranged to present a number of book reviews each month and in the August number we are running the opinions of competent critics on such prominent works as Cabell's "Straws and Prayer Books;" Lewis' "Arrowsmith;" Fitch's "The Causes of Industrial Unrest;" Brodney's "Rebel Smith;" Calverton's "The Newer Spirit," and Trotsky's "Literature and Revolution."**

## CORRESPONDENTS, NOTICE

**When writing letters concerning the management of this magazine and Industrial Solidarity, address them to O. N. Peterson, Business Manager, as he is the new manager of these publications.**

**Letters dealing with matters regarding publication should be sent to the respective editors. Vern Smith is editor of Industrial Solidarity and John A. Gahan of The Industrial Pioneer.**

# The Cossacks and the Workers

(Continued from Page Twenty-Four)

that attempts to suppress ideas result only in their more rapid propagation."

The international capitalists are now intensifying their campaign of terrorism against the workers. In Italy, Bulgaria, Poland, Germany, Hungary the reactionary governments are killing and jailing thousands of workers who are opposed to the rule of capitalism. This is done in the hope of averting the coming storm, the Social Revolution.

Nor are the capitalist class of this country sleeping. In California the police are suppressing free speech and jailing workers for their insistence of that right. There is reason in believing that the strike-breaking President Coolidge will inaugurate an era of terrorism in an attempt to quiet the present agitation. And Charles Dawes, the American Mussolini, is prepared for the drive against the workers of America.

Labor is the producer of all commodities, therefore the originator of all wealth. The workers raise all the corn, wheat and potatoes, but they are starving. The workers build beautiful mansions as homes for their masters while they live in tenements. This is due to the fact that they are not united.

The workers feed and clothe the police; the capitalist orders the police to use their guns on the workers; this also, because the workers are not united.

The workers manufacture guns, clubs, bullets, the equipment of the police and find they are used upon the workers. This because they are not united.

In order to change the system; in order to abolish exploitation; in order to stop the brutalities of the police, the workers must unite industrially.

By uniting you will gain the power to overthrow and change the system; by uniting you will come into the enjoyment of the full product of your toil.

# An Address to the Brotherhoods of Railroad Men, Galion, Ohio, on their Memorial Day, June 14th, 1925

By BISHOP WILLIAM MONTGOMERY BROWN

My Friends:

If I were a politician, or if I were the sort of clergyman I used to be, I would probably begin by addressing you as "Fellow Workers". That would be a nice way to begin, but it would not be so. I am not a worker. I am a parasite.

The workers are those people who create the wealth of the world. The parasites are those who take it, without doing any work. You earn your living by the sweat of your brow. I get mine in exactly the same way—by the sweat of your brow. Under the circumstances, I have not nerve enough to address you as "Fellow Workers." I am afraid some realistic railroader out there in the audience would yell, "bunk!" And what could I answer to that?

I might say that God in his infinite wisdom has arranged things that way. But I do not believe it. I believe that we in our infinite stupidity arranged things so that some of us shall have all the work and worry and others have all the pay and play.

It is easy to charge all our mistakes up to God, especially those mistakes which give us an easy living and give the fellow we are talking to such a raw deal that we are ashamed to take the responsibility for it.

I do not know anything about railroading. I know a little something about railroaders, however. I know they are heretics.

Do you know what a heretic is? A heretic is a person who does not believe all the things that people used to believe. He is also a person who believes a lot of things which never were believed before.

Please get both of those statements. Many people seem to think that a heretic is simply a person who does not believe something. Study all the great heretics of history, and you will discover that such a definition does not fit. The heretics all believed something. They were great believers. They believed too much. They believed so much that they made the authorities feel uncomfortable.

Some of them did not believe in the divine right of kings. But they did not stop there. If they had only stopped with that, the kings would not have minded it much. But they believed in the divine right of the people to get rid of their kings. That is what made the kings mad. These noble souls were not put to death for their unbelief. They were put to death for their beliefs. They believed in changing things. They believed that things could and must be changed.

I said that railroaders are heretics. If you had not been heretics, you would not have organized these brotherhoods. That was a terrible thing to do. It shows that you did not believe that God had everything fixed up exactly as it ought to be. You believed that things ought to be changed. You believed that they could be changed. You are heretics.

There are a lot of things which you believe in which would have shocked your great-great-grandfathers. You believe in steam. You believe in electricity. And you believe in the laws which govern these forces, instead of assuming that they are controlled by good and evil spirits.

If your great-great-grandfathers could come back today, and see one of your trains whiz through their farms, they would conclude at once that the Devil was going by. They would go to their knees before such a supernatural demonstration. The chances are they would confess their sins and cry out for mercy.

You take such things as a matter of course. You have a general idea in your mind of how railroads happened. You do not think of them as supernatural. More and more, in this industrial age, the tendency is not to think of anything as supernatural.

Does this mean that we have less faith in these days than in the good old times?

My answer is no! That is where I seem to differ most from my brethren in the House of Bishops, who have been trying me for heresy. I claim that this so-called age of unbelief is an age of great and growing faith.

The old dogmas, to be sure, have lost their hold upon us. It is harder than ever to stampede us into the ancient gestures of devotion; and threats that once filled us with terror are now heard with a grin. Hell, if it has not been abolished, has cooled off perceptibly. It does not blaze in our consciousness in the way it used to do.

But this does not mean, I maintain, that we are less religious. It does not mean that we are less humanitarian in our impulses, or that we have less of the Christ spirit in our daily lives.

You railroaders today, I believe, are more devout, in the best sense of the word, than were the high priests of the day gone by. You know more than they did: and because you are better acquainted with the laws which really govern us, you are living far more holy lives.

You firemen, for instance. If you were holy, in the sense that holiness used to be understood, you would not be worth anything at all to your fellow

men. If your fire did not burn, you would attribute it to some evil spirit, and you would begin to burn incense instead.

And you engineers would not like that. Not that you are irreligious, but you happen to know that incense does not make a boiler boil. You may believe in the supernatural yourself, and, though I do not, it is not my intention to attack anyone's belief, you do not want your fireman to take his supernaturalism too seriously while making a run.

The holy man, under such circumstances, is the man who knows the laws of combustion and brings his own actions into conformity with those laws. Such a fireman may not know that he is religious. He may even use some supposedly irreligious language while he goes about his job: and people like myself—idlers and parasites and professional moralists—may hold our hands to our ears.

Nevertheless, if we are waiting for a train or we are riding on one, we are not much concerned with the theological theories of the men who are manning it; but we want to know that they are thoroughly acquainted with the laws that govern steam engines and air brakes, and that they will hold those laws in reverence.

This, I am aware, is a very shocking view of religion. It is shocking because everybody understands it. It is shocking because it is practical: because it can be applied.

Religion, according to a long-standing theory, is something apart from life. It does not have to do with this material world, with the world of force and motion, with electricity and steam and engine failure, with flues that leak and coal that will not burn and general mismanagement from which you men are principal sufferers. And when we think of religion as not having anything to do with these things, the religion we think of presently becomes a religion we can not use.

It is no accident that we save such a religion for Sundays, and for funerals, and for special occasions. It is no accident, since we can not do anything with it in this world, that we shunt it all over into the next world. And it is no accident, since we can not live by it, that it means nothing whatever in the practical affairs of life to speak of a man as being "religious."

A man may be religious, according to a common use of the term, and not be a whit more honest than some notorious "infidel". He may be religious in this sense and be infernally mean. He may be religious and devote his life to piling up wealth. He may even be religious, in this sense of the word, and hire little children to slave away in factories and oppose every attempt to liberate them as being bad for business.

But he can not be religious, in my sense of the word, and be any of these things: for he can not be any of these things, if he understands the laws which actually govern human life. Just as the fireman who understands the laws of combustion has comparatively little trouble getting along with his fellow men.

He may not believe in hell. He may have serious doubts as to the special divinity which is supposed to reside in certain names. The dogmas he hears from the pulpit may have little meaning to him, or they may seem to him to be hideous travesties of truth: and it is even possible that such a man may think that he does not believe in God.

But see what the man believes, if you want to get his real religious measure. See what he is driving at—what he is actually living by, not what sort of words he uses or what Psalms he sings.

Has he discovered his fellow men, and does he believe in them? Has he observed the marvelous laws which govern human nature? Has he discovered that the life is more than meat and the body more than raiment? Has he observed how profitless it is for a man to gain the whole world and lose his own soul? Has he noticed that human beings can not live unto themselves, and that they can realize human life only to the extent that they live in lives of other human beings?

And has he observed therefore, that he that saveth his life shall lose it, but he that loseth his life for the Son of Man's sake, the same shall find it? If he has discovered these laws and observed them—do not tell me that he is not religious. He is a saint.

It is quite conceivable that he may be tried for heresy. He may even be crucified in some way: and the tribunal which condemns him to crucifixion will maintain, of course, that they did it because of his unbelief.

But that need not fool us any longer. Those who want to hold the world still are never disturbed because people lack belief. What disturbs them is that people are beginning to believe. They are developing convictions, and there is real danger of their doing something about it.

I wrote a book a few years ago. I think you have heard about it. It was a terrible book. It was an impolite sort of book. Perhaps it was not a nice book, judged by ordinary standards, for a bishop of the Church to write. But I insist that it was a thoroughly religious book.

On the front cover of that book, I printed this slogan: "Banish the Gods from the Skies and Capitalists from the Earth."

Now, that book has given me all kinds of trouble. It seems to me that I have been in court ever since. Incidentally, I have been officially branded as a heretic by two tribunals, and one of them has recommended to the House of Bishops that I be deposed from the Christian ministry.

I do not intend to argue that case before you. I shall just refer to it in passing. The situation at present is this: if the House of Bishops, or the Church itself finds it possible to define heresy—if they can set forth some statement concerning Gods in the Skies—some confession of literal belief to which they are all willing to subscribe and which shall be used as a standard of my fitness to remain in the ministry—then there will be no further controversy. I shall know at once whether I can sub-

scribe to it or not; and I shall either subscribe to it and remain in the House of Bishops or refuse and come away. But up to date, no such standard of literal belief has been agreed upon: and there is no intention, so far as I know, of attempting to erect such a standard.

We have our Creeds, to which we subscribe; but no educated clergyman, so far as I know, accepts them as literal standards of belief. When we say that Jesus sits "on the right hand of God," we do not mean that we literally believe that God has a right hand and that Jesus has been sitting on it all the time during two thousand years. We use it merely as a symbol, just as you speak of the sunrise, although you know very well that the sun does not rise. But many of my brethren take some of the statements in this creed literally, while taking others symbolically, whereas I take them all symbolically.

They think I ought to accept some of these statements literally: and I could not object to that if they would only tell me what ones. But I have objected, and do object, to being thrown out of the Church for heresy by persons who are not willing to say what they mean by the term.

So much for my trial: we have more important things to talk about here. What did I mean, a lot of good people are forever asking me, by proposing to banish Gods from the skies and capitalists from the earth? What did I have against God? What did I have against the capitalists?

The answer is, first, that I had nothing against God. I believe in God. I am searching for Him. I want God. I believe we need Him in our business. I believe we need God in our railroading. I believe we need Him in the organization and promotion of all human affairs.

And because we need God in all our human activities, I do not want Him reserved for funerals. I do not want Him, moreover, as the mere ruler of a kingdom beyond the clouds which, under the circumstances, we can not possibly know anything about. I do not want Him kept up in the skies where we can not see Him. I want Him brought down to earth, so that the real laws of human relations may supplant the present absurd guesses on the part of politicians and priests.

We have made what we call laws, but they are not laws. They are not the laws of human life, because human life, does not thrive under them. They are nothing but a book of rules: and I do not need to tell a group of railroaders that there is a vast difference between actually understanding railroading and simply following the book of rules.

We have made laws, for instance, which make it necessary for the millions to spend their lives in toil so that the few can spend their lives in luxury. We have made laws which divide the human family into classes, which compel certain people to perform the most disagreeable services and then punish them with poverty for their heroic efforts. We have made laws which put a premium on idleness and try to make a virtue out of greed. Of course, such laws do not work; and in spite of all our marvelous scientific achievements, we are constantly falling into chaos and war.

This, I claim, is because we do not obey God. We could not obey Him, for He has not been real to us. The world has been superstitiously worshipping a lot of unrealities up in the skies instead of observing and obeying reverently the great realities of life. Therefore, it was a truly religious motive, I believe, which, prompted me to begin that book with the cry: "Banish the Gods from the Skies."

And certainly I did not mean any irreverence when I suggested banishing capitalists from the earth. I had nothing against the capitalists, except that we did not need them. How could I have anything against them, when I am one myself? I did not suggest abolishing any human beings; it was only their function as capitalists that I proposed abolishing; that peculiar quality which they have which sets them apart from their fellow men.

I do not like classes. I believe we are all the children of God, and I believe we ought to play together decently. If we could all be capitalists, that would not be so bad. If we could all sit down and let our money roll into us—the way it rolls into me, month after month, whether I turn my hand over to do anything or not, and I have not turned it over for forty years—why, I would not have any particular quarrel with such a system.

But we can not do that. Somebody has got to do the work. The workers can get along without the capitalists, but the capitalists can not get along without the workers. You can do without me, but I cannot do without you. And so, since we can not all be capitalists, I proposed that we be brothers anyway; and the only way I can think of to accomplish that is through our all becoming fellow workers.

"Fellow Workers!" I am back where I started from or where I wanted to start from but could not.

In these words, I have tried to present to you my religion and my politics complete. But if there is anything lacking—if you still think that we should reserve a place for that which we can not possibly relate to life itself—that we should have something up in the skies to adore unceasingly, while not allowing it to interfere with our practical affairs—well, perhaps I can revise my slogan so that it will fill the bill.

After we have searched out the realities, after we have brought God into human life, after we have established a classless world—then perhaps we might fill up that vacant place in the skies by sending the capitalists up there. The world could treat them then with all the meaningless reverence it shows to its unreal gods today. We could worship the things the capitalists stand for, like war and poverty and greed: for none of those things would hurt us, if we were careful to keep them in another world.

In other words, summing up all I have tried to say: Let us make religion a reality and capitalism a myth.

This is the Memorial-day of the Brotherhoods of

Railroad men—the day when you meet in honor of your deceased members.

The Galion organization has not suffered loss by death since the last meeting, but there have been many losses within the forty-two years since I began my ministry here as a deacon, and among them some dear friends of mine, Conrad Pfeffer, Arthur Ball and Jerry Wemple, members of the Episcopal Church, not to speak of others with whom I did not have an intimate acquaintance but who were greatly respected by me as by all who knew them.

Therefore, I can join with you on this day in living with the dead, one of the most precious privileges of humanity.

"O may I join the choir invisible
Of those immortal dead who live again
In minds made better by their presence; live
In pulses stirred to generosity,
In deeds of daring rectitude, in scorn
For miserable aims that end with self,
In thoughts sublime that pierce the night like stars,
And with their mild persistence urge man's search
To vaster issues.
So to live is heaven:
To make undying music in the world."

This is also Flag-day and in the minds of a certain type of patriots, it should be dedicated, not to what the flag really stands for but to a dogma of flag-worship.

The flag is a symbol and can be used only as a symbol. But these well-meaning people are trying to endow it with a certain literal quality instead. They seem to think, and they are frantically trying to make other people think, that red, white and blue are intrinsically more sacred than green, yellow and black. The results, from every point of view, are disastrous. These super-patriots not only make general nuisances of themselves, but they defeat the very aims of patriotism and bring dishonor to the flag. Let me illustrate.

There is a parade on the street and the American flag is carried by. Some onlookers, recognizing the genuine symbolism of the flag, reverently take off their hats.

It is a beautiful gesture. Personally, I like it. So long as the symbolism is unsullied, I find myself thrilling to this gesture of reverence.

But there are other onlookers, who also remove their hats, yet for a very different reason. They do not think of what the flag means to them, personally, but they are accustomed to do whatever the crowd does: they see others take off their hats, so off go theirs.

That is not quite so good. I do not mean to criticize it harshly, for there is something within most of us that makes us want to fall in line: a certain reverence for people's reverence, whether we have any particular reverence on our own account or not.

But there are still others in the crowd—some who take off their hats and some who do not—and these who do not remove their hats may be honoring the flag, without being at all conscious of the fact, while those who think they are honoring it most may be dragging the emblem in the dirt.

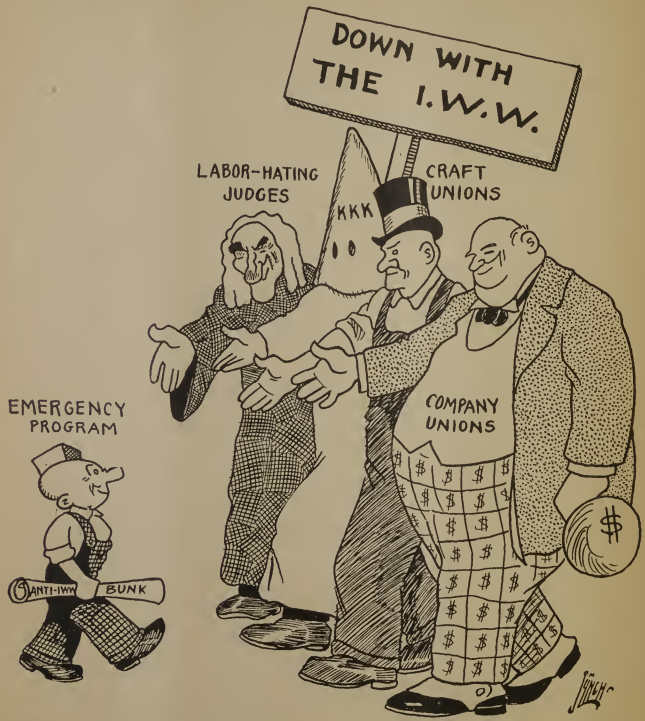
Let me repeat that, so you will all get it. It is a strange statement on the face of it, it is true: and if we can understand that, we can understand not only the great religious controversy which is now shaking up the mind of America, but we will understand much of our political and social dilemma too. So let me repeat:

It is quite possible, in every large crowd which sees the flag go by, that those who do not seem to honor it are honoring it greatly while those who think they are paying the highest tribute to it are dragging the emblem in the dirt.

Suppose, for instance, that one of the persons in the crowd is an Italian section hand. He has had the meaning of the red flag explained to him: he knows that it means that the trains must stop, but that may be as far as his flag education has gone. In Italy, we shall suppose, he was a Socialist. He did not know much about Socialism, perhaps, but he knew that Socialists were with him in his labor union aims and that the government was against him. As for American politics, however, he is an absolute beginner. He does not even know what it means when the flag goes by, and he does not take off his hat.

Now, let us suppose that there is a one hundred and six per cent American patriot observing him. He is offended because the "ignorant foreigner" does not remove his hat: and the patriot proceeds in his own way to make that foreigner honor the flag. He may assault the man. He may have him tarred and feathered: and the Italian, being a section hand, it is possible that he might have a red flag on his person, and evidence might be found in his home that he was a Socialist in Italy, and no end of complications might ensue.

Other workingmen, you may be sure, would hasten to tell him that he was all right. They would say that a man does not have to take off his hat to the flag unless he wants to: and they might illustrate this lesson in Americanism to him by refusing to take their own hats off.



In that case, who is the patriot? The literal flag worshipper, or the American workingmen who stand out in this particular situation with the poor Italian for the fundamental principles of freedom?

I leave the answer to you. Those who once understand the question cannot help answering it right. But you cannot understand the question until you see the danger of taking symbolic things literally.

The flag is a symbol. In the very nature of things, it cannot be anything else. By forgetting that it is a symbol, however, and attempting to make it literally sacred instead, we are in danger of turning it into a symbol of oppression.

The misguided patriot I mentioned set out to teach Americanism to an ignorant foreigner, and gave him a lesson in bigotry instead.

# WELCOME!!!

**The Emergency Program faction of labor divisionists is composed of three elements. At the top are the stoolpigeons who work for the bosses within the "program," and the unscrupulously ambitious and egomaniac tribe who give orders in tsarist fashion whenever necessary and who resort to any means to accomplish their ends. Under this hierarchy are the dupes who pay the bills. To follow this shabby, vicious, dwindling and treacherous crew one must be either a fool or a stool. Emergencyites, take your pick!**

# Preamble of the Industrial Workers of the World

The working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

The conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

# OSSAWATOMIE

By CARL SANDBURG

I don't know how he came,
Shambling, dark and strong.

He stood in the city and told men:
My people are fools, my people are young and strong, my people must learn, my people are terrible workers and fighters.
Always he kept on asking: Where did that blood come from?

They said: You for the fool killer, you for the booby hatch and a necktie party.

They hailed him into jail.
They sneered at him and spat on him,
And he wrecked their jails,
Singing "God damn your jails,"
And when he was most in jail,
Crummy among the crazy in the dark
Then he was most out of jail,
Shambling, dark and strong.
Always asking: Where did that blood come from?

They laid hands on him
And the fool killers had a laugh,
And the necktie party was a go, by God.
They laid hands on him and he was a goner,
They hammered him to pieces and he stood up.
They buried him and he walked out of the grave, by God,
Asking again: Where did that blood come from?

**SELF-RELIANCE**—In a society cleft into distinct and profoundly antagonistic economic elements with the producing strata occupying a subject position, it is to be expected that independence of thought and action on the workers' part is discouraged by the dictatorial minority. In every walk of life workers are trained to rely upon others for direction. An age of intense specialization giving to individuals, professional and technical groups wide knowledge of particular subjects lends itself admirably to continued subjugation of the masses through deprivation of initiative and control on their part.

We do not question the social importance of technicians because we recognize their ability, but we are equally cognizant of their disabilities and lack of social vision. Workers, to say the least, should not regard themselves as one whit less necessary, therefore less desirable, to society. Scientists could not use test tubes, lenses, microscopes and a whole array of other tools of their callings without the prior labor of glass workers and other mechanics, and these skilled workers could not perform their trades without the assistance of common laborers, both before, during and after the operations peculiar to and constituting their skill. The proud labor aristocrat pulling the throttle of the locomotive depends very basically for his success and his life on the gandy-dancers, and the man who drives the spike is quite as socially necessary as the one who drives the locomotive.

Creative processes complement each other and in any sane community there could prevail no caste distinctions bearing honors for certain productive strata and odium for others. To consider again caste differences it can be said with all assurance that the wage slave sweating in the ditch with pick and shovel frequently holds loftier ideals of human progress than the lauded genius of the laboratory. Moreover, his ideals are, on the whole, of infinitely more scientific value than those of the great technician or scientist who often knows nothing about society. We have men and women of these professional elements who do contribute worthily to human advances, and to them we accord the same homage that we have always extended the street sweeper who safeguards our lives. But there are another, and perhaps more numerous, group of these experts whose work, directed by their bourgeois masters, contributes nothing but misery to the vast majority of mankind. Their labors evoke scorn. In this category are the chemists who are so assiduously engaged in perfecting death-dealing forms for warfare, and the engineers who are tirelessly toiling to outdo all others in the designing of engines of human destruction.

But in the control of capitalists the scientist and technician discovering laws and making devices that should really benefit the whole race, such as finding cheaper units of energy and inventing instruments to increase productivity, are actually working against the masses. This obtains because with every machine invention more workers are thrown out of employment than previously swarmed the labor market, and there is no solution except through working class ownership of the means of life. The laborer who understands this fact knows more than most of the scientists. The expert in science may be like a pilot who would steer blindly, intent only on manipulating the machinery properly, not seeing rapids ahead; or like one becoming so absorbed in motor car transmission on the road that he plunges over a cliff.

Workers must cease holding those with

(Continued on Page Forty-One)

THE GIGANTIC GOODYEAR PLANT LOCATED AT AKRON, OHIO

# Rubber Slavery at Akron

By A RUBBER WORKER

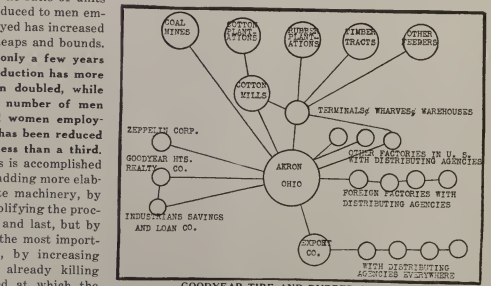
**WITHIN the last few years the rubber industry has assumed the proportions of a basic industry in this country and it is hardly receiving the attention from unionists that its importance would seem to merit. The production of rubber goods in the United States this year will be valued at about a billion dollars, over half of which will be produced in Akron, Ohio, where some forty or fifty thousand workers are employed without a vestige of organization.**

The only rubber workers' union in this country is at Carrolton, Ohio, where a hundred or so workers are employed by the Tuscan Tire and Rubber Company. They are organized by the company for the use of the A. F. of L. union label which is expected to sell their product and save them from the fate that is in store for the small scale, inefficient manufacturers.

Akron is the center of this world-wide industry and is the home of many of the larger manufacturers, including Goodyear, Goodrich, Firestone, Miller and a score or more smaller ones. With the exception of Firestone all these larger shops and many of the small ones are owned or controlled by New York financiers.

These larger shops are giant horizontal trusts with their tentacles reaching out to all parts of the world and with distributing agencies everywhere, all under one management. The trend at present is to save transportation costs and tariff duties by establishing manufacturing plants in all the principal consuming countries.

Some conception of the ramifications of these imperialist industries can be had by a perusal of the holdings of the Goodyear Tire and Rubber company, which is shown in the diagram. It is a 156-million-dollar business with 113 acres of floor space in the two Akron plants which have a tire producing capacity of 35,000 daily beside all the thousands of other hard and live rubber products. In 1923 this company produced, in Akron, California and Canada, 9,250,000 tires, 81,000,000 pairs of heels and 25,000,000 feet of hose. They used 50,000 tons of crude rubber and 15,500,000 kilowatt hours of electricity. These plants combined have a floor space of 166 acres.



This company has some thirty-five subsidiaries which include coal mines, rubber plantations, cotton plantations with irrigation projects, textile mills, timber tracts, a banking institution and rubber

factories in at least ten foreign countries. This list is constantly growing, as they have within the last few months added the million and a half dollar Marathon Tire and Rubber Company at Cuyahoga Falls, a suburb of Akron, and have paid several million dollars for two more textile mills at New Bedford, Massachusetts. The Zeppelin Corporation is also a recent acquisition, although they have for several years been building balloons and airships of the non-rigid and semi-rigid type and have an immense hangar and field near Akron. The Dodge Brothers Company of Detroit, Michigan and Walkerville, Ontario, Canada, has been purchased by Dillon, Read and Company of New York who own the Goodyear Tire and Rubber Company. It is reported that they expect to add several more automobile plants to their string. These will not be a part of Goodyear but will be owned by the same group of capitalists, and E. G. Wilmer, who is chairman of the board of directors of Goodyear is expected to be president of the new company. If he holds both positions at the same time it can be seen that cooperation between them will be very close.

It can plainly be seen that capital is truly international and that narrow nationalism is intended to keep only the workers divided.

Apropos the concentration of capital, it is interesting to note that despite the marvelous growth of the industry in the last few years the number of rubber companies in the United States has decreased from 300 to 100 or 66 per cent since 1900.

The ratio of units produced to men employed has increased by leaps and bounds. **In only a few years production has more than doubled, while the number of men and women employed has been reduced to less than a third.** This is accomplished by adding more elaborate machinery, by simplifying the process, and last, but by far the most important, by increasing the already killing speed at which the men have to work.

**GOODYEAR TIRE AND RUBBER COMPANY**
**35 Subsidiaries Operating in All Principal Countries.**

These large companies are firm believers in industrial unionism and have powerful organizations. They will not tolerate it among the workers, however, and will ruthlessly crush even an A. F. of L. union with spies and intimidation if necessary, but in most cases it has been found more effective to amuse the workers with many diversions and schemes to keep their minds off their troubles. Of these schemes there are many, including sports and athletics, clubs, etc., and the Goodyear has the best one of all. They call it "Industrial Democracy."

### Goodyear's Industrial Democracy

The Industrial Assembly was established in 1919 and is patterned after the National Congress. It is composed of a Senate of 20 members with at least five years' service and a House of Representatives of 40 members with at least one year of service. These are elected by the Industrians. The Industrians are American citizens, 18 years of age or over, and have at least six months' service with the company. Note how they promote race consciousness and division among the workers.

Members of the assembly are in perpetual fear of their jobs and of course are very servile. Once however, when the assembly was first organized, some of the more intrepid started a move to raise the wages of all workers by fifteen per cent. This passed the House and Senate but was vetoed by the factory manager. It was passed again over his veto and went to the board of directors where it was again vetoed, their action being final.

There are always plenty of candidates for office as members of the Assembly as these members, while attending to their duties get their regular pay plus ten per cent and have other privileges. They have no difficulty in getting out the vote. The factory manager makes the statement that to vote is a privilege and a duty and the votes are cast. In my department at last election there were but two who did not vote. I didn't hear who the other was or what happened to him, but I've been doing all the most disagreeable work ever since.

The department managers actually make work for the Assembly by imposing some petty tyranny on the workers, then very obligingly adjusting the matter when it is taken up by the committee, thus giving the Assembly a great deal of credit. Strange as it may seem there are a few workers who believe this "Democracy" to be a great blessing conferred upon them by a benevolent employer.

It is a dandy little plaything to keep the children out of mischief.

### Flying Squadron

Following the 1913 strike, which crippled the shops here for some time, the Goodyear formed what they called the "Flying Squadron." It is

GOODYEAR COTTON PLANTATION IN IRRIGATED SECTION OF ARIZONA.

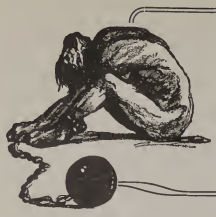
composed of about 60 men, two added each year, and who are carefully selected for "character" which means loyalty to the boss. They are given three years' training, then given a regular job in some department where they are treated the same as anyone else except that they would be the last to go when workers are laid off and that they are subject to call in case of "emergency."

During the three years these men have to work in every department and learn practically every operation. They are also given physical and some technical training in Goodyear's private head-fixing institution, The Goodyear Industrial University. There is also a lot of folderal that it designed to make the squad man feel very superior to his fellow workers. The object of the flying squadron is to provide a body of loyal workers trained to break a strike in any department should one occur. It is, however, mainly effective as a moral influence or threat and would be powerless in case all the workers in the shop were organized so as to make possible a shop-wide strike.

### The Old Game of Debt

One of the very effective schemes this company has for keeping the workers' noses on the stone is to keep them in debt. Goodyear owned several tracts of land in and near Akron, and one of these, known as Goodyear Heights, was consigned to a subsidiary known as Goodyear Heights Realty Company, which operates in close cooperation with another subsidiary, The Industrians Savings and Loan Company. The Goodyear Heights Realty Company subdivided this tract into very small lots, constructed streets, sewers and other necessities and built what they had the nerve to call houses. These houses were very pretty when first built, but were constructed as cheaply as possible. It has been said of them that there is just enough house to hold the paint and wallpaper in a vertical position. These houses sold to Goodyear employes on the installment plan for from three to seven thousand dollars, with the understanding that if the purchaser stayed with the company a specified period of time a portion of the purchase price would be deducted. Consequently, those purchasers are very careful not to do anything that would bring about their dismissal.

Many of these homes will be mortgaged when they have fallen down.



### A. F. of L. Treachery

Early in 1923 a few hundred tire and band builders employed at Goodrich came out on an unorganized strike against a cut in wages. They went to Central Union hall and elected a strike committee led by two individuals who were later found to be private detective. This committee, at the suggestion of Sam Newman of the machinists, sent for an A. F. of L. organizer to come and try to organize the rubber workers. Let me say here that Sam Newman, despite his affiliation with that group of autocrats known as the A. F. of L., was as sincere as anyone could possibly be, and he worked hard and long, even when he could no longer hold a job himself, to induce the rubber workers to organize and fight. If the rubber workers had started to form an independent or an I. W. W. union I believe Sam would have given them all the help he could. I have seen him out in the early morning with handbills to give the workers on the first shift when the rubber workers themselves would not get up and help.

Thomas J. Conboy, an A. F. of L. organizer, was sent to Akron in response to the request, and proceeded to organize a union of the strikers and some other rubber workers who had made inquiries of the C. L. U. Conboy was loyal to the machine and demanded that the union be loyal also. The rubber workers, however, demanded that the first consideration of the union be effectiveness. As the union couldn't be both loyal and effective, a struggle for control soon started and the rubber workers won, electing a group of progressives to office. Conboy wouldn't give in and called in the police one day to oust some reds. Thus it was that the union exploded.

The craft unions were very anxious to organize the rubber workers because their little groups were unable to function effectively with the great majority of Akron's workers unorganized, but to help them the union must be loyal so they adopted the "Rule or Ruin" policy when the union was first

(Continued on Page Forty-Four)

# A Prison Idyll

By "AUSSIE"

II

EARLY in 1916, the Labor Party in the Federal Parliament in Australia were busy "winning the war." Senator George Foster Pearce, a lugubrious, rabbit-faced ex-cabinetmaker from West Australia, was the Minister of Defense, and woe it was to anyone who did not have the same viewpoint as to the righteousness of the war as he did. Needless to say his chief, William Morris Hughes—who had emigrated from Wales to Australia by walking along the sea bottom—backed the gloomy and misanthropic Pearce to the limit.

At this time I was publishing "Direct Action," while Tom Glynn was acting as editor. I published a cartoon by a young artist showing a soldier crucified on a huge field gun, while beneath were gathered several vulture-like capitalists catching with bowls the blood which flowed from the dying soldier. Under the cartoon was a quotation from the prospectus—issued by the Labor Government—of the War Loan of the day, in which people were urged to take the loan as a patriotic duty—and the point was made—quite a telling point—that the interest was "far higher than that paid in normal times."

Some weeks later an intelligence officer found this cartoon and a warrant was issued for my arrest. After getting off to a false start, I was finally convicted by a magistrate with a very bad breath of "prejudicing recruiting" and senteneed to one year's imprisonment in a Labor Party prison with an alternative of a fine of £100.

The sentence was appealed at the Quarter Sessions but the judge upheld the lower court. On May 4 I was taken to Long Bay Penitentiary to begin my sentence for the heinous crime of not taking the same attitude on the war as the renegades, who were within the same year to be expelled with ignominy from the Labor Movement.

After two weeks in Long Bay, where I washed prisoners' clothing in the wash-house, I was put into irons with 17 more prisoners and sent to the big prison at Parramatta. Parramatta is a prison of the old type, used only for prisoners who have three or more convictions. No one is sent there who has a sentence of less than three months. The inmates include a large number of murderers, forgers, garrotters, thieves, hold-up men, sly-grogsellers (bootleggers), methylated spirit hounds, vagrants, ordinary drunks, and all kinds of offenders who have previous records. I was the only political prisoner in this hungry bastile.

The cells in some of the wings are narrow, and unheated in winter time. A watery electric light bulb would give a gleam of light until 8 o'clock. The first two weeks I was in "Mad Mick's" wing. "Mad Mick," alias Daniel Ahearne, was a colossal Irishman with beetling brows and enormous black and filthy hands. He was a senior warden, and wore three stripes on his arm—they said that he had "bummed" his stripes. In the old days he had been a member of the famous Parramatta Gaol football team—the gang of huskies who used to charge a prisoner in his cell and then kick him about the body as he lay in agony on the floor. It was said that Mick had taken a vacation some months previously—the first one in ten years. He went to Melbourne in Victoria and hired a room near Pentridge Prison—and got a permit to visit this latter prison daily. He was lonely away from his business, was Mick.

I was very lonely in this prison, there being no one I could talk to, nothing to read. The nights were cold in the cell, and the bedding old, smelly and insufficient. Like every prisoner I thought of what I would eat when I would get out. Corn mush—with weevils and all—16 ounces of poor class bread and a chunk of wiry gristle and bone is not a very satisfying diet.

The governor, known to prisoners as "Micky Dripping," kept pigs. The pigs lived well even if the prisoners starved. "Micky Dripping" had sufficient of the Emerald Isle in his make-up lavishly to admire a lardy and grunting hog—his idea of earthly beauty.

After a week in the wing where "Mad Mick" reigned and hollered, I was sent to another wing mainly occupied by pimps, petty thieves and vagrants.

One night, I was carrying my corn meal "mush" into my cell to eat it hastily before my bed was thrown in and myself searched—when my door suddenly opened and a gruff voice demanded "How is your light burning, lad?"

I answered "All right."

He then said in a quieter tone "What's your name?"

"Aussie."

"All right, Aussie, you have a friend in me. I

know all about you. I've been round your meetings in the Domain. Where do you work?"

"In the bookbinder's shop."

"Do you smoke?"

"No."

"Would you like a newspaper—a "Direct Action"? I can get it to you in the shop where you work."

"Sure I would like a paper. Thanks."

He gave a door a rattle and hollered out again—his superiors were down below—"How's your light now, lad?"

"All right" I answered again.

I shook hands with myself. A friend IS a friend in jail.

Two days later he visited me in the workshop and he dropped a copy of "Direct Action" into an open drawer. I hastily smuggled it inside my shirt. In my cell that night when search was over, I read it under my hammock. The big headline was "SET AUSSIE FREE"!

The warder's name was Charley Keys—an appropriate name for a prison guard. But as the advertisers say, he was "different." He hated his job, had got into it somehow. But his job had a new zest for him now, he could aid a militant member of his class. He was outspoken, too, for he would sometimes call the attention of other officers to the door of my cell and say "There's a fellow in there with more brains and guts than all we fellows have got together. He's fighting for us and we turn the key on him."

During this time a big agitation was afoot outside to force my release. The unions and the political labor leagues were indignant at the Federal Labor Party for my arrest and imprisonment. Holman, the Labor Premier of New South Wales, went to Broken Hill for a poliitcal meeting. When he arrived there miners stopped his train and told him that he could not speak in the city until "Aussie" was released.

Little by little the federal ministers were getting tired of having me in prison. Big meetings were held in Sydney, which my friend Keys reported to me. He watched every newspaper and kept me supplied with cuttings about my case. Every Monday, when his duty brought him near me, he would detail what the speakers said about my case at the Domain meetings.

It was remarkable how his attentions to me were not noticed by some of the higher-ups nor by some of the pimping and snitchy prisoners—who are always present.

One cold Saturday morning, the iron tongue of the prison bell woke us from our fitful slumber. It was still dark and one had to grope to dress and make up his bedding.

A second bell and the officers unlocked the cells. My door unlocked and a dark figure handed me a piece of paper. A familiar voice whispered, "A note from the boys, Aussie. The government has cut your time from a year to three months. Congratulation, boy! Read the note and then get rid of it."

We passed out in the yard, I clutching my precious letter in my shirt. My heart was joyous, even if the morning was cold and dark—the surroundings grim and forbidding. The Australian workers had been true, my good fellow workers had triumphed over the government. For the second time in two years the government had been compelled to yield, and to release me before the expiration of my sentence.

The letter told me all. And at 11 o'clock the Scotch chief warder marched me in front of "Mickey Dripping" who was impressed very much apparently by the very unusual action of the government in cutting my sentence down 75 per cent.

"Phwat's yer name?" he asked—as if he didn't know.

"Aussie."

The chief warden nearly dropped dead.

"Sir-r-r" he screamed.

"Sir-r-r" I shrilled falsetto-like.

He turned purple all over the face, it spread to his ginger hair and suffused his skinny and wrinkled neck—nothing very edifying to Scotland.

"Aussie," sniggered "Mickey Dripping," "yer sentence has been reduced by the guverment to three months, and yer fine to twenty-five pounds. I note ye have sufficient to pay yer fine. If ye care to do so, ye can go free this marrning."

"No," I said, "I don't pay for the privilege of speaking or printing what I think is right, even if the government doesn't like it. I'll finish the term."

And so out I marched, with about four more weeks to serve.

A week later I saw my friend Charlie passing through the shop. He looked glum, miserable, discontented. He spoke to me.

"I cannot stick this lousy job any longer. I am going to turn in my clothes and go out navvying, laboring, anything rather than do this rottenest of all jobs. I can lock up drunks and vags, for it is THEIR home. But I draw the line on turning the lock on men like you. To see you marching in that line of old-time habitual prisoners acts like the sear of a red-hot iron on me. The food I eat in the boarding-house when I think of you with you weevily corn mush, the bread like sawdust and the lousy morsel of worn-out bullock which they glorify by the name of beef, nearly chokes me. I am going to quit this week. The only thing that has held me here so long has been the fact that I was able to help you."

He was too useful to me. "Hang on, Charlie, for another month," I said; "you may be able to help me some more."

"All right," he whispered. "I'll sit on my feelings and principles a litle longer."

The days dragged away one by one. How one gladly sees his life's days pass away when in prison! Weeks, hours, even minutes, seem to go with

leaden wings. The long, bleak, cold nights in a narrow cell, when the prison is wrapped in a yellow mist. When violent rain and wind storms eddy and careen around the grim and hostile walls, while the guards on watch curse their fate and growl the call, "All's Well!" and long for the call of the iron-throated bell that wakes the living dead to another day of torment and misery.

"If 'all's well' with you, then 'all's well' with me," I used to say as I turned in my mouldy blankets to make another effort at wooing good Mother Sleep.

On the second of August I saw Charlie for a brief moment. "You're going out tomorrow? Good. I'll see you in Sydney."

Later in the day I was in "Mad Mick's" wing. Mick received them and Mick checked them out. My beard was a good month old. "Now," said Mick, "here's a rayzor, and here's a strop and here's some soap and here's a looking glass and here's a br-brush. Now when 'oo shaves does 'oo use hot wather or cold wather?"

"Hot water."

"All right; if 'oo wants hot wather, 'oo can have hot wather. Does 'oo know where the boiler house is?"

"I do, Mr. Ahearne."

"Then, go down to the engineer, and tell him that Mr. Ahearne send 'oo for some hot wather."

And so I shaved and took a bath after which I undressed to the skin in the corridor. Then Mick pushed me into a cell where my civilian clothes were waiting for me. This method was used to prevent prisoners taking out letters from inmates.

After being searched I settled down for the night. I did not steep, but counted the chimes striking the hour from a neighboring church clock. At 5 a. m. I arose and put on my own clothing. At 5:45 a rattle of keys was heard and the second warder on night duty opened up and said, "What is your name?"

"Aussie."

"All right, come on. There's a car waiting outside. Maybe it's for you—?"

"I don't think so."

A few minutes later I received my valuables from the Deputy-Governor. I started for the gate, the only time-expired prisoner that morning, in a jail with 300 prisoners. A squad of prison guards passed me in single file, going on duty for the day. The first man in the file was Keys. He gave me a keen look, a sardonic look, I thought.

Outside the walls a car was waiting for me. Joe Fagan, Billy Teen and one of the Franks had come up to take me home in style. We rolled into Sydney on a stormy and squally morning. Breakfast, I remember, was roast pork with stewed apples. I was back among real folks again, among fellow workers, human beings with red blood in their veins, with courage and a class-conscious spirit.

We drove around Sydney. I was welcomed back to work by the people who had compelled my release.

At night the Sussex Street Hall was lit up in my honor. An enormous crowd was there to meet me. The I. W. W. band played in the street. The women fellow workers, always hospitable, were giving out sandwiches and tea.

Speeches were made by men who were themselves soon to taste of prison, to taste a far greater punishment than that which had befallen me. My few months was the forerunner of many years, of a violent persecution by political renegades and charlatans, of political cowardice by so-called labor parliamentarians.

At the height of the festivities a man came straight through the hall to me. For a moment I did not recognize him. Then as he clasped my hand—for the first time—I saw that it was Charlie Keys—whom I had only seen in the uniform of a prison officer.

We were in a place where we could talk freely. We embraced each other. I forced coffee and cake on him. His face was shining.

"Now," he said, "I am going to join the I. W. W." "You're a great fellow, Charlie," I said; "you've acted whiter than lots of men I could call fellow workers, but the I. W. W. bars both policemen and jail officials."

He smiled. "Listen till I've finished then you'll know that I can join the I. W. W. This morning after I passed you at the gate, I made up my mind that my job was no longer good to me. We let the prisoners out for wash-up, and then locked them up for breakfast. Then we had our own breakfast. After that we were all standing around in the yard waiting for the bell to unlock the cells to get the prisoners to work.

"You know Churchman the senior warder on the gate?" I remembered him as one of the tough birds in the administration. "Well, Churchman opened up his mouth. Says he, 'I see that **bastard** Aussie went out this morning in a motor car. A **bastard** like him ought to have been carried out in a hearse.'

"He was standing near the gate, which was still ajar, for some of the warders not yet back from breakfast. With a glance at the open gate I sprang for his jaw with my left. My right got him in the wind as he staggered backwards. He fell like a pole-axed bullock. He lay still. In a brief second while everyone stood thunderstruck, I unhitched my belt and ran my fingers through my coat butons. In a flash they were off. I threw them on Mr. Churchman's carcass and sprang for the gate.

"Yes, Aussie has left, and now I'm leaving too. Goodbye!"

"So now," he said, "how about me getting a card?"

And he got one.

MILITANT CHINESE STUDENTS CLASHED WITH FOREIGN SOLDIERY WHEN THE FORMER TRIED TO SET FIRE TO THE FOREIGN ADMINISTRATIVE BUILDINGS.

# White Terror in China

By FRANCIS J. MALLOY

SECRETARY of State Kellogg has communicated with the various imperialist governments concering the advisability of holding a conference on the Chinese situation. The capitalists of this country with Chinese holdings, and the ones who have designs upon China, wish to maneuver themselves into a position of undisputed preeminence in China. This means that they are not satisfied with China's treaty governing foreign relations. Great Britain and Japan are well entrenched in China. America has not been so long in the business of Chinese penetration, but her industrial position is the world's foremost and the world war placed her indisputably at the head of capitalist nations. Consequently, anything less than domination must be distasteful to American banker-industrialists.

Press reports say that Foreign Minister Chamberlain made the following statement in the House of Commons relative to the American state department's communication: "Britain is not prepared to renounce extra-territorial privileges in China." In other words, England has a select position for exploiting China which she has no intention of relinquishing.

A few weeks ago nearly a score of battleships steamed up to Shanghai to quell the strike of 150,000 Chinese wage slaves and their sympathizers. The foreigners murdered a number of strikers and students, American marines being the first to land. And that is significant. It shows that the bosses instigating the movement of these marines are not a bit backward about the matter of initiative. Significant, too, is the fact that the strike was against a Japanese employer, but the warships were flying the polychromatic fetishes of the United States, France, Italy, England and Japan. Fight among themselves as they will for the best points in the grab game, they evince a solidarity that has its lessons for us, and that gains its successes through a demonstration of organized strength in attacking its adversaries.

### Marks of Capitalism

Penetration of China by foreign capitalists means the introduction of Western wage slavery. Wherever capitalism enters its dehumanizing marks are speedily impressed. Its development in England furnished the classic examples of fearful stories in the not too roseate history of the race. Destroying home industries; filling the factories with men, women and children, with the women and children at a ten to one numerical ascendancy over the males; driving peasants from their land to make sheep pastures to supply the woolen manufactures; and filling the highways with ragged, hungry, homeless and hopeless vagrants unable to find employment capitalism rose in Nineteenth Century England. Then was it that the great English fortunes ceased to have their roots in piracy and found a more profitable, God-ordained source in the grinding of the masses through the machine process. So

rapacious were the early English employers under capitalism that they emptied almhouses and orphanages for slave flesh. Their factory conditions were so destructive of human life that they were rapidly decimating and enervating their slave population. It became imperative to place a curb on their own greed, which is immortalized in statutory form under the Factory Acts. Thus did they keep themselves and one another from killing off all the wage slaves. The goose that lays the golden eggs was not to be destroyed.

China has a system of wage slavery corresponding to that of the older systems. There is widespread child labor and employment of women of all ages and conditions. In America we are used to this driving, this hurrying, worrying, torturing thing that is monstrously unfair, unscientific and a cancer eating at the social body. We have been trained to accept our slavery with our national holidays and our unemployment and Christianity . But the Chinese have another way of viewing life, and evaluations that are quite different. They don't like the "New Freedom". They have their own traditions and their own religions. They have their nationalism to develop, and, with us, a working class internationalism to learn of.

Going into China Big Business pursues the same course as it has elsewhere. The missionaries on one side and the factory managers on the other constitute a holy alliance that has stamped its characteristics on every land beneath the sun. This alliance went into Africa, and is having some difficulty there with the Riff tribesmen at this moment as it experienced hindrances from Congo tribes in the past and from the Boers at the other extremity of the Dark Continent. The alliance entered India and the Americas; it went to the East and West Indies, to the Far North and Far South, and to all the islands of the great oceans. Always with bibles, hymnals and the policy of exploitation.

### The Example of Hawaii

Hawaii well illustrates the point. It is a picturesque example, with a French gunboat going in to open a rum trade suggested by Franch molasses interests in the West Indies. Under the frowning gun-turrets squatted Jesuits. The blessings of civilization came to Hawaii. The population was nearly wiped out by diseases introduced by the invaders. Then American Protestant missionaries came to the scene, stole the lands, and succeeded in "annexing the United States," as they say in the exclusive clubs of Honolulu. But they did not quite succeed in proselytizing the natives. Nor are they going to do the trick in China, whose civilization is older and greater, and whose potentalities are so vast.

The student movement in China is the voice of nationalism. It is a clear voice commanding attention and worthy of respect. The Shanghai strike embodies the two-fold aspect of nationalism and awakening class consciousness. But there can be no industrial organization without industries, and these are new in China. The Chinese workers, headed by the militant and broadminded Chinese Seamen's Union, have made the great gesture. Their strike is the opening gun. So long as there are factories owned by private individuals to make profits there will be strikes. Our Chinese fellow workers have definitely set about the task of uniting to oppose the mailed fist of international capitalism. Our greetings go out to them, and we owe them our solidarity. The best way to show it is to organize right here in the United States where are made the bulk of the resources being used to beat down the Chinese.

### Internationalism

Nationalism fills its basin to the brink before it overflows into internationalism. Capitalist progress bears out this statement. When the resources of a country have been exploited to a point of overflowing capital looks abroad for expansion. American capitalism developed domestic resources to the limit before it spread to foreign fields. Bankers know that in human relations the era of isolation has forever been passed, that we live in a period of internationalism. Wars prove this. When they appear they drag into the maelstrom most of the strongest states. There is no time of comparative prosperity or of unemployment in any country that does not reflect itself to the ends of the earth. Capitalists fully understand these matters. They are alert to their class interests. By organizing they prove that they have this understanding. They perceive the gigantic enemy, the terrific menace, and they act together from base to keystone to keep this powerful foe from waking and uniting. If once the working class learns its strength down go the bars that cage its flesh and soul, and snapped are the chains weighing it in the shambles.

We rejoice in the Chinese protest; we recognize the difficulties. Alone the Chinese workers can but continue to build their unions. With the workers of the world they shall one day use these unions to smash their exploiters with the blows from which there is no recovery. Capitalism is worldwide. Capitalist organization opposing the workers is worldwide. Industrial unionism must be equally international, equally universal, equally aware of the existence of one enemy, and equally prepared to destroy that enemy when the final clash comes.

There is a white terror in China. Wherever business empire enters there stalks the white terror, with hands red with blood. We have its expression in America. Battle scenes of the class war in this land of the free and the home of the brave are far-flung. Until now we have not, as an American working class, learned to be class conscious. So the white terror here has walked over our bowed backs to world domination.

The vigorous action of our Chinese fellow workers promises a class consciousness there that may well became an example for the workers of the world to follow.

# To an Orthodox Minister

By HENRY GEORGE WEISS

YOU stand for him? You stand? Don't make me laugh!
You with your wise smug saws, your well filled board,
Your canting sermons and your goldrimmed specs,
Your portly deacons and your church-made lord.

YOU stand for him! You fool, you dupe, you knave,—
Whichever of the three you hap to be,—
What know you of the simple working man
Two thousand years ago spiked to a tree?

YOUR kind was there, rich, arrogant and proud,
To see him framed, thorn-crowned and crucified;
High priests and Pharisees, the Temple crowd,
To seek his death, to spit on him, deride.

"HE stirreth up the people," was their cry;
"He damns the rich and lifteth up the poor;
He is a foe to Caesar —crucify!
Away with him, the bastard of a whore!"

YOUR kind! Remember that! The likes of you!
The Church's own anointed ones, the rich,
All banded there to hound unto his doom
The migratory casual from the ditch;—

THE hungry, homeless carpenter, so poor
He had not where at night to lay his head,
Who saw the wolf of want at Labor's door,
And cried aloud "give us our daily bread!"

THE working stiff, the lowly tramp, the vag,
Whose only vice was love, whose only crime
Was preaching brotherhood, was reaching hands
To lift his mired fellows from the slime.

YOU stand for him? You fool, you dupe, you knave,—
Whichever of the three you hap to be,—
The haloed Christ you've dragged within your church
Is not the murdered slave,—it is not he!

HE had no spotless robes, no gamboling lambs,
No gloried crowns upon his matted hair,
He did not live with rulers, bless their lands,
Consort with gold,—you lie!—he is not there!

BUT daily past your church the bleeding slaves
Go fainting with their cross to Calvary;
Your eyes are stopped with gold, your ears with pride,
Fool, knave or dupe, you look but do not see!

# The Essence of Industrialism

By WARREN LAMSON

THE conception of a new social order, in which many of the evils of today shall be eliminated, is not new. But the conception of an industrial democracy, based wholly upon labor, is a decidedly new idea, an outgrowth of mass production. It differs from the Utopias of the ancients that were to be executed by fiat, and the social democracies and cooperative commonwealths of the socialists, that were to be inaugurated and administered through bureaucracies and legal processes, by depending upon the liberation of present suppressed or unorganized social forces for its birth.

It also differs from all former concepts of a new social order, in resting wholly upon labor. Labor is to be its creator and no other class than those engaged in socially necessary labor would find place in its proposed scheme of life.

This new social theory originated in the unions of the workers, and has been nourished and developed mainly by the Syndicalists of Europe and the I. W. W. of America. While faint anticipations of this concept may be found in the literature of their forerunners, it has remained for these to incorporate in their structures and philosophies provisions for the development of the idea, and the realization of the ideal. At the same time it would be a serious omission to overlook the fact that many of the ablest scholars of modern times have by reason of their training and knowledge, made valuable contributions to the unfolding of this conception.

Humanity has undergone many changes. Today the race is facing the greatest change of all, one in which the working class will follow the procedure of the bourgeoisie, and perform its "historic mission," or society will fall apart, its institutions crumble, and a new "dark age" envelop the earth, the effort of the past be wasted, with the race doomed to spend weary centuries of blind groping. This idea was expressed by Arturo Giovannitti in 1912 in the following words: "No, we do not covet your ass, your ox, your maid-servant nor your wife, but we do covet your factories, mines, mills and railroads. We rigidly insist and maintain that, outside of the working class, there can be no salvation in the social hereafter."

It is not the purpose of this work to submit proofs of the basic theories upon which these organizations rest, and which will at times be noted, i. e., theories of economics, etc. These theories have been developed, and published, in works upon which the writer does not feel able to improve.

The term "Industrialist," derived from "Industrial Unionist," which in all English-speaking countries roughly covers the groups advocating this concept, will be used in referring to them hereafter.

The evils of inequality are today vivid, and perceptible to most; they are obvious and need not be stated here.

New ideas have never been welcome, and their utterance has ever been and still is accompanied by personal risk, from individuals, associations and governments; still modern man is far from being as conservative as the man of past ages. Social and industrial innovations are too often introduced today without the average man being consulted, at least the average worker, for such inherent conservative states of mind to remain unaffected.

The world is still, despite its mechanical progress, full of misery, ignorance and ugliness, and for the majority of the working class, insecurity, until it has become not a duty but a necessity for the workers to develop associations that will in some measure protect them.

Yet the foremost advocates of this new social order do not blame those who might properly be termed oppressors. They view them as products of the "system" and individually helpless to alter it collectively without the social vision, or the necessary knowledge of the needs of the workers and the life of society as it is today.

The concepts and theories of these groups rest upon the following premises:

1. That labor produces all wealth ,and that wages are drawn from products already created, not from any vague thing, of no beginning or no end, "capital." To use the words of Lester F. Ward, "The 'wage fund' is a myth."

2. That society is in the play of social forces that today are neither controlled nor directed, nay, not even understood.

3. That just as the present social order depends on specialized, massed, human labor, the welfare and progress of humanity depends on that labor's ability to administer industry, and other—more incidental phases—of society.

4. That ability is as widely diffused among the workers as any other class. That it is opportunity that is lacking.

5. That it is not sufficient to leave the social development to the slow processes of evolution, but that organization is necessary to facilitate the process of change and to prevent social disorder which otherwise would accompany it.

6. That religion is but the idealization of the things we do not understand.

7. That any state, association, or social organization whatever, that rests upon and enfranchises all must be one in which education must be an important factor.

So far as the first of these premises is concerned,

it will not be further dealt with, it being already thoroughly expounded in Marx's "Capital."

Second premise: That society is in the play of social forces that today are neither controlled nor directed, nay, not even understood.

This assertion will be doubted by many who think that some connection can be seen between so-called wise statesmen and events.

It is not intended here to represent the Industrialists as ignoring such attempts as have been and are being made to control social forces. But on the other hand they assert that only a very small measure of success has been achieved and that no worldwide attempt has been made by the race as a whole to interpret these forces and work in accordance with them.

The action on the part of a corporation to exploit natural resources with human labor for the benefit of its stockholders—often to the detriment of the people as a whole—sometimes leading to disastrous wars—cannot be regarded as such: the attempt to boost the prices of farm products while millions are in want; the erection of tariff walls for the protection of infant (or bribing) industries cannot be classified as such, but only serve to demonstrate the premise. For what are social forces? A corporation of ten millions capital, unemployment, the liberating of fuel values from coal or oil, are all social forces.

They are today to some extent controlled and regulated by institutions like banking combines, national governments and chambers of commerce. But it is a one-sided control, exerted by a small group, only offering temporary and unsatisfactory relief for the first evils; and at times the unbridled and nonunderstood social forces break out in wars between nations, industrial crises and so on. The war between the working class and the employing class is furnishing a constant accompaniment of strife, at times breaking out in thundering discords of giganitic strikes and revolts that are crushed in blood and starvation.

Third premise: That, just as the present social order depends on specialized, massed, human labor, the welfare and progress of humanity depend on that labor's ability to administer industry, and other —more incidental—phases of society.

The civilizations of the ancients—Rome, Greece, Persia, China and Arabia—produced men of fully as much talent as the most enlightened statesmen of today. One thing they could not do with all their talent was to make the standard of the livelihood of the toilers, even remotely, approach that of the workers of modern industry. This requires the development of mechanical and engineering apparatus, which by producing an abundance cheapens the article. Our statesmen of today are in most cases mediocre men, agile politicians, and are not the cause of the present productivity of modern labor; nor could they indeed prevent it, though they have sometimes tried to do so.

The amazing productivity of modern industry was made possible by massing labor and machinery in hitherto unheard of proportions. The trusts were a necessary, if disagreeable, by-product. Political representatives of the petit bourgeoisie, that rightly feared being wiped out by the coming of modern industrialism, failed to see that the present "trust-busting" tendency of all the so-called progressive political movements was the result; movements tackling the problem of how to make time move backwards.

The industrialist accepts the modern mode of production; yes, even the trusts. What he wants is to have the workers who are now employed by the trusts to choose and supervise the administration of the trust, and to create a super-trust, controlled in the same manner by all the workers.

The industrialist looks and works towards the future. The reformer and trust-buster look to the past or try desperately to maintain the status quo.

Fourth premise: That, ability is as widely diffused among the working class as any other and that it is only opportunity that is lacking.

The opinion is often held, even by members of the working class, that this class lacks the talent and ability to manage a society successfully in which all would be workers. They forget first of all, that all other classes would be merged in a classless society of producers, and that all of the genius of the degenerate nobilities, and the real ability which is not denied, of the bourgeoisie and professional classes, would then become a part of the property of the working class, or the new society, as the possessors became members of the new classless race.

However, the premise as stated affirms the innate ability of the present, despised working class.

The working class comprises not only the so-called manual laborer, but as well the so-called intellectual worker, a university professor, a mechanical or any other engineer; in short, anyone who works for wages belongs to the working class. The trend in modern industrial life tends to equalize the conditions of all workers, depressing the brain workers down to the low wages and insecurity of the manual laborer. Their interests become identical, and the sympathy between them increases.

There is no reason to believe that the manual laborer has inherited mental inability. The higher strata—intellectual as well as unintelligent—of society are continuously recruited from the lower. The reason that the manual laborers produce few intellectual achievements is that those of them who do, when recognized, are transferred into other groups of society.

The superstitions, errors and blunders of the working class are not due to lack of potential ability, but to lack of proper and accurate information. They reason as well as they can with the materials at hand and if their conclusions are wrong, the cause will not be found in any inherent mental deficiency, but in erroneous data.

Fifth premise: That it is not sufficient to leave the welfare of humanity to the slow processes of evo-

lution but that organization is necessary to facilitate the process of change, and to prevent the social disorder which would otherwise accompany it.

Despite popular opinion, created by newspaper writers on the subject ("les petits scienteste" of Sorel), evolution, or the blind mechanical forces do not necessarily, unless directed, make for continuous progress.

Some of the man-like apes are in all probability products of evolution starting from the same point as man. Lester F. Ward in relation to this says, "Every deviation from a straight course increases the tendency to deviate still further, and this goes on until some insurmountable obstacle is encountered."

What men believed to be decayed and obsolete, they, if it obstructs them, have a wholesome desire to change, but of course such desires can only proceed from the possibility of benefiting therefrom. One reason why many attempts to modify the social structure and abolish the evils that afflict mankind have failed is that the social forces were not understood, and those who attempted the work were consequently unable to direct or employ them. For this purpose an organization free from major antagonistic interests is necessary, which for that reason could continuously follow up such work.

With minor exceptions, the only ones who will wholeheartedly support a policy are those who will profit from it. The working class are primarily the ones who would profit by the establishment of an industrial democracy. That this might raise and improve the entire human race does not mean, and is not sufficient to call forth the support of those who benefit from the present social order, for they view the world through the spectacles of immediate interests. Industrial Democracy is the mission, and must be the work of the working class and of it alone.

Those masters of today are little people, pompous but with petty visions. They who would create new values, establish a new social order, and once for all lift man from the status of the brute, where he is the plaything of uncomprehended social forces and make him the master of the world, cannot proceed by half-hearted methods. On the other hand organization is necessary to arouse the workers to action, to create the spirit of the warrior, for such a new order requires new men. The social institutions, states and empires of man have crumbled many times in the past, and of late in Russia, and whether capitalism shall fall, or be overthrown, or be torn apart by its contradiction an international organization, an organization ready to reorganize society on new lines and carry on production, may save untold suffering, and prevent a debacle carrying the race back centuries in development.

In effectually organized labor lies the hope of the future salvation of the race. Modern labor adequately organized must be the redeemer of modern times.

Sixth premise. That religion is the idealization of the things we do not understand.

No attempt shall here be made to draw the reader through the philosophical systems that have been given to the world, with their endless arguments about the known and the unknown. It shall here be shown only why such a movement should not accept any religious dogmas, nor accept, as an organization, any religious guidance.

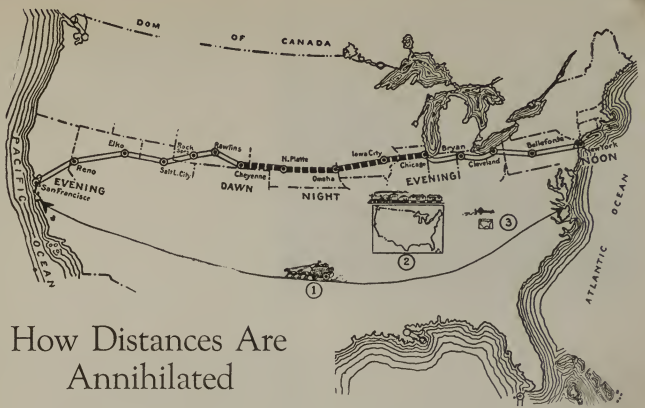
True there are some religionists who claim that their visions have all the purposes, and awaken all of the emotions of a social movement of this kind. In proof thereof they point out that all religions have attempted to unify the race, and that they have called forth at times all that was best in man.

However I must insist that this is mere quibbling, for all religions direct the thoughts of man away from earthly affairs, while the organizations themselves direct their attention themselves in a most odious manner to "mother earth" and her wealth, and if they call forth great effort on the part of their followers, they direct it for political and economic purposes. There is no democratic church!

Today, in all parts of the world, no matter what the dominant religion, there are hundreds of thousands who belong to no religion whatever, and this number contains the best minds, the most civilized people. Such persons' actions are usually in line with their ideals, while the difference between religious men's professed beliefs and their everyday acts are obvious, even to children. But an organization such as is necessary for the work with which we are dealing requires men to act in accordance with their conclusions.

True, we are not content with the actual present, we imagine the possible, we organize to reach it, but we do not leave the domain of which we have knowledge and contact, for one of which we have no knowledge, about which we must speculate. For to introduce such questions violates men's prejudices and creates the opportunity for the introduction of antagonisms of a nature to prevent unbiased administration, and research.

Many religious organizations and persons have interested themselves in the affairs of the workers, but their effect has been in every case bad; they do but muddy the waters, already murky.



In the place of endless sermons and hosannaing of a bigoted creator, in the place of religion, we place humanity.

In the place of celestial paradise we substitute Industrial Democracy; for never ending bliss, economic freedom; for superstition, "a systematic conception of the universe."

However the various industrialist groups, which have developed the idea of society as an industrial-social organization, have a philosophy, a positive philosophy, a scientific philosophy; we refuse to take an idea and make the facts fit it, as all religious explanations do; neither do we accept the rigid philosophical systems of any particular philosopher. Ours is a philosophy based on demonstrated knowledge, to which many have contributed.

All errors in the administration of the affairs of man are derived from philosophical errors. Every

# How Distances Are Annihilated

IN the map above a sense of distance elimination brought about by evolution of transportation methods is conveyed. The diagram marked 2 shows how the distance between places, for practical purposes, was reduced through railroad transportation. The tiny inset marked 3 illustrates progress in this respect due to airplane service. This map was prepared by the Division of Topography of the Post Office Department.

Early days of western development depended upon the stage coach for passenger and baggage transportation. Then to gain speed in carrying small packages and letters the pony express was established with riders and horses relaying at each fifteen miles. These means of transportation gave way to the railroads.

Now the air mail service has made it possible to carry mail from New York to San Francisco in a little more than one day, and from Chicago to New York in six or eight hours.

While these advances are being made perfection of sending photographs by electrical means from one end of the continent to the other has almost been secured. This is called "telepix." And all are familiar with the radio.

The world that used to be so large has grown smaller, and men now go around it in the same time it took a hundred years ago to travel from New York to Pittsburgh. Go around it in comfort that was undreamed of at that time.

In ancient times with marauding bands, tribes of nomads and conquerors seeking expansion, Egypt preserved a civilization through many dynasties covering thousands of years because the Red Sea and a narrow desert protected her from eastern foes, while the desert to the west and the highland and jungle to the south aided in this isolation. In parts of India there are peoples surrounded by mountains so effectually that they are strikingly different ethnologically from their neighbors. And, indeed, they are not neighbors in the sense of social intercourse. Railroads and airplanes would tear down this aloofness.

Because it was so difficult to transport troops and means of communication were so slow the Amerıran colonials were able to defeat the British. General Burgoyne proceeded southward expecting to meet a northgoing army of English in the Hudson valley, by which fusion would be smashed the "rebel backbone." But it took a long time to send the order across the Atlantic after an official in the war department in London had remembered to mail it. Today news flashes over the earth by cable and wireless, and men having conquered the land and the sea have made quick strides to conquer the air.

The peoples of the world are taught by patriotism to hate one another, and where the spirit of universal fraternity should prevail there is only bitter competition fostering race prejudice and fostered by it. This situation obtains because capitalists own the means of transportation and communication as well as the land and the factories. This also gives them ownership and control of the educational agencies.

Let the working people of the world that has become so accessible join in economic organization to utilize the means of life and communication in furtherance of cultural growth cognizant of universal brotherhood. This means the movement of the entire human race through the action of the organized working class to the commonwealth of cooperation.

# These Twenty Years

By WARREN LAMSON

**JULY 20, 1905, marked the beginning of a new epoch in the world's labor movement. On that date the first convention of the I. W. W. adjourned with over fifty thousand members committed to the overthrow of the wage system through general organization of the working class and the inauguration of a classless social system based upon democratic administration of industry.**

Prior to this time the unions existing in America were not in any sense class instruments, but only combinations of individuals engaged in particular crafts. The new organization brought the struggle of the workers as a class directly to the point of production, and emphasized the cardinal principle that its object was the control of industry to be obtained by the efforts of the class itself and not through the legal processes and legislative enactments dreamed of by utopian socialists. The conceptual powers of political socialists were limited to the idea of capturing political government and they were always theoretically unable to devise any means of transforming society into an industrial democracy, the desired state. Transition periods worried, and still worry, these worthy ones.

The I. W. W. refused to be stalled in this labyrinth of creation by government fiat and looked upon the new society as the necessary product of a growth of desire and method of expression of the working class. It cut the Gordian knot of transition by building the structure of the new society within the shell of the old. It recognized that the working class correctly organized would be a greater arbiter of social destiny than the state; that those in control of the means of life control all social development.

### The Real Enemy of Capitalism

It was this structural weapon that immediately made the I. W. W. the greatest menace to the ruling class. It is this conception of revolution that placed the I. W. W. in the forefront of all revolutionary movements. It is this conception that enables it to maintain that position regardless of fluctuating numerical strength. The working class permeated with such a concept will accept no peace but victory. The I. W. W. was conceived and launched as the evolved product or previous revolutionary action. It was a fusion of many elements not identical with and superior to any single constituent contributing to its make-up.

The organization's early years were necessarily wasted in clarifying its position. It declined in membership, but its aggressive program still stood. About 1908, having freed itself of those who would pervert its principles, it began to make bid for leadership in the American labor movement. Its entire membership, not including strike membership, was small, but it was successfully demonstrating that its methods were the kind that win. In this short time it proved to the working class of the entire world that revolutionary industrial unionism was a superior weapon to political action or trade unionism.

During this time it had on its payroll a small battery of the ablest and sincerest organizers the American labor movement has ever possessed, of which Joseph J. Ettor, William D. Haywood, George Speed, William Trautman, Elizabeth Gurley Flynn, James P. Thompson and Frank Little were the outstanding figures.

Early in this period attempts were made to organize the loggers in the Northwest. This work proceeded successfully until thousands were held within the organization, while its principles were understood and accepted by the loggers as a whole. Finally a Brotherhood of Timber Workers of the Southern timber belt joined in a body. This organization, formed in the home of racial friction and hatred, admitted members of both the negro and

white races to all of the privileges of the union, proving that race prejudice is no serious obstacle to determined and clear-thinking men. These lumber workers of the South and the Northwest formed the National Industrial Union of Forest and Lumber Workers.

During these same years the I. W. W. conducted an aggressive campaign in the textile industry. Strikes were conducted in Lowell, Lawrence, New Bedford, Massachusetts, Paterson, New Jersey, Little Falls, New York, and many other places. In all of these places they had to contend with many nationalities, but they never permitted these obstacles to prevent them from achieving their ends. They taught them, Italian, Polish, Belgian, Turk, Armenian and all of them, women, children and men—to fight as a unit. Out of this series of successful strikes came the National Industrial Union of Textile Workers which at one time had some 40 locals located in the textile towns of the East.

Another series of strikes and activities were conducted in several ports, notably Philadelphia, New Orleans and San Pedro, California. These activities brought forth the National Industrial Union of Marine Transport Workers. Its largest local was in Philadelphia, but there were some half dozen locals in other ports.

The organizers of the I. W. W. during these fruitful years also made a titanic effort to secure control of the steel industry. In 1909-10 they bearded the steel trust in cossack-ridden Pennsylvania, conducting strikes in McKees Rocks, Butler, New Castle and Bethlehem, Pennsylvania. In practically all of these strikes they had to fight the discredited internationals of the A. F. of L. Thousands were organized.

### Many Nationalities United

These mills, like the textile mills, employed workers of many nationalities, oftentimes hereditary enemies, but the organizers of the I. W. W. did not for one moment allow these national divisions to hamper them. They were not organizing nationalities but workers. In McKees Rocks, the scene of the most spectacular strike, they tamed the famous Pennsylvania cossacks and beat the steel barons at every point in tactics. In Bethlehem, where the I. A. M. was in charge, the I. W. W. organizers were at first welcomed, as they were needed to get the workers out of the mills. The I. A. M., however, fearing that it would lose control, managed to bar Ettor and Schmidt, the I. W. W. representatives, from the strike.

One of the most promising developments of the strike at McKees Rocks was that both the railroad men and the steamboat employees refused to haul scabs, this over the protests of their union officials.

Two things were demonstrated in the raids on the steel and the woolen trusts. First: that the rank and file of the working class is revolutionary enough to bring about a social revolution the moment that an adequate machine is devised through

JAMES P. THOMPSON
Forceful Orator of I. W. W for These Twenty Years.

which this revolutionary energy can manifest itself in an organized and concerted manner. Second: that religious belief has but little to do with a worker becoming a revolutionist. In these fortresses of the trust barons the workers, regardless of religious tenets, spoke of a labor trust, sang the International, and put their trust in the One Big Union. They were not troubled about the past failures or splits of the I. W. W., nor by the bad reputation given to it by capitalist agencies. They recognized that the program and tactics of the I. W. W. filled the workers' needs.

### The First Struggle for Structure

The organization in 1913 was torn with dissension which caused a cessation of its activities in the East. This was a struggle for structure. The organization had a universal structure, which was that of national industrial unions and local industrial unions. Mixed locals or recruiting unions were established where there were members, but not sufficient to charter industrial locals. These were supposed to bring about their own dissolution by organizing sufficient members to charter industrial locals, but this never worked except in theory. There was a universal per capita rate for the industrial local to pay to the National I. U. All of these matters were determined in the general convention and not in the conventions of the N .I. U.'s. The migratory workers of the West had always accepted the idea of industrial unionism, but functioning unions did not result; the mixed locals did not meet their needs. A decentralization movement arose, and while it had some good points, it had many that were absurd, such as abolishing the G .E. B. and all general authority. The decentralizers were defeated in the 8th Annual Convention. The organization, however, remained dormant till 1915.

### Tapping a New Field

In 1911 a small group of members met in Kansas City, and laid out a plan for organizing the harvest workers, who were then, as usual, gathering for the annual wheat harvest. They organized many members that year and formed what was known as the Agricultural Workers' Organization. It had no locals but was in reality one large local with branches covering the entire industry. These branches had no membership nor treasuries. The members had the branch, but the branch had no members. This temporary structure suited the mobile personnel of the harvest hand well. In 1916 they again organized thousands, and when they came to the general convention that winter their program was adopted as a universal structure for the organization. This change in structure permitted functioning unions to be developed in the logging, general construction, and agricultural industries and among the sea-faring workers. For several years the organization grew in strength and prestige in these fields, but on the other hand it did not permit growth in the stable industries, but on the contrary killed off what union had been built in them with much effort. This growth continued till war having been declared many of the ablest organizers were removed by arrest. Despite the removal of many of their ablest men the union still held some 30,000 or more members, though it now initiated more members in a year than paid dues in any one month.

Battles were fought and won. The agricultural workers, faced with persecution both from state and municipal authorities, forced up the wages and cut down the hours. Hundreds were arrested, but the work never stopped. In the Northwest the lumber workers during the war gained the eight-hour day and many improved working conditions which they still hold. This organization was achieved

JOS. J. ETTOR
Who was Tried for Murder in Lawrence Strike and Acquitted.

ELIZABETH GURLEY FLYNN
at the Time of Her Activity in the I. W. W.

only after a fierce struggle. The Everett Massacre was enacted in 1916, where the hirelings of Big Business were deputized to fire upon a landing steamer filled with unarmed men, and in which the powers of the state were used to persecute the outraged passengers rather than the thugs who, from the dock, had fired upon a helpless and unarmed group of singing workers.

Many men were organized in the steel and railroad industries, but due to the fact that these workers were seething with revolt, with its structure and tactics fitted to the migratory personnel of the agricultural, general construction and logging industries, functioning unions could not result and the organization could not hold them. Thus the universal in structure and methods was again bringing about dissension and it was only logical that a struggle would again take place.

### The Factional Fight

In 1924 the General Executive Board and the general administration officials split into two factions, one upholding the need of a powerful general organization, and one adhering to the idea with certain modifications the decentralizers had put forward in 1913. Those adhering to the idea of the decentralizers being prevented by a group of the membership in the vicinity of the headquarters of the general organization from destroying the general organization, without a convention adopting such a program, withdrew and set up a separate organization. This attempt to inaugurate a separate I. W. W. without the consent of the general convention, and without traversing the regular legislative channels of the organization, coupled with the fact that this faction appealed to the jurisdictional wing of the capitalist state rather than to the membership for support, caused their support to be limited, the majority of the membership and all of the machinery of the organization remaining with the parent organization.

This split, however, though small, has awakened the membership to the necessity of once and for all time solving the struggle for structure, and it

(Continued on Page Forty-Seven)

# Industrial Observations

By CARD No. 264978

**WE were recently told by no less an authority than the Secretary of Labor that the army of unemployed in the United States numbers more than six million workers. In this figure is not included the great army of migratory workers, who never enter the records of the Depatment of Labor. By including these workers in our figures it is safe to state that the army of unemployed exceeds the 7,000,000 quota.**

Where do we find all this unemployment? A trip through the Eastern industrial centers will disclose, even to a casual observer, that the figures quoted above cannot be very much exaggerated. Having recently had an opportunity to visit the large industrial cities and centers in the East, I will endeavor to set forth, as exactly as it is possible, the conditions encountered.

New York is really too immense in its dimensions anywhere accurately to estimate the prevailing unemployment. All one can do is to venture a guess. However, a worker looking for a job in almost any industry will find it very difficult to obtain employment. The only exception is in certain trades in the building industry, such as carpenters, bricklayers, painters, etc. So far as the majority of the workers, even in the building construction work are concerned, they are confronted with a large surplus of labor power and a scarcity of buyers of that particular commodity.

You will be informed, while in New York, that the various trades in the building industry are making big money, ten, twelve, and fourteen dollars a day. But if you inquire as to the pay received by the laborers, digging the cellars, packing the cement or mixing the concrete for these giant mansions of the idle rich ,you will find out that 50 cents an hour for the hardest kind of work paid ahead at top speed for ten or more hours a day, is rather the rule than the exception. You are also told that it is mainly Italians who perform this kind of work, and that they cannot be included with building workers proper.

Even the so-called skilled workers find themselves oftentimes working for 25 to 50 per cent less than their scale calls for. The steel construction workers are supposedly paid at the rate of $1.50 per hour, but there are buildings in New York being erected where those workers toil for half that price. Besides we find among this group of workers a very great percentage unemployed.

Outside of the building industry there is hardly a decent job obtainable in the city of New York. Thousands are gathering around the various factory gates, at the waterfront and at all places where workers are engaged in productive activity, offering themselves, or their power to labor, for sale for almost anything the employers see fit to offer.

The cost of living is so out of all proportion to the pitiful wages paid in New York that it is impossible to understand how the workers manage to exist. A poor dwelling of a couple of out-of-date rooms with a smoky, dirty and dark kitchen costs from $60 per month upward. Foodstuffs and clothing are in proportion. How to balance the monthly financial sheet with those expenses and a four dollar a day wage to enter on the right side of the ledger is a problem that requires a greater economic genius than the writer possesses.

What is said of New York and the working conditions there holds equally good in regard to the Eastern metropolitan centers. Philadelphia, Baltimore, Boston, Cleveland, Buffalo and others are in the same class, with the possible exception that in those cities the building boom is less pronounced than in New York, but then the influx of labor is also less, so that the one balances the other.

In Boston the painters went on strike demanding fifteen cents increase an hour, from $1.10 to $1.25. Of course, being conducted on a strictly A. F. of L. basis, with all the other building trades working, and besides part of the painters signing up a temporary contract with their bosses for the duration of the strike, the strike was a failure. Similarly with a little strike staged by the Italian building laborers in that city.

In Worcester, Massachusetts, the slaves in the United States Steel Corporation wire mills are working ten hours a day. The wages are very low, 40 to 50 cents an hour being the limit, and the work very hard and rushed to the limit. Most of the work in the various factories in that city is being done by the piece-work method, and the slaves are lucky if they can eke out five or six dollars per day by exerting every ounce of their energy.

Pittsburgh, Pennsylvania, is called the "Smoky City." If precent conditions are to prevail it will be well to change the name. Half of the steel plants are staying idle and those in operation are working only part of the time, three or four days per week. Starvation and misery are rampant among the workers on account of the great unemployment. Cleveland, Ohio, is somewhat more fortunate, as there are quite a number of large construction jobs in operation. Besides, it was the only city encountered where the workers really made some attempt on the job to better their conditions, and also succeeded to some extent.

If one wants to study the unemployment problem in detail, it is well to drift away from the

large cities and venture out to the small industrial towns and mining centers, where the results are more apparent. Especially is this the case in the coal mining industry.

Not half the mines in the Ohio Valley are operating, and those which do operate keep running only three or four days in the week. The miners of Mannington, Ferry, Tiltonville, Bellaire and Dillonville were mostly idle, and the reason offered for their idleness was that the mines in West Virginia were running full blast with scabs working 20 per cent cheaper than the union scale calls for. As a remedy the union officials in the United Mine Workers as well as the mine operators advocate that the union consent to a similar wage cut. Of course, all that can be gained by such a procedure is that the miners of West Virginia will either be laid off or else forced to work still cheaper. It is significant that the only remedy offered is to take steps towards crowding out the miners in other localities by means of underselling them; organized workers underbidding the scabs in the sale of labor power.

At Bentleyville, Pennsylvania, a mining town of approximately 3000 miners, in addition to the nickel snatchers who exist upon the miners, every mine was closed. There are ten mines in the vicinity of that town and not one of them was in operation. As the miners have been only partly employed for the last year it is needless to state that conditions among those workers is as terrible as one can possibly imagine it to be. And among those workers their union has collected, through the check-off system, 80 cents every month for union dues and one-half cent on the dollar earned to go towards organizing the miners in West Virginia. So far the United Mine Workers officials have been very prompt in collecting the dues and assessments, but they have stayed at a safe distance from West Virginia.

To all appearances the once-powerful United Mine Workers of American has dwindled down to nothing more than a company union. So far as being a power among the miners that is respected by the mine operators it amounts to nothing. It is nothing unusual to find mining operators openly violating the contracts, and when it is called to the attention of union officials their only reply is to accept what the bosses offer, as "we cannot afford any troubles with the employers at this time."

So much has been written and said about the "apathy of the workers" that the phrase has developed into an axiom by this time. Nevertheless, if one is fair, one must admit that the workers, at least in the mining industry, and I dare say in all industries, are no more apathetic today than they have been in the past, and not that much. On the contrary, one finds audiences everywhere willing to listen to any speaker who deals with industrial conditions, and the questions that are being asked and the interest displayed prove everything but apathy. It certainly ought to be self-evident that millions of workers, thrown out of employment and on the verge of starvation or actually starving, can not be disinterested in questions pertaining to their own material welfare. The reason for their present deplorable condition is to be sought rather in the form of organization under which they have fought in the past, than in some peculiar psychological disposition among those workers.

For years those workers who are today members of the old form of craft unions, or influenced by them, have been so used to finding some particular individual taking charge of their mutual affairs that they have lost all confidence in themselves. To them a "union" means an institution to which they pay dues and from which they expect some particular official to come and straighten out their difficulties. In the early days when the A. F. of L. still had many sincere and devoted officials who really urged the membership onward to better conditions in life through their organized strength and their ability to fight for such betterments, those officials gained confidence and accumulated a great reputation for being "great labor leaders." The successes or failures of the local have been either credited or debited to the individual in office. Usually the debit was wiped out providing the official in question was sufficiently smooth-tongued to talk it away.

However, the officialdom in the A. F. of L. has deteriorated to the lowest stage possible. Graft and greed are the dominating factors, and the welfare of the membership plays no part whatsoever in their calculations. One finds officials in the United Mine Workers of America who are shareholders in the mines where their constituents are working; the major part of them are obviously bribed by the mining operators; their expense sheets show conclusively that they are living on a standard much closer to the one enjoyed by the mining operators than by the men they are supposed to represent. In my travel I ran across one case where a worker paid a $300 initiation fee to join a certain international, and when told that even at that "the books were closed" he was asked to contribute $500 in bribe to the officials in charge to get him in the union. "It is not much as we are nine to divide it," he was told. Under such conditions, is it any wonder that the unions lose their strikes? As the matter stands today in the whole A. F. of L. we find that every time the union wins its officials lose and vice versa. As a result the unions always lose, thanks to the actions of their officials.

This state of affairs is clearly understood by followers of the various new creeds operating among the craft unions. In fact the whole program of the Trade Union Educational League is built upon those facts. As the members are fairly well aware of those facts they gladly listen to any and all criticism of the officials and thoughtlessly adopt the

(Continued on Page Forty-Eight)

# ELECTRICITY

By T-BONE SLIM

JUICE is stranger than friction.

A friendly stranger is half as strange as a strange friend.

The world's champion friend has 198 friends—two, former friends —are no more.

China has 440,000,000 opportunities for a man looking for friends.

The thinning out of the Chinese, in favor of western civilinsanity, has started in earnest—earnfest—to enslave the rest.

The idea is to get the 440,000,000 Chinamen to support the world —an impossibility without thinning them out, and impossible after.

China industrialized will number about 200,000,000 workers, and will be able to do much of Europe's manufacturing, when not conducting an engagement with rice and chop-suey—and, when Europe's unemployed hold extraordinary sessions with soup and petrified biscuits.

Europe's civilinsanity, too, will feel safer after China is deflated: remember how rosy the school girl complexion of "our" capitalism got after labor was deflated, 1920—?

But, (note this) they do not deflate labor in America any more—they use a stomach-pump: they grab a man in the street, full of compulsory temperance, rush him to a hospital, and pump the constitutional sobriety out of him.

Sometimes they save the man. Good! Bravo! But, **neverthelittle,** prohibition has killed more men than we lost in the last war—this is not favoring war nor prohibition—prohibition is the worst stuff I ever drank.

I would not mention it if it wasn't a thinning-out process—why carry on war when—when you can give the victims wood alcohol, hair oil, chloral and torso-ointment—?

If you want to thin 'em faster, re-introduce saloons, legalize moonshine and denatured "gas."

Not much prohibitionary stimulant is being guzzled—little is SO effective, and SO cheap. Really, prohibition seems like a concession to the mounting gas bills—with what would you buy a radio if the people were allowed to spend the money for liquor? Only saloonkeepers would have Fords and "Neitherdynes."

Leaving all jokes aside, I would rather listen to a radio than a drunk, yes I would—as much as the **pufformers** stagger in their igloo —Sixon—but I would rather be half shot while doing it, yes I would.

How helpless we Americans are. Law tells us when to work, what to eat, what to drink, what to chew and smoke, where and when to sleep; tells us what to think; tells us where to live; tells us when to die—where would we be without law? What would we do? It tells us not to celebrate our Independence with Chinese fire-crackers.

I suggest—patriotically suggest—that we loan our laws to China, just as soon as we can spare them.

Another thing in our favor is cheap food. It's really astoundful!

You can get two spoonfuls of oats and a tube of milk for 10 cents—everybody, too, seems to have a dime—ah, may the dimes never grow extinct!

I stood by the cashier's desk and watched the breakfast customers pay their bills. Here is what the register registered: 10, 15, 10, 05, 05, 10, 10, 10, 10, 05, 10, 20, 10, 10—I wonder where all that money is coming from.—A hundred years from now they'll celebrate this prosperity and Coolidge—the one-man PROSPERITY.

# The Road To Autocracy

By HUBERT LANGEROCK

**NOTE: This is the second article of a series aiming to prove how the necessities of trustified production are, under our very eyes, leading to a transformation of the institutions of present day society from a political democracy into an oligarchy of capitalistic magnates consistently developing autocratic methods of government while the institutions of political democracy are left in existence in the shape of an empty shell with the purpose of deceiving the ignorant and the gullible.**

**The first article of this series appeared in the May Day issue of Industrial Solidarity under the title: "If You Don't Like 'Em, Vag 'Em." The next article will appear in the next issue of the Pioneer and deal with "Government by Injunction."**

II.

Much of what has been said about the abuse of the vagrancy law could be repeated about the thousands of prosecutions for disorderly conduct which crowd the dockets of the lower courts. Again it will be throwing the crude light of common sense upon the subject, if we go back to the fundamental notion of a guilty act. In order that there may exist a punishable offense, there must be present at the same time a material deed and an anti-social intent.

It is a matter of common knowledge that these elements are not present in the vast majority of disorderly conduct cases. The material deed is there but the anti-social intention is generally lacking. The anti-social character of an act is not a matter of fact but a question of appreciation and that appreciation generally rests with the police. Thus it came about that many people have been and still are found guilty of disorderly conduct for the commission of deeds of which the police happen to disapprove without having a legal right to stop them or a law on which they can fall back to obtain a direct conviction based upon the principle of lawful repression or prevention.

The interpretation of a certain act as disorderly is purely a matter of arbitrary appreciation. There is not in existence any kind of a fixed standard by which a judge may be guided in administering the law. Disorderly conduct covers anything and everything which the arresting officer chooses to label in this manner and when the hearing in court takes place a conviction is secured not on the basis of what has actually taken place but on the strength of what is not stated in open court or made part of the record and has been whispered into the ear of the judge or brought to his knowledge by devious methods which leave the defendant without any real opportunity to defend himself properly because he is generally not aware of the nature of the real charges held against him.

The law books and law journals are full of decisions in matters of disorderly conduct which are so opposed to every notion of justice and fair play that they would reach the domain of ridicule if one was able to forget that those legal vagaries are gambles for which the life and liberty of the down-trodden class generally provide the stakes.

I want to quote a few instances to illustrate that statement.

### Pawns For the Law Game

Recently the owner of an automobile was brought into court on a charge of disorderly conduct because a policeman objected to the sound of the horn on the man's car. The owner claimed to possess as good or even a better musical ear than the complaining officer and stated that he liked the sound. Nevertheless, he was convicted.

In another case a man stood in front of a bar talking to a few acquaintances. The complaining officer admitted that he was talking in an average tone of voice, not loud at all. The man was giving his opinion of the police and stated about half as much as can be read any day in thousands of books, newspapers and magazines. He was arrested, placed in jail, held incommunicado for five days, and when the police, after a laborious investigation, were unable to place any kind of a charge against him, he was brought to court under a complaint of disorderly conduct, and convicted.

Now, the main point which I want to bring out is that these actions of the police are not vagaries of stupid individuals intoxicated with the possession of a certain amount of restraining power of which they are not deserving either by their personality or their character, but deliberate acts which find the reason for their existence in the class struggle.

The following instance will illustrate this general statement. In this case, the defendant was an employee working under a woman boss. In the course of his employment an argument arose upon a matter connected with the work in hand. The employee had the better of the argument whereupon the woman, in a fit of anger, charged her subordinate with disorderly conduct. The latter happened to be a foreigner and the judge handed him a severe sentence and lectured him upon the respect due to an American woman. The case went to the superior court on appeal. On the witness stand the lady straw-boss admitted that there had been no loud talking, no bad language, nothing beyond a somewhat acrid conversation. The defendant established that on the technicalities of the question in dispute, he was right and the woman wrong. Since there were no witnesses, the court had to dismiss the case.

It is only too evident that the judges who lend themselves to such inconsiderate judgments are no judges at all. For them the facts of the case have not the slightest importance. What really matters with them are the things which are understood but not mentioned. The performance in court is a joke, a kind of ritual through which the parties to suit go mechanically, the real matter at issue, the reason which causes the sentence is never stated.

If this is the case, where is the difference between such a performance and the methods of an out-and-out autocracy where sentence is pronounced without trial? What is the practical value and the real tangible significance of that day in court which so many uncritical people consider as one of the fundamentals of Anglo-Saxon liberty?

The autocracy and bureaucracy which trustified capitalism is slowly building up within the shell of a pretendedly democratic government reduced to the status of camouflage evinces first of all a thoroughly hypocritical character. It proceeds by indirection. It is too cowardly or too clever to make a frontal attack upon the beloved commonplaces of the ignorant mass and prefers to punish unpunishable opinion under the pretext of technical crimes.

### "Justice" Applied to Unions

After the war was over, the Lever Act, a war measure, was used to prevent the coal miners from striking.

A few years ago, when the officials of the Structural Iron Workers were brought to trial, they were not prosecuted for blowing up jobs on which scab labor was employed. They were accused of transporting explosives on passenger trains from one state to another but, in the course of the trial, nearly all the testimony offered had no reference to the crime with which they were charged. It referred to the explosions of which they were not accused and for which they were not on trial. One of the consequences of such an underhand method of framing social rebels is the lack of proportion between the penalty imposed and the technical offense charged, proving once more that the conviction was brought about in a roundabout way and aimed to punish for crimes not mentioned in the indictment.

Such a treacherous method is pregnant with untold possibilites. During the war, second class mailing privileges were withdrawn from a magazine on the ground that it had spoken disrespectfully of Samuel Gompers. About the same time Thorstein Veblen's book on Imperial Germany and the Indutsrial Revolution was barred from the mails although it had been issued in 1915.

Most of the war legislation is still on the statute books and capitalism may be relied upon not to overlook the fact that, let us say, a petty struggle with some diminutive Central American republic would provide an opportunity to deal a smashing blow to every form of revolutionary thought by a resurrection of all the restrictive legislation enacted during the last emergency for the suppression of discordant opinions.

The pious camouflage of free press still stands but what are, in reality, the facts? There may not have been recently any outright suppression of working class papers, but the post office is still empowered by law to deny transportation in the mails

at second class rates to any opinions of which it does not approve and, under the benefit of that rule, it maintains a censorship of ideas and principles which Congress would not dare to translate into a direct law. To commit the liberties of the citizen to the mercy of a political appointive officer, like the postmaster-general, is worse than entrusting them to a mob, because it is safeguarding tyranny by law.

### "Pay Streak for Reaction"

The growing capitalist autocracy is under the impression that the indirect punishment of socially discordant elements by underhand methods constitutes a regular pay streak for reactionary purposes and it is daily inventing new variations of this primary theme. Some of the most recent ones deserve to be mentioned with some details.

The first one of these up-to-date tricks consists in dragging an obnoxious individual away from his place of residence where it is questionable if a conviction could be secured, to an out of the way locality where an ignorant or supine jury can be easily secured which is willing to convict at the behest of the district attorney.

Those who may have followed closely the criminal syndicalism trials in California are familiar with the type of jury which will convict when the master class cracks the whip. The question at issue, in a criminal syndicalism case, is always whether or not the I. W. W., as an organization, is committed to the methods of physical violence whose presence the law considers as the character of criminal syndicalism. It is a matter of descriptive sociology. The task of the defendant is practically identical to that of a college professor lecturing to his class in economics. If, at that particular moment, one takes a look at the men in the jury box, he is convinced by the empty stare on their faces that they do not understand. Those men picked from the four corners of a cow-county, or a backwoods district have never heard of any of the many points covered in the argument of the defense. They are men of the soil or from some small shop or store and vague echoes of the industrial conflict have seldom reached their lonesome dwellings. They lack every form of preparation for the understanding of a plea which marshals arguments borrowed from economics, sociology and social psychology. The look on their faces is a confession that they are unfit for the task which they are performing.

### How Wobblies Are Convicted

Up gets the district attorney. They know him, he belongs to their lodge or to their church. Their votes have put him in office. He is their neighbor. He leans over the rail of the jury box and talks to them in a familiar way like an old woman gossiping over a back fence and then he steps back two paces, draws a deep breath and winds up his speech with a re-hash of his last Fourth of July oration. He wins, he gets a conviction and yet, he has not even tried to bring a shred of relevant proof.

In order to drag a man from an industrial center where a conviction would be harder to secure, to a hole in the ground where the product of many cumulative atavisms can be readily swung by a mixture of intellectual crookedness and local clannishness, a brand new device is at hand. It is known as constructive crime.

In our poor workaday world one has done something or he has not done it. The make-believe world of lawmakers and jurists has improved upon that simple situation. It has created constructive crime which is a hocus-pocus under which you have done something when you have not done it.

Here is the way it works. If they want to secure a conviction against a certain individual in some rotten borough of their own choice, in spite of the fact that that person has never set foot in that particular neck of the woods, all they have to do is to maintain that he was there constructively, which puts him in a position of having been where he has not been.

It is the easiest thing in the world. The man is probably an official of an organization which may count a hundred thousand members or more and employ a score of organizers. One of the latter may have passed through the isolated district where it is thought easy to secure a conviction. He is arrested and brought to trial and with his own case is connected that of the man whom they intend to reach. As an official of his organization, he is the arrested man's employer and that makes him constructively present with his employee. Thus the stage is set for extradition proceedings and a citizen is made to face a prejudiced jury in a hostile community. The result is obvious, vindictive capitalism lands its man.

No unprejudiced onlooker will dignify such proceedings with the name of justice. It is parody or vaudeville or anything you feel like calling it and even the individuals who benefit by such warped trials must, in the intimacy of their conscience, if they have one, admit to themselves that the whole performance is a joke staged for the special benefit of the benighted ones who lack class consciousness and may, in their simplicity of mind, be led to consider class revenge as the logical application of a just and equitable law.

Any man who is not blinded by the bias of his class interests will readily admit that punishment of social rebels by the arbitrary methods of an avowed autocracy would not be different as to results and a good deal more honest as to method.

# Book and Motion Picture Reviews

JAMES BRANCH CABELL continued his allegorical, philosophical rambling in **Straws and Prayer Books,** but the book is sure to disappoint those folk who are thoroughly disgusted with this Sumnerized America and who smacked their lips over Jurgen's amours. Because the latest book calls for no Sumner on the run, and had the author resorted always to such literary advertising of his own wares and those of his friends I am sure that his name would never have been placed in the Puritan pillory by the elements of our Babbitteria who regret that Flaubert did not die at the stake, that De Maupassant was not crucified and that M. Anatole France passed out of his quietly chuckling life in the peace of a bedroom.

Between the elegant advertising and the verbiage—Cabell has a matchless verbosity, previously unsurpassed in H. G. Wells—you gather that the author is insistent that the literary artist is not primarily concerned with making money, or with pleasing his friends or displeasing them, for that matter. He is moved to write for his own amusement, his own diversion. Perhaps that is why there are so many half-starved writers, whose number we can but guess at because they have no patron saints in publishers. But why anyone should write several hundred pages on that foundation is as unjustifiable as that ninety-nine and nine-tenths per cent books are written at all.

Cabell has a pretty way of saying things, and yet he can be quite coarse, not that our epidermis is too thin, but that of the ladies certainly must be when he describes them as perambulating graves for slaughtered kine, swine and sheep for all their veneer of refinement. Their hostility may not stand up when they recall **Jurgen,** and whatever they feel about the matter it must more than be made up to Cabell by his literary buddies, whose "stock he has nicely boosted."

For those who are carried away from perception of reality of the whole by the brilliancy of certain passages the advertising stunt may not become apparent, and the book cannot suffer in this respect so far as they are concerned.

Altogether a book with little meat, a number of playful thoughts about death, some flowers, and the recurrent tributes to his friends (who also sell their MSS. to publishers) which I insist upon calling elegantly contrived advertisements.--**Thos. Senn.**

STRAWS AND PRAYER BOOKS, by James Branch Cabell. Robert McBride and Co., New York. Price $2.50.

AFTER reading **"The Causes of Industrial Unrest,"** by John A. Fitch, my impression was that he analyzes carefully as far as he probes, and that he cherishes an eminent desire to be perfectly fair. The first sentences of his opening chapter run: "The term 'industrial unrest' is used here in the sense in which it is generally understood, referring to dissatisfaction on the part of the workers, rather than on the part of the employer. This is because the struggle between the two parties that grows out of the feeling of unrest is generally, though not always, precipitated by the workers. Strikes are overwhelmingly more frequent than lockouts. Labor seems to be the aggressor in the struggle. It is battering at the employer's defenses, seeking a change in the **status quo.** The employer is generally on the defensive, since he either desires no change in conditions or he favors a revision downward. When the employer reduces wages or increases hours, he is really the aggressor, but he does not appear to be, because he does not attract attention unless the workers protest. . . . However, the majority of the strikes are for improvement in their conditions instead of against a reduction."

In spite of this percipience and his arraignment of capitalists for their almost universal reprehension of collective bargaining, for their employment of spies in factory and union, and for their using courts and other governmental branches against workers, Mr. Fitch's conclusions smack of class collaboration, and one gathers that he would not view an extension of Civic Federation influence as incompatible with the will of the workers for an improvement in their conditions.

The concluding chapter is synthetic and the author divides society into the working and employing classes and the public. All have rights, he contends, and the harmonious relations of the first two insure the wellbeing of the last. A summary of this sort exhibits a woeful lack of understanding of the nature of wealth creation in connection with its ethical aspects, by one who stresses moral considerations. Profits in the Marxian analysis are surplus values, and surplus values are extractions by capitalists from workers through the capitalist ownership of the means of life supported at all times by force—police, armies and navies, to say nothing of the later auxiliaries masquerading as fraternal or religious bodies.

This places the capitalist in the position of a robber, which he is. He is a parasite, and there is no solution to industrial unrest possible or desirable

until the capitalist is deprived of his class position. It is quite true that when a strike occurs the noncombatants are regarded as the public. But in this age of rapid means for communication, and of intense struggle for life there are no neutrals, none whose sympathies, if not actual support with resources, do not go out to one or the other of the disputants.

That employers are on the defensive is truer than Mr. Fitch probably imagines, because in the course of evolutionary development the hour is striking for the working class to assume its place of dominance and to subordinate all opposition. Social operation of great machines cannot forever exist under private ownership of these machines. Capitalism is in its death throes for all its pompous strutting. About one more world war for democracy to end war will end the bourgeoisie.

But Mr. Fitch's work reminds us of the liberal attitude, and when one sets out to look into the causes of discontent among the workers it is impossible to strike at the roots of the matter with the scratches of palliatives and the salves of reforms. The workers are discontented because they are robbed of the wealth they create. There is no change possible without their complete emancipation from wage slavery, based on their seizure of the tools of production.

The book is worth reading, having much documentary evidence and fair statements of position by various working class organizations as well as those of employers. There is a wealth of allusion showing how broad has been the author's research. And in the hands of a Marxian the same material could certainly be worked into an irrefutable indictment of the system Mr. Fitch seems unwilling to see swept aside without attempting to have patched up.

—**Mary West.**

**THE CAUSES OF INDUSTRIAL UNREST. By John A. Fitch. Harper and Brothers, New York. Price, $3.00.**

SPENCER BRODNEY'S play **"Rebel Smith,"** is the story of an I. W. W. organizer in Australia who entered voluntary retirement from activity due to a sense of hopelessness induced by observing proletarian apathy. Laboring on a farm in the back-country he makes frequent trips to a nearby public house where he is regarded as a disreputable character. The proprietor is a supporter of the treacherous labor party government and Rebel Smith is known as a brainy agitator for the One Big Union. At first the proprietor's daughter, who is a bar-maid, refuses to have anything to say to Smith, except quips of an abusive kind, but he manages at last to engage her in conversation and to make her catch the first glimmerings of class consciousness by showing her how both of them are victims of social conditions, of capitalism which makes them slaves.

Smith's employer was to have married Kitty, but she is awakening to a realization of what a dreary, bestial existence awaits her if she joins him, and the agitator confirms her convictions. Thereupon she begins to see Smith's possibilities, which are materially slender, but he is good looking and young and he speaks well. When an ex-Wobbly who sold out to get into the labor party government offers Smith a lucrative post, Kitty wants him to jump at it. He is taunted by his employer about Kitty. Smith has just quit him. The farmer tells Smith he can have "his leavings." Smith then takes his challenge and says he will marry Kitty, and in order to do so he accepts the offer from the politician. Later he reverses his position and says he will not be a rat.

He leaves Kitty, feeling that he is unable to compromise and to attach a wife to his meager baggage. Then he goes away to become active once more in disseminating the philosophy of revolutionary industrial unionism, which will make it possible for men and women in economic security to live natural lives.

Kitty's parents wanted her married and they were inspired by the economic urge, as was Kitty herself. Love was a minor note in their considerations, just as it is in most marriages.

When the third act ends the play Kitty is sitting in a depressed mental state and Smith has gone. It is just one more of the tragedies of modern society, told in a simple manner.

—**Lewis Enright.**

**REBEL SMITH. By Spencer Brodney. Published by Siebel Publishing Company, 32 W. 20th St., New York. Price $1.00.**

THE novel **Quo Vadis** was a short time ago made into a moving picture by some Italian film company, and posters announcing it teased my curiosity enough to make me go in and see what it looked like. I was about ten or eleven years old when I read the novel the first time, and I attempted unsuccessfully to read it a second time at a more mature age but my interest flagged so much that I never succeeded in finishing the second reading.

The impression the novel made upon me was that it seemed especially adapted for exciting the emotions of adolescent children, sentimental unmarried females, Y. M. C. A. secretaries, Babbitts and other creatures unable to assimilate strong and healthy mental food. It is a Polish counterpart to Ben Hur, but written by a better craftsman.

Its author, Henryk Sienkievich, has written a wagonload of moralistic and nationalistic novels of which I have only succeeded in plowing by way through one called "Without Dogmas." In this novel the author has been diluting Dostoievski's themes of gigantic sins and absorbing penitence to such an extent that they will be acceptable and understandable to the class of readers that I mentioned above.

The author is showing his literary preferences

in it. They are Octave Feuillet, the most saccharine author in French literature, who spent his life describing heroes that resembled the sickly fantasies of a Sunday school superintendent and judiciously punishes each misdemeanor recorded in his novels before he lays away the pen.

Sienkievich shows his sagacity and knowledge of sociological problems by denying the validity of Darwin's theories and on the same page using them for proving that the capitalist system is the best possible and the only possible.

When we remember that Poland has been raving about liberty and Russian oppression for a couple of hundred years and is now using its "national independence" to institute a white terror every bit as bad as the tsarist regime, we may understand why Sienkievich has been acclaimed the interpretor of the Polish "national spirit."

The moving picture is naturally going its prototype one better. It is of one cloth with all other moving pictures. Same trash, to put it short and sweet. For a student of history it is full of all kinds of "discoveries."

He finds out through the subtitles that the Christians were opposed to property and militarism and will be sitting wondering why it is that people having the same beliefs are persecuted in Christian countries today.

It is rather hard to be excited about the atrocities committed against the Christians on the screen, when one remembers that they in turn committed the same atrocities against the heathens and heretics when they had the big stick in their hand.

It struck me as a rather curious piece of mob psychology that the spectators were sitting through the various atrocities only showing a rather mild interest until it was the turn of the heroine. While it apparently was considered right and proper that a few thousand Christians should be tortured to death in accordance with the teachings of standard textbooks of Roman history, it seemed like anything interfering with the hero and the heroine getting married and living happily ever after would be a grave breach of moving picture etiquette and morals.

In the beginning I was tempted to ascribe the weak impression the picture made on me to a godless skepticism and sophistication on my part, but later on I noticed that I was not the only one that laughed at the wrong places, that, in fact, most of the public seemed in the same sacrilegious mood of levity, as myself.

The acting seemed rather colorless at times and at other times downright idiotic. It seems as though moving picture acting resolves itself into a few stencils that can be used at all occasions, when judiciously selected: anger by frowning heavily and shaking the fist; fear by rolling the eyes and performing motions like a shimmy done by a victim of St. Vitus dance, etc.

The actor performing the role of Nero seemed to have the making of a good fat man comedian in him. But as there were no slapsticks and custard pies in the picture he was handicapped in exploiting his possibilities in that direction.

—Kristen Svanum.

# Education Shall be Free

By COVINGTON AMI

Hear me, all ye Fundamentalists, ye Legions and ye Klans,
The truth shall go to Labor in defiance of your bans!
In spite of all the Usurers, the Great Ghouls of the earth,
In spite of all the Hirelings their gold has given birth;
In spite of Press and Parliament, of armies, courts and laws,
The truth shall be full spoken in Science's holy cause!
The youth of Toil shall hear it—the Word that sets men free—
All-conquering, invincible, through land and air and sea,
Its message shall be cried aloud, or else in whispers blown,
Through all the censored Continents till all the facts are known!
Yea! till Education's halls are freed of all the myths that blight
The flowering of the spirit and the dawning of the light,
And till Truth shall stand triumphant on the dead Lie's shattered laws,
The Word shall be full spoken in Science's holy cause!

# A Militarizing Phase of Imperialism

By JACK BRADEN

**Past President of World War Veterans, Who Picketed the White House for Release of Class War Prisoners**

**For the present purpose, it is not a pressing need to trace the general path traveled by American capitalism to its present dominant imperialistic world position. Be it deemed sufficient merely to say here that imperialism, as any other epoch of society, is given birth to and mirrors certain definite economic and political pressure, gains momentum or weakens in accordance with its form and intensity.**

In this regard, in its present stage of development, we find American capitalism confronted with a multitude of unprecentended, course-determining factors: keener competitive commercial expansion —the very life-blood of modern imperialism. Protection of investments in foreign countries, which must be increased if the enormous accumulations of finance capital are not to remain idle, and are to bring the expected profits. It is faced with the necessity of propping up tottering capitalist governments so as to enable safe exploitation of their workers, resources and markets.

By the very nature of its well developed capitalistic competitive system, and in obedience to the command of evolution, "Forward!"—it must forge ahead, and increase its holdings and widen its influence. It cannot turn back, nor stand still! It resorts to all means to keep open the road of its ever onward speeding chariot.

The many obstacles in its path must be removed, but, above all, it must subdue its natural enemy, the working class, whose development parallel to capitalism has taught it many a bitter experience—ruthless expolitation, unemployment, injunctions, and war. As a result, this working class, as yet, is in a hazy uncertain sort of way, but still, it speaks of a labor party, governmental ownership of industry, abolition of judicial powers, injunctions and wars, and its left wing, though still pitifully limited, both numerically and influentially, already thinks and speaks in terms of civil war—the overthrow of capitalism.

American capitalism is comprehendingly aware of these apparently indistinct and seemingly distant potentialities, that are foretold in the symptoms of awakening of the American working class, corroborated so glaringly by the meaningful occurrences of our own times, in front of our very noses, so to speak, such as, the Russian revolution on the one hand and its temporary antidote, the Hungarian, Italian, Bavarian, and other white dictatorships on the other hand. It is these experiences that lend immeasurable support to the already irrefutable fact that a bayonet on either side of the clas struggle is equally achieving.

American capitalism, having assimilated the lessons of many past and particularly more recent experiences, both at home and internationally, is more firmly than ever persuaded that a "reliable" army and navy of proper size and proportions is the most convincing language in its international dealings and that a "dependable" company of infantry will break a strike where a bushel of injunctions fail.

So, quite naturally and not illogically, American capitalism, in adaptation to changing conditions and its own new role (so outstandingly proven by its increasing prestige, as seen by current international political and commercial events, in which it is a dominant participant, and the undercurrent among the exploited against its rule in its colonies and at home) is proceeding in a cautious, systematic manner to shed its age-long cloak of "democracy and civil rights" and is diligently and shrewdly pushing to the fore the idea of militarization.

It is compelled to pursue this course to meet the indispensability of keeping its military arm abreast of its commercial and political stride—at home and internationally. In a word, the symptoms that announce the blending of capitalism into what we may justifiably term its summit, at the same time its greatest danger point of development, namely, imperialism, is marked not only by its increased prestige and holdings, commercial dominance and political forwardness, but also, by its far-fetched militarization program, and by the latter, proportionately speaking, even more than by any other single factor.

It is this, its military phase, that is of concern here, careful scrutiny and understanding of which ought greatly to influence the timeliness and manner in which we approach and deal with this question.

On occasions the radical and pacifistically inclined liberal press has called attention to the numerical increase of the armed forces since the prewar period. It seems unnecessary, therefore, to dwell on that point. Instead let us focus our attention upon the militarizing schemes employed. All sorts of psychological trickery, rules and regulations are introduced tending to imperialize not only the standing armed forces, but also the various sections of the population, in accordance with their potential military role and importance.

Some of the methods used appear insignificant on the surface and easily escape attention. But we must not be unaware of the fact that capitalism voluntarily introduces ideas only when beneficial to it—particularly upon fields of operation where it

enjoys unchallenged full sway, as is the case with its armed forces and to a somewhat lesser degree, with its conscious and unconscious militarization agencies among the population.

**Prussianizing the Army**

Of the many changes that have taken place in the army since the war—purposed to swing it into step with the economic and political imperialization of American capital, two will be pointed to for the purpose of exemplifying their seeming insignificance on the one hand, and their effectiveness on the other, as well as to stimulate alertness upon the activity of the imperialist on this field.

About two years ago in place of a dark blunt and rather unattractive button and insignia formerly worn by the soldier, bright shiny paraphernalia was introduced. This substitution was accompanied by a general improvement in the appearance of the soldier. For instance, instead of issuing ill-fitting, ready-made uniforms, post tailor shops were instituted which now fit the soldier with a uniform at the small cost of thirteen fifty, etc., etc.

Before going further let us examine the effect of a seemingly harmless brass button, the value of which must among other things be correctly appraised as a prerequisite to any effective opposition to the aims of the imperialists.

The soldier's own improved appearance greatly impresses him as being an outstanding chosen defender of the government, as something apart, and having little or nothing in common with the civilian. The more conspicuously the soldier is separated from the civilian in appearance, the wider is the gap between them, from the soldier's viewpoint.

The admiring glances directed at the spick and span brass button soldier by the citizenry generally and woman particularly, serve to emphasize the gap in his relationship to the civilian. This, indeed, is a very desirable feather in the hat of the militarist who understands well that the soldier must not suspect himself of being part of, or as having any sameness of interest with the civilian. Such a concept on the part of the soldier may cause him to hesitate when an order to shoot at the civilian is given (one of the chief reasons that the soldier is forbidden to vote, or participate politi-

WAR STRIKES AGAINST THESE.

cally with the civilian is to keep the two from mingling, and thereby recognizing or establishing some commonness of interest.)

The citizen does not escape the effect of the shiny button. He instinctively couples the glare of the uniform with the efficiency of the army. It gives him a proud feeling of ownership, and aids to dispel such inclinations that he may have against the appropriations for maintenance and extension of the armed forces. (Talk to the average citizen on the side lines of a military parade, and you will inevitably find that the appearance of the paraders ha a molding effect upon the opinions of the spectator.)

Another and more directly accomplishing effect of the brass button and its accompanying regalia is its influence upon the young man. A shiny button makes a splendid recruiting agent! True, some are driven into the armed forces by adverse economic periods. But this number is small. It is the adventurous, and not necessarily patriotic young man attracted by the glitter of brass and the uniform, who make up the bulk of the army, navy and national guard. So, despite its seeming unimportance, even a brass button is introduced with a purpose and proves its worth.

**The Army's New Pay Adjustment and Its Effect**

The following partial table, though roughly prepared, will serve the purpose of showing the reduction made in the private's pay on the one hand, and the increase of the non-commissioned officer's pay on the other, creating an unprecedented gap in the compensation of the two.

MONTHLY BASE PAY (Base pay excludes any of the "extra" pay, such as re-enlistment, qualification of gunnery or marksmanship, foreign service, etc.):

| | Private | 1st Class Private | Corp. | Serg't | 1st Seg't |
|---|---|---|---|---|---|
| Pre-War | $15.00 | $18.00 | $21.00 | $30.00 | $45.00 |
| During war up to 1922 | 30.00 | 33.00 | 36.00 | 38.00 | 54.00 |
| Present | 21.00 | 30.00 | 42.00 | 54.00 | 84.00 |

The above pay adjustment is not an accident. It is based upon the experiences of different European and other armies, during various social manifestations, and is designed to serve certain definite ends. As will be seen, it prepares a foundation for maintenance of discipline under tense military operations, which apparently the militarist expects.

The pay arrangement provides a great temptation to the private to rise above his rank. It stimulates keener competition between privates for promotion and so serves to improve the efficiency and obedience of the soldier. As individuals, out of formation, it estranges private from private, since in the race for promotion one private is attempting to outdo the other.

Promotion of the private to a corporal in addition to doubling his pay, and dignifying and lightening his work, magnifies his status not only to the soldiers about him, but also to the civilian whom he chances upon, but above all to the ladies (the weakness for favoritism and admiration from woman is more prevalent among men who live the life of a soldier, sailor, lumberjack, etc., than among men whose daily pursuits make for continuous contact with the opposite sex. This feature of promotion is usually underrated, but nevertheless plays an important part. The writer's ten years of military service and consequent contact with the innermost confidences of the soldier is responsible for the expressions as to the soldier's feeling in the several matters touched upon here.)

The non-commissioned officer, due to his increased pay and accompanying importance, becomes more determined to keep his rank; the private who has been animated with added temptation for promotion becomes a serious bidder for the former's job, and is viewed by the non-commissioned officer as a pressing and quite dangerous competitor. This breaks up much the closeness that has formerly

existed between private and non-commissioned officer. In consequence, many misdeeds of the private that have formerly been overlooked by the non-commissioned officer are promptly dealt with, or reported to a superior. The breach thus created between non-commissioned officer and private, and between private and private, is of great significance, because it makes impossible, or at best highly difficult, any sort of organized mutinous action.

The non-commissioned officer is considered the backbone of an army. Nepoleon popularized this belief, the soundness of which is accepted by militarists universally. There was only one thing wrong with this "backbone"—it was closer to, and more confidential with the private than the commissioned officer. The recent pay adjustment creates a necessary gap between the private and non-commissioned officer, and thereby brings the latter closer to the officers, who in the eyes of the rulers are the most loyal element in the military service. The trust placed in the commissioned officer is easily explained by the fact that the overwhelming majority of the officers are chosen from a social stratum which is well satisfied with things as they are, because of its favorable economic and social status.

Upon being commissioned an officer in the armed forces these "proper minded" men are further influenced in the "right" direction by the caste system that has been developed within the armed forces. Their income, environment, and life generally make for loyalty to those whom they serve. It will readily be seen then how much more desirable it is to the militarist to maintain a breach between the private and non-commissioned officer than between the non-commissioned and commissioned officer, particularly when we are mindful of the fact that the privates by themselves, due to training, are pretty much of a "headless body", but in alliance with the non-commissioned officer they become units quite capable of operation on a moderate scale, and in cases even on a large scale, quite independent of officers.

Having given some consideration to the pay adjustment and its influence upon the morale of the army, we reasonably reach the conclusion: that deliberate, open-eyed preparations are being made by the militarists to so fortify the morale and discipline of the armed forces as to enable the handling of those forces, not only in such operations as will have been seemingly approved by the population, but also in such actions as may be antagonistic to the civilian, or even unpopular with the soldier himself.

In a word, the armed forces are being prepared to meet the dangers that may threaten the imperialization program of the American dollar, both at home and on foreign soil.

### Militarizing the Population

To weaken the anti-militarization sentiment of that part of the population whose collective moral wound, inflicted in the last war, has not yet healed, the militarists employ ingenuity of the keenest order. An example of two of the methods used, it is hoped, will provide a searchlight, which if used, enlarged upon and adequately supplemented by the true anti-imperialistis, will eventually expose to the full view of the working class of the country the manipulations of our imperialist rulers, who are ever ready to sacrifice countless millions of the working class on the altar of dollars.

The imperialist is not slow to determine which of his agencies among the population is most effective in the performance of a given task. The ex-service men organizations are a very useful implement with which to popularize among the population given programs of the war department. Their frequent method of procedure is as follows: At a national convention of the American Legion the military affairs committee makes a report and recommendations in accordance with the will of the war department. The convention, of course, accepts these recommendations along with other recommendations and resolutions reported upon by various other committees.

The convention adjourns, the delegates return to their homes, sober up and read in the official organ of the Legion the complete program accepted by the convention. They find among the resolutions accepted such that provide for the care of the disabled, of orphans, etc. These resolutions are commendable, but wedged in between them is also a resolution that the Legion endorses wholeheartedly "Defense Day," or citizens' military training camps, military drill in schools, extension of the armed forces, etc. The members of the Legion are informed of those convention mandates not only in the Legion press, but also in the general press which makes a great splash in support of the convention's doings. Even if some member of the organization is not keen for the militarization resolution, he views it as part of the Legion's program, and being a good loyal member of his organization he supports the entire program even though some feature of it displeases him. This displeasure is soon dispelled by the speeches that he hears in his local post by this or that reserve colonel, retired admiral or national guard major who are aptly assisted by spokesmen from the civic and commerce associations and the local press.

The effectiveness of the Legion to popularize militarization lies in the fact that an ex-service man is considered an authority on military matters by non-service people. It is necessary, therefore, properly to persuade the ex-service man that a defense day is the proper thing to have, so as to make of him its proponent in his daily contact with others.

In addition to the ex-service man's authority outweighing that of the civilian on a military matter, he is well equipped by the Legion press and patriotic speeches to make an argumentative, emotional appeal to his listeners. The most frequently used arguments are, "that war has always been, and therefore will always be." Why not then be prepared for it and keep down the losses to a "minimum"?

WORKING CLASS MISERY IS GUARANTEED BY BAYONETS; MILITARISM IS THE ARCH-FOE OF MOTHERHOOD.

"That if we had been adequately prepared for the last war there would not be so many 'little white crosses' in Flanders Field."

The above arguments sound logical to the average mind, and make of it either a proponent of militarization, or blunt its opposition to the point of passiveness. The program of the war department is thus carried out by many unsuspecting, but effective ex-service men, who look upon militarization programs as their very own. Did not their own convention sponsor them?

The militarist's use of the Legion as a legislative whip is of importance. Due to the imperialistic use of the Legion's political pressure, many votes for measures of militarization are cast in legislative halls, contrary to the conviction of the legislator. It usually works along the following lines: the federal or state legislator is informed of the legislation wanted by the Legion in accordance with its past or "future" convention mandates. The legislator knows that to vote contrary to the Legion's program is to face its opposition in his re-election. So, aside from few exceptions, most take the road of least resistance and vote as desired by the Legion.

The above procedure enables the war department to influence militarization legislation in a most indirect blindfolding manner, since to all appearances the constituency of a given legislator is responsible for his vote, rather than the pressure of the war department.

The Legion is not by any means the only ex-service man's organization through which the war department operates. Despite the writer's activity and intimate contact with the ex-service man's movement since the war it can be said that the World War Veterans is the only ex-service man's organization that has not been an agency of the war department.

The militarist does not overlook any bets. In carrying out his program he resorts to every means at hand, as is evidenced by the fact, for instance, that even the post office stamp cancellation machines are used to advertise the citizen's military training camp. He utilizes his most effective agency, the ex-service man's organization, in a multitude of ways: the frequent parades of those organizations is of great value to him. They serve to bolster up the mob, war spirit of the paraders, who are made to feel by the applause and admiration of the spectators that, after all, their part in the war was worthwhile. They are made less opposed to doing it over again and to advise others to do the same. It aids to make of the parading ex-service man a militarization proponent at least until the next parade or patriotic speech. We have already seen that the ex-service man is considered an authority on military matters, at least in his own particular circle of non-service people. It is therefore very needful that he nurse a "favorable" opinion if he is to be an effective agency.

Those parades have a many fold effect upon the watchers on the side lines, and appear to influence each according to age and even sex. The boy in the early teens wishes that he were a bit older so as to become eligible for a uniform and to become a hero, and thus share with the other paraders the admiration of the people. The smaller boy, judging from the eagerness with which he views the parade, is undoubtedly angered at his parents for not having married and given birth to him a few years earlier so that instead of watching the parade he could be a participant and applauded as are the paraders. The school training, the movies, and general environment help, of course, to prepare the boy to be thus psychologized at the sight of military display, all of which goes for the making of future cannon-fodder. Aside from a few exceptions the woman parade watcher is emotionally subdued by the age-long weapon—the uniform. To the non-service man a parade serves to emphasize the fact that he is a follower rather than a leader in military affairs, and he is thus easily reconciled to the belief that those boys who did the fighting in the last war know best what is needed in preparedness for the next war, etc., etc.

The plans of the imperialists merrily go on unhampered. Its octopus tightens its grip upon young and old, and the enthusiastic opinion expressed by a radical or pacifist "that the war instigators cannot repeat the last slaughter" becomes meaningless. As long as there is not a united, well formulated opposition to the imperialist carried on such lines as will weaken his most effective agencies there will be no difficulty to plunge this nation into war whenever its rulers deem it desirable.

### The Reserve Officers' Corp

Last year this organization reached the height of 81,706 officers of all ranks from second lieutenant up to and including two major generals. Its value lies not only in the fact that it, together with the enlisted reserve, comprises a nucleus around which an army of millions can be organized in a comparatively short time, but among other of its war and peace capabilities the reserve officers' corps is a powerful connecting link between the war department and the population.

Its militarization influence is felt in the fraternal, religious and civic life of the population. The social strata which the reserve officer belongs to, or is drawn into by his fellow officer, through clubs and so on, makes possible his appearance as a leading, honored, responsible citizen before the members of his church, fraternal organization, etc. He is thus placed in a favorable strategic position effectively to defend the plans of the war department, as well as to oppose its antagonists.

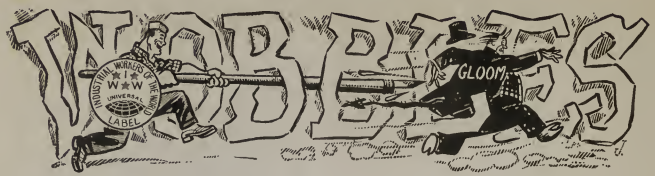
There are but few cities among whose political, industrial, church or fraternal leaders that a few reserve officers are not found. It is their conspicuousness in the various phases of community life, not unaided by their military titles, that enables them effectively to propagate militarization.

The reserve officer, in addition to his contact with and influence over great numbers of the civilian population, does his bit in the national guard. In 1924, there were five thousand three hundred and eighty-four of those officers assigned to the national guard. There, together with the national guard officers, they aid in the work of Prussianization.

The reserve officers in overwhelming numbers are members of ex-service men's organizations, in which, together with national guard officers, retired army and navy officers, they are the dominant factor, and see to it that those organizations are on the "right" path, that the desires of the war department, with which they are bound up, are sanctioned at conventions and are actively assisted with.

The reserve officers' corps, due to the combined influence of its members and its ability to sink its roots among the different groupings of the population, becomes the strongest militarization influence among, at least, the adult population.

It is the reserve officers' corps due to its contact and growing grip upon the population, and its own economic and social status and training, that becomes the greatest potential "white guard" center in this country. But this phase, to be comprehendingly conveyed, must have more space than could be given to it here.



### Conclusion

Despite the inexactness of the wording, the crudeness of formulation and coherence of this article, it is hoped that the few militarization methods cited will serve to call attention to the fact that along with the economic and political imperialization of American capitalism, there goes on a relative imperialization of the armed forces. That the militarists' activity among the population is unprecedented, and that the agencies carrying on this work are smooth and effecive, and therefore merit the closest scrutiny of those who recognize the necessity of challenging imperialism, both at home and in the colonies, on this field, as well as the political and economic. A close inspection of the imperialists' methods, used in the armed forces and among the population, will disclose such openings, that if taken advantage of will overshadow and defeat their intention. For instance, the pay adjustment spoken of, admirably serves certain militarization purposes. Still there is an opening; it will be noticed, that the private who does all of the "dirty" hard work, and upon whom discipline rests the most and privileges least, had his pay reduced, while those who boss him had theirs raised. It is not difficult to convince the private that he should have more pay, and that no matter how diligently all the soldiers perform their duties to increase the pay by promotion, only a limited number can be promoted, since a unit is only allowed a definite number of non-commissioned officers. The private is the material factor in the armed forces and while his attention is glued upon certain abuses of the private in connection with those imperialization schemes, the private will make himself heard, or at least felt, in such manner as greatly to hamper the plans of Prussianization.

With few exceptions there are openings in the methods of the imperialists that could be taken advantage of similarly, provided that the anti-imperialists of this country become such in deed and not merely in word.

ONLY THE WORKERS CAN UPSET MILITARISM.

## EXECUTION ECONOMY

Abe Goldberg had shot a man and was sentenced to be electrocuted.

On the morning of the execution the warden told him how sorry he was, and how it was going to cost the state five hundred dollars to electrocute him.

"Bum business," spoke up Goldberg. "Give me fifty dollars and I'll shoot myself."

wIw

## "WHEN THE DEVIL WAS SICK"

"I'm very sorry to hear that your wife is so ill, Samuel. Not dangerous, I hope."

"Thank'ee, Miss, but she be too weak to be dangerous."

wIw

## IN ADDITION

"Organize Deaf and Dumb"—headline in Daily Worker.

My God! ain't there enuf of them already organized? What's wrong with the A. F. of L.?

wIw

## SPORT

"What is Sport? queries the Literary Digest.

Well, as near as I can get at it, it is 10,000 setters watching 10 sweaters kick or swat a ball around a stadium.—Gogetterism jazzed up and pop drunk.

wIw

## IN THE HEADLINES

"Garbage Peace Near"—headline, Kansas City Star.

That's what we always thought capitalist peace was—garbage for the workers, angelcake for the warmakers.

wIw

## A WELL-EARNED REST

"Fellow citizens," said the candidate, "I have fought against the Indians; I have often had no bed but the battlefield and no canopy but the sky. I have marched over frozen ground till every step has been marked with blood."

His story took well till a dried-up looking voter came to the front.

"I'll say you done enough for your country. Go home and rest. I'll vote for the other fellow."—**The Continent.**

## FRANK ADVOCACY OF THE ILLEGAL BLACKLIST

**Asbestos,** house organ of the Asbestos Trust, discloses the practical benefits which may accrue from shady operations conducted by employers' associations by stating, "Careful records kept on each worker, ready on call by the members of the association, do much to lessen the labor turnover. A man who knows his record is kept and can be obtained by any shop in the city, is much more careful, in the first place, to have the record clean, and in the second place he is more likely to stick to one shop instead of floating around through the different shops."

wIw

## IN A BAD PLACE

A man taken to a hospital to be mended after an accident was asked by the M. D. how he came to be hurt so seriously.

"I got between two automobiles," he replied; "one was a taxtcab and the other fellow didn't care, either.

wIw

## "GOD'S VICEROY" ROBBED

News comes from the "Holy City of Rome" that "God's Viceroy," the "infallible Pope," has been robbed of "precious objects valued at more than one million lira," and that all Italy, including the atheistic leaders of the Fascisti, are frightfully shocked at the occurrence. As the thieves did their looting right in the midst of the very holiest of "holy places," St. Peters's cathedral, it is no wonder they are all shocked, for the raid clearly indicated that God was either sleeping on the job or that he doesn't care a continental about how soon his "Viceroy" is bankrupted. Personally, I believe it is the last, for I remember that in an old and forgotten book it is told that his son Jesus said to the rich young man: "Sell all thou hast, give unto the poor, and come and follow me." That's it!—God was trying to make his "Viceroy" obey the orders given him through his one, only and crucified son! Good old God! Soak him some more! He deserves it.

—**Ali Baba.**

BOOST THE I. W. W. PRESS!

# In The Making

By HENRY GEORGE WEISS

LUCY was young and pretty. That is, she had a slim, graceful figure, a well turned ankle, smooth, soft flesh, white teeth, dark eyes, abundant brown hair. She had taste, too, and knew how to to dress. Men turned to look after her on the streets. Lucy had come up to the big town to look for a job. That is, it was a big town to Lucy. Compared to the small Kansas village it was an immense town. She had kept house for her father, a tenant farmer, until the Lord—or overwork—chose to call him hence; then with the little cash left after everything was settled, she set out to face the world. Beyond keeping house there wasn't much she could do, so she got a job waiting table in a restaurant. All the girls that waited table with her were "live ones". The boss would hire no other kind—unless they were "lookers". The town was a railroad center and pretty girls drew trade. He paid them twelve dollars a week, with meals while working. The patrons were mostly rough men or slick traveling gentlemen of the bounder type who kidded the waitresses. They weren't always particular what they said. Some of them were fathers with girls as old as Lucy, but that made no difference. At first she was indignant; but the boss wouldn't stand for disgruntled customers; and a job is a job, so she learned to take what they said with a smile, to return vile insinuations with a ready quip.

For the sake of economy Lucy and another girl roomed together. Her roommate was a country girl too. Her name was Marie. Like Lucy she was an orphan. The two girls had much in common. For both it was a maiden essay into the world beyond home confines. For both the world behind the counter was at first a sordid and a smutty place, where women told questionable stories and cooks took liberties. A common distaste drove them together. Later they made dates, went to dances in company. By this time Lucy was an adept in "picking up" the men. She didn't go out with everyone who asked her, however, only with the "nice" ones. She met one boy—he was really twenty-six or seven, though he seemed boyish to her—whom she liked—at first. But soon he bored her. Instead of the small talk to which she was accustomed, he talked of Wells, Shaw, Marx, Ward, even going to the extent of quoting poetry—radical poetry. He told her of problems which only addled her pretty head. When he tried to show her that waitresses were underpaid, she took exception.

"You are wrong there," she said. "My friend and I room together. We pay seven dollars a month each for an awful nice room. Laundry comes to another ten; and the clo'es we buy to another twenty. Waiting table is a darn sight easier'n working on a farm, let me tell you. Why, I have nearly a hundred dollars in the bank now. That's more'n I ever had on the farm!"

He tried in vain to make his meaning clear. When it developed that he was an I. W. W. she ceased speaking to him. Down in Kansas, where she came from, the Wobblies had a terrible name, and only loafers and the worse sort of crooks belonged to them. This she believed. So the lad who might have been her salvation went his way sore-hearted, and if she thought of him at all it was as "that fool who didn't know what he was talking about."

When Lucy's bank balance was exactly one hundred and thirty-five dollars and sixteen cents she had a pain in her side. When she came out of the hospital her bank account was nil and she was three hundred dollars in debt. Marie stood by her, however; but when after two months' absence she approached the boss for her old job, it was filled.

"Sorry, my dear," he said, "but you know how it is. Can fill you in on off days, though. Best I can do."

So Lucy made four dollars working, two days a week, scanning the want-ad columns for better employment, walking miles with weary, dragging feet.

But it was a dull season. Hundreds were out of work. The few positions vacant called for skill she didn't possess, or were given to girls with more experience in that particular kind of work. Without the aid of her girl friend she would have starved. As it was, it taxed both of them to the utmost to get along. Clothes became shabby. There were no more pretty frocks picked up at bargain sales. Lucy felt her dependence on her friend keenly.

"I don't know what I'm going to do," she said to the boss one day.

"A nifty skirt like you oughtn't to have to worry about that," he leered.

The implication sickened her. Yet as the weeks passed she became desperate. Something had to be done. She knew of course that some of the waitresses made money on the side. She had always thought that that was because they were "bad" women. Now the remark of one of them came back to her: "How do you think we get by in the off season if we don't hustle?"

When Glandon stopped his car on the street and said, "Hello, kid, do you want a lift?" she stopped too. Glandon was an oil man, a promoter of sorts, with a big home down the valley a ways, and a whole floor of offices over the Woolworth department store across from the restaurant. He was a man of about fifty odd who affected a fatherly manner to cover the remorseless approach of the confirmed libertine. He took many girls out in his luxurious car. She knew what for. She knew his reputation. But she was tired. Her side hurt her cruelly. Her head ached and she was faint for food. The walk to her room was a long one and she had no carfare. When he urged her into the limousine she did not resist. It was heaven to sit down on a soft-cushioned seat, to be wrapped in a rug. Glandon saw that she trembled. He drew something from his pocket and pressed it to her lips. "It'll do you good," he said. She knew what it was. She knew what the effect would be on an empty stomach, on a head unaccustomed to potent liquors. She knew that he knew too. But she did not care. His arm was about her possessively, holding her close. What did it matter? What did anything matter? She drank.

# What Is The Economic Situation?

By COVINGTON AMI

**UNDOUBTEDLY the plutocracy, the upper strata of the middle class and a handful of skilled craftsmen holding key positions in the industries are now, and have been for some time, enjoying great prosperity, but it is also true that the direct reverse is true of the great mass of unskilled and semi-skilled workers and the farmers.**

During the last four years I have travelled from North Dakota to Louisiana, from Texas to Illinois, to Oklahoma, Missouri, Alabama, Tennessee and Arkansas, crossing and recrossing the territory bordering along the Mississippi River. I have talked to men of all trades and businesses and have been very closely associated with farmers and their organizations, so that I am judging conditions first-hand as well as from reading and observation. Having, therefore, given close study to the situation, I believe I can make a fair general estimate of the economic conditions now prevailing in the United States.

### Farmers Steadily Fail

First, the economic position of the farmers has steadily worsened ever since the great "deflation drive" was made on them in 1920-21 by the Federal Reserve System and the Wall Street banks. They are actually and relatively far worse off than they were in 1920. Hundreds of thousands of them have been driven from their farms and into the mass-production industries, while other thousands have been reduced to abject and hopeless tenantry on the farms they and their fellow workers dug out of the wilderness and desert. Thousands were also thrown so deeply into debt that they will never be able to pay out; they are what the Southern farmers so well call "debt tenants," which they declare to be the "worst form of tenantry on earth"—and it is, for it is a form of peonage from which they have no hope of escape this side of a revoluiton that will overthrow the wage system. That this raid on the remnants of the free-holding farmers was deliberate on the part of the plutocracy, cannot be doubted when one reviews the "deflation campaign" of 1920-21. Its purpose was, first, to teach the rebellious farmers of the Northwest a lesson so that they would "know their real place in society and stick at their "God-appointed tasks" of producing plenty for parasites and getting poverty for theirs; and, second, to drive the younger men off the farms and into the mines, mills and factories in order to produce a large reserve army of unemployed and semi-employed to the end that wages in the industries might be lowered and greater profits accrue to the plutocracy. Also the bosses figured that the greater the number of men and women hunting for work could be made, the weaker the unions

would be and the slower the unorganized worker would be to listen to "radical talk" and begin to organize. With the bankruptcy of the farmers went, of course, the smashing of wages paid agricultural workers, who, already miserably paid in 1920, are today worse off than ever in the history of the country. Hundreds of thousands of these agricultural workers have also been driven off the farms into the industrial centers—there to compete with their former employers and other wage workers for a bare subsistence. That this drive against the agriculturists was deliberately planned, is borne witness to by the whole course of the movement. Speaking in Chicago to a group of business men not long before he died, Secretary of Agriculture Wallace said: "Two hundred years ago England was facing the same dilemma that now faces the United States, and she solved it by sacrificing agriculture to industry and became the leading nation of the world." That was the "remedy" advocated by "Secretary of Agriculture" Wallace—to sacrifice agriculture to industry—"the wisdom of England," he called it—and that policy has been steadily followed by the plutocracy with the able assistance of both the Harding and Coolidge administrations. Wallace's idea seemed to be to turn the whole United States into one vast steel trustized hell, with the notion that "we" could find foreign markets for "our" surplus products, though he did not tell his business men audience how a nation of 110,000,000 people hitched to the most perfect labor-saving (?) machinery ever possessed by any ruling class could find foreign markets that would absorb the surplus profits they intended to rob from the American workers and farmers. Anyway, they went ahead steadily with their "deflation" of the farmers and unskilled workers, with the result that today "our" guns are booming from China to Germany and from Mexico to Morocco in a vain effort to force "our" products into foreign markets. Tomorrow, unless the workers and farmers of this country wake up, organize and stand together, they, the plutocracy and its allies, will be marching millions of toilers to die on distant battlefields in order to "create markets" for "our surplus products." So much for the condition of the farmers and agricultural workers—they have been stripped naked and are headed for peonage like to that of old Mexico and China unless they can organize and deliver battle in their own behalf. Everywhere I have been, in all the states, the great mass of the agriculturists have their backs to the wall, and there is no hope for them within capitalist society. For them capitalism has writen over its doors: "All hope abandon, ye who enter here." They have, literally, "nothing but their chains to lose and a world to gain."

As to the industrial workers: save for the handful of highly-skilled craftsmen in the building, printing and railroad industries, the mass of the industrial workers have not only not gained any real advance in wages and living conditions since 1920, but they have actually lost in both respects. Rents everywhere are about 100 per cent above prewar levels and the tendency is for rents and all costs of living to increase and not decrease—this though a great building boom has been going on in all the larger towns as well as in the cities for the past several years.

### The Wage Situation

Down in Texas and Louisiana the wages of the lumber workers are back to prewar level with the ten-hour day or longer prevailing practically in all the mills. Two years ago even, the mills in Western Louisiana were paying the miserable wage of $1.25 a day for a ten-hour day to unskilled labor, which, at the present cost of living, meant that these workers were working below the cost of subsistence—that they were coming out at the end of every month deeper and deeper into debt to the Long-Bells and the rest of the autocrats who have stolen our forests. Abject peonage is again the rule in the Southern timber belt, and all because the workers did not have the guts to stick in the Lumber Workers' Industrial Union of the I. W. W. and present a united front to the lumber barons.

Over in Alabama I found white men working in basic industries and getting the enormous wage of $2 a day for a ten- and twelve-hour day! In Tennessee it was the same. In Birmingham, Alabama and Chattanooga, Tennessee, I found union (?) men, some of the railroaders, who were afraid to let it be known that they were for La Follette for president! This, of course, merely shows to what extent they have been enslaved economically, for had not their economic enslavement been almost complete they would never have admitted to such cowardice. But, then, of all forms of cowardice, economic cowardice, the fear of the boss, the god of the job, is the wildest and worst of all, the most unreasoning—for the workers need not suffer this shame a minute longer than they choose to suffer it—all they have to do is to stand together in one SOLID UNION of INDUSTRY, and then it will be the boss's turn to bow to the god of the job—the industrially-organized working class.

### The Miners' Position

Coming back onto the track. Everywhere I went I found the coal and other miners fast going the route being travelled by the farmers and agricultural workers—hitting the long, hard trail that leads directly into the hell of peonage. From all I can gather there is practically no union organization left in the metalliferous mines, while the United Mine Workers of America preserve today only a shadow of their former mighty power. In Illinois, Indiana, Ohio, Pennsylvania and other states that once were strongholds of the U. M. W. of A., the coal miners are fast losing out. On one side of them are the big non-union coalfields of West Virginia, Kentucky and Alabama, and on the other a bunch of either brainless or traitorous union

"leaders" and officials, so that the bosses do what they please to the union, disrupting it first by slow starvation and then by open and brutal war, such as was declared in Herrin and Nova Scotia, and other places. Not only are the miners facing unemployment on a wholesale scale, but they are being headed for peonage with lightning-like rapidity. While their boneheaded officials are twiddling around talking about developing "super-power electric plants at the pits," the bosses are actively organizing **nationally and internationally**, to subjugate not only the American miners but the miners of the world to their unrestrained will. In their drive for the world-wide open shop in the mines, the international bosses have already played the trick of using the German miners against the British, then the French and Belgians against the Germans, then the American against the British and German, and the British against the American. That is to say, when the miners of one country were striking against starvation wages, inhuman living conditions and hellish social surroundings, the coal mined by union miners in another country was used to supply the struck market and thus to break the strike. So far, the British miners are the first and only ones to see this crooked game of the international owners of the mines and to move to end the boss's advantage by uniting all the miners of all the countries into one compact fighting body of organized labor, which is the only way in which the miners can today effectively protect themselves and their class from still further degradation at the hands of the gold-crazed, profit-mad plutocracy. This is the only way, yet to watch the antics and listen to the gabble of the "leaders" of the U. M. W. of A., one would think that the only miners in the world were located in the United States who still pay Lewis and his henchmen taxes for the privilege of working two or three days a week and starving while doing it. It is the great "District system" bearing its logical fruit—the disruption of the miners' union here and throughout the world. All this I get not only from reading but from talks with men fresh from slaving in the mines, union and non-union. During the past five years the economic position ofing the America miners of all kinds has, like that of the working farmers and agricultural and lumber workers, steadily worsened—and it will grow worse and worse unless the miners turn and compel their officers either to lead them in a fight to organize the non-union fields and to reorganize the unions, nationally and internationally, or to get out and let men who have the brains and the will to lead take their places. This is today the only hope of the miners of America and the world—ONE BIG UNION of MINERS, lined up solidly in ONE BIG UNION of the INDUSTRIAL and AGRICULTURAL WORKERS of the WORLD. That is the only hope of the miners, and the sooner they "go to it" the better off they and their class will be. They too "have nothing but their chains to lose, and a world to gain." For them, the miners, there are but two choices today—freedom through and in One Big Industrial Union, or American-wide and world-wide peonage in a world-wide open shop.

It is the same with the textile workers.

It is the same with the lumber workers.

It is the same with the boot, shoe and leather workers.

It is the same everywhere I have been, from Dixie to the Dakotas with all that great host who are today contemptuously spoken of as the "unskilled" and "semi-skilled" workers— the economic condition of the mass has steadily worsened during the past five years. Not only are their real wages lower but their standard of living will from now on rapidly fall unless they can organize industrially—unless they can develop the power to take and hold what they produce for themselves and their children, a right they have under all the laws of God and Nature, as you choose.

To themselves alone can the toilers look for any relief from the adverse economic conditions that are new confronting them, and which conditions are pre-destined to grow steadily worse and worse as the days go by unless the workers unite in ONE BIG INDUSTRIAL UNION and proclaim INDUSTRIAL DEMOCRACY—equal rights and opportunities to all, and special privileges to none.

"Workers of the world, unite! You have nothing but your chains to lose, and a world to gain!"

# Making a Social Revolutionist

By LLOYD EMMONS

WITH shattered ideals and hopes, the wage slave is now wondering, in despair, if the future holds for him any rays of sunshine. In a retrospective mood, he again sees his master's mansion with its spacious lawns, surrounded by the choicest of shrubbery and trees, and in the center of all, a fountain whose dancing sprays are kissed by the sun's bright rays, which are then reflected away in variegated hues to the formation of a miniature rainbow of beauty.

He sees through the dining-room window choice viands; fruits and sparkling wines, bought with his (not the master's) money. He sees servants darting here and there, ever ready to answer to the master's beck or call, or tinkle of the bell.

He sees the master and his family leaving the beautiful home to the care of the servants, and going forth in a high priced, high-powered motor car, to enjoy the beauties of the boulevards, and the cool, refreshing air of the parks and neighboring lakes.

In the master's family are—his own "Lordship," "the Mrs."—"a boy of about twelve" and a little girl of about ten years of age, and two thoroughbred Pekinese dogs.

The most of the "Mrs.'" time is occupied in caring for the Pekinese.

Then he (the slave) recalls his children telling him how the master's children are taken to and from school in a nice coupe. His master's children are also receiving private music lessons.

His (the slave's) children are walking to and from school in patched clothing, with holes in their stockings and shoes. His children are handicapped in their studies by hunger gnawing at their vitals. Sickness is ever ready to pounce upon them because of their undernourishment and insufficient clothing.

He knows that if **Pestilence** in its journey comes near, it will attack his children before it will the well-nourished and well-clothed children of the master. He, too, knows that **Death**—ever lurking near, waiting for an opportunity to claim its prey —will take his children before it will those of the master.

He sees that his children must enter into the "struggle for existence" handicapped physically, mentally and financially.

He muses to himself, "Did I commit a crime by bringing children into this struggle?"

He again thinks of the master's mansion. He is living in a shack.

He again sees the high-powered motor car. He walks.

He again sees the fine silk clothes of the master's wife, and the good clothes of his children.

His wife wears ginghams and his children rags.

And then he says to himself, "Oh, well! I should try to be optimistic. I'll use a little Pollyanna Philosophy: It might be worse."

**Yes, indeed! And it gets worse!**

The next day he is handed an envelope with his check in it, and a note informing him that he is indefinitely suspended from his employment.

He and his family could not LIVE on the wages he did receive, but the master is going to show them how to live on nothing.

In a few days his money is gone. The grocery man is in business for "profits," and can see no profits in trusting a wage worker that is earning NO wages; so credit is denied him.

The rent comes due, and he has nothing to pay it with.

The JOBS are NOT his, so he goes forth to BEG the PRIVILEGE of working.

### Mutual Prosperity

He fails. He goes to his former master, and the former master tells him, "Well! There is a depression in business, and you know prosperity to me means prosperity to you; and so when business picks up, maybe I can place you again, but you'll have to accept less wages, for you know living expenses have come down, and I can hire hundreds of men for less than I was paying you."

If the "boss" had told him that LIVING had come down, he would have told the truth.

The slave—the former slave (he lost his master when he lost his job, and was first made a bankrupt, and then pauperized)—returns home.

His wife and children meet him at the door. He does not need to speak—the look of despair in his face tells the story more completely and more accurately than could spoken words.

He downheartedly stumbles across the room, and despairingly drops into an old, wooden rocker. He takes from his pocket the daily paper, which he had paid for with his last three pennies, thinking that perhaps "the latest current events" might rest his troubled mind a little.

In the first column he sees in bold headlines, **"Mr. and Mrs. Rich to Tour Europe."** (His former master and wife). "Mr. and Mrs. I. M. Rich sail from New York next week to tour Europe. They are to visit Liverpool, London and other places of interest in England. They will then visit Berlin, Vienna and Rome, after which they will spend one month in Switzerland, and then, returning via Paris (where Mrs. Rich intends to add to her already rare collection of art works) will arrive in New York in the early fall."

He could read no further. His mind was in a whirl. He kept repeating over and over—"Prosperity to me means prosperity to you."

He gets his hat and goes from the house, and has not gone far, when he meets his friend Bill.

Wisdom, who at once detects the troubled look in his face.

"Hello, Jack!" says his friend. "What's on your mind?"

"Oh, hell!" Jack replies. "All is dark; wife and kids hungry; no job and can't beg one. I've struggled for years to get by, but have failed, just failed, that's all."

"Listen, Jack," says his friend; "you have nothing in common now with your fellow workers but misery, and the privilege and duty to organize and fight to correct the errors of society and thereby do away with hunger, want, misery, prostitution, crime and a hundred and one other results of the profit system. You have nothing in common with your boss—."

"Hold on," says Jack. "My boss told me that 'prosperity to him meant prosperity to me,' and—"

"Wait a minute, wait a minute," says his friend Bill. "Before the war, The Rich Equipment Co. was declaring 6 per cent dividends. In 1918, they declared 25 per cent and put a few millions into a reserve fund, which they called undivided profits, or interest on accrued investments—or something else that you and I don't quite understand. Did your wages increase five or six hundred per cent? If Mr. Rich's profits increased five or six hundred per cent, and your wages did not, was his prosperity your prosperity? Had you interests in common? Say, Jack—just do a little thinking and studying for yourself, and as you do, say, 'I'm going to STUDY, THINK and ACT for my interests and welfare,' and by doing that, you will be doing something for your fellow workers—for HUMANITY."

"If you THINK, ACT and WORK for Mr. Rich's welfare, instead of your own, you are simply 'kidding' yourself more than he 'kidded' you when he said, 'My prosperity is your prosperity.' And as you are thinking for yourself, always keep in mind two words—POWER and PROFIT. They are big words in the economic question.

"Under the present system, PROFITS are what we are all after, and the division of those PROFITS is the principal cause of most of our struggles and wars, with the employing class. POWER is the deciding factor in those struggles and wars.

"They (the oligarchy) now have the preponderance of POWER and so give us the small end of the PROFITS and call that small end 'wages'. They take the big end of the PROFITS and call it 'dividends'.

"If they had to call the big share they take WAGES, the same as we do the small end we get, maybe it would set you and some more of the workers to thinking more clearly.

"But say, Jack! Here is a book—"What Is the I. W. W.?" Read it, yes, two or three times, and then get some more I. W. W. books—**they are all good.** And then read 'Looking Backward' and 'Equality' by Bellamy. Follow these by 'The Iron Heel' by Jack London.

"After you have read these books and done some thinking for YOURSELF, I'll bet my interests in the capitalist system against your interests in The Rich Equipment Co. that you'll be a damn good SOCIAL REVOLUTIONIST. Goodbye, Jack."

## INDUSTRIAL WORKER

**Published weekly at Seattle, Washington, needs your immediate co-operation. This means bundle order increases, new subscriptions and renewals. Don't let lumber, shipping, construction and other industrial exploiters put this fighting newspaper of the West out of business! Do you want better conditions? Do you want to get the Centralia and other Wobblies out of Walla Walla prison? Are you in favor of getting out propaganda designed to smash the C. S. statutes? If you are, then fight for your industrial unions and for your press which is their chief support.**

**Send your orders NOW to the Business Manager Address Box 1857, Seattle, Washington.**

## INDUSTRIAL SOLIDARITY

**OFFICIAL ORGAN OF THE I. W. W.**

**Published weekly at Chicago—the nation's center of heavy industry. Accurate news of this most important district and from all parts of the country. World news right up to the minute. Labor's viewpoint is worth reading. If you want the truth about what is going on in America and all over the globe don't delay, but send in your subscription at once. $2.00 a year. Single copies, 5 cents. Bundle orders, 3 cents. New address 3333 Belmont Avenue, Chicago, Ill. SUPPORT YOUR PRESS!**

(Continued from Page Two)

special technical, scientific or academic training in awe. We are no less expert in our functions than they are. We must rely upon ourselves, feeling that, in addition to being capable builders of the present world, we are far in advance of all pledged by environment and training to this rotten system. We have no superiors if our vision is for a classless race working, sharing and playing together in plenitude and harmony, and if we are doing all that we can to carry this vision forward to the members of our class. This outlook makes us culturally superior to the bourgeois-minded. Why should workers feel humble before "professional men" when these latter, as a class, subscribe themselves heartily and brutally to war on fields of battle and wars in the arena of industry? They are the ones to feel ashamed, to be conscious of inferiority. Workers must think for themselves and fight for themselves in order to right this topsy-turvy world, this world of misery for the masses. Industrial unionism makes such thinking and fighting effective.

**INDUSTRIAL WASTE.**—England recently received the report of a government commission created to inquire into the comparative effects of strikes and unemployment on production. They found that unemployment crises are eight times as destructive to productive capacity as are strikes. Since capitalism has the same general features everywhere, it can be ventured that a very similar result would ensue such an investigation in this country.

Discrediting strikers by accusing them of being anti-social in their stoppage of work can hardly hold its ground after this report. If workers fighting for the means of life by the use of their strike weapon are anti-social, what epithet fits bosses who stop industry's wheels to an extent eight times as great as that of the strikers? If strikers standing together against starvation wages and conditions of peonage are anti-social, what can we term employers who shut factory gates when they can no longer sell goods at a profit, even though the masses are in dire want of these goods? In this country the courts have acted for employers to outlaw strikes and to declare strikers criminals. American jails have been filled with this new kind of "criminal," and they are well represented in the penitentiaries of the immediate year of light and Our Lord, 1925. But if they are criminals we are criminals, for we hold the same faith and espouse the same kind of action.

Engineers in industrial research have said that the usual management of industry—while operating in "good times"—is far more responsible for losses in production than strikes and lockouts combined. The evidence points very clearly to capitalist inefficiency all along the line. It is sufficient, however, to say that when men, women and children need food, clothing and shelter, and men and women are eager for the chance to apply their labor power to the raw materials and machines to supply their own and the wants of humanity, the dominating class hindering and forbidding this application is criminal, anti-social and just about ready to have the skids put under it.

Organize and sweep capitalism into oblivion!

**LAW IN CALIFORNIA.**—The **Sacramento Bee** for June 27, points out editorially that state laws of California on adultery are in effect dead letters; that from 1914 to 1924 inclusive there were never more than four persons confined in the state prisons under these statutes. It says: "At San Quentin in three separate years there were no such inmates, and at Folsom none in four of the years above specified. . . . In a total of 2,312 prisoners at San Quentin in 1914-15, not one had been sent there for adultery." The editorial gives the statutory definition of adultery and goes to show that numerous divorces secured on grounds of adultery prove its widespread existence among

married persons. It is common knowledge that adultery in the definition by law is very prevalent.

We have no wish to argue for enforcement of so stupid a brace of laws, but we do wish to employ this chance for comparison of enforcement in that benighted state. The California laws say so-and-so about adultery and constitute it a felony. Admittedly it is flagrantly violated. There are practically no trials and no convictions in this connection. But a very different attitude is demonstrated regarding enforcement of the vicious Criminal Syndicalism Law under whose vile provisions hundreds of I. W. W. members have been arrested and a large percentage of convictions secured. There are seventy-six victims of this law now in San Quentin and Folsom penitentiaries. Why is the Criminal Syndicalism Law enforced, while bootleggers go free and violators of the adultery laws are not apprehended or sentenced?

Well, it is like this: California courts are the property of California industrial kings, and it is natural that members of the I. W. W. attract legalistic hatred because the owners of the industries do not like the I. W. W. They do not like the I. W. W. because they are robbing the workers to the very limit and there is only one weapon that workers can grasp which is an effective one to stop this robbery. The I. W. W. plan of organization on the jobs is this weapon, and it is the one instrument able to destroy exploitation of labor. Of course it is treason to tell the slaves to seize this industrial union weapon. It is high treason. It marks the advocate a literate slave, and since mankind took the bloody trail through the valley of class rule a literate slave has been deemed worthy of death and persecution by each succeeding dominant group.

Industrial unionism means right here and now in this blessed era more of life's good things for workers and less profits for the dear boss. It means better and more food, an improved kind of clothing and sufficient of it, adequate and comfortable shelter for workers who are now largely deprived of these necessities. It means an end of child labor and speeded industries. It stands for safeguarding the workers' lives and providing for educational and amusement features for them that will constitute definite cultural growth. All this together means greater power to the workers and less to the bosses, and in the day when the former have gained enough organized strength it means the final overthrow of rule by industrial autocracy, and in its place democratic rule by the whole working class in the industries.

There is nothing utopian about industrial organization. Employers unite their economic units in such manner. The time of the individualist among bosses has forever passed. The present is a period of combination, of wealth concentration, or business solidarity. Bosses understand how their power has grown since adopting this broad and provident viewpoint which is expressed so successfully by them through their preying on slaves. It would be a very bad thing for the slaves to adopt the tactics of the master. Very bad indeed. Especially bad when they reflect that the numerical aspects of the case are favorable to the slaves. And not only the numerical but the industrial, as well, for the workers can live without bosses because the workers create all the food, all the clothing, all the shelter of the world and the bosses create nothing but wars and want and waste.

Because employers so persecute those teaching the industrial union idea every worker should be able to see without further argument that the industrial union idea is good for workers and bad for bosses. Masters will always attack with their utmost resources the foremost opposition to their operations. The I. W. W. in California and wherever it exists, constitutes a menace to the exploiters of labor. These exploiters know what threatens them and they desperately strive to prevent growth of industrial unionism among workers. Conscious of this situation, if you are a worker you belong in the I. W. W. We need one another in order to advance our class interests. Get into the union of your class and speed the day when all laws shall be made in the union halls of an emancipated humanity.

# Two Poems for District No. 26 U. M. W. of A.

*By* LAURA TANNE

## THE LOOT

The clouds were clean as new linen in the blue sky
When the fathers and mothers came out of their houses.
Long poles of sunlight slanted to the earth
As the fathers and mothers marched up the street.
The children thought the long poles of sunlight
Upheld God's linen underwear
As they followed their fathers and mothers up the streets,
While soldiers watched. . . . .

The children saw rickety wagons and boxes and bags
Come from buildings ripped open by force,
And filled with things to eat and wear.
They heard the mad words on fathers' and mothers' lips:
We must eat. We are cold. Our children suffer.

When night came the children thought:
A bundle of wind will blow God's underwear
All over the blue grass—
And was that Uncle Ned that got shot by the soldier?

## Soft and Easy

Lewis of the U. M. W. of A.
Nestles so many green babies
In his vest pocket every night
For being president of the U. M. W. of A.
He sleeps softly. He talks softly
To rebel men and tells them
To take it easy.

Men with steel picks on their shoulders
And empty dinner pails
Listen to Lewis talk softly
Thinking of their women
Blowing a kiss to summer
By an empty coal bin . . .
Thinking of dream-empty babies
With a heart of powder
Leaning against the kitchen corner . . .

These men listen to Lewis
With so many green babis
In his vest pocket
Talk so soft and easy.

## RUBBER SLAVERY AT AKRON

(Continued from Page Five)

started. They had circularized the entire American labor movement for funds with which to conduct the campaign, and nearly two thousand dollars was collected from Canada, United States, Cuba, Porto Rico, Panama, Hawaii and the Philippines. As soon as they lost control this money was misappropriated to other uses and everything possible was done to disrupt the union.

**"Labor Shortages" and "Law'n Order"**

There is considered to be a labor shortage in Akron when the number of unemployed drops below 5000 men and women and steps are immediately taken to remedy the matter. Advertisements are placed in Southern papers to bring men here. When they arrive they are told "Nothing today, sorry; but if you will leave your name and address we will send for you;" or, "Come in again." Thus they keep an army ready if anything should happen, and they keep more than a hundred deputy sheriffs, all klansmen, scattered through the shops so they will know beforehand if anything is going to happen. The presence of these deputies was brought out clearly when the grand jury was investigating the liquor traffic among other deputies who would raid a bootlegger and sell his liquor. The governor ordered the sheriff to discharge his army which numbered several hundred. According to this order they were all dismissed "except slightly more than one hundred who are employed as special police and watchmen in the shops" to use the sheriff's own words. The sheriff and all his deputies are klansmen and these deputies work without pay from the county.

**We Must Educate the Rubber Workers**

Incidentally, these workers brought here from the South are the greatest obstacle to organization. They come from the rural districts of Louisiana,

RUBBER PLANTATION WORKER LABORING FOR GOODYEAR IN FAR-OFF BRITISH EAST INDIES.

Alabama, Tennessee and other points in the "Pure Americanism" belt where wages are low and they feel deeply indebted to the rubber companies who pay a "living" wage.

Here are thousands of men and women working in an atmosphere heavily laden with the dust from a large and choice variety of chemicals, at a speed that warps and kills and in constant dread of that surveillance and the army at the gates.

## "Germany's Artist of the Masses"

**This is the title of Agnes Smedley's wonderfully appreciative article of the matchless art of Kathe Kollwitz. We are running in The Industrial Pioneer for September the article and a number of photographic reproductions of the paintings that have no equal in expressing the life and spirit of the proletarian. This is a very unusual offering and we ask all to send in their subscriptions and orders for bundles as early as possible because the issue is sure to be rapidly sold out. This magazine is the world's outstanding journal of revolutionary industrial unionism and by continuing to give its readers the best in working class literature and art it deserves your heartiest support. Let's make the September number take a big jump in circulation! We can do it by acting together.**

religious system is based on ignorance of the so-called laws of nature. The founders of these absurd system did not know the nature of the human mind, nor the history of the race, they thought that they, though relatively primitive men, knew all the race would ever know! They based their conclusions on the wholly insufficient knowledge of their times.

We refuse to travel ahead of the actual knowledge we possess, and when we speculate upon anything unknown, we do not assert our conclusions as facts.

Seventh premise. That any state, association or social organization whatever, that rests upon and enfranchises all must be one in which education must be an important factor.

One thing that the reader should bear in mind, is that those who propose an industrial democracy, are proposing it as an industrial-social system in which all who are able to will be producers, between certain ages, and as producers they will be members or citizens; first, in the local unit of industrial endeavor, with such groups autonomous, self-governing, in all matters of local concern; second, a citizen or member of the industrial division or state, likewise autonomous, self-governing in all its domestic affairs. Local industrial units would be limited or circumscribed only in their relations as producers to others of the same industrial division, or the units of other industrial divisions in the locality. Industrial divisions would be limited by the welfare of the whole body of such divisions.

It is sufficient at this place to show that the proposed new social order is to rest upon the producers all equally enfranchised, consequently the need for education.

The object of education, from this standpoint, is primarily to secure the smooth working of the social organization, for upon this depends the carrying on of production, on broad enough a scale to liberate the producers from long and exhausting toil, and provide the leisure and equipment for the development and completion of the individual. Individual freedom from a constant struggle for the needs of existence depends upon social regulation of production. Only by such regulation can the individual secure the means of life, and have the leisure and equipment really to become a complete individual, and reach his fullest capacity, upon which depends the development of a more perfect type of individual.

Education as conducted today is not sufficient. It has in most cases been entrusted, at least that of the working class, to young girls and feeble men, who when not too ignorant to teach the full knowledge of the race to their pupils, are too furtive to do so, because they are dependent on their work for a livelihood, and the control of positions and policies lies in the hands of usually illiterate, always corrupt political machines. The consequence is that a hodge podge of chaff, exploded theory, and unconnected truths are supplied to the pupils, in the school period, when impressions are most vivid which often obstructs the acquisition of real knowledge later in life. New truth is debarred by previous impressions, is the substance of a summing up of this subject by Ward.

These facts render it necessary to develop a method of separating popular fiction from real knowledge, and presenting information in an intelligently organized manner, and preventing the teaching of well known errors, and the forming of false conclusions.

"In proportion as the structure of government gives force to public opinion, it is essential that opinion should be enlightened." Let us change this statement of Washington to meet the needs of the social order proposed, as follows: "In proportion as the structure of a social organization enfranchises and places power in the units and individuals comprising these units, of the structure, it is essential that all should have access to all of the accumulated knowledge of the race."

(To be continued.)

# Tenements

By MARY HOPE

TWO naked children pull a mattress onto a fire escape asking a sleep-god to give them a little wind and sun. Behind the bars of the fire escape tiny blue hands and a cough tell the story of tenement swords slashing to death the sleep-god.

The Polish family upstairs scattering god-damns everywhere while downstairs Rosie and Bennie talk over the day's work. Rosie says: "The boss' wife, she comes in and says, 'Good morning and how are you girls?' like she was climbin' golden stairs on stilts and the foxie woof-woof 'round her neck nearly knocked us coo-coo. And Bennie answers, 'You got a cinch. Come and see me spittin' lead from rubber mixin' for 9 hours and my guts lined with it . . . . . .'"

Evening comes like a dark shame-blush. Their papers lie scattered in the dust. Headlines awry. Coolidge and a west-end murder look at a cat's belly pausing to sniff at them on his way to his faithful love, the garbage.

A shop girl comes home, tired. Black streets snap at her with the tongues of long hungry hounds. She sees a rough fellow staring at her. His overalls are dirty. He says to himself: "If I wasn't always fighting I could marry a girl like that." . . . . She hurries on, weary, while the pitter-patter of many footsteps on the pavement says to her, "Don't-you-care, don't-you-care."

The tenement-night clothes itself with that sweet liar, the darkness. And stars and diadems of far-off moons adorn it, like a heavenly smile on the face of a leper. The tenement-night is like a priest in soft clothes and soft words and linen clean as a baby's first tooth. While underneath disease and fat and lies eat him to the core. Tenements.

# And They are Still Coming

By T. P. and "X"

THE following is merely an incident taken from the life of the "white gypsies" of California. The actors of this little drama are just a few straws caught in the sucking whirlwind of California real estate advertising, carried high—in hopes—and none too gently dropped to earth. If it were desirable it is quite possible to recite thousands of such heartrending tales . But one straw is like another. The incidents are all similar, differing only in details.

The average family that comes to California from the East seeking health and fortune in response to the deceptive advertising carried in eastern papers by California real estate brokers and chambers of commerce, leave a home life behind it to become a wandering unit of the ever increasing horde of "white gypsies"—the automobile traveling farm proletariat of California. As often as not these families come from the petit bourgeoisie, had in the past small places of business that provided them a somewhat secure living.

To get a bit of first hand information of this process of what we might call proletarianizing it was decided to make inquiry from some victim in one of the auto camps where the "white gypsies" abound.

After getting several rebuffs, because a great many of these families still retain their bourgeois pride, we finally succeeded in engaging in conversation a matronly appearing woman with a look of utter despair in her fine face. At first it was just a few remarks about the weather and the outlook for the summer's work. It was raining then. Not thinking it advisable to use a notebook the gist of the woman's story is all we can give. We didn't even ask her name—but her address is the open road.

It appears that this particular family had come from some small town in Michigan where they had owned a little store that had furnished them, and the parents of the mother before them, a fairly comfortable living and enough to put away for the proverbial rainy day. But as the little town increased in population during the period of the war, and immediately after other stores started up and competition made inroads into their little savings. It was after the Atlantic & Pacific Coffee and Tea Company had opened its store that they decided to quit and go to California. No use bucking the trust with what little they had, and hard times, too. So it was California bound in response to the advertising lure. There had been a longing through the years for something better. Why not try?

The store was sold at a sacrifice and the Ford, the same dilapidated, rickety old thing we were looking at, was loaded with what earthly belongings were deemed necessary for the long overland trek, and it started. It was the most pleasant experience of her life, this overland auto trip, so she stated, with its splendid outdoor life. "Of course, we had a little money then and there was no immediate worry—as there is now," she thoughtfully added.

To come from Michigan to California in the Ford had not been very expensive. It was not until reaching California that expenses started to pile up. There was so much to see—years of pent up curiosity to satisfy. It cost money and lots of it. California lay before them in the gay beauty of a harlot, her blemishes concealed—her favors to be had for money only.

After a few short months of this their little capital, which had originally been a little over three thousand dollars, had dwindled to a very scant two. In order to save what little was left it was decided to buy a piece of land. But where? Land was so high.

In their travels they had been through the town of Madera and had noticed in passing that land was for sale at $400 per acre, in 10 acre lots, and terms. So they came back to Madera and "bought" ten acres of unimproved land on "terms."

How little these people knew of California farming! Canals, and main ditches, and laterals, and headgates, and intakes, and water rights, Jackson pumps, and so forth, was like so much Greek to them. That the soil would not produce enough from ten acres to feed a family unless the land was irrigated was not realized at the time the eight hundred precious dollars were paid the glib-tongued real estate shark, and papers were signed to make payments of five hundred dollars each year henceforth until four thousand dollars and interest was paid.

That they had to build a house they realized, of course. It was unimproved land. But that the land had to be leveled and ditches and water gates put in preparatory to irrigating they merely had a vague idea about. Even had this been done before they bought there would still have been the all important question of water for irrigation.

The real estate man had told them that they would have to put down a well temporarily and use a pump until they could get the "gravity" water from the mountains. The dam was surveyed and so forth. Well? What a silly thing to mention. Where they came from everyobdy had a well and a pump. Of course, they had to have a well and a pump. The real estate man must think they knew nothing. It was not until they later started to inquire about the cost of a well and a pump that they grasped what the real estate man had been none too anxious to tell them—and the great amount of water needed to irrigate ten acres of thirsty California soil. They found out too late that a fully equipped well capable of furnishing enough water to irrigate ten acres would cost about two thousand dollars. It was a staggering blow.

Another thing was the leveling of the land and

THIS IS HOW CHILDREN OF "AUTO TOURISTS" LURED TO CALIFORNIA BY REAL ESTATE SHARKS MUST TOIL IN FIELDS WHEN PARENTS ARE "BROKE".

putting in the ditches and water gates, etc. All in all they discovered that it would take at least three or four thousand dollars merely to get started. Had they had sufficient for this there would still have been the problem of making a living until fruit trees and vines came into bearing—and the mighty problem of making payments ,these "easy" payments, at the same time.

They tried to dry farm the first year but merely exhausted their meagre funds in the attempt. When the payment came due they were broke and had to leave the place. They left a house and a well fenced place behind them to be used by the real estate shark as a further inducement and bait for catching the next sucker. Mr. Shark benefitted, from this deal, a neat little house, a good fence, the leveling of ten acres and was paid $800 besides. Another sucker or two and this particular plot will be worth double.

It was just about two years ago that they had loaded their earthly belongings into their Ford for the second time and had left Madera. Since then the family had tried to make a living in the fruit. It had been a hand-to-mouth existence. And here they were now owing rent for the use of the camp grounds, and there were cherries to pick if they could just get to where the cherries were. A hasty search of pants pockets brought forth a couple of dollars which were gratefully accepted.

* * * * * * * * * *

Statisticians tell us that for every success in the business world there are approximately four thousand failures Among the homeseekers that come to California from the East the percentage of successes is much smaller—about one in seven or eight thousands.

The step from comparative independence to actual acceptance of alms is in California a short one. But they are still coming.

---

# These Twenty Years

(Continued from Page Eighteen)

now appears that in the near future this old struggle, which has obstructed the organization more than all other agencies combined, will be successfully negotiated.

This will mean that a general organization will be obtained which will not only be powerful but to which all subordinate parts will bow on general questions and which will be of great value to all units. It will be the true instrument and expression of the working class as a whole, rather than the tool of a single union or combination of unions with similar needs. Once this is achieved the road is clear for a tremendous growth, for the working class is already cognizant of the need for a more adequate form of organization. The future social development of man rests with an aggressive, properly adjusted, revolutionary industrial organization, free from all philosophical errors. If these last twenty years place in the hands of the world's workers such an efficient vehicle they will have been well spent.

# Industrial Observations

(Continued from Page Twenty)

program of "reliable officials" that are supposed to be developed by the new creed.

This program makes matters worse instead of better. Whatever we have to say about the A. F. of L. officials they generally originated in the crafts of which they became the officials, and understood the work thoroughly. As a result, if they really had a desire to serve their fellow workers in the union they were also more or less qualified to do so. The new type is different. He is the professional official, the "leader type" similar to the professional politician as contrary to the common citizen who had politics merely as a public duty and not as a profession. Unfamiliar with the work as well as the psychology of the workers in the union the result of this new leadership means only added confusion and expensive blunders, resulting in disillusionment and discouragement among the workers.

The main task confronting us is to prove to the workers the failure of all "leadership," that only in their own ability to fight the battle and to direct their progress lies the solution of their present industrial and economic difficulties. We must instill confidence in the workers and endeavor to stimulate the initiative among them, or else it will be nothing but an endless experience with new leadership that will eventually land them in the same old predicament.

We will find among those workers a fairly good understanding as to the aim and object of the I. W. W., and its philosophy is quite well understood also. But what is lacking is a clear and concise conception of the working operation of industrial unionism as propagated by the I. W. W. What we need in those fields are not speakers as much as educators and organizers; men who are willing to go among those workers, to teach them how the I. W. W. is composed of industrial unions with job branches; how those branches operate, what their jurisdiction is and what duties rest upon the officials, and what power they have. It is a big job and a slow one, but it must be done. With a little patience great results can be obtained.

A very large percentage of the workers are foreigners, and what little they have of organizations that can be characterized as labor unions is mostly among various foreign-language groups. It is estimated that more than 75 per cent of the miners in the East are foreigners. As a rule those foreign workers look toward the English-speaking workers to take the lead in the union and to fill the offices. Whenever they find one who proves to be really sincere and able in his work, any amount of support is offered. What is needed in the East are a couple hundred of the old type intelligent and courageous job delegates we had on the Pacific Coast when we built our industrial unions there. If that type of delegate can be prevailed upon to enter the industrial field of the East, they will be able to accomplish an organization drive the result of which will make the 1917 lumber workers' drive appear to have been small by comparison.

In the Eastern industrial centers we have a field to win for the I. W. W., and win with very little effort. It is less a question of finances than a question of getting members with the necessary qualifictions to instruct new delegates how to proceed with the work, to carry on our educational program, not with oratory and large meetings, but through the constant contact with the man on the job; to supply our press with live news directly from the industrial field, thereby making it more valuable to the whole organization; and first and last: instill confidence among the toiling masses; create a revolutionary spirit that not merely expresses itself in lengthy resolutions but in actual deed on the industrial field. The workers in the Eastern industries are waiting for us to come and point the way. Let us not fail them.

WORKING CLASS MAGAZINE GROW!

# Preamble of the Industrial Workers of the World

The working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

The conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

# The New Religion

By COVINGTON AMI

HE Unadaptable shall perish. They who cannot meet
The changing of Environments must die. On City Street
Or Country Road, wherever life has cast their bitter lot,
However high their dreams or great their love, it matters not;
However noble be their aim or fine their work, the Unfit die.
The Weaklings fail. The Strong ones win. Thorn-crowned the Christs go by
Golgothaward, while smiling Caesar mounts his golden throne
Triumphant. The Fittest shall survive. The Best the World shall own."

* * *

This is the New Religion, this the "Scientific" Creed,
Under which the Magons hunger, under which the Morgans feed;
Under which the Emmets perish, under which the Georges reign,
The shamanism blessing all the frightful works of Cain;
By which the Sons of Jacob from the Sons of Esau take,
By which the mighty Usurers the will to freedom break;
By which Love's angels vanish with Hope's fairies from the skies,
Under which the truth is smothered in an avalanche of lies!

* * *

This is the latest reason why the Knaves and Morons rule,—
**The Mind that made Environment the convict of its tool!**
This tells us why the Masses are the servants of Machines,—
**They are helpless in Environment as shadows on the screens!**

* * *

Ye fools that slave in darkness that the Few may dwell in Light
'Twas **You** that made Environment,—'twas born of Labor's might—
And Yours is all the **power,** and to change it is your right.

**BRITISH LABOR SOLIDARITY WINS—** Mine operators of England posted notices at the collieries to the effect that after July 31st wages were to be cut twenty per cent. Over a million miners replied that they would strike against the decrease. Negotiations followed, resulting finally in a government subsidy to the operators calculated to be equivalent to twenty per cent of the miners' wages for a period of six months. The sum is $50,000,000, and a beer tax is to be levied to raise the amount.

This unique action in peace time conciliation, guaranteeing, as it does, no loss of profits to the employers and none in wages for the miners, has roused the ire of the British premier, who was obliged to initiate the subsidy, and on August 6th Mr. Baldwin rose in the House of Commons to announce that the precedent constituted a "grave menace." He charged the workers with "anarchy" and declared that if they go too far they will be met with united national opposition.

What called for this warning was the solidarity pledged to the miners by railroad and marine transport workers who said that they were ready to strike with the miners if called upon to do so. Such an expression of class consciousness certainly does constitute a "grave menace" to the coal robbers of England and all other bourgeois thieves who live in indolence and luxury, surfeiting while the workers of the world endure intermittent starvation.

The miners' victory is an object lesson of tremendous import to labor everywhere. It shows how the solidarity of labor can defeat all opposition, emphasizing the fundamentally industrial nature of modern society. Mr. Baldwin, acting as the spokesman for British capitalism, may well display the greatest concern at the spectacle, realizing as he does—but as the world's wage slaves do not—that the matter of industrial power, of industrial ownership which gives this power, is based on strategy. The triple alliance of mine, rail and marine workers forms a triune keystone of working class power in England that will yet learn to play its full part in the coming upheaval that is to dump the world's parasites from the backs of the workers.

Meanwhile the pledged concert of action of the unions of miners, railroaders and seamen of England has forced the government to act to save the mine operators, and wages for miners are not going to be slashed. Militant workers throughout the world hail this victory with rejoicing and cry "Long live the solidarity of labor!"

**WE ARE NOT GANDHIS**—Even leaders of reactionary trade unions occasionally refer to their organizations as being militant, implying that militancy in associations of workers for economic advancement is effective. Usually such references mark anniversary orations, while in the everyday relations between their members and the employers class collaboration is stressed and militancy is discouraged. But whatever we may think about militancy or its lack in the trade unions it is a fact that aggressiveness, the will to hold fast to every gain that has been secured and ceaselessly to struggle for additional improvement is as necessary to a real, functioning union as red blood is to a healthy, living body.

I. W. W. ideational soundness and the eager determination of its advocates to propagate the message of revolutionary industrial unionism, to establish the correctness of its theoretical position by the evidence of victories crowning its practical application, early aroused employing class antagonism. As circumstances and their tempers dictated they have seen fit to jail our members, to deport them, to lynch them, to deny free speech and press and to raid our halls. Now had we been appalled with a sense of our unworthiness or oppressed with hopelessness; had the bosses been able to beat this red devil of industrial union conviction out of us there would now be no I. W. W.

Aggressively and defiantly our speakers delivered their message to the workers; our delegates and organizers continued lining up new members; for every man sent to prison in the struggle many others joined the organization; Wobblies deported for agitating returned to agitate some more, and when the ruling class forbade our presses to operate we published our opinions notwithstanding. These are not the acts of pacifists. We are engaged in class warfare. Recognizing this belligerency between workers and employers the capitalist press does not regard it as an insoluble problem, but the fierceness with which the battles of industry are waged has compelled reflection in the language of bourgeois publications. "Wage disagreements" as they were called a few years ago are now headlined as "Industrial Warfare." With these journalistic sciolists evincing such an advance in terminology is it not time for the workers to regard their struggle as a class war?

Moreover, it is also time for well-meaning liberals to cease mentioning Wobblies as pacifists, as men and women imbued with a "turn the other cheek" spirit, or with the non-cooperation philosophy of the Indian leader, Gandhi. Recognition of class war leaves no place in our tactical program for such systems, but their influence has been active in our organization. Whenever a labor union loses its militant spirit it is in a dying condition. We have no other business as industrial unionists than that of opposing the employing class at all times and striving for the enlistment of other workers to the struggle's support.

Christianity itself, which is usually glorified as a pacifistic philosophy, hid away in the darkness of catacombs so long as its leading protagonists adhered to a non-militant philosophy, and it came out of the hole to spread over the world only when its mission was propagated at the sword's point. Gandhi's philosophy already betrays inconsistencies, and we find him quite recently saying that it is all right to fight to defend what you have. No passivity there. The I. W. W. is abreast of the times, and we are not in the age of the spinning wheel any longer; neither, then, should our mental processes hark back to ancient pacifism that proved a failure. The working class is faced with a machine development that steadily throws larger and larger numbers of workers out of jobs; that contributes continually to capitalist concentration and working class misery. This class operates the machines socially and the solution to its problems is in the abolition of private ownership of these wealth producing tools. The I. W. W. is fighting for possession of these tools by the working class.

Martyrdom is incidental to the progress of this battle for proletarian freedom; it is not the objective, and any who have entertained such an idea have not grasped the purpose of our organization.

**SOLIDARITY IN FARGO.**—The Chamber of Commerce of Fargo, North Dakota, recently ordered its police to arrest members of the I. W. W. going through that section carrying forward organization work among agricultural workers. Twenty-two members of Agricultural Workers' Industrial Union No. 110 of the I. W. W. were jailed as a result and they are being held. When release was offered to all but three of the group it was refused, the men saying that all must be freed.

This kind of concerted action is very bad for the bosses and they know it. An expression of it through the entire harvest belt has resulted in higher wages and better conditions generally for the workers. Our fellow workers started the drive properly by declining to work for the "going wages," which were around three dollars a day. They held out for five and got it. John Farmer does not know that when he beats his "hands" down in wages and living conditions he is only saving that much more to hand over to the bankers when the harvesting is over. But the bankers know it and they fight the I. W. W. to insure a substantial "steal" by fall.

Let the membership hasten at once to the support of the jailed men at Fargo and

**Whose Art Is A Sword Carving a Way For The Working Class**

## "Every Talent Carries with it a Social Duty"

IN THE never-ending tide of our human history ride the laboring masses, toiling, struggling, dreaming; enslaved by their own ignorance and disunity; occasionally becoming conscious enough to revolt; and now and then throwing up personalities to show the world the wealth of suppressed beauty and genius which lies buried in the depths—genius that the human race can ill afford to do without.

One of such personalities is Käthe Kollwitz, of Germany, a woman artist of world renown who is a convinced, unbitter and earnest champion of working class emancipation. She stands among those artists who, during the past half century, have demonstrated the intimate connection between social forces and creative art. For, just as aristocratic, feudal and bourgeois society each in turn are mirrored in the art of those periods, so has society produced and continues to produce today—with historic naturalness—artists who picture the struggles of the working class. The first of such artists was the Frenchman Millet; then Delacroix, Daumier, Courbet, and the master sculptor Rodin; the Belgian Meunier, creator of the Statue of Labor; the Hollander Joseph Israel; and the Germans, Klinger, Liebermann, Fritz von Uhde, Heinrich Zille and Käthe Kollwitz.

The only woman among these artists of the period is Käthe Kollwitz. She is of special interest to us for of all these she is the most conscious, convinced pleader for the working class; added thereto, she is a person of great simplicity, sympathy and richness of character; and not only is she one of the greatest living artists, but she is a clear product and expression of the present historical epoch. Her father was a master mason who fought in the Revolution of 1848 in Germany, and it is undoubtedly to his influence that she owes her philosophy. For he aroused in her the consciousness of social duty and always held before her the words of her grandfather that "every talent carries with it a social duty." "The Song of the Shirt," by Hood, was the first poem he taught her, and from this earliest childhood impression has sprung one of her well-known etchings, showing a miserable, poor home worker,—a mother sitting by a cradle and sewing shirts far into the night until she falls into exhausted sleep on the table.

It is not without significance that, in days when

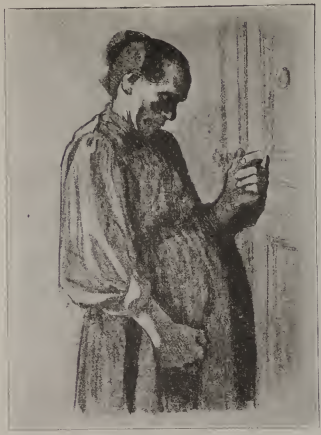
Lent by Emil Richter Verlag, Dresden, Germany.



women were supposed to be capable of nothing more than housework and of caring for a dozen children, Käthe Kollwitz's father arranged for her training in drawing and painting in Konigsberg, then later in Berlin and Munich. In her early twenties she married Dr. Kollwitz, a young physician and socialist who, upon graduating from Berlin University, went into the workers' section of North Berlin and, from that date 35 years ago until today, has remained the patient, often unpaid physician of the working class. The young wife not only nursed her husband's patients, but she reared two sons, and she turned her little flat into a studio.

Motherhood did not prevent her from working with great intensity at her art. Her first work was "The Song of the Shirt." Her second brought her before the art world of Europe. It was a series of etchings entitled "The Weavers' Revolt," planned after having witnessed the first production of Gerhard Hauptmann's drama, "The Weavers," in 1893. The drama was subsequently suppressed by the government, but the misery of the weavers of Silesia as therein depicted had swept over the soul of the young artist; it gave her the impetus to labor for four years on six etchings which, when exhibited in the Great Art Exhibition in Berlin in 1898, won not only the medal for graphic art, but caused one of the most noted art critics of the day to write that her creations revealed "visions wrung out of a frightful reality by a steady, strong, healthy hand; unfanatical, humanly-clear drawings, with simple, almost chaste lines."

### "War of the Peasants"

The work which placed her on the pedestal of fame was her "War of the Peasants," inspired by a history of the War of the German Peasants in the 16th Century. This cycle of seven great etchings covers the following themes: (1) peasants, instead of horses, drawing ploughs; (2) the body of a peasant woman, raped and left dead in a marsh—these first two themes showing conditions which led up to the war; (3) a peasant woman sharpening a scythe in preparation for the coming conflict, her face sinister with hatred; (5) the "Outbreak," showing in the foreground the great figure of a peasant woman leader, her body tense with passion and inspiration, her arms upraised as she calls to the oncoming tide of peasants who, like the waves of an angry sea, sweep onward with mad cries. The words of Edwin Markham in "The Man with the Hoe" are recalled—

"O masters, lords and rulers of all lands,
How will the future reckon with this man?
How answer his brute questions in that hour
When whirlwinds of rebellion shake all shores?

THE HIRED WOMAN
Lent by Emil Richter Verlag, Dresden, Germany.

How will it be with kingdoms and with kings—
With those who shaped him to the thing he is—
When this dumb Terror shall rise to judge the world,
After the silence of the centuries?"

The sixth drawing of the cycle shows the imprisoned peasants, bound and coralled like wild beasts: great shoulders, upturned faces of defiant hate, crushed but not defeated; the bound, drooping body of a little boy who, with the others, had "done his bit." And, lastly, the field of slaughter at night, —the black horizon, the heaped, brute-like forms in the darkness, the bent body of a peasant mother with a lantern stealthily turning over the dead in search of her son—the ghastly face of a dead man cast in relief in the light of the lantern. This cycle of work, as well as "The Weavers' Revolt," hangs in the National Art Gallery in Berlin.

**Kollwitz a Revolutionary**

Only a strange kind of Jesuitical reasoning can force a person to say, after gazing at this cycle, "Käthe Kollwitz is not a revolutionary—she is **above** all that!" as some do say as they sit in evening dress about drawing rooms discussing great personalities. Yet to those who are close to life—who have touched bed-rock as it were—on the pencil of this woman artist rides an emotional conviction as deep as life, compelling them to rise with the peasants or weavers, fight with them, and lie with them on the field of battle with their dead.

Her well-known drawing entitled "The Carmagnole" pictures bloodthirsty women dancing about the guillotine of the French Revolution as members of the aristocracy were given to the knife. A wan, half-grown boy, in rags, stands in the foreground and beats a drum, his face mad with blood-lust; a stream of blood runs from under the guillotine through the cobblestone pavement; and the mad women dance and sing "The Carmagnole," one of the songs of the French Revolution.

Käthe Kollwitz is sometimes referred to as the artist of social misery. But she is more than that, although it is true that the dark side of life of the poor has occupied her more than the joyous. One of her etchings bears the inscription "Aus vielen Wunden blutest du, O Volk"—"You bleed from many wounds, O People." And in that phrase is summed up her life-work, for she has indeed shown the wounds of "das Volk" to the world; she has pleaded, she has warned, and she has stormed the gates of heaven with them. In the first twenty years of her artistic activity her themes dealt chiefly with revolt, with uprisings and revolutions. We can follow this thread that runs through her life in all her famous works, the source of which were, as we have seen, literary.

**New Concepts Born in War Period**

With the beginning of the world war, however, new motives crept into her work. Life itself becomes more overwhelming, more commanding than literature or history, and thenceforth her themes deal with poverty, famine, hunger, illness, death; the **motif** of deep human love, especially between mother and child, is predominant; the **motif** of death recurs endlessly. And since her art is an intimate part of her own life's experience, we must know that her youngest son, a youth of 18, was one of the first volunteers in the war. She was deeply opposed to his enlisting. He was among the first soldiers to fall, and this tragedy in her own life may be studied in her war posters—in the misery of mothers waiting in death-like calm for news, in the posters of death; in crouching, animal-like forms expressing the grief of mothers over the dead bodies of their children. During the war she produced a series of seven woodcuts entitled "War," all expressing the deepest human tragedy. One is entitled "The Volunteers"—faces of young men, insanely intoxicated, their eyes closed, following Death beating a drum; another entitled "The Mother," picturing a woman, her face turned in fear in one direction as her outstretched arms enclose and try to protect many, many men, youth and boys; the last is "Das Volk"—in the foreground the form of "das Volk"—a face of calmness—unearthly calmness—surrounded by mad, fierce faces shrieking at it; and yet it remains calm.

Apart from many of her concrete drawings picturing death, the best-known of her works on this theme is entitled "Tod und Frau" (Death and Woman), showing death and a little child struggling for

the body of the woman—a creation of deepest subjective origin. Such art critics as Kaemmerer * state that this work can be classed with any of the masterpieces of the immortal Michael Angelo. But to class it with the symbolic masterpieces of Rodin seems more appropriate. Certainly it is majestic: the beautiful, strong, nude body of the mother struggling against the grip of death from the back, while the tender hands of a little child cling to her from the front. The work, like other deeply human symbolic creations, is capable of many interpretations: we may say it is life struggling against death; we may say it is life and death struggling for the mother; we may say it is the working class struggling for emancipation; we may say it is subjected peoples struggling against oppression.

By this one drawing alone—not to mention others—we see that the creations of this artist of the oppressed are not only historical, not only social, but that they touch also the eternal, elemental, primeval instinct of Life, as old as the first amoeba, —to picture which gives immortality to any work. Added thereto is her techinque, for—apart from her pen and pencil drawings, her woodcuts, and the sculpture on which she privately works—she is classed as one of the greatest living masters of the art of etching. Her technique can be understood by the simplest and most unlettered of us, and it is typical of her that she did not choose a form of expression which could be understood only by the initiated, the learned, in art. Her technique, on the contrary, is as close to our understanding as are her themes to our hearts. It is a simplification of the idea of the forces driving the masses—forces as primitive and elemental as the sea or the storm: fear, hatred, rebellion against injustice; and the hunger for love, for happiness, for freedom that is the right of all that exists. In a few lines only she will picture her idea—suppressing detail. With the exception of a few of her creations, the details of the body concern her little, and throughout it is the expression in the face and hands at which she aims. The sophisticated might laugh when told that she has made innumerable etchings of the worn, character-full faces of working women, as well as numberless sketches of the hands of workinmen,—large, rough, strong hands which to see is to love for their beauty and strength.

**Moving With the Battle of Life**

Added to her other works of art, we find countless studies taken from the working class of today

DEATH AND WOMAN

Lent by Emil Richter Verlag, Dresden, Germany.

—the theme of the mother and child predominating. And there are many other productions, such as her "Gretchen" drawings, inspired by the immortal Goethe, of whom we, in America, unfortunately and to our loss, know practically nothing. One of her drawings is of a hired woman, soon to become a mother, her head bowed in pain, as she stands in the act of knocking on the door of her elegant mistress. Perhaps the most gripping of her posters is the one entitled "Bread." Another poster is "Nachgeboren"—meaning the children born after the war; half-starved, stunted children gaze dumbly upon the war-torn world into which they have been brought. Still another poster of note is a crude outline of a miserable old woman, her arms upraised in hopeless questioning, as if she has come to the end and merely awaits the hand of destiny.

In later creations the artist has thrown her whole soul into forms of pathos and solicitude. We see sick mothers gazing into the faces of hungry, questioning children; a working mother laughing in the joy of her baby: "Unemployed"—a man sitting and gazing into space, his thin chin sunk on one hand, while his wife lies with one tender baby in her arms, two other children sleeping in exhaustion on her sick bed.

**Her Greatness Recognized By the World**

Today the world brings honors to the door of this artist of the masses; the National Art Gallery in Berlin, the famous Art Gallery in Dresden, as well as other museums of art throughout Germany, consider it an honor to own and keep her originals on exhibition; valuable medals have been presented to her; the Ministry of Education of the German government has conferred upon her the

title of Professor—and in Germany "Professor" is an official academic title of the highest order. Lengthy, learned books, such as Kaemmerer's book already mentioned, as well as others* have been written on her life and work, and all parties try to explain just how it is that she is, or is not, a revolutionary, and therefore a follower of their programs. But she belongs to no political party, nor is she interested in them. She is now 58 years of age, and remains unimpressed by attentions, medals, books, or professorships. Her ceaseless physical activity would lead one to believe she is no more than 40. Her life is as simple as that of an ordinary working woman, and she still lives in the Workers' Section in North Berlin. Her gaze is direct and her voice startlingly strong and she sees far beyond those who bring her superficial, external tributes or who try to use her for their own propaganda purposes. She is a silent person, but when she speaks it is with great directness, without trimmings to suit the prejudices of her hearers. Many people, before meeting her, expect to see a bitter woman. But they see, instead, a kind—very kind—woman to whom love—strong love, however—is the rule of life. And in speaking with her one always has the impression that truth alone is of value to her.

### "A Product of the Working Class"

She could have wrung a fortune from her art, for she is famous throughout Continental Europe; but she considers that she is a product of the working class and that her talent belongs to the masses. "Every talent carries with it a social duty" is written large upon her soul. Her countless posters, which may be seen throughout Europe, have been drawn for all kinds of relief committees, for labor organizations, for famine committees, for exhibitions of the work of home workers, and many of them have been done without cost. She has not, as have many artists, considered her talent as her personal property; she is a product of certain social forces, to which her talent is due.

. . . . . .

"What has been the purpose of your life's work —what have you tried to achieve?" the writer of these lines once asked Käthe Kollwitz.

"I have tried to arouse and awaken mankind," she replied.

"And why have you devoted yourself to the working class instead of to the upper class, like many other artists?"

"Why? Why—the working class has beauty and strength and purpose in life. I have never been able to see beauty in the upper class, educated person; he's superficial; he's not natural nor true; he's not honest, and he's not a human being in every sense of the word."

The work of this woman artist shows us that the working class is not only as she says, but that it has all the human weaknesses, pettiness and often anti-social passions, as well a real human strength, greatness and social purpose. Yet, whatever may be the immediate effect of the work of Käthe Kollwitz, two things are clear to us: when the present historical period has passed into time, her art will stand as a record of the struggle of the working class to build a new world; and, on the other hand, it will endure, as do the dramas of the ancient Greeks, because it has, with strong, simple technique, brought to conscious expression certain deeply-human and psychological problems and truths which are common to all men through all time.

# The Lust for Power

By W. C. OULD

MANY innocents abroad are greatly worried lest "all incentive" to the exercise of executive ability will be destroyed once the profit incentive is abolished by society. They need not be. The lust for power will more than offset the loss. This all my experience in the labor movement and with cooperative enterprises, plus my experience in political parties, plus a wide reading of ancient and modern history, seems to bear out.

As a matter of fact, the profit incentive is the lowest of all urges determining the action of a real executive, while the lust for power is among the highest, strange and heretical as this may sound. It all depends on what lines, and for what cause, the executive is lusting for power.

Already there are hundreds and thousands of men and women in the labor and radical movements who could make far bigger wages if they were governed by the profit incentive in their actions; but, consciously or unconsciously, the lust for power drives them on to so-called sacrifices for The Cause. This applies as truly to a Debs and a Mother Jones as it does to a Lenin and a Trotsky, to a Christ as it does to a Mahomet.

Verily, verily, I say unto you, the lust for power has been a far greater motive force in human evolution than "democratic" historians want to admit. The working class, and especially the American working class, is today in its present subject state almost solely and entirely because it has no real, true lust for power. This applies especially to all craft unionism regardless of affiliation. It not only has no lust for real power—it fears it. Everywhere it dodges industrial and social responsibility, is content to take orders so long as its belly is reasonably full. So ludicrous on the part of the A. F. of L. "leaders" is this fear of the assumption of power that they hardly ever open their mouths that they do not immediately assure their enemies and the world that they have no intention and no desire whatsoever to interfere with any of the fundamentals of wage slavery, or capitalism, as this form of robbery is euphemistically styled. So greatly, indeed, do they fear the assumption of power by the working class that they not only fight all workers who dare raise the cry of "All Power to the Workers!" in the most vicious and treasonable manner possible, but they have gone to the shameless length of separating themselves entirely from the world labor movement and to O. K-ing every move of the rotten American imperiaists on the world checkerboard, leaving to the lords of the plunderbunds the dictation of the policies to be pursued by the American government regarding international labor and all other problems.

Here, though, the "leaders" of "organized labor" are merely casting the intellectual shadow of the groups they represent, for they speak not truth who assert that the Gomperses and Lewises, the Johnsons and Farringtons do not truly represent the aims and ideals (if willingness to sell oneself children and class into eternal slavery for a cent an hour advance in wages can be called idealism) of the A. F. of L. The "leaders" are what they are because their rank and file are what they are, and all of them are what they are because the American working class has not yet developed a lust for power.

That is why, because they fear the assumption of power, which always and inevitably means the assumption of economic and social responsibility and all the penalties and dangers thereof, that "organized labor" in the United States was scared almost as stiff as was the plutocracy when the Russian revolution hurled the tsardom into the sea of blood and terror that is crimsoned off on the map of history as "Capitalist Civilization."

Whether it be a subject race, a subject nation, or a subject class, not until it develops a lust for power can it hope for freedom—for the powerless are always slaves, and that whether their chains are gilded or not.

The sooner the American working class wakes up and learns this and recaptures and reincarnates in inself something at least of the fighting spirit of its frontiersmen forefathers, the better it will be for the American working class, the republic and the world.

Lastly, in this highly industrialized, supertrustified naton, the working class has but one road left by which it can march to the real conquest of power, and the name of that road is "Industrial Unionism," for it is only through its **economic** organizations that the working class can hope to hold for itself what is taken by it, whether the takings be higher wages, shorter hours, better social conditions, or the world and all that is in it,—for it is the **holding** and not the **taking** that counts, a fact the workers should always remember.

Finally, remember this: In all organizations, "God—Power—is on the side of the heaviest battalions, but the heaviest battalions are composed of three-quarters spirit and one-quarter matter." This has been proven time after time by the I. W. W. Let our young men and women prove it once again and more gloriously than ever before!

**All Power to the Workers.**

# Bill Stroud Does it All

By ALBERT WEHDE

This powerful story by the co-author of "Finger Prints Can Be Forged" sets forth an incident of prison existence which is just one tragedy of the endless line of tragedies for which the system of incarceration is guilty. We think no more impressive evidence of the effect of prison environment on conduct has ever been written.

VISITING days were always the hardest for me at Leavenworth. Sightseers came in droves on Tuesdays—curious persons, mostly from other towns and frequently from far away, to whom the sight of caged humans, moving automaton-like at their tasks, was a thrill to be remembered for years. Obviously many of the visitors had no legitimate business there; those who actually came to talk with relatives or friends behind the bars were in the minority. . . More than half of those who came were women—glib flappers, older women wearing too much rouge, unsatisfied ones in the dangerous age, who played their own emotional needs against the needs of starved men within the walls, and made the hunger of these men more desperate than before.

Escorted through the prison by guards, they gazed upon the gray-clad inmates of the workshops, where shoes and shirts were made and where printing was done. A talkative crowd these visitors for the most part, courting adventure, dropping notes to be found by prisoners, soliciting clandestine correspondence, and thus paving the way for affairs of passion after the men concerned were free again. Some of the women were social exiles, as much outcasts as the men they pitied in the prison, even though they had the freedom of the streets. . .

But there was one woman who did not come on regular visiting days. The first time I caught sight of her I was struck with wonder. It was on a Sunday, which is not a day for callers. She came toward me in the corridor of the main building. I was new to the prison, and almost spoke to her, but remembered in time the rule which forbids inmates to address visitors. . . . She was in black, and her dress was worn and rusty with age. Her hands and face were those of one who had been battered with storms. At the end of the corridor she turned to the left, into the brick-paved alley, passed along the mess-hall and beyond to the right, where I saw her enter the door of a house that is synonymous with burial alive—the house of permanent isolation.

"Who is that?" I asked an old-timer near by.

"Bill Stroud's mother. She has a special permit to visit him on Sundays. I don't know how she got it."

My dormant imagination was aroused. It is the way with all prisoners. One gets to musing and if one stays long enough one becomes prison-simple. The mind wanders, things appear in an exaggerated light. Surrounded by evil, day after day, year after year, one learns to disbelieve the existence of all virtue, to deny it, and to ascribe sinister motives to every human act. Some men succumb to this mental aberration in a few weeks, others withstand it for months, for years perhaps—but it gets them all in the end. I tried consciously to retain my belief in the inborn good of all mankind and looked for virtue everywhere. I hungered for company of decent people—a boon denied to those who need it most. Association in the flesh being barred, I sought for it in the spirit, and dug out of the dead past the memories of all the fine characters which had touched my life. My days and nights were spent in reveries of the long ago, blessed reveries, for they took me away from the ghastly and unclean present; made me forget, for hours at least, the faces of my fellows, most of whose eyes mirrored vice and depravity, weakness and insanity. Scrutinizing new faces, always trying to fathom their tragedies, and struck by the unexpected sight of a woman in a man's prison, and on a day not a visiting day, my interest was doubly aroused. I must learn the story of her sorrows.

From that day on I looked forward to each Sunday hoping to catch a glimpse of this old mother who occupied my mind quite as much as did the memory of my own mother awaiting the day of my return home. With my face pressed against the bars of my cell, eagerly scanning the yard, I saw Mrs. Stroud often, but only once did I have the opportunity of passing near her.

I was called to the deputy warden's office one Sunday morning and as I neared the entrance of the building within which this functionary's quarters are located and which also contains the cells for permanent isolation, I met the old woman coming out. There was the pathetically sweet look on her face that I had observed before, and I dared whisper a "good morning." She answered with a

glance of warmhearted friendliness. My eyes followed her and I saw her turn to cast one lingering glance at the red brick walls of her living son's coffin. Then she passed on, tears hanging from her lashes, though her face illumined with a glow of faint but exquisite happiness.

I inquired into her son's history.

Bill Stroud came from Alaska on a ten-year sentence for homicide. His lack of mental poise culminating in the taking of a life, was to be corrected by lengthy intimate association with oil stock promoters, bootleggers, dopeheads, counterfeiters and sadistic prison guards. The cure, though prescribed with the best possible intentions, did not take.

The most absorbing chapters of human history are devoted to man's errors, though few occupy themselves with it. Unlimited energy is spent in throwing the limelight of investigation on the accomplished deed; the thought which impelled the deed, the source from which the thought sprang, the conditions which developed it, are persistently ignored. Swat the fly is the maxim, while its breeding place remains undisturbed. I know nothing of the details of Stroud's first homicide. But it was not a premeditated murder—that much appears from the measure of punishment pronounced upon him. It was a deed of passion, and men giving way to passion must be restrained. Prison life is physical restraint for the time being. The spirit roams in an imaginary world, breeds thoughts of revenge; fantasy develops weird pictures, a breeding ground **par excellence** of all that is evil and vicious and dehumanizing.

Prison guards are constitutionally devoid of ambition. Aversion to creative effort is the only mental prerequisite fitting a man to become a keeper of caged unfortunates. Drowsing idly in the sun, watching others stall at their labors, year in year out, does not improve man's mental nor physical make-up. Lack of exercise spoils the digestion, and when dyspeptics are clad in blue cloth trimmed with lace and gilt buttons they are certain to take advantage of their authority by venting every ill humor on their hapless charges. For a prisoner to complain against his keeper is to invite the most ruthless persecution. He is beyond the pale of every law.

Detailed to work with a gang whose overseer was particularly given to practicing subtle chicaneries on prisoners, Stroud brooded and grew bitter. He abhorred his surroundings and hated in particular the guard who every day showed his unfitness for the job he held. Bill could have done away with himself; prisoners do sometimes, but that was not his way. He decided to take the guard with him to eternity.

He managed to conceal a table knife, blunt enough not to be considered a weapon. During many unobserved hours he sharpened and pointed it by whetting it on a stone. One day, during the noon meal, his persecutor stood near his table. He raised his hand in token of a request he wished to make. The guard approached and Stroud plunged the steel into his heart.

Prisoners and guards stood aghast, pale and trembling. The murderer brandished the knife. None dared approach him. He pointed it at his own heart, then laughed raucously, threw it to the floor and said:

"Take me to isolation!"

They did. He was tried for first degree murder. There were no extenuating circumstances, at least none could imagine any, and he was sentenced to be hanged.

His mother came from Alaska. The small home he had provided for her was sold to enable her to make the long journey. She arrived penniless. No matter to her, she must be near her son, hold him to her heart once more, and bring him her blessing.

Sometimes the wheels of human justice work like the mills of the gods. They are damnably slow, but there the similarity ceases. The gallows were built, in the prison yard, but the day of execution was deferred. The old mother, without means of support, scrubbed floors in Leavenworth village and did washing, anything to earn a crust of bread. She visited her doomed boy as often as the rules permitted and brought him the few permissible luxuries she was able to procure.

On the evening before the hangman was to discharge his duties came a commutation of sentence —condemnation to a lingering death in permanent isolation.

"He is a tough guy," other prisoners said. "He would kill you as quickly as that!" and they snapped their fingers to indicate how easily and quickly Bill Stroud would take a life.

I pondered, trying to figure out what deep-seated emotion would induce a man to commit a deed that would only render his condition more acrid. He could not hope to evade the most stringent punishment, that would at once and forever do away with every possibility of freedom and a life worth the living. I felt sure that I never could do such a thing no matter what sinister influences might be brought to bear upon me. And when I considered that every violation of prison rule, even the slightest insubordination indulged in by a single prisoner, necessarily compels the warden to introduce still harsher measures of restraint under which all inmates must suffer, I felt bitter towards Stroud. If his fellow prisoners were not worthy of any consideration, how about his own mother? Should he not have behaved himself and abided in patience for her sake? Like the Pharisee, I thought myself better than he.

Soon after the morning's meal has been disposed of, the signal is given for "sick call," and all the ailing lined up according to their places of employment, march to the hospital where they await their turn standing outside in long lines. Gang after

gang enters, the men file past a little window where they state their "symptoms," receive a few pills or powders, and proceed to their stations. Only the visibly ill are ushered into a small operating room where their temperature is recorded and some pretense at treatment is made. Prisoners are detailed for that work, only the severest cases being taken in hand by the prison's solitary physician who must look after the physical ills of 2600 men—3300 now (May 19, 1925).

It was in the early spring, the "flu" had made its appearance, and the hospital was overcrowded. There was a paucity of nurses, the warden had issued a call for volunteers for sick-room service, and the response was a credit to the inmates. Great numbers solicited the opportunity of ameliorating the sufferings of their companions.

I had spent a restless night, I was feverish, had pains in muscles and bones, my throat was raw. In the morning I joined the "sick call" and went to the hospital building. For half an hour I stood in line outside in a drizzling rain. At last our file was permitted to enter and in due time I went in the operating room. Its walls were lined with sick men and dope fiends. There was no privacy. Venereals received their treatments in plain view of all. Disgust increased my ill feeling and my turn came none too soon, for I was becoming nauseated. My temperature was noted.

"Number 16576 has 104 fever; put him to bed!" the attendant, a Saint Louis counterfeiter and forger, called out, and I was taken to an upper story.

The room I was taken to was a large one and would have been airy had it not been overcrowded. Normally there were two rows of beds, heads towards the walls, feet to the center, with ample passage-way between. Now the beds were moved close together, a foot apart, and the gangway leading across the room, between the foot-ends of the two rows, was likewise filled with cots. I was put into one of them.

Just what treatment I received I do not know, for I have no recollection of seeing the physician. I know that ice bags were put on my head, but that is all I can remember of that first day in hospital. Night came, and what happened then is forever graven into my memory.

A voluntary nurse, nicknamed "Frenchy" was assigned to stay with me. He was solicitous, even tender, took my temperature at intervals and made the required cold applications.

In a regular bed, the foot-end close to my head, lay a red-headed military prisoner who was recovering from an operation for appendicitis. As the hour grew late the redhead and my nurse considered themselves safe from interference. The former turned in his bed, so that he lay with his head at the foot-end of it and in close proximity to where my nurse was ministering to me. The two conversed in low tones, and though their words were whispered, each one resounded on my ears with painful loudness. Both were serving sentences for unspeakable crimes, and now they boastfully gloried in their degenerate impulses.

Footsteps emanated from the next room, connected with mine by a passageway, along one side of which were several enclosed toilets. The redhead quickly reversed his position, Frenchy occupied himself with the ice bag and quiet ensued. I felt sickened, jumped out of my cot, ran toward and entered the first toilet. Instantly a rough voice yelled:

"Get out of there! Can't you read that sign? Get out, I say, that toilet is for venereals-"

It was Beck, the hospital guard. He said much more than that, but it was not what he said as much as the way he said it that upset me completely. My impotence galled upon me, my helplessness embittered me and engendered in me the wish to commit murder.

I went into the next compartment. It had no door, and from here I could see a table upon which were the rests of the night nurse's meal, with spoon, knife and fork. "If that knife could only cut anything," I mused . . . . and I thought of Stroud. . . .

Then my eyes became riveted to the fork. Its prongs seemed sharp enough—there was no small, still voice to detain me, there was only urge: "Take the fork and jab it into his belly—deep, deep"—and I argued with malevolent logic: "It is unclean, full of food-rests. It will penetrate his intestines. It will cause gangrene which is sure to kill him, and he will live long enough to know why you did it."

Vicious thoughts raced and raged in my brain. What did I care for consequences? Not a bit. I felt that no jury would convict any man for a deed committed under a temperature of 108.

"Hell, man," I said to myself, "you are out of your head; you are not responsible for what you do. Go ahead, run that fork into Beck's guts. Kill him. Be a hero like Stroud is a hero. And what if they do hang you? You will merely give your life for the betterment of the world. Life is such a little thing to give. You will die for your fellow prisoners—it's all right with Christ!"

With these thoughts I sneaked across the narrow way to the table, took the fork, hid it under my shirt and went back to my cot. There I lay, hour after hour, my temples beating as the hammer blows and my brain possessed with the one thought: "Kill, kill!"

But Beck did not pass that way again that night, nor did any other guard. In the morning I was given a narcotic and became quiet.

Would I have killed Beck? I hope not—though I fear yes!

Weeks passed. I had recovered and was working again in my allotted station, which was the laboratory for personal identification. connected

with the photographer's shop where every newcomer's picture is taken.

One day the word passed:

"Stroud is coming!"

It was true. The term of his first sentence had expired and he was now to begin his second term, life. "Doing it all," as prison parlance expresses it. In accordance with the rules he had to be re-photographed and re-booked.

I was eager to see him. My experience in the hospital had caused me to apologize mentally, but sincerely and often, for the unkind thoughts I had harbored against him. Though his act was an error, his spirit of self-sacrifice impressed me. Is it not the same that imbued **von Winkelried?**

He came accompanied by the dressing-in officer. His candid face and friendly smile contrasted sharply with the brutal and vicious appearance of the average convict. He was tall, gray-eyed and slightly stooped. The flesh of his cheeks seemed transparent in its prison pallor. Four years he had passed in solitary confinement. His visit to the photographer was the only break in his monotony, the only one to dwell upon during the rest of his life. It was an adventure to him and he showed it in every glance and by every word he spoke or heard spoken. The eager curiosity with which he viewed every face and every object was pathetic. His guard was not inhuman and while he did not countenance extended conversation, he did permit a few commonplaces.

"What are you in for?" Stroud asked me.

"I am a political," I replied.

"Are you a pacifist?" He looked at me quizzically.

"No, I am German and . . . ."

Here the guard raised a warning finger and led him back to his sepulchre.

# PROCLAMATION

**THROUGH THE PRESS OF ALL COUNTRIES OF THE WORLD TO THE SEAMEN'S ASSOCIATIONS OF ALL COUNTRIES, LABOUR ORGANIZATIONS, LABOUR MOVEMENT PROMOTERS, AND ALL WHO ARE INTERESTED:**

**After three times of shedding the blood of unarmed Chinese students, labourers, and parading girls and boys in Shanghai, Hankow, Shameen and Canton; and four raids of colleges; and dozens of assaults, beatings and severe physical injuries applied to Chinese citizens, the Shanghai Branch of the Chinese Seamen's Union now ranks among the list of victims of the foreign haughty, greedy and barbarous imperialists at Shanghai.**

**The said office was raided, without any reason, nor any official notice, at 5:40 P. M. July 3rd, 1925, by fully armed police and detectives. Officers and members of the Union were driven out without time to take any personal effects, and the office was immediately locked and sealed up.**

**What right has the foreign municipal council to do this? The Chinese Seamen have rendered good service to all countries of the world—that is, to mankind, and now we, together with our race, are suffering from such a vexatious and inhumane torture! Can you bear to hold aloof, without giving your immediate and needed help to suppress imperialism, and to efface the shame of mankind?**

**Our Enemy is your Enemy! Our Defeat is your Defeat!**

**Give us your helping hand without delay for the sake of civilization and the fuutre of mankind! Else you and all of us will always fall!!!**

**THE WHOLE BODY OF CHINESE SEAMEN, WHARF AND TUG WORKERS, Shanghai, July 4th, 1925.**

# Evolution and Labor

By ROBERT WHITAKER

**THE other day a girl walked into my office and laid a large envelope in my hand. The envelope contained a manuscript poem of considerable length, and I thought at first glance that I might as well be done with her at once and tell her that we do not use much verse, and only brief bits, in The Open Forum, of which I happed to be editor. However, she was so quiet about it, and so altogether unpretentious in her manner, that as a matter of courtesy I read it, while she sat in silence at my left. The poem startled me, rather bewildered me, I confess. It had literary quality, which was enough in itself to justify some surprise. And it was frankly, even brutally violent, in its conclusion. "Who wrote this?" I asked, with more show of interest than I had manifested up to that time.**

"My father," she replied simply.

"Ask him to come in and see me," I said, and she went her way. The next day her father called. He was a plain-appearing man, who looked like a laborer of the more serious type, but there was nothing otherwise unusual about his bearing. I satisfied myself that there was nothing violent or abnormal about him, and that his poem was an expression of something deeper than the literal reading of the words would imply. It was a discussion of evolution, certainly not from the standpoint of the Fundamentalists, and quite as evidently not a championing of the scientists. I had felt for days that something needed to be said on this subject which neither side had uttered, and was not likely to utter. And here it was. Perhaps you will like to read the poem yourselves, you who have not already found it in our Open Forum.

# We Miserables

By FRANK FORBES

We both, low born.
As children, we knew the gutter;
Later I, the perils of the sea,
The danger of the deep bored mine,
The toil and risks of foundries,
And now at fifty,
The mule-like lot of daily ditch digging.
She, the factory,
And other benumbing drudgery;
And then, the giving of birth to seven children.

And we quarrel;
And curse our fate;
And twice came to blows!
Once because I took teo beastly to drinking,
And again, during a strike,
When hungry and the children were crying for bread,
She wanted me to scab;
Didn't let me in peace about it,
But nagged, and nagged;
Wherefore I struck her!

Our children, too, are rough-necks and ignorant;
But at that, not really bad.
They are proud and pay their way.
The girls work in laundries and factories;
The boys, in foundries and sell papers.
One is a messenger boy.
One of the girls seems born for better things.
She's pretty, dresses neatly, and reads novels;
But is disgusted with life!
Long hours of drudgery make her unhappy.
She is broken hearted!
One of the boys lost both his legs in the foundry,—
Now sells pencils, and collar buttons,
And shoe strings from a cripple's chair.

Nice looking fellow, too;
But ill-tempered;
And though good to his mother,
Curses me for having had him born. . . .
And so, as a whole, we're not a bad lot,
No, as a whole, we're not a really bad lot!

But my point:—
Why, then, Mr. Science, and Mr. Progress,
And Mr. Evolution, and Mr. This, and Mr. That,—
Why, jeer, and pook, and say:
"You fool, there is no Beautiful City!
You fool, there is no Eternal Summer!"—
And WHY isn't there? . . . .
THERE SHOULD BE. . . . .
For we're cold—we miserable;
And are dying to pitch tent in a warm land.
Are dying to know the glory of a perfect day.

Ah! I know,
You'd like to accommodate us,
For you know we deserve to be,—we miserable;
But you're square, and loyal;
You mustn't falsify facts.
For facts are facts. Two and two make four, not five.
I know. In what I read
In your great, illumming books,
It shows plainly and positively that there's no such world
As we—we miserable, dream of.

No, there's nothing to be expected.
Nothing but six feet under ground.
Yes, I know.
I hear all about that at the socialists' meetings, too.
Also at the Union and at the saloon.
And I tell you, those fellows know.
They're scum and slaves, but they KNOW.
They read all your books;
Everything; and understand.
They know more than a lot of professors.
And they love you, and preach, and spread your gospel.
They'll soon have us all believe in your way,—
In your big, illumining way!
There'll be no more humbug. No more fairy tales.

No more dreams of that Beautiful City.
Even the most low and miserable of the like of me,
Will know that life is to be lived here only, and now;
And that all beyond is emptincss and darkness.
And that we, the such as I,
Will be comforted by the grace of your wisdom,
That if we were fated to live a living hell in this world,
We'll not have to fear to live another in the next! that . . .
W-H-A-T! ? ? . . .
Damn if you ain't mocking me!
There's something wrong in that.
Some terrible mistake.
You're fooling me!—You keep me down,
Live on my hide, and suck my blood!

Up! Up! comrades!
Let's make trouble for these high-brow stiffs!
They're swindling us!
Like staid bishops whom they scorn,
They pass among us and bull us
With their views of "new aspects,"—
And we believe, and crawl. . . . .
Certainly! It pays them.
It's their bread and butter;
The making of their careers and reputations.
No! Let's not stand for it.—
Modern, Pagan, Socialist, Atheist, Evolutionist,—
They give us nothing;
No more than the priests do—whom they scorn.

Look about you and see where you're at.
Nothing to live for now.
And nothing to expect hereafter.
What do we care about their brag
Of what will be one hundred years from now?
No! Quit applaud!—and instead,
Snarl, bite, burn, rape, kill, ruin,—
Or else, make them come through with the healing goods
Right now, N-O-W.
Do that! make them come through—or else help yourself!—
Damn if I for my part won't get my sharp razor;
And I know it's sharp;
For that's my only pastime in my skinny little hour
Of evening rest;
Keeping it going on the honing stone,
Stick my pipe in my mouth,
Grin, and watch the kiddies fight.
Well, that's what I'll do, get my razor
And cut my employer's throat.
He is rich; and I know where he keeps a chest full of gold.
I will steal it,—
And—hell! as you say, when you're dead you're dead!
Take a chance; blow somewhere where it's safe,
And at least, until I get caught,
Give myself one hell of a good time!

There is a chance, of course, that some who read this, being of the invincibly literalist type, may still be inclined to take it verbally, and for their sake I am going to say again that this is poetry, and not prose, imagination and not argument, interpretation, and not advice. Nobody need sharpen his razor on account of this verse, but whoever will read it understandingly may sharpen his wits.

For this writer has seen through the sham of the evolution controversy as very few of even the workers seem to have sensed it yet. He is willing enough to admit the poor foundations of fundamentalism and traditionalism in general. But he sees also what children the scientists are, what pretenders to a wisdom which is not theirs. Because his own approach is from the standpoint of life itself. And what have these scientists to give those who are doing the world's work and are caught in the mess of world affairs? It is not for himself that he makes his hero conclude with a savage reaching for his razor and a proposal to cut his boss's throat. This is not the solution that he would commend. It is rather a reductio ad absurdum of the theorizing of the "advanced" folks of all kinds. "Well, suppose you are right," he says; "what of it?" And then he satirizes them unmercifully by suggesting that if their wisdom is the last word, the poor devils who slave might as well take what they can get, in any way they can get it, right now.

### Newspaper Sensationalism About Dayton

The New Republic complains that the newspapers and the lawyers have made a cheap sensation out of the Tennessee case. Of course they have, for the same reason that this man of the poem proposes to reach for his razor, because there is bread and butter in it—and cake. Well, the workers want cake, too, do they not? And how do the evolutionists propose to deal with their wants? Relief is coming, say the natural scientists, in perhaps ten thousand or a hundred thousand years. The radical revolutionist speeds it up and says, in another generation. But if this life is the whole story a man might as well wait for a hundred thousand years as wait another generation. Why wait at all? Why not take it now? Others take what they want by sensationalism, and any device that will work.

Over against this bold utterance by Frank Forbes, who indicts both sides in the Evolution controversy because they have neither of them anything to give the workingman, and are both fiddling while Rome burns, let me put another bit of verse by one who has made fame and fortune by playing a very different tune. Walt Mason's popularity is not merely a matter of the type device that he uses, paragraphic rhyme prose, but is largely due to the fact that he stays safely within the realm of the commonplace and the neutral zone. Here is his treatment of Evolution. I quote merely the last lines of his paragraph, entitled, "ANCESTRY," but the whole of it is in the same key.

"I strive to dodge the bogie, debt, when buying things
I pay the dough,
And let the four-eyed savants sweat o'er problems of
the long ago.
It may be they are talking bunk, it may be what they
say is true,
But there's no prehistoric monk can stop me when
I've work to do."

### Popular Rhymester Plays Safe

The same mail, and the same letter which brought me this from Walt Mason brought another of his bits of daily doggerel, "THE NORTH POLE." In this he deals with the people who deride the Arctic explorers for taking such risks and enduring such hardships, all on account of a "vision," "a phantom." Here is how he ends this, by quoting the people who say, of the Arctic adventurer, "He is a fool for going away from home and friends, up there where it is snowing, where Winter never ends." And then he concludes:

"But if all men were cravens, and feared to sail away,
from safe and sheltered havens, where would we be
today? If Christopher had faltered, as doubtful of his
dope, the Choctaw's mustang haltered, would be the
country's hope."

In other words, when it is a matter of recognizing the services of the Arctic pioneers, against whom there is no mighty Fundamentalist movement organized, Walt Mason is quick enough to see and say a word of commonsense defense. But when it comes to intellectual pioneering, Mason plays safe, and carries water on both shoulders by amiably laughing at Evolution as having nothing to do with everyday life. Grim as Forbes' poem is, it is a far bigger thing than this shallow cowardice of the other man.

Yet Mason's stuff is also an indictment of the evolutionists, as well as of himself. He laughs at Evolution, because, after all, the Evolution that was so much in evidence at Dayton, and which is being so widely discussed now, is poor stuff, and of slight consequence to the world. Some service it is doing, in the domains of scientific investigation. But it is timidly remote from common life. It is not important enough for the leisure class to take any chances of getting in bad with anybody defending it. And it is not human enough, clear-visioned enough, courageous enough for the workingman to have much use for it. There is

quite another side to it, however. Evolution, when you get to the real thing in its revelation of the meaning and value of human labor, is a tremendous, a revolutionary thing. Here the scientists are as ignorant, and as time-serving as are the Fundamentalists. And it is this doctrine of Evolution that labor needs to know.

With the problem as to how God, or "natural law," made the world before man took over his part of the job labor has nothing directly to do. It is not the creation process in the supernatural realm, or even the natural realm, that concerns the workers of the world; it is the creation process as they have carried it on themselves. There is no irreverence, and no unbelief in the new slant which the workingman is giving to the old saying, "Remember now thy creator." It is himself, as **creator**, with whom he has need to get acquainted, and to keep in lively remembrance every day.

### Man's Active Attitude Toward Nature

Man's active attitude toward nature is the first, and the fundamental factor in differentiating him from the other animals. For untold centuries man was as the other animals are yet, acquiescent to conditions as he found them. He was a food gatherer, not a food maker, an accepter of nature, not an interferer with nature as he is today. The process of interference on his part began very tardily and incidentally, and moved very slowly for innumerable generations. Man discovered that he didn't need all his four feet to walk upon, that he could release his front feet, and use them as hands. With all his inventiveness man has never made quite so big a discovery since, because all the rest of his discoveries came from this one. It is a rather belittling term now to speak of men as "**hands**," though, significantly enough we do it with respect to the working class. But men would never have been **thinkers** or **souls**, if they had not become **hands**. Does that sound shocking? Well, it is what our ablest philosophers themselves are coming to admit today, that thinking comes by doing, and "high feeling" out of everyday life.

Man got his hands free, and then began that "extension course" which he has been taking ever since. He got hold of a club, and found that his hands would reach farther and hit harder and heavier when so elongated and energized. Some time later, perhaps a very long time later, he worked out the bow and arrow, and found out how to throw things so as to make him a formidable assailant of animals naturally many times stronger than himself. When he had learned to stand off the fiercest attacks he learned how to subjugate the more serviceable animals to himself. Meanwhile he had found other uses for the stick than that of making a club of it to kill other animals. He had begun to stir the ground with it, and cultivate the seeds that came his way, instead of waiting upon nature's very irregular and uncertain supply of them. He still liked hunting better than he liked work. but hunting found him too often at the end of the day like Esau, famished and spent, and ready to sell his birthright to the other fellow who had stayed at home and made an appetizing stew out of the garden truck. So, much as he disliked the change he settled down, and took to raising a food supply, both animal and vegetable, rather than trusting to luck to find it, and get it. He made the other animals help him by forcing them to carry heavier loads than he could carry himself, and to pull the plow through the ground instead of merely pushing a burned stick into the soil himself. And having harnessed the animals to serve him, and harnessed nature, he learned the shrewdest and most serviceable trick of all, the knack of harnessing the less clever or the less fortunate man. Then he became a scholar and a gentleman, and in some cases a scientist in a small way, because he had "hands" to work for him.

### Inventions to Protect Masters

So it became worth his while to set up private ownership in land, and in tools, and in products of them both, and thereby make himself more completely the master. And in order to carry out this program more effectively and on larger and larger scale the clever fellows invented religions, invented governments, invented education, invented all manner of parasitical "paps" by which they could suck the substance from the breast of labor. For labor was the Great Mother bringing forth from her womb food and clothing and shelter and cities and temples and ships and highways, and whatsoever else made for the sustenance and the convenience of man, and supporting from her breasts all men, whether high or low, or reckoned common or mighty. Had it not been for labor God himself would have gotten nowhere with man, for it was only when man took creation into his own hands that he rose above the beast of the field, with whom otherwise he would have been a good deal less than equal. It is labor that has made man's world as distinct from the raw material of nature which the earliest man shared timidly and to utmost disadvantage with the other animals.

And Labor has not stood still. However the world got here, and however man got here, there is no denying the evolutionary process that has been going on since Labor took hold of the job. Men haven't grown very much as "minds" in the last five thousand years, if we are to accept the testimony of the best thinkers of our day, who admit that there were thinkers in the ancient world who measure up as to originality and profundity with any that we have today. Men haven't grown much as characters, as souls, since the days of Zoroaster and Pythagoras and Socrates and Jesus. But men have grown as "hands," grown so much, indeed, in the last century and a half that man's hand-reach and hand-power are immeasurably beyond what they were even when George Washington was here. Our thinking wouldn't startle him,

if he came back today, nor would our moral achievement stir him to enthusiasm. But our labor would strike him dumb with the miracles it can do.

### No Missing Link in Machine Evolution

Why don't the Evolutionists tell us something about this evolution, where there are no "missing links," and where the evidence is not pieced together as the fragments of occasional fossils of dubious origin and age? Why argue so strenuously as to whether God made the world of raw material when the thing that concerns us is who made the world as we have it now, and as we use it every day? Why are we so dreadfully upset that young Scopes is denied the right to tell his pupils how the world was made before man took hold of it, and shaped it nearer to the heart's desire, when ten thousand men in ten thousand schools, even the universities themselves where the scientists are in their glory, are forbidden to tell the workers about their own evolution as tool-makers and tool-users, and none of these scientists say boo about it?

Well, it isn't hard to tell you why. You see if we once admit that it is the workers, not the thinkers, who are at the beginning of things they may insist upon knowing why they fare so poorly at the end where things come out. If we let them discover that all our ideologies, and all our moralities are built upon our labor activities, and the uses we make of labor, they may not be so willing to let all the leisure and all the luxuries go to those who "toil not, neither do they spin," except webs of legalism and traditionalism in which to entangle the workers while they suck the blood of their labor from them. If the workers find out that it isn't a "divine providence," or a mere mess of hit-or-miss, happy-go-lucky "accidents," or "genius and executive ability" that gives the fruits of labor to those who do not labor, but that it is a very definite and quite discernible process of appropriation first of all the land, which belongs of right to us all, and then the tools, which are in the main the resultants of the whole body of the labor activity of the world's yesterday, and then the capital and the credit, which are likewise social and industrial in their origin, if the workers get on to this very real and very demonstrable evolution they may evolve for themselves quite another kind of social and industrial organization than that which prevails today. So long as they can be kept diverted by speculating about what God has been at, or what the "chemical forces" have to do with making the earth, and making man, they may be bamboozled, as they have been for centuries, into overlooking what man, particularly and emphatically the working man, has been doing himself.

### The Workers' Great Task

The scientists are just as blind, or just as time-serving as the "sky-pilots" themselves when it comes to pointing at everything except the things which it is most important for the common man to see. They are not telling you the story of the tool, which is a whole lot more important to all of us who depend upon tools every minute of every day than is the story of the Garden of Eden, or the primeval slime. They are not telling you the story of the surplus, which has been a bigger thing in America for the last forty years than it was in any four hundred years of the past, and is vastly more important to the welfare of the world than all the clatter about fossils and vestigial remains, and "missing links," or anything else that the natural scientists have to say. They are not telling you about the class struggle, which is of more vital consequence to the world's workers than all the roarings and wreckings of prehistoric animals in the "lost world" of the antedeluvian ages.

No, they are not telling you this evolution, because they do not know it themselves, and would not have the grit to tell it if they did understand. There is a science that the workers need, but it is a science which they will have to teach themselves because it has to do with themselves. And when this science has been learned, and this evolution is known, and the knowledge applied, then the workers will open the schools to all other knowledge, and then the evolution of the natural order will be told without fear and without favor, because ignorance will no longer be the protection of privilege, and theological traditionalism will no more be the smoke-screen of the robbers of mankind.

## *The Letters of Rosa Luxemburg*

**IN the September issue of The Industrial Pioneer will be run a very absorbing review of the book by Luise Kautsky in which she has given to the world the letters of one of the greatest spirits of the revolutionary movement. Rosa Luxemburg was the highest type of woman, one with indomitable courage carrying forward the workers' cause with a power of expression that showed her great mind and profoundly humanitarian sympathies. For this she was murdered by a conspiracy of junkers and social-democrats which at the same time destroyed that other brave leader of the revolution, Karl Liebknecht. Watch for the next issue for this brilliant feature.**

# What Forces Can Abolish Child Labor?

By THOMAS SENN

WITH the recent failure to abolish child labor under eighteen years in the United States by amending the constitution it is quite natural to look for continued attempts along legislative lines exerted even more vigorously than ever before.

Those who have studied the history of legislative enactments over industrial affairs are not optimistic about the adequacy that a child labor prohibition should have when supported in no other manner than by entry on the statute books.

In such an industrial society as ours the leading industry or industries of a community hold power over the civil government, which operates only as an agent of the economic masters. Passage of all the laws conceivable to the imagination cannot alter this fact, nor cause the employers to heed them in any case which is a blow at their profits.

On the statute books of Colorado laws passed to safeguard the lives of miners and to promote their welfare, which amounted really to an attempt at alleviating their wretchedness, were never obeyed by the great mining companies, and it was for the establishment of conditions **in reality** which were guaranteed **by law** for seventeen years that the great strike against the Colorado Fuel and Iron Company, a Rockefeller corporation, was fought.

It has been the writer's experience that child labor laws, even where they are made to forbid employment of children of tender ages, are not enforced. Long after Pennsylvania's laws prohibited child labor I saw children as young as six years working nights in glass factories, and others almost as young enslaved in the canning industry of the Empire State when that "commonwealth" stood similarly opposed to the practice. This exploitation goes on untouched by any real attempt at law enforcement. The writer has seen crippled children working in the textile mills of New England as well as the ordinary type, and child labor in Southern cotton mills is notorious. California has its quota of child slaves working in the fields and elsewhere.

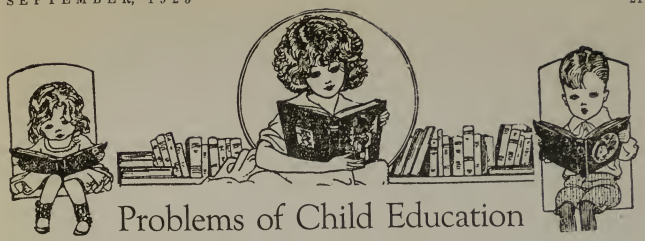
Some will say that this throws individual blame upon parents even before it is pertinent to charge manufacturers, but the miserable wages paid to these parents when they have employment is not productive of a high type of parent. It is a vicious circle, bounded by inadequate income, and there is a demand for the labor of their children, while their

juvenile earnings are sorely needed in the impoverished households. Laws exist in the various states prohibiting child labor, but the practice goes on to the detriment of the young victims and the injury of society. It is profitable to the bosses, and the ignorant slaves are always very busy turning out a never-ending host of their own flesh and blood to feed the machines.

The same force that can abolish child labor is the one capable of increasing wages to the point where parents can support their offspring. This is the force of working class organization. It is a direct onslaught at the citadel of greed, which when mustering to its standard of human decency any considerable part of the working class cannot fail to achieve its victory.

# The Work People's College

IN NOVEMBER the Work People's College opens its 1925-26 season. The college affords an excellent opportunity for students to receive instruction in regular business courses and in subjects of particular value to the workers. History, biology, sociology, economics, industrial survey and industrial unionism are taught in an understandable manner by competent instructors. The classes in English and public speaking aim to train workers in clear expression, to equip them with the power to convey the great message of working class freedom to their fellow workers everywhere.



Added to the studies are opportunities for physical exercise. The main college building has a very good gymnasium. Close to the college is Spirit Lake which freezes during the winter affording sport for skaters, which is taken advantage of by the students. The college building is steam-heated throughout, the rooms are attractive, and the meals are wholesome. Those not able to secure rooms in the college building can get quarters in the immediate vicinity without higher charge, and their meals in the college. Board, room and tuition in this homelike atmosphere cost only $39.00 a month, a lower figure than it is possible to live on outside without the mental and social aspects that make the Work People's College profitable and enjoyable.

To spend the five months from November to April at the college should be the intention this year of a larger group of fellow workers than at any other time, and with such response the extent of the educational program can be considerably enlarged. There are a myriad of schools with a bourgeois bias teaching adults, but few, indeed, are the educational institutions of workers where working class bias dominates.

And the Work People's College is frankly biased for the workers in its instruction, existing as it does to fit them better to advance the industrial union idea for proletarian freedom. The opportunity for development of the college is great but it rests with our members and sympathizers and those who want to learn what our organization exists for, to make the college grow and prosper. We look for a larger enrollment this year than in past years, and with this expectation fulfilled we can go onward to finer achievements and make the work of our own working class educational institution a more positive and far-reaching force than may now be conceived even in fondest imagination.

Our organization needs speakers and writers and members capable of stating our position in plain language, but language that compels attention and respect and conviction, and the college exists to give to the I. W. W. such trained members. We can not have too many possessed of these qualifications. In next month's Industrial Pioneer further information will be given concerning the college.

# Problems of Child Education

By WILLIAM THURSTON BROWN

**MY dear Mrs. X:**

**Perhaps I should apologize for inflicting upon you such a long letter as this, but my excuse is at least a compliment to you—and besides, you are under no obligation to read it. In fact, if it did not seem discourteous, I should make it anonymous, since its author should not signify at all—its ideas, if sound, should. Of course, their immediate source does not determine their soundness.**

**Your book—"An About Face in Education"—and the one talk I heard you give seem to me so stimulating and valuable, that I am moved to offer a few suggestions as perhaps germane to the educational problem you are seeking to solve.**

We may at the outset agree, I feel sure, that no one thus far has **solved** or even professed to solve the problem of education. The most any one has done—so far as I know—has been to discuss the problem and offer a tentative approach to it. Of course, no one ever will or can solve this problem—it will change steadily with the evolution of society and of the individual.

But if we are to deal intelligently or fruitfully with our immediate phase of this problem, we shall agree that there are certain fundamental questions which we must answer—answer, too, in accordance with the best knowledge the world now possesses:

First, what is a child? That is to say, how are we to regard this raw material of education, objectively? Second, what is the society or civilization into which, in some fashion, children are to be fitted by the process of education—or, at least, with reference to which education must get much of its meaning? And third, what is—what **must** be—the **method** of education?

It seems to me—and I think it will also seem to you—that these questions are **basic**, that they can be most fruitfully considered in the above order, and that we cannot take any **sure** steps toward building a sound educational structure, until we have found a satisfying answer for these questions.

1. In approaching the first of these questions, I shall assume that you accept, as I do, the doctrine of evolution—that you do not view the human child as a divine creation in any sense, but rather as one link in the long chain, or as one product in the long process, of evoluton from lower forms of life. If we were to accept the biblical interpretation at all, we should have no basis for educational **science**—or for any other. We should be face to face with the **unknowable** in this and in all other matters.

But if every child is a link in the chain of a purely mechanical evolution, in a process with which no reputable scientist associates the notion of an intelligently planning or controlling purpose, we cannot impute to the child moral qualities or even moral tendencies, as we use those terms. To be sure, all life **tends** to adaptation to its **natural** environment—but the environment which we know as human society is an **artificial** thing, and we know perfectly well that the human child has no **innate** fitness for adaptation to this artificial environment. (More than that, no social environment will ever be possible for which any human child will have an **innate** fitness.) Our homes—the creation of adults for adults primarily—are ridiculously unsuited to the needs of the child. Far worse is it in the case of our artificial society, which, because of its legalistic rigidity and its static "mores," at once defeats the innate and wholesome need and desire for adventure in the human child and youth: the most innately **dynamic** thing human life possesses.

It is impossible to contemplate the facts of evolution without coming to the concluson—it seems to me—that, as we use the terms, a child is neither "moral" nor "immoral," but rather non-moral. At any rate, his native interests and instincts tend toward actions which, as related to our artificial "mores," are non-moral viewed from the child's standpoint, and only immoral from society's legal and unscientific point of view.

If, then, it be said that every child responds readily to the appeal of "fair play"—which I doubt—it would merely mean, if true, that in so doing

it is simply adapting itself to a social environment from a certain individualistic motive. For example, respecting the rights of others is seen by the child to be a condition, of gaining desired ends for itself.

Surely, the whole testimony of evolutionary science points to the fact that a human child is not innately or instinctivey a **social** being in the sense required by any conceivable form of social organization, and that therefore its education must bear immediate relation to what we shall decide to be its function in, or with reference to, such social organization.

2. It follows logically that we can make no real approach even to a partial solution of the problem of education until we find a satisfactory answer to our second question: What de we conceive to be the nature of this social organization with reference to which all education gets at least a part of its meaning? And what must we conceive to be the true function of the individual in this social organization: the State, the Nation, the Government?

There is no difference of opinion, so far as I know, as to the fact that education is a **social** process, and observation shows that it is also a **social** function. But it would be saying too much, would it not, to say that educators have as yet a comprehensive understanding of what the above fact implies? Your own book—its very title—carries that implication, surely. If "an about face in education" is desirable, it needs no profound intelligence to conclude that educators, as a whole, have been facing backwards in this matter. Of course, I agree with you in this—heartily.

Let me give you some of my reflections for what they may be worth. One thing we shall agree to at once: these children whose education we as teachers are supposed to be trying to promote, **must** become in some fashion members of what we call society: organized society, the civilization in the midst of which we have been born. We may be profoundly thankful that they do not come into the world already saturated with the inheritances of this society, since then all hope of improvement would be illusory.

Very well. Then the wise teacher will also know what the **proper** relation of the child—its **true function**—as a potential citizen of this organized society is. In other words, the **intelligent and efficient** teacher will find an answer to this queston: What, in the light of history and social science, is the **real function** of the individual in the social process? To attempt or propose to teach future citizens without this equipment is exactly like proposing to travel from one place to another without knowing **either directon or goal!**

Now you know, of course, that the function of the vast majority of individuals in the social process—or rather in the social organization as we now have it—is that of **zeros:** they get any significance at all only in relation to some other individual who does signify in this particular civilization, or else in relation to some **machine** or fixed system. For example, the mass of **voters** in the United States are merely **cogs** in a smoothly working political machine, which is the creation of large **economic** interests and controlled by the paid agents of these same interests: the politicians. May not this fact explain why in the United States a far smaller percentage of those eligible to the political franchise vote in our elections than in almost any other country where voting exists? In our industries—upon which our political system rests—the above principle is even more evident. We indicate this by the term which we apply to the millions who function in industry solely as operatives—almost wholly as mere appendages of some machine—we call them "hands," do we not? A most admirably accurate description. The "hand" is not significant in itself, it only becomes significant as an obedient, unquestioning "servant" of what really does signify: the brain.

I have too much respect for your intelligence to think that you would approve an educational system —or even think it really educational—which, in the name of patriotism or some other reactionary slogan, tended to multiply those **zeros,** or was motived by the idea that the functon of the individual is to fit into the social system **as it now is.** (I am not saying that patriotism is **necessarily** a reactionary thing. Usually it is. But I can conceive of a condition of affairs in which it would not be reactionary. It wasn't during the French revolution. It hasn't been during any genuine revolution. It will be reactionary so long as it connotes loyalty **to a static system of any sort:** political, industrial, religious, social.) This simply makes it imperative for any intelligent teacher or educator to decide definitely just what is the individual's true function in, or relation to, the social organization. What I think about it will appear presently.

From what you said about war—in your talk and also in your book—I can see—or I think I can—that you would agree that the only true function of the individual in society is a **dynamic** one: a function growing out of two facts recognized by all real educators: (1) that society is a dynamic process, changing, growing, outgrowing, and (2) that life itself is also dynamic, not static. You would try in the school to help in the development of **dynamic** individuals. Good.

But, before we can go far in promoting the development of dynamic individuals, we must possess a correct philosophy of history and of social change: that is, of the science of sociology. Indeed, we shall discover no philosophy of history except through a knowledge of sociology. We must know what the social forces are and how they operate. Unless we do know these things, we shall be doing nothing but beat the air. For progress in any sense can mean only the evolution and control of these social forces by human intelligence and for purposes which serve the common good of the social whole. The only alternative would be the idea of

individualistic **escape** from society: an idea entirely consistent with that religious system of modern time which so faithfully mirrors the ignorant guesses of the race's childhood—with its notions of sin, salvation, heaven and hell.

History and society must have for us teachers a meaning that is clear-cut, rational, even dramatic: a meaning that invites to strenuous, even enthusiastic activity. And of course, we can't spin this clear-cut meaning out of our inner consciousness, nor deduce it from our emotions or our desires. Not so is real improvement to be expected. A friend of mine in the East, an ardent disciple of Froebel, a teacher of great talent and long experience, bases her teaching upon the theory—accepted by no inconsiderable number of educators—that the great desideratum in social development is freedom: the freedom of every individual to live his own life to the full; that existing social organization negatives any such condition for all except a mere handful; that the solution of our problem lies supremely in education: if we can see to it that children develop in an atmosphere of freedom and in the practice of it—by being left utterly untrammeled in their school experience—we shall automatically eliminate every social structure that today crushes freedom. Given a generation of young people accustomed to disobey any law which affronts their will to be free, cramping laws and institutions will fall away by disuse, and all will be free.

To me this view, or any view which closely resembles it, is a fallacy. For one thing, no conceivable social organization will ever maintain or tolerate a system of education which undermines it. For another thing, mere existence in our modern world is inconceivable without a definite and complex social and industrial organization. Assume, for the sake of argument, that we could give one generation in American schools a thorough knowledge of the principles of sociology and a practice of democracy, or of individual freedom, in their school life. Can you imagine the result would be a radical change in our present social system?

Take one example. War. What is the **cause** of war? Unless you find the cause of war in the schools or in the lack of schools, you will not find its **cure** in the schools. The opinion is well-nigh universal today among thinking people—always a small minority, of course—that the cause of all modern wars has been **chiefly** commercial rivalry. The root of commercial rivalry, of course, is **capitalism**: a system of industry based on private profit, and not on mutual or common service. If this is true, is it not idle to think of ending war unless we propose to end the regime of capitalism—something not one teacher or educator in a hundred even contemplates?

We cannot go further in our thinking unless we face squarely two questions: (1) What is history? (2) What is the significance of our present society in the light of history and social science? It goes without saying that we cannot educate children in relation to society, or promote their proper functioning in society, unless we have a correct and clear-cut idea of what present society essentially is.

Taking these questions in their order, we shall find that the bulk of our historians to date have no satisfactory philosophy of history. Many of them—most of them—practically admit this. We have a philosophy or explanation of biological evolution, even if the fact has not reached the minds of a vast multitude of devout Christian people—not their fault either, it seems to me; far more the fault of a college and university system largely lacking intellectual integrity. Our so-called scientists, for the most part, have not taken their science seriously, have not seen its intimate and vital relation to world problems, have not accepted the responsibilities which the discovery of truth must always impose on the discoverer. Is there not—must there not be—also a philosophy of **social** evolution? At any rate, would it not be rational to expect such a philosophy? And such a philosophy would be the only possible explanation of history.

Again, would it seem strange if a real explanation of social evolution had existed for decades **without receiving any recognition as such by scholars?** Do you recall the fact that Darwin's epochal discovery—which, by the way, the dean of a Catholic university in Belgium frankly and warmly praised in an address at the Darwin anniversary celebrated at Cambridge University, England—gained no recognition whatever from England's foremost university, Oxford, for 20 years or more after the publication of "The Origin of Species"? Indeed, is not Darwin being attacked today in America, and by some men who are products of our schools, as an enemy of religion, and so of life itself?

Would it, I repeat, seem strange if a similarly revolutionary science of **social** evolution should have to wait much longer for any academic recognition? Financial interests are incomparably more powerful than religious interests—no one allows his supposed religious interests to interfere with his economic interests. Besides, what publishing company would print, what school board in America would buy for use in a school, a history or a book of economics or sociology which taught a philosophy hostile to capitalistic interests?

Now it happens that there is a well-developed theory of social evolution: that of "economic determinism" enunciated about 75 years ago, or more, by an educated German, Karl Marx. Ah! but that is socialism, bolshevism! Away with it! But wait. Have you read Mr. James Harvey Robinson's "The New History"? Mr. Robinson is a joint author of a series of history text-books more widely used than any others in our American public schools. Yet on pp. 50 and 51 of "The New History" he makes some startling admissions. After carefully explaining that he cannot accept some of the claims made by Marx and his followers—it would be a rather large

order for any historian to go that far—he at least says this of Marx's basic theory:

"It serves to explain far more of the phenomena of the past than any other single explanation ever offered."

This book—"The New History—is not a text-book, will never get into the schools. Mr. Robinson's text-books are perfectly innocuous, of course.

But history has had a way of repeating itself, so to speak. Some of us know that the Copernican theory of astronomy and the notions of Galileo were once—and for generations—under the ban of the world's most powerful organization. Today, no one is opposing the teaching of the ideas of those men: they are taught as a matter of course in all our schools. It would not be so strange, historically speaking, if all histories fifty or a hundred years hence should give to the Marxian philosophy at least as full recognition as is now given to that of Darwin. But if they do, it will only be as a consequence of far greater social upheavals than are conceivable as growing out of any school system. The tail will never wag the dog.

It ought to be apparent to any person who reads history and possesses fair powers of observation and reasoning, that society and its institutions are clearly based on economic foundations, that its politics is built on those same foundations and can be explained only from that fact, and that the bulk of our effective "mores"—especially as regards property—reflect those same foundations.

What is the Marxian philosophy of history? Very briefly: that history is chiefly the record of a series of class struggles—struggles between an oppressed and an oppressing class, a struggle growing out of the method of producing and distributing economic goods; that every oppressing class inevitably calls forth in the oppressed class the class solidarity and the class intelligence and will, by means of which the former shall sometime be overthrown; and that always the new society thus created develops within the shell of the old which it supersedes.

That is not at all an adequate statement of the Maxian philosophy, but it will perhaps serve the present purpose. As this division of society into classes whose most fundamental interests—as under our capitalistic industry—are opposite and hostile, involves, in the struggle, the very life of the members of the oppressed class, warfare between the two classes is as inevitable as gravity and condemnation of that warfare is as idiotic as condemnation of gravity would be. **This warfare can cease only when economic class division ceases.** Moreover, the success of the oppressed class in our present social organization brings the end of militarism and war, by **removing the cause of both.**

It is to be borne in mind, however, that this class conflict bears no causal relation to the phenomenon of war, as we know war: to armies and navies and armed conflict between nations. And yet, the class conflict never ceases—witness the strikes and lockouts and labor troubles the world over—and never can cease till its cause—capitalism—is removed. You say, in effect: "We don't want warfare of any kind. Let us do away with it by developing right in the school period of children's lives the practice of 'give and take.'" But this practice of "give and take" has marked every public school in America for a hundred years or more. And it has had no more effect on the breaking out of wars than the phases of the moon. It does not touch in any sense the **cause** of international war—not remotely. Why, there isn't a single section of any nation's citizenship so profoundly committed by all its profession and all its basic beliefs to "give and take," to the "Golden Rule," as the clergy. But experience will prove to the hilt that no other section of the citizenship goes further in sustaining a war than this same group, even bestowing upon any war its nation embarks upon the "dviine blessing." Not that way, in any sense, lies the solution of this problem of war and peace. The philosophy which teaches any such method is as baseless a superstition as the cosmic beliefs of Mr. Bryan.

Think now of a single phase of our educational problem. We shall agree that the need is imperative that these potential citizens—our boys and girls—shall learn in school the facts about the world in which they live: the facts of biological evolution, so that they shall not be the victims of ancient superstitions surviving in a scientific age; and the facts of social evolution, that they may become effective citizens. If, then, we teach them in the schools to think of our present social system as final, or of its basic institutions as just or tolerable, when neither of these teachings is in accordance with the facts, are we not, as teachers, committing a crime against them? Are we not teaching them falsehoods and insuring the continuance of a citizenship that shall be as asinine and reactionary and inimical to social improvement, as people like Mr. Bryan are showing themselves to be? If, on the other hand, we can in some way help them to see that our alleged democracy is a fraud—is nothing but only a camouflage beneath which is being maintained a species of exploitation and enslavement as hopeless and dangerous as any in all past history; that, on the contrary, the supreme urge and virtue of citizenship consists in aligning oneself with the forces of inevitable and benficent social change toward a society of cooperators, are we not then and only then dealing with reality and promoting the best interests of both society and the individual? In a word, must we not, in loyalty to truth as exemplified in the long drama of history, tell these children that our human society is not a sacred thing, divinely ordained (as ridiculous as the exploded and abandoned "divine right of kings" so long taught generation after generation and upheld by no one so devoutly as by the clergy), but rather that our social organization, like all others, is today as really a battlefield of struggle between hostile forces as was the world war, and that it is the crowning merit of every citizen to get into that struggle on the

side whose triumph means the ending of war and the beginning of the real history of the human race? How long will a teacher in the public schools last, who teaches this? Not a fraction of the time that Galileo or any of his fellow scientists lasted in the society of centuries ago.

Of course, too, since we learn only by doing, these children should learn citizenship by living and practicing citizenship—and in no toylike way, as in the sheltered atmosphere of the school room. That isn't either learning or practicing citizenship. At the earliest possible moment they should begin to function as citizens, and be so recognized. As well propose that they learn to swim, but never go near the water, as expect them to learn citizenship with no chance to practice it. No wonder the study of "civics" is an unmitigated bore to the mass of our school children.

3. As I have included above some discussion of what the method of education should be, I will add no more on that point. Let me, however, offer one suggestion: that nothing is more imperative for the intelligent, effective educator than a profound knowledge of sociology—above all, a philosophy of history and of social evolution that will explain phenomena—yes, and that will afford an incentive to life and activity. Without that, we are simply beating the air. Nearly twenty years ago, Mr. Albion W. Small and Mr. John Dewey jointly issued a pamphlet to teachers—a pamphlet whose central thesis was that sociology must become the hub or axis of the whole educational system before the latter can be either symmetrical or rational. While I know of no reason for thinking that either of them had an adequate understanding at that time of this problem, I believe their central thesis was and is sound. But before any such system can be installed here, revolutionary social changes will have to occur: changes in the whole **control** of the State.

If you have never read Lester F. Ward's "Dynamic Sociology," I feel sure you would find it one of the most rewarding experiences of a lifetime to read it. Speaking of this book, Albion W. Small once said: "I would rather have written "Dynamic Sociology" than any other work ever published in America." It seems to me that Ward has sounded the clearest and most rational note in the entire discussion of education—but I also believe that his philosophy requires for its completion the "economic determinism" (and much more) of Karl Marx.

Pardon me for writing such a long letter. But at worst, it is a tribute to your open-mindedness and ability, an expression of my belief that you are performing a real service—and should perform still greater services in the field of education.

# The Fundamental Difference

By COVINGTON AMI

**THE I. W. W. is the most American thing in America," Frank P. Walsh once declared, and he declared truth.**

**It is the most American thing in America, because it was only here in this highly industrialized nation that the working class could fully and first conceive of a labor organization built on the lines of industry and capable, when the organization was perfected, of operating the industries and administering the general affairs of society.**

It is in this that the I. W. W. differs fundamentally from all other labor organizations, and especially from all political parties.

It differs from the craft unionists in that it holds to the idea of the equality of opportunity for all who toil, whether with brawn or brain, as well as in its form of organization. It differs from the Anarchists in that its form of organization is based fundamentally on Marxian conceptions. It differs from the Syndicalists, not in final aims, which are to be achieved in its view as well as that of the Syndicalists, by the building up the new society through the perfection of the **economic organs** of the working class, but in its form of organization and tactics. It differs from the Communists in that it expects nothing from the state, whether capitalist or "proletarian," and so bitterly resists the attempts of any and all political parties to assume a dictatorship over its affairs. For this reason, on this fundamental difference it has fought off the efforts of all political parties to dominate it. It has fought the Socialist, Republican, Democratic, Socialist Labor, and is now resisting the Communist party on this ground, and, broadly speaking, history is proving that the "Damned I. W. W." is right.

Its position on this issue—**the right of the working class to control its own evolution and destiny**

**for itself and through organs of its own creation**—is sound to the core, for if the Mexican and Russion revolutions prove anything at all, it is the soundness of the I. W. W. contention that the economic organization is all-important; that, without this, the emancipation of the working class is practically impossible, whether we "capture the state" with ballots or bullets.

This being its fundamental position, it, of course, follows that the I. W. W. is only incidentally interested in politics. It cares nothing about giving the state more power than it today possesses, and it assuredly cares less about creating a "higher form of the state," as Russian leaders have declared the Soviet Republic to be. This because it seeks to establish, by building up the One Big Union, a cooperative form of society—an Industrial Democracy. This being the case, the I. W. W. member, if he knows the philosophy of his union, will sacrifice all political parties and all other machinery that may be used to attain the goal of working class emancipation always and ever to the interests of the Industrial Workers of the World. We do not oppose political parties merely as a matter of principle, for whether or not we take part in political action is not a question of principle, but of tactics, and tactics are always to be governed by the exigencies of the movement. Politics are to be used or not to be used solely as they advance the building up of the One Big Union, and for no other purpose.

As to armed action, we believe with one of the great German historians that "An army is nothing but a political party that has quit using ballots and gone to using bullets," and we, in common with all American labor unions, are suspicious of politics and politicians. We know that the politicians, be they howsoever honest or dishonest, are incapable of administering efficiently and effectively modern industry. We know this, first, because the political or territorial state is not so mechanically organized as to be capable of handling industry, which pays no atention whatsoever to territorial lines—it is something outside of industry seeking to dictate to that of which its representatives have little or no direct knowledge; and, second, we know this because the political state is not of, by, or for the workers—it is not their creation, but the machinery through which the capitalist class holds the human race in subjection for the purpose of exploiting its labor power.

Knowing this, the I. W. W. then seek to build up out of the working class social machinery that will function effectively and efficiently for all the workers—it seeks a social organization based four-square on the **economic interests** of all the workers everywhere. If this is not sound social doctrine for the working class, then there is no such thing as a working class philosophy of action, and then emancipation is impossible for the toilers to achieve.

It is here—on the issue of whether the **union** or the **state** shall dominate the new world that is being born—that the I. W. W. clashes with the Communists and all other political parties. This may, of course, be "intellectualism" and "mere philosophy," but nonetheless it is true, and it is the fundamental difference that the clash between the Industrialists and Communists comes. The clashing of the two groups comes from wide and fundamental differences of ideas, and has nothing whatsoever to do with whether or not the present ruling class will give place peaceably to the working class or will have to be forcibly ejected from its position. They are blind who argue otherwise.

This is not to say that the different revolutionary groups should not work together harmoniously wherever they can for the common good of the workers, but is merely an attempt to put the I. W. W. straight and to answer back the charge that the I. W. W. is either "dual unionism" or an "impossibilist organization." **It is the only organization proposed on earth by and through which the workers of the world can finally win to real and true emancipation,** and this because the modern working class is essentially an INDUSTRIAL and not a POLITICAL class.

Let the Communist party, especially in the United States, throw all its power into the upbuilding of the One Big Industrial Union, based solidly on the principle of INDUSTRIAL DEMOCRACY, and the quarrel between the two organizations will, I believe, soon end, and a mighty forward movement begin. If this cannot be, then let every member of the I. W. W. in the future as in the past give his first and best allegiance to the Industrial Workers of the World before all other organizations—for only by and through the organized INDUSTRIAL POWER of the workers ON THE JOB can immediate gains be made and held, and final freedom be won.

AS JAMES P. THOMPSON frequently points out in his industrial union lectures throughout the country, the group on the G. E. B. in 1924 who bolted the organization and set up their own headquarters were afraid of the I. W. W. membership and they wished to have nothing to do with the constitution which provided for no dictatorial action. The Emergencyites on the board did not have power to act because they did not constitute the necessary two-thirds provided for by the constitution. But even had they been in such a majority they would not have had the right to attempt destruction of the organization. The membership of the I. W. W. is the supreme court of the organization whose decisions must be observed. The Emergency Program tsars feared that membership so much that they went to another court. They applied to the capitalist court for an injunction to halt I. W. W. activity. But the organization has continued to carry on its work, while the disruptionists have arrived at the last stages of disintegration in an atmosphere of mutual distrust and with accusations of dishonesty openly flung about among the prime movers of the outfit as was displayed at their convention at Ogden recently conducted.

# The Road to Autocracy

By HUBERT LANGEROCK

**Note: This is the third article of this series—Government by Injunction. The next article will deal with the Judiciary Veto.**

THE process of injunction, although judicial in its outside form, is in its essence bureaucratic. In the manner in which it is used today the injunction has nothing in common with the legal process that was, in the past, known by that name.

What we call necessary institutions, says de Tocqueville, are often no more than institutions to which we have grown accustomed. Chief Justice Taft, we venture to suggest, is a victim of this process of self-delusion. For him there never was a time when recourse to the writ of injunction was not a law of nature. In his opinion the world was never without it and, therefore, the foundations of the world are involved in the maintenance of that practice. And yet, 1889 marks the first recorded opinion of an injunction in a labor litigation. In 1896, the Chief Justice of the state of Massachusetts still speaks of injunctions in labor disputes as "a practice of very recent origin." By 1921 the right to an injunction in the case of a labor dispute had become an immutable principle of liberty and justice, world without end!

As a result of the use of the injunction, the "due process of law" clause of the Constitution has become a joke, it does no longer guarantee trial by jury and the cause of this is evident to all: the people who resort to the use of the injunction in a labor dispute do so because there exists, when use is made of the injunction: "a greater probability of a conviction by a judge alone . . . than by a jury which may possibly sympathize to some degree with the offender."

The injunction originated in Rome. People who had been entrusted with the management of the property of orphans took advantage of their position to rob the minors placed under their guardianship. One of their favorite methods was to shift the cases from one court to another, so as to create a confusion which served their purpose of intended robbery. So the Roman judges issued orders to keep the cases before the same court and provided severe penalties for the violation of those orders on the ground that they constituted an insult to the dignity of the magistrate.

Later the process of injunction was carried over into Anglo-Saxon law but only for specified purposes and under strictly defined circumstances. No writ of injunction could apply where an injury could be repaired by money damages. The injunction was strictly limited in its use to differences between individual small business men and supposed to be used only when the contemplated act would have wrought irrepairable damages. For instance, if two farmers had a dispute about the boundary line of their adjoining fields and one of them wanted to chop down a tree located on the disputed land, then the other could obtain an injunction prohibiting his neighbor from cutting down the tree until the case was settled.

It is always possible to find in remote corners of the earth survivals of social institutions of the past and these survivals very efficiently serve the purpose of illustrating the nature and the purpose of such institutions. Anybody wishing a true insight into the nature and the working of the injunction has but to travel to the interior of Scotland where the primitive form of the injunction is still in existence under the name of interdict.

The process of injunction being essentially tied up with the era of individual competition should have been allowed to die when that era was superseded by the corporate form of business made necessary by the advent of the machine process. When, through the appearance of corporations, labor disputes ceased being individual disagreements, the use of the injunction ceased to be an unwarranted extension of a custom of the past and became something entirely new both in form and purpose.

Unlike the farmer whose neighbor wanted to chop down a tree standing on contested land, a corporation threatened by a strike is not menaced with any damage that cannot be repaired by money damages. Neither is that damage itself of an irreparable nature.

In reality, the process of injunction today is a method of taking away from the oppressed class the rights which it theoretically possesses under the constitution and the law of the land.

The writer of these lines was present in the courtroom in Chicago when Attorney General Daugherty secured from a complaisant federal judge an injunction against the shopcraft railroad strikers in 1922. That injunction was a clear instance of class warfare and of the employment of the powers of the government by one class against another class. Nobody in the whole United States was really suffering from the effects of the strike, nobody was starving and nobody was freezing. There were enough trains running to protect the country totally and perfectly against all danger of any real and genuine suffering. The system of craft organization had prevented all the other rail workers from standing by their fellow workers of the shops. Still Mr. Daugherty went into a federal court and persuaded the judge to take jurisdiction over a lot of railroad shopmen who had struck in order to improve their own working conditions and the financial outlook of their families and he induced that judge to call those workingmen conspirators against the interstate commerce of the United States and to forbid to them and to their misleaders all acts necessary to the suc-

cessful prosecution of their attempt to improve their condition.

I saw Judge Wilkerson by every gesture and every look as well as by his final decision make himself not an impartial final adjudicator of a difference between the government and the shop unions but a nodding, smiling partner in a conspiracy to get out a class injunction in the name of a common welfare which was not effectively threatened.

The recent extensions of the process of injunction transform it in reality into a system of government in which the injunction judge takes the place of the legislative authority in the political state.

In the nature of things, owing to the limited number of material possibilities or alternatives, an order to desist from committing a certain act becomes a command to do something else. The judge who forbids to a man by injunction to build a house on one side of the street practically orders him to build that house on the other side for the simple reason that there are only two sides to a street. But injunction judges have gone a good deal further. They have added to their restraining orders regulations of a positive character which constitutes, for all practical purposes, organic legislation. A judge in Denver issued an injunction prohibiting scalpers from dealing in railroad tickets and then proceeded to lay down the manner in which such tickets should be sold. This is practically legislation and an assumption of the duties of Congress.

In all the most recent cases, the original nature of the injunction seems to have been forgotten. What really took place is that the plaintiff wanted a judge-made law which he knew beforehand he would never be able to get from an elective body. Mr. Palmer who, as attorney general, started the proceedings against the coal miners, practically admitted that, in his opinion, the end justified the means. His avowed theory was that, if an autocratic procedure averts a calamity, autocracy is the way out. Those who accept such a theory forget that there always exists a probability and a strong likelihood that such tactics will only postpone and very likely aggravate the dreaded calamity, the latter becoming practically unavoidable as a direct result of the autocratic power used.

Since the war was over, the Lever Food Control Act was practically dead and the highest officials of the government admitted this contention. The abuse of the Lever act as a faked basis of injunction proceedings aiming at depriving the coal miners of their legal right to strike was an act of dishonest despotism.

The state of Washington has a complete set of criminal laws. To cope with what it was pleased to call the I. W. W. menace, the same state passed a law making it a criminal offense for a man to hold the opinions and views of that organization, even if he does not try to apply those views in a practical way and to the extent of violating the already existing statutes. The anti-syndicalism law of that state had already created a crime of opinion but a judge thought that even such drastic legislation was not far reaching enough and he issued an injunction prohibiting the existence of the organization and ordered all persons whose affiliations therewith could be proved to be brought before him on a charge of contempt of court. For all practical purposes, such an injunction was a denial of the right of trial by jury and the judge and his followers frankly and cheerfully admitted it.

The state of Kansas immediately followed suit. It also has a criminal syndicalism law but did not deem it sufficiently harsh. So, on the ground, the purely imaginary ground, that the I. W. W., as an organization, advocates acts in violation of that law, an injunction suit was filed by the attorney general permanently enjoining that organization from maintaining headquarters or having a membership in that state. The injunction was granted.

Then came California. The notorious Busick had received on account of his revolting partiality such an unsavory reputation that he tried to do away with court proceedings in anti-syndicalism cases. That infamous injunction has since been upheld by the supreme court of the state. It contains two exceptional features. First, it is directed against persons unknown to the court, men and women of whose very existence the court is probably not aware. Secondly, it enjoins people from committing acts which are already punishable under the common law of the state.

The first character shows that the recent use of injunctions in labor disputes is a new departure disguised as an old procedure. The origin of the injunction process as an accepted rule provided that the injunction must be directed at a definite individual. The second character amounts to overruling jury trial by court decision. Trial by jury is a dead institution if a judge can use injunctions to punish persons through contempt for acts punishable by common law of the land. Supporters of the new system pride themselves on its speed and effectiveness, making it superior to laws of repression already at the state's disposal. In this they are correct. Autocracy ever has been swifter, more effective than democracy. The jury system is admittedly slow and cumbersome, but a belief that it was a bulwark against executive and judiciary tyranny caused the constitution's framers to include it with citizenship guarantees. There may be some people left who still hold that opinion.

I wonder if those who uphold the species of autocracy embodied in the recent use of the injunction have ever thought that they uphold and help in proving the truth of the statement that trustified capitalism is working out a new set of institutions more directly adaptable to its necessities and its desires and that those new institutions have a distinctly autocratic character.

# San Quentin

By JOHN McRAE
**PRISON No. 39347**

SAN QUENTIN prison stands upon the shore
And frowns rebuke upon the dancing sea.
Sometimes above its walls the seagulls soar,
Then drop to join some carrion jubilee.

THE tide upon the changing sand engraves
Its myriad cunning patterns every day;
And all the while it seems as if the waves
Attempt to wash the bloody stains away.

UPON the landward side high, rocky hills
In kindness hide the place from passers by;
On one the slave his destiny fulfils:
To sleep in death, the wind for lullaby.

NO polished marble here expounds their fame
Who lost the path in life's long grueling race.
Forgot, but free of man's abuse and blame
They slumber on in mother earth's embrace.

AROUND the iron gate the flowers blow.
In all the prison they alone are gay.
The gardener's tears are dropping as they grow
Among the fallen petals on the clay.

THE close set buildings rear against the sky
High overhead. It is the way of man
To hide the thing he cannot justify;
Lords of the earth and boast no nobler plan?

GREY clothes, grey faces are the convict sign,
The withered frame, the dull and drooping eye.
Sure man must know some wondrous anodyne
To give us back our lifeblood, bye and bye.

AT dawn the whistle calls us from the gloom
Of narrow cells to man the dusty mill.
To spin the jute and feed the hungry loom;
Our lives alone suffice to pay the bill.

GO fool, and pray to God upon his throne:
Forgive me Master, I but lost my way,
Next time I will do better, I atone.
Your brother answers you: Repay, repay.

THAT God our mothers taught us to revere
Was never known to heed a single cry.
Who dares to judge the convict if he sneer
At pretty tales of life beyond the sky?

THE worker need not ask of Heaven or Hell;
His mighty arms are fit to make his own.
But he is blind and seeks not to rebel,
So builds himself a prison, steel and stone.

FOR none but he who toils has ever felt
The lash to goad him to a greater speed.
None but the working man has ever dwelt
In dungeons dark; a sacrifice to greed.

IF fate would lift the curtains of the years
And let us look upon the days to come;
The sight might dry these non-essential tears;
Might make these chains not quite so burdensome.

PERHAPS in time these walls will know decay;
This system crumble, and these idols fall.
The Kings of earth may put their crowns away,
And love become the ruler of us all.

# BOOK REVIEWS

IT has always been a source of worry to right-minded, god-fearing pillars of society that there are evil-minded men and women who disregard the good and salutary precepts that have been handed down to us from our forefathers.

One of the best-known of these civil-minded men was Jesus of Nazareth. Already as a child he showed bad tendencies. His father and mother found him one night in the temple where he was sitting arguing with the scribes and the elders instead of accepting their wisdom and authority as any well-mannered child would have done.

Later on he was associating with sinners and publicans. He has even gone on record as favoring the heinous crime of Sabbath-breaking. When he was not occupied in breaking all precepts of private morals he would be offending public ones by preaching his revolutionary doctrines to whoever wanted to hear them.

Small wonder that old and experienced people were shaking their heads and saying: "That boy of Joseph's will never come to a good end." Time proved them to be right. As history teaches us, Jesus of Nazareth was executed as a common criminal, and conventional virtue triumphed.

History is replete with examples of that sort. In England men like John Bunyan and Milton are rather outstanding examples of the same type. Bunyan, a simple handworker, had the temerity to write on morals and religion in an extremely unconventional way. It will, I hope, be a comfort to all right-minded men today, as it was in his day, that he had to spend quite a considerable part of his life in jail.

Milton was ,after all, the worse of the two. Under guise of writing a religious poem, Paradise Lost, he wrote a poem with the devil—Lucifer—as the hero. Besides being an ardent advocate of freedom of speech and such immoral practices as divorce, he was a political revolutionist. It may be permitted me to state that virtue triumphed in his case, too, and that he died in poverty and misery.

In more modern times, we have had such heretics as Marx and Nietzsche who, not satisfied by attacking special moral tenets, have attempted to prove that there is no such thing as an absolute set of morals.

Nietzsche, dealing with ethical problems from the point of view of the ruling class, exhorts them to stop fooling themselves about eternal principles in ethics, pointing out that morals are changing and biased by class idiosyncracies.

What Nietzsche discovered from the point of view of the ruling class was before his time discovered by Marx looking at the problem from the working class point of view. But by Marx it was put much clearer, as he was not concerned with making faces at the philistines and not the victim of the lurid lyrism and hectic melodrama that Nietzsche quite often sinks down to.

These are some of the intellectual ancestors of Sinclair Lewis. If we should venture a guess as to his artistic ancestors, i. e., to name his teachers in the craft of writing, there are a few names that irresistibly force themselves upon one.

Upton Sinclair is in his "Mammonart" comparing the plot of Main Street with the plot of Madame Bovary. The similarity in them is striking and the way of building up the material collected shows that Sinclair Lewis has read Flaubert and benefited from him though without any slavish imitation.

Another French author that seems to have given something to Sinclair Lewis is Honore Balzac. Balzac is the first novelist who consistently tried to trace the influence of man's occupation on his total personality. He was the first novelist who tried to describe the individual and his environment through an economic interpretation. He forms the basis for practically all achievements in realism in modern novels, whether his influence is direct or indirect. One of his tricks of letting the persons appear from one novel into the next has been used by Sinclair Lewis as by quite a number of other modern novelists, as for instance, Knut Hamsun.

The goal set by Zola and the other French naturalists of giving a true description of the "milieu," the environment, to be the historians of the morals and manners of their time has been achieved quite a bit more successfully by Arnold Bennett and Sinclair Lewis, than by any of the French pioneers.

Lest these remarks have given the reader the impression that Lewis is a bookish pedant who has been creating his novels from imitation, I hasten to add that, though well read, Sinclair Lewis is never bookish. He is drawing his material from contemporary life around him, a life he seems to know better than anybody else.

His last novel, Arrowsmith, is the biography of a young doctor. The author follows Arowsmith's first vague ambitions to become a medic through his long struggle until he has become one of the mas-

ters of his profession, not a "mechanic" with lance, scalpel, suture, gauge and scissors, or feeler for pulse-beats with a "bedside manner," but a scientist, tirelessly seeking causes of disease. What an uphill battle such a course is has been depicted with vigorous, unforgettable strokes by one whose observations of this pushing, surfacy, bourgeois go-get-it society has been rather more evocative of his sneers than of any other attitude.

The story begins by telling of the difficulties met with in the university, whose purpose is to turn out professional men commanding for their services five dollars an hour, and "men and women who will lead moral lives, play bridge, drive good cars, be enterprising in business, and occasionally mention books, though they are not expected to have had time to read them. . . By 1950 one may have expected it to create an entirely new world-civilization, a civilization larger, purer and brisker."

Despite the brilliancy of his work Martin Arrowsmith has a hard time of it getting through that university. When he goes west to be a general practitioner he finds that the American peasants and small town bourgeoisie are more concerned with preservation of traditions than with his fight for truth and efficiency over sloth and accepted lies.

He quits the little town, and takes up a post as a medical officer in one of the overgrown villages that sprang up mushroom-like in Mid-America. The experience is disastrous. Setting out to fight disease he finds himself speedily faced with the enmity of the practicing doctors, and, because of their influence, practically all of the community, except the workers. Certainly, disease should be fought, but in the accepted manner, with remedies not cures, and with no thought of preventives. No socialistic tomfoolery; no destruction of death-breeding tenements as long as rents can be collected from them, and no snickering at honest, God-fearing, accepted standards are to be tolerated.

Martin is forced out of his post. Then he tries being a laboratory man in a surgical clinic, and leaves that to become a research worker in an endowed scientific institution. He thinks that he will be free for researches but finds that he is supposed to furnish sensational cures for the ills of mankind. He fights for a while and then withdraws to make research work with another scientist who cherishes the same attitude, who is possessed of the same fanatical zeal for truth.

This synopsis of the scientist's conflict for truth against vested interests may lead one to think that the novel is "dry," but it is not. It is full of human interest, full of humor, irony, pathos, and of adventures in the West Indies. Arrowsmith has been married for a number of years to a very lovable woman who is always ready to help him in his work by ministering to his physical wants, which are few enough, to be sure. Sondelius, a medical adventurer, who trots over the globe fighting plagues, accompanies Arrowsmith to the West Indies to fight plague there. Leora, Arrowsmith's wife, goes too.

To make the test of the serum's efficiency against the plague Martin wants to try it on part of the population affected and compare results with the mortalities occurring among the elements not inoculated. This develops into a political quarrel, and before it is settled many of the people have been swept to death by the fury of the plague. Martin comes home one night to find Leora dead, killed by the disease which is carried by rats covered with fleas. Other novelists would have given many pages to a description of this woman's fatal illness and the manner of her death. Sinclair Lewis' technique of execution is swift, merciful to the reader, but startling because we are unused to having characters that live and breathe through the pages, that speak to us and attract our sympathies and understanding struck down so abruptly and forever removed. The doctor carries the slight form of this gentle, patient, courageous and womanly woman out to the sands and buries her in the night, alone. It is reminiscent of the interment of Manon, but Leora was fircely constant in her devotion to the one man of her choice, Martin Arrowsmith. The passages here are poignantly memorable.

There is an interesting gallery of portraits in the novel, some of them extremely typical, others exceptionally individual. Max Gottlieb is a character. He is a distinguished old scientist who has seen and encouraged Arrowsmith's talents, and who is otherwise hard and impersonal. But he is broken when he attempts to come to direct grips as an administrator with the world. Agnes Duer, a surgeon, is a cold careerist, a perfect caricature of the conventional idea of the Nietzschean Uebermensch. Almus Pickerbaugh is the medical Babbitt.

On the first page Sinclair Lewis acknowledges his indebtedness to Paul H. Kruif for his collaboration. Together they have created the greatest American novel of the century.

**ARROWSMITH, by Sinclair Lewis. Published by Harcourt, Brace and Company, New York. Price $2.00.**

IN the foreword to "Fairy Tales for Workers' Children, Ida Dailes, who has translated Herminia zur Muhlen's work into English, says in part:

"You have read many fairy tales, some of them very beautiful and some that frightened you with their horrible giants and goblins. But never, I am sure, have you read such lovely stories about real everyday things. You see poor people suffering around you every day; some of you have yourselves felt how hard it is to be poor. You know that there are rich people in the world that do no work and have all the good things of life. You also know that your fathers work hard and then worry about what will happen if they lose their jobs.

"Comrade zur Muhlen, who wrote these fairy

tales, tells us in a beautiful way how these things can be stopped. . . . We must join together, we workers of the world, and stop these wrongs."

Under four titles—"The Rose Bush," "The Sparrow, "The Little Grey Dog," and "Why?" Herminia zur Muhlen has set about teaching children the lessons of class consciousness, an understanding of which is essential to a movement of the workers for their freedom from wage slavery. Having observed how eagerly several children read the book, which is illustrated in colors and also black-and-white drawings in profusion, and how well it was understood by them, I thought that a brief mention of the book should be made in The Industrial Pioneer.

On all sides our children—I mean the children of the working class—are surrounded by books designed to support the present system and to inculcate into the children's minds the moral viewpoint of those who benefit directly from the scheme of existence prevailing, or indirectly by allying themselves physically and spiritually to the robbers this society is pleased to exalt and who are called capitalists.

The writer has no idea that education of working class children to class consciousness on a large scale is possible so long as the control of education is in the hands of the enemy, but so far as we can we should encourage the reading of such books as this one by our own children and others over whom we exert influence.

The cover is red and black and the size is larger than this magazine. The 66 pages should be an inspiration to working class children fortunate enough to get copies.

—MARGARET CLARK.

**FAIRY TALES FOR WORKERS' CHILDREN, by Herminia zur Muhlen. Published by the Daily Worker Publishing Company, 1113 W. Washington Boulevard, Chicago. Price, 75c.**

A HEREDITARY ruler appoints all the executive machinery and the main legislative body, the people elect half of the representatives in the other legislative body that has only advisory power, the other half being selected indirectly by the hereditary ruler from his executives.

If anyone would describe a government of that kind and call it a democracy he would be considered ignorant of the subject with which he was dealing. Nevertheless when the hereditary ruler, John D. Rockefeller, Jr., makes an assertion like this about the Colorado Fuel and Iron Co., describing it as an industrial democracy the statement is considered important enough to cause Mr. Selekman and Mrs. Mary Van Kleeck to spend several years making a study of that "industrial democracy" under the auspices of the Russell Sage Foundation. and to publish two books as the result of these studies without challenging the fundamental contentions of John D. Rockefeller, Jr.

Furthermore, it is remarkable that in hardly any of the reviews of these two books the fundamentals of the Rockefeller Industrial Relations Plan has been challenged. Polite objections have been raised to details of the management of the plan; it has been stated regretfully that the plan "as yet" does not function "quite satisfactorily." Reviewers of the book have together with the authors spent some time looking for where to put the blame for the miscarriage of the plan, whether on management, petty officials or employees.

It seems to have escaped their attention that the plan is built on an altogether false foundation: the identity of interest between the company and its employees. If such an identity of interest existed, no plan would ever have come into existence. There would have been no need for it. There would have been no strikes, no battle at Ludlow—or massacre rather—no scandal, and no incentive to find a new mode of dealing with the workers of the company.

Both books are giving a wealth of material on the origin and workings of the plan. The method used of checking up on all statements of facts with the company officials, the workers, and representatives of the United Mine Workers has made the books absolutely reliable documents. As source books they are invaluable; but their interpretation of the facts have no value whatever outside of giving anybody who is in search of such information an idea of the blindness even of the most intelligent part of the middle class to the outstanding facts in the labor movement.

Two great facts have been pointed out that cannot be emphasized too much: viz., that in the steel industry it is the United States Steel Corporation that sets the wages, while in the coal mining industry the United Mine Workers is quite a factor; but that in either industry the Rockefeller employees have nothing whatsoever to say about the wage scale outside of tinkering with the details after increases and reductions have taken place.

Two of the advantages that have accrued to the workers on account of the plan must after further analysis be in the one case ascribed to other factors, in the other case be considered apochryphal or at the least immensely overestimated

The first one: the establishing of the actual eight-hour day in the steel works of the company took place only after spontaneous strikes and walk-outs had occurred and the employees were at the time most of them members of the trade unions that were blooming on account of the A. F. of L. steel drive.

These two causes must be considered the most effective means in establishing the eight-hour day. Incidentally the company found out that the eight-hour day does not cause a higher labor cost in steel production than the twelve-hour day.

Neither of the two causes can be considered connected with the Representation Plan, and the third one tells why the eight-hour day remained in force

after the unions had been destroyed and the company had its workers at its mercy.

The second advantage of having the arbitrary discharge of workmen abolished will not bear any closer scrutiny. All through the books we hear of arbitrary discharge for no sufficient cause, and besides that it is time and again pointed out that petty officials can make it that "hot" for their victims that they will not need to discharge them, because they will be only too glad to quit.

The advantages to the company, on the other hand, are very easy to grasp, as one of its officials says: "If we pay lower wages than our competitors we lose our employees." The company is through the plan able to prove to its employees that it pays as good wages as any other employer in the industry in question, a thing it would have to do anyway.

By making discharge of workingmen subject to review it is able to give a show of fairness that does not amount to much anyway: the causes for which a worker can be discharged are determined by the management. All that the "joint committees" are doing is to check the arbitrary notions of petty officials, a thing that would have otherwise to be done by some other agency, if the company would avoid losing efficient slaves that "got on the wrong side of the foremen or other slave drivers."

Another thing that the company has accomplished through the scheme is to permeate the whole atmosphere of their employees with company propaganda and to make them dependent on the company in their daily life in a hundred different ways.

Through company libraries, Y. M. C. A.'s, propaganda lectures given by lecturers hired by the company, it selects their mental food and makes sure that it is "wholesome," i. e., friendly to the company.

Through company doctors and hospitals, company housing schemes, savings bank schemes and pension schemes controlled by the company, it makes them dependent on it in such a way that the workers are at least unable to make any independent move whatsoever, for fear that they would incur the displeasure of the company and be thrown out in the cold with all those benefits for which they have been slaving for years lost.

Besides that it naturally leaves the company in control of the community and able to shape public opinion to suit its own purpose.

These things are the real dangerous things about the Representation Plan, so-called. Instead of being—as it is touted to be—a step towards industrial democracy, it is just the opposite. It is a step towards serfdom. It encroaches on the worker's personal affairs and makes him more and more dependent on the company in all the details of his daily life.

It propagandizes actively, even if sometimes covertly, against unionism, and by taking up numerous unimportant grievances it tries to make the worker believe that he has got some agency that is able to look after his affairs in a similar way as a union would do.

But the soundness of the worker's instincts have been too much for the scheme. It has therefore been very coldly received by the employees of the Colorado Fuel & Iron Co. It has been successful in strangling unionism, but it has not been successful in suppressing strikes. Whenever an emergency has arisen the Rockefeller employees have known on what side they belonged and demonstrated their solidarity with the rest of the working class.

The plan has been successful for Mr. Rockefeller as a makeshift, but that is all. I believe it is not too much to hope that some day Rockefeller's slaves will take the bit in their mouth and kick the traces, declare their solidarity with the rest of the workers and organize together with them.

Today some of them may be under the spell of the "welfare" schemes, but tomorrow they will sing in derision:

Sing a song of welfare, a pocket full of tricks,
To soothe the weary worker when he groans and kicks.
If he asks for shorter hours or for better pay,
Little stunts of welfare take his thoughts away.

Sing a song of welfare, play the horn and drum,
Anything to keep his mind fixed on Kingdom Come;
Welfare robs your pocket while you dream and sing,
Welfare to your pay check does not do a thing.

Sing a song of welfare, forty 'leven kinds,
Cultivate your morals, elevate your minds,
Kindergarten, nurses, bathtubs, books and flowers,
Anything but better pay and shorter working hours.

—KRISTEN SVANUM.

**And children's mirth**
**And wives like west winds**
**Blowing free.**
**They want the earth**
**Between me and thee.**
**The incorrigible Masses—**
**Damn them!**

# A Bourgeois Pipe Dream

By The GENTLE WAITRESS

THE American oil magnate was entertaining his friend from over the Atlantic in one of the most exclusive clubs of the city. The dinner had been of the best, with just the right amount of the correct sort of wine. They now sat smoking cigars which cost $25 the dozen.

Things seemed right in this best of worlds until the visitor casually inquired about the labor conflicts of the country. He had heard there are some vindictive strikes at times. Would the host be kind enough to relate just what were the chief causes and what was generally done to settle the strikes?

The host looked cautiously about. Seeing the waitress still in earshot, he smiled broadly, waved his cigar disdainfully, and said:

"Oh, well, we sometimes have some little difficulties, but then when we take them by and large, they don't amount to much. There is of course some misunderstanding, but the newspapers make them out much worse than they are. The papers are in business and must have something to report if they are to sell their wares."

Another cautious glance over his shoulder. The waitress had stepped out and closed the curtains. But she knew her business and did not go too far; she might be recalled for some service. Of course she must take the dishes to the kitchen, so when the host looked out she was retreating quietly through the kitchen door. But she somehow heard more of the information about American strikes.

". . . . . for when we get things lined up right we will show them just where to head in, and that will be into oblivion. Do you think we intend to have the damned filth around begging and whining for more wages and shorter work days and better living conditions? I'll see every one of them in the bottom of the fish ponds first!

"You see, we are not quite prepared. There are a few things yet to do in the way of perfecting some of our automatic machinery so there will be no need for them. We can press a button and do automatically what it now requires some little intelligence to do by hand, or with present machinery.

"Then besides, we have not perfected our own organization. We have many sorts of clubs, all of which have some value, but there is one which we have only in an imperfect and embryonic state. That is a kind of club, I don't know just what to name it, which will educate our class to the dignity and ability of caring for itself. We are doing it now to some extent with our hiking clubs and mountain climbing clubs and hunting and fishing clubs and all those. But what we need is one that will combine all the good features of those with none of their toil and unnecessary hardship.

"Then we will have them. Why, say! The dream of the Wobblies and every manner of Red will come true, you're damn right it will. But not in just the way they think it will. It will be the master class who will continue to be the master class. Do you think we are going to knuckle under to them? Not on your life! We will have a society without a master or slave, all right, but you can bet it will be the slaves, as they call themselves now, who will be abolished and don't you forget it.

"But first, as I said, we must develop our own ability just a little more. The dirty, disagreeable work of the world is mostly done now by machinery, or can be done so. What little there is that must be done we can handle easier than we can have that class of cattle in our way. We will be well rid of them.

"Of course, the Reds now say they are going to educate and organize the workers to take over the functions of society. But that is a joke with us. We know where we are at. And where they are at, too, for that matter. Organize the tramps? Rats! They couldn't organize to pick crab apples.

"Our plans are not perfected for getting rid of them entirely, but they are working out. We may decide to send a few million of them into Africa, or South America, or even into China, and let them be cut down by some unexpected disease..

"I say 'unexpected disease.' I mean just that. I do not mean 'unknown disease.' Oh, it will be known, all right, to a few, but you may be damned well certain it will be unexpected—to them.

"Then again it may be possible we will have to wait a generation for the bastards to starve off the face of the earth. There are a few who are afraid that will mean an uprising likely to overwhelm us. But no fear, we have military right now to handle that question. Then we can set the military forces fighting each other, or even into a foreign war. Once we get the process working good it will not be long before it is finished.

"Then what? Why, with the filth of the world cleaned out, with that damned working class gone, we will have no more of this rot of the class struggle. Of course we deny the existence of such a thing when we talk for publicity, but believe me, it is the thing that keeps us awake at night. We are as anxious as the workers are to solve it. And we will solve it, too.

"And that means we are not going to let the brutes have a look-in when the final answer is written to that problem. We are going to write it in our own way, and that way is just this:

"We will have a world without conflicting classes, for we will be the one and only class in existence. That means no class struggle. That would mean less trouble to do our own work than it is now to keep the cursed cattle quiet until we have them down and tied.

"Come on. It is time for the show; then after that those two girls I told you of will be waiting for us over on the North Side."

# The Essence of Industrialism

By WARREN LAMSON

(Continued from August Issue)

**This is the second installment of the thesis that won the first prize in Tie Vapauteen's literature contest a few months ago. The editor of Tie Vapauteen has kindly permitted its presentation here in the original English.**

SOME scholars assert, and submit much evidence to show, that man is not naturally a gregarious animal, or social being; that while civilized man is such, this quality has been taken on as a result of compelling, driving forces, which have gradually altered his constitution. This is the view of Ward. In the light of events within the experience of all of us there are many who support this theory, but whether this be true or not, we are able to say today, that classes and divisions of mankind can be united for a continuous effort in which all will benefit, only with great effort and as a direct result of inexorably compelling necessity. Such associations as have been formed by man, broken up and reorganized and adapted, have usually tended to grant a greater degree of self-government to the units composing them, not willingly, or as a result of deliberation, but to make such association sufficiently attractive to its units to retain the loyalty or at least the acquiescence of a sufficient part of them to render itself secure. For men are prone to abide by what they have, as long as it meets their accustomed needs, and excessive social chasms are not developed and flaunted before them.

It is for this reason that the industrialists so strenuously oppose any great degree of centralization, although a contributing factor is cognizance of the fact that autonomous units develop more self-reliance, initiative and talent, than the most favored units can when their destinies and welfare are largely depending upon outside forces.

Somehow man has acquired the ability to labor, and an aversion to waste and futile effort. Some attribute man's ability to labor to slavery, holding that from countless generations this ability or power has been transmitted down till at last men became accustomed to applying themselves continuously to labor. Whether this be true or not, the greater part of mankind are today capable of such continuous effort, and when the creative instinct is given some play, are capable of intense interest or attention, even under slavish conditions. However, the growing aversion to futile effort is causing an ever increasing number to conceive of a social order in which work would not be carried on at the whim of one whose only relation to the product is that of a peddler.

"War has been the chief leading condition of progress." It seems from all the evidence that in the past this has been to a great extent true. War, as shown in Wells' "Outline of History," has caused old and settled conditions to be broken up and brought new blood and ideas to the development of new social states. In the past of the race, prior to the 18th Century, large groups of mankind lived wholly isolated, and ignorant of others having different institutions and customs, and it was only through war and conquest, that new ideas, and methods were adopted, and the stagnant backwaters started into motion.

However, today when all associations, except onerous patriotic ones, with hidden motives, search the entire world for data this condition of affairs is changed. On the other hand I am compelled to think that modern progress in invention and production is due more to the economic warfare between the employers and the workers, and rival groups of employers, than to warfare. This is no new idea. Some fifteen years or more ago this view was elaborated by the French Syndicalists, i. e., that the aggressions of the workers compelled the employers to bestir themselves to survive. This view is also well substantiated by Marx. But all of these compelling forces have never operated to liberate the latent powers of mankind, obviously present. If oppressive methods can develop production and widen concepts, then methods of liberation should far surpass them. Lester F. Ward, after making an intensive study of latent social forces, says, "The new gospel, therefore, to which I found myself committed was a gospel of liberation." This is the conception of the industrialists—to remove all obstructions, open all channels, eliminate all waste, to set free, emancipate all of the forces of production. The liberty we seek is that which will provide economic equality for all, that without drag or hindrance we may move on to a dimly conceived higher civilization. For it is not alone what we wish to be free from that is important, but what we would be free for, that is the basis of dispute between the various revolutionary movements.

Let us consider the philosophy of the industrialists and their relation to other phases of life.

The industrialists may be said to subscribe to

the view that has been termed "pain and pleasure philosophy." That pain causes men to perform acts which make not only for the preservation but for the progress of the race. That pain causes men to seek to avoid acts which are not only destructive, but obstruct the actual upgoing of the race.

Thus, for instance, primitive methods of production make necessary long hours of exhausting toil, for the larger part of the population, while to avoid this requires the use of indirect methods, consequently organization takes place, to enforce better methods. The real advance in such cases is not only in securing better methods but in the improvement of organization. And it is thus that man has been evolved from the lower forms of life, and reached the degree of social organization—quantity production—that we have today.

One thing all men have in common, and that is the desire of securing adequate means of living with the least possible expenditure of energy. Modern labor has a productive capacity so great, with only a minority of the people usefully employed, a large number of non-producers are able to live in splendor, while an even larger number, without performing any socially necessary labor, live far better and more secure lives than the best paid laborers. The costly, but more durable and in some other ways superior product of the craftsman, has given way to the cheap machine-made article. "The ages of stone, bronze and iron have been successfully passed and we are living in an age of paper and caoutchouc." Such production of cheap articles was essential to any attempt to institute a social order of the character with which we are here concerned for only that which is cheap and easily reproduced can be widely used.

There could be no equalization of opportunity till the resources of society were sufficient to impress men with the possibility of such a change. All of the utopias of the ancients had fairly rigid slave class foundations. The productivity of slave labor was not sufficient to originate the idea of a society without slaves. Today we have what is termed overproduction, which in simple language can only mean, more than there is a market for. Production in excess of need has never taken place, and in all probability never will.

The institutions of man have not kept pace with his industrial progress. The state came into being through conquest; was necessarily a coercive institution. It still is, but, as the industrial methods of man change, so should all other institutions and customs, for industry is the life of a people.

### The Industrialists and the State

This philosophical basis of course leads to new views of the state, morality, the future of humanity and all other phases of society. Consequently the attempt to give the industrialists' views on the various subjects will be made each under its own heading.

The state being a coercive institution, organized and adapted for suppression, cannot be utilized by the industrialists for their purposes which are to liberate, not to suppress. This is in direct opposition to those who lay the most stress on political action (socialists), for while the socialist and the industrialist may both be said to visualize a new social order, in which man would be economically free, they differ in method. "The syndicalist, however, is poles asunder from the socialist in method, and method counts for everything in social change." (Ramsay MacDonald in "Syndicalism.")

The industrialists have both in Europe and America consistently refused to endorse any political party or program. Where exceptionel groups have done so, usually through the parties compelling their members to join and become active within the syndicates or the various industrial groups, the effect has proven disastrous to the groups affected.

By engagnig in political action the class struggle is denied, for all the parties accept membership and support from other classes than the workers until the counsels of one petit bourgeois who can contribute $500 to the fund outweighs the counsels of fifty actual wage workers.

Compromise follows compromise till at last the interests of the most despicable of all, the petit bourgeois, dominate. The petty visions, sordid ambitions and mean vanities of a social fossil supplants the concepts and methods derived from the creative instincts of the working class.

Such parties employ all of the shallow profundity, sentimental idiocy and buncombe of other parties. Their candidates must try to ensnare the votes of antagonistic interests, and if elected must strive to placate that element which means the continuation of his political career. Political action was the means of the bourgeoisie, it cannot be the method of the working class. Looking over the world today we see here and there victorious labor parties (?) strenuously upholding the "system," striving to satisfy the "interests." The revolution of the working class is something different, for the lion and the lamb lie down in peace only in holy fiction. Parties must deal with the nation, and with its domestic and other questions, which do not materially concern labor. Antagonisitic interests cannot form a true community.

"Of all the classes that stand face to face with the bourgeoisie today, the proletariat alone is a really revolutionary class." (Communist Manifesto.)

"Indeed no one who believes in the class war as the fundamental fact of socicty today has any refuge to protect himself against Syndicalist logic. Given the class war Syndicalism is its necessary corollary." (MacDonald's "Syndicalism.")

To the industrialists, the state (government) is an odious instrument of class suppression, of no value for any other purpose, and in place of it he would institute industro-social organization, but not by wasting any energy in its capture by direct methods.

For inasmuch as the state is viewed by all socialists as well as industrialists as conditioned by the economic situation, they hold that they who control industry can control the state, providing those who control the economic processes need an instrument of suppression; while those who administer the affairs of the state, through the capture of administrative powers only, can reflect only the need or will of those controlling the economic life. Thus they say, since energy can only be expended in one way, why waste it on the state, when the state admittedly is not the important factor; and when the attempt to capture it makes necessary an alliance with non-revolutionary classes, and delivers the workers as pawns into their hands. So they refuse to have anything to do with political action, despite the promise of state aid in overthrowing the beneficiaries of the state, for whose purpose it has been devised and adapted. On the other hand, they set up their own machinery, and social organization for taking and holding, and administering the economic life.

### The Industrialists and Morality

"Morality is the result of historic development. It is the product of evolution, it had its origin in the social instincts of the race, in the material necessities of social life. Seeing that the ideals of social democracy are one and all directed towards a higher order of social life they must necessarily be moral ideals." In this quotation from Dietzgen, the industrialists' views on morality are admirably and concisely stated. For the industrialists own a rational dislike for the professional moralists, who are continually striving to place life in a moral straightjacket, and are interested in forms more than in substance. For morality is subject to evolution; our conceptions change as our methods of life change. Those acts which are generally considered moral are in most cases detrimental because of the tendency to retain forms that are obsolete. Moral precepts originate out of the conditions of those who hold them; they in themselves cannot alter or elevate the moral condition of a people, but they may, when the form persists after the need for it is eliminated, be socially harmful.

Many institutions whose social uses have long passed and whose continuance is socially bad are hedged about with sanctity which renders them difficult to alter. This is even true of institutions developed in the various revolutionary bodies. Instead of placing the social forces of human life in a straightjacket, and damming up the stream until the organism is seriously injured by revolt, men must learn to divert them into newer channels. Science today has brought philosophy from the mists of speculation and given it a basis of reality, yet even in revolutionary bodies, those with no scientific training whatever, but with a mere superficial and parrot-like learning, enforce outworn and exploded theories. These people belong to the same class as the noxious professional reformers in general social life.

That theological writers and sentimentalists ignorant of science should laud moral straightjackets is to be expected, but that philosophers, scholars and revolutionary leaders do so is a subject for those who understand the human mind to explain. This mania for assuming responsibility for the moral character has destroyed the usefulness of many able men. Today in revolutionary organizations one's influence depends upon guarding and censoring one's words; one dares not say what he thinks, and must make servile apologies and prefaces when voicing new ideas or disputing old ones.

The true industrialist of course opposes this, and no organization will meet the requirements necessary to fulfil the work of the industrialists until this tendency is largely eliminated. The world must have morals, not because they are of divine origin or eternal in form, but because they are a product of social organization of mankind. They should be permitted only to minimize the friction in daily life. Disobedience is by far a more valuable factor in human progress than conformity, and a skeptical, questioning attitude should be encouraged.

### The Industrialist and Religion—the Church

There is a distinct tendency wherever mankind exists and as its reasoning powers begin to unfold to require an explanation for everything. The more igorant the people the greater the tendency to explain things with an idea, and to make all of the facts which they are aware of fit the idea. This applies not alone to the explanation of life but to everything, and is caused by insufficient data, lack of equipment for securing more, and mental laziness. Such ideas once accepted, no matter how absurd or incorrect they may later be shown to be, are tenaciously held; this applies to ideas of mechanics, geography and all phases of life. Who is not familiar with the opposition to steam and other mechanical devices which were branded as devices of the devil? This human tendency is one of the reasons for the need of a federation of largely self-governing units, so that this tendency towards "official propaganda" shall not be too strongly enthroned.

The various churches, which have been developed along with all religious ideas, have vigorously opposed the search for additional information upon things of which they have given the only true and godly explanation (?) even going so far, when they had the power, as to inflict torturous death as the penalty. Yet, step by step, they have been forced to abandon various false conclusions which they defended. The only domain today left largely to them even by the average man is that of which the majority is ignorant, which equals the statement—All religion is a deification of human ignorance.

Religious ideas, as Christian Socialism for inst-

ance, have made the attempt to enter the revolutionary movement, to graft onto them their explanation of life. Still more dangerous is the innate human tendency to hedge with sanctity the immature deliberations of mere party and union officials and legislative bodies.

**The Industrialist and Education**

"Education," says Mazinni, "is the bread of the soul." Without education ability remains latent and the individual, under any form of society no matter how democratically organized, is the pawn of forces he does not comprehend. In education lies the hope of the new race, the new men, who dimly conceived, has made the works of Wells, Wm. Morris and many others so delightful, and whom we now know to be a possibility. In all the past, and still today we have those who think of securing a superior stock by the development of the few, by furnishing those alone the opportunity. But the position of those superior ones would indeed be precarious. On the other hand the industrialist asserts but a more secure and certain method to operate in securing this end on a grand scale.

Education is the development of intellectual force, by which mankind as a whole can better its standards, by widening the scope of conceptions. An uneducated class is a social drag in every sense of the word. Lacking the development to perceive or even glimpse the most advanced ideas of their time, they either oppose all innovation or are seized and carried away with the most absurd ideas that any charlatan may advance. And yet in no case, except idiocy, is this condition irremediable. It is today a proven fact that crime can be prevented by teaching the criminal and introducing him to the pleasures of purely cerebal emotions. The moron sufficiently mentally developed to remain outside of institutions provided for the feeble-minded is now often a useful, working citizen and is even capable of interest in astronomy or biology. Though he may not be capable of original research work, he needed not be neglected and permitted to endanger the welfare of all.

Most of the truths of science are strange to the average man, which of course includes the vast majority. This is undeveloped, potential ability, talent, for which no opportunity has opened, and which once developed would change the entire condition of the race, and make "Mother Earth" far more pleasant than she is. With such a great source tapped, greater than the entire present intelligent social force, unhampered by a backward social group, all energetic minds would become actual contributors to intellectual progress, while those not sufficiently energetic to become actual contributors, would acquiesce and cooperate, for they would be able to understand and visualize the improvements proposed.

Capacity is often erroneously gauged by abstract thinking. Many persons have but little aptitude for classical subtleties, but they are fully able to acquire knowledge, for there is nothing in the scientific truths that surpass the ability of a child to understand, but these truths are not of a nature to be acquired without aid, for facts nearly always give the lie to appearances. The bulk of so-called difficult knowledge consists of metaphysical argument and gymnastics and is of but little real value.

This acquisition of knowledge and development of intellect requires leisure and equipment. Society cannot much longer deny these to all, for it thus endangers itself. The means of destruction are becoming too great to allow the majority of men to be the pawns of charlatans and scoundrels. An industrial democracy could not offer society any solution were it to propose to leave the present methods of diffusing knowledge to stand.

The time to begin education is in youth, and not by night schools or correspondence schools, where studies are persued by exhausted students. Most people develop some time after coming into early maturity intense desires for knowledge. They often force their way through educational institutions in spite of great obstacles. They are hungry, omnivorous, and swallow the chaff and truth with which they come in contact voraciously and indiscriminately. What is needed is free access and discrimination. The inspiration of being one of those making intellectual contributions, hoping to meet the test of the ablest, is the most potent incentive that sways mankind. "The mind is essentially altruistic, and next to the pleasure derived from the acquisition of knowledge and the discovery of truth, its greatest satisfaction is in imparting this knowledge to others." (Applied Sociology. Ward).

The ambition of the industrialists is the scientific education of all.

(TO BE CONTINUED)

A VAST domain of wealth and resources lies west of the Mississippi River. Millions of people are living in that region. Yet in all that country, there is but one organization reaching out to take control of its resources for the workers—the Industrial Workers of the World.

The only organ for those millions of workers in their struggle for those resources which is printed west of Chicago is now published in Seattle.—It is the INDUSTRIAL WORKER.

You cannot be informed on the most vital phases of the class struggle in the West without reading that paper. Write to Box 1857, Seattle, Wash., for sample copy and subscription rate.

## Editorials

(Continued from Page Two)

the authorities will very soon get an order from the Chamber of Commerce to let them go free. Within the walls the Wobblies have pointed the way by standing together; following their example on the outside is sure to get desired results. When the bosses try to stop organization the logical answer is to give them more of it than they ever bargained for.

**COAL STRIKES** — Negotiations between representatives of the United Mine Workers of America and mine operators have just broken off with nothing in sight but an anthracite strike of 158,000 miners to take place on September 1st. The miners are asking for a wage increase and the check-off system by which latter the dues owed to the union are deducted from the men's pay-checks and handed to the workers' organization. This check-off has been used to collect debts owed by miners to the company, and the union has found that its integrity depends upon the check-off.

The Department of Labor has recently published figures showing that there has been a rise in prices of life's necessaries over one year ago approximating ten per cent. The miners' wage demands do not reveal any motive for bettering their living standard as they want only ten per cent, which, according to the labor department's statistics, amounts to asking for a wage consistent with maintaining their purchasing power and does not seek its extension. There are other demands, however, in addition to this one and the one for the check-off which are forward moves, such as no longer paying for their tools, and for openings every 150 feet to provide the men air and breathing space.

It has been estimated that bituminous miners may join the strike, but unless the miners learn from the lessons of solidarity in England it is doubtful that they will give their aid by ceasing work. Lack of solidarity has whipped the miners before in many struggles, and the district divisions militate against them just as do trade union divisions in the organizations of the old school of unionism. When the miners lay down their tools they should do so as one man and refuse to dig any more coal until their demands are granted whether they affect only one district or the entire industry. At this time there are thousands of union miners on strike in West Virginia. Mine strikes by districts are often long and bitter conflicts characterized by excessive hardships. How long would the miners of West Virginia have to strike if the union to which they belonged stood with them as a union should, to the last man?

Added to the internal difficulty of organizational form is the fact that with the pits piled high with mountains of coal the bosses are not hard hit so long as they can have that coal hauled. Here comes the opportunity for railroad and marine workers to demonstrate their solidarity. In England the very threat of such action brought the government to its knees, and it can be done here, too, if the workers have the hearts and the intelligence to stand together.

In such an eventuality they must be prepared to override the orders of their reactionary officials, and it is well for them to remember that John L. Lewis was yellow a few years ago when Federal Judge Anderson tied up the U. M. W. of A. treasury to prevent a coal strike. Lewis said, "We cannot fight our government." This is a patriotic note that has no place in the workers' class war tactics, and an understanding of the nature of the courts and the entire machinery of governmental administration tears away the cover of democratic tommyrot and reveals the government as the executive board of the industrial autocracy under which we exist. Opposition at all times to this autocracy is the business of class conscious workers.

The miners must learn to make their demands backed by their entire organization regardless of districts, and they are entitled to the immediate assistance of trans-

portation workers. So acting and supported they have the great opportunity of forming an unbeatable phalanx of labor, and a model for their fellow workers to follow.

The time for the proposed strike should have been set for the first of November, but September is quite an improvement over the policy of going out when the soft winds of spring and warm rains bring back the flowers and make people forget about the coal supply.

**UNION CONSCIOUSNESS** — When men and women enter into any organization the act itself is an exhibition of their faith in the salutary results to be derived from united action. It shows that they are conscious of a power peculiar to concerted effort that can not be wielded in any other manner. Workers banding together in economic association do so for the purpose of securing ends that are beneficial to them severally, but which they know are not to be reached by their acts as individuals.

Such awareness has not come to them mysteriously nor by any rapid revelation. The lessons of united action are very old but not so old as the failures of individuals who perished because they did not learn to cooperate with their own kind against forces that were greater than their individual strength. The history of labor unionism is comparatively brief, but it has driven home its lessons to those sufficiently intelligent to accept them. It is not part of our discussion to trace this history, yet it is important to note that unionism was from its inception attacked and outlawed by the ruling class and its governmental machinery. It won by tenaciously holding to its principles and by persevering in demonstrating its power. At length the new status which this attitude compelled was concluded to be one of the rights of labor. But rights are only acknowledged when they have been established by power.

Unionism is before all else a profession of faith in its efficacy born of past experience which gives us the right to expect and to predict further gains to our group when it functions as a group. Therefore, this admission of group superiority over individual attempts embodies a loyalty to the group which is required of each of its members. Ours is the union group, the revolutionary industrial union membership, and to it we are primarily responsible. In the face of an armed foe we would not do anything to injure our own comrades in arms. Such an injury is correctly regarded as treason. Yet how many giving lip service to unionism fail to extend that real assistance which membership involves simply because they refuse to keep their individualism within bounds?

If the individual can forge ahead faster for his own material welfare without allying himself with his fellow workers then the union has nothing to offer him in this respect. But if, as most unionists realize, improvement of their individual condition is possible only by standing together with their fellow workers, then this recognition is not consistent with and must exclude rampant individualism. The union is a weapon designed for our class improvement; it is not an aggregation of free lances out to debate every proposition that arises to the point of an exhaustion precluding all hope for action. Neither is the union a place in which making baseless accusations against other members is to be indulged in with impunity. And it is not in existence to furnish an audience for the gratification of exhibitionism by individuals. These phases of action deleterious to unionism are specified because they seem to me to be of outstanding harm to our common interests.

When a man or woman enters the industrial union he or she thereby admits that such entrance is for the purpose of arriving at a goal which cannot be reached through individual effort. There is no other sound basis for joining, and the individual so associating himself with the organization should at all times think first of the welfare of the whole. He must constantly regard himself subordinate to that whole, and he comprehends its objects only in so far as he realizes that by sinking his own individuality into the union can he give that union his full measure of the strength which makes it effective.

Lack of this sense of proportion and

knowledge of the actual purpose of unionism on the part of certain individuals has always deprived it of their constructive potentialities, and frequently in a more positive way has it acted inimically to union welfare. You would not allow a member to disrupt one of your business meetings just to afford him the pleasure of self-expression. Then be ever alert to prevent individuals from disrupting your union for similar gratification. Whenever we have made any gains in organizing large numbers of the unorganized it was possible only because we were organized well within the union and general recognition existed of the group purpose.

**CALIFORNIA JUSTICE.** — A judge who gets off the bench and serves as witness for the prosecution; a defendant charged with corruption of a juror who never was a juror and whom the defendant never saw; a man sentenced to five years in prison for discharging the ordinary routine duties of secretary of a defense committee —these are some of the features of a trial recently concluded in Sacramento, Calif.

It was the third trial of Tom Connors for jury tampering; and it was perhaps the strangest specimen of California justice thus far offered by that strange State. To understand the situation it is necessary to go back to March, 1923. At that time there was a bill before the California Legislature to repeal the criminal syndicalism act. A number of liberal, labor, and radical organization circulated leaflets revealing the iniquitous workings of this wartime law and urging moral support of the repeal bill. Among these organizations naturally was the California branch of the General Defense Committee of the Industrial Workers of the World. Tom Connors as secretary signed and sent out some 20,000 of these leaflets. The names of the citizens addressed came from the telephone books of the various cities, and nothing beyond their names and addresses was known concerning them.

Now it chanced that at that time in Sacramento, the State capital, there was a trial for criminal syndicalism involving three members of the I. W. W., Judge Charles O. Busick, and the Sacramento BEE. The BEE, rather a fair and well-edited paper in other respects, reserves its sharpest stings for the I. W. W. Its editorials are frequently incitements to violence against this organization which its owner, C. K. Mc Clatchy, so ardently hates. Of this, more later; the real star of the drama is Judge Busick himself.

Charles O. Busick has a little more than a year still to run as judge of the Superior Court. He has tried nearly all the criminal syndicalism trials held in Sacramento, and has been regarded as uniformly unfair and prejudiced. On one occasion a change of venue was asked because of his bias; Judge Busick heard the evidence against Judge Busick, decided that Judge Busick was fair, and proceeded to try the case. It was in his court that defense witnesses were not permitted to testify, as not having knowledge proper to the case, unless they stated they were members of the I. W. W.; whereupon as they left the stand they were arrested on a criminal syndicalism charge, having confessed themselves members of the outlaw association. Their convictions have been upheld by the Supreme Court of California and the men are still in jail. Judge Busick is also the author of the famous anti-I. W. W. injunction, by which it becomes an offense, punishable by fine and imprisonment, to be a member or officer of the I. W. W., and a man can be and has been sent to jail, without jury trial, in Los Angeles, hundreds of miles away, for violating an injunction issued by a judge in Sacramento. This injunction has been made permanent, and is still in force though nowadays seldom used.

To return to the criminal syndicalism trial in Sacramento. On the venire for the jury—Judge Busick **selects** his juries from the registered voters, as do other Sacramento judges; the panel is not drawn by lot—were two men, one named Arnold, the other Bennett (a literary coincidence having no relation to the intellectual standing of the venire). Neither of these men actually served on a criminal syndicalism

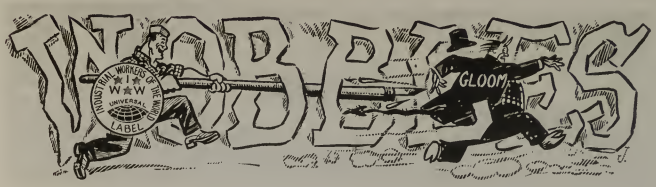
jury, and therefore neither was ever a juryman in a position to be "tampered" with. But both of them, being in the Sacramento telephone book, received copies of the printed plea for repeal of the criminal syndicalism act sent out by Connors's office.

These leaflets they carried to Judge Busick, who thereupon secured the arrest of Connors on a charge of jury tampering, the leaflets being the only evidence against him. The first trial resulted in a disagreement, the second in a conviction and sentence of five years in San Quentin. After Connors had served more than a year he obtained a third trial, which has just ended in the same conviction and sentence. It is interesting to note that while the second trial was in process another man was tried for jury tampering in the little town of Woodland, near Sacramento. This man had introduced the defendant to a juryman in a bootlegging case and solicited the best efforts of the juror in the defendant's behalf. He was convicted, and sentenced to—five days, as against Connors's five years!

When Connors's third trial started, with District Attorney J. J. Henderson and his assistant Renfro prosecuting, and another Henderson—R. W. Henderson, the blind labor attorney—acting for the defense, it was suddenly discovered that the prosecution had "lost" the evidence submitted at the previous trials—namely, the envelopes addressed to Bennett and Arnold containing the leaflets. The court immediately granted permission to use the transcript of one of the former trials as evidence. Every motion of the defense, including one for change of venue before the trial commenced, was overruled as if automatically. The judge himself assisted the prosecution liberally with advice and encouragement. "Aren't you going to object to that, Mr. Renfro?" was a phrase frequently on His Honor's lipts.

Finally he abandoned his bench and took the witness stand to testify that he had been sent and had seen the envelopes and leaflets. Immediately the defense offered a motion that if the judge was going to act as a witness for the prosecution another judge must occupy the bench. This motion was promptly denied, and when his testimony as witness had been heard by himself as judge, His Honor stepped back into the judicial seat. He justified this action by saying he had not physically left the bench—he had only stood up!

Meanwhile, during the five days of the trial, the Sacramento BEE poured forth news items and violent editorials against the I. W. W. and all its supposed works. The jurymen received the BEE regularly, and they all knew that Connors was a member of the I. W. W. This, however, was not "jury tampering," and no one has suggested arresting McClatchy.



Tom Connors is a slight, boyish-looking fellow, appearing younger than his years of experience as lumber worker and labor organizer would seem to make him. He takes the situation with calmness and courage. But his philosophical acceptance of his personal suffering does not make the proceedings against him any less of a disgrace to the State of California and to the nation at large. "Tennessee justice" has become a phrase for laughter; "California justice" is something uglier.—(From THE NATION, August 12).

**INDUSTRIAL SOLIDARITY**

OFFICIAL ORGAN OF THE I.W.W.

Published weekly at Chicago—the nation's center of heavy industry. Accurate news of this most important district and from all parts of the country. World news right up to the minute. Labor's viewpoint is worth reading. If you want the truth about what is going on in America and all over the globe don't delay, but send in your subscription at once. $2.00 a year. Single copies, 5 cents. Bundle orders, 3 cents. New address 3333 Belmont Avenue, Chicago, Ill. SUPPORT YOUR PRESS.

## THE SKIN GAME

Q.—What is the difference between a muskrat and a wage slave?

A.—You can skin a muskrat only once.

## A FATHER'S PRIDE

School Superintendent (examining a school in literature): John Jones, who wrote Hamlet?

John (scared to death): I don't know, sir!

Supt.: Billy Rogers, who wrote Hamlet?

Billy (tremblingly): Please, sir, I don't know.

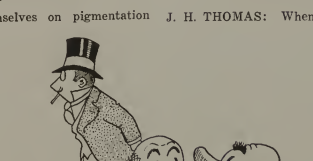
Supt. (enraged at the ignorance): Willy Brown, Willy: Please, sir, 'twas't me!

The superintendent, shocked at the ignorance, called on Willy's father to protest. "And I asked him who wrote Hamlet, and he said, 'Please, sir, 'twasn't me!' Think of it! Think of it!!!"

Father: Haw!!! Haw! Haw!! And here the little devil has been writin' it all the time! Boys will be boys!

## LADYLIKE

A woman entered a London hospital, her face bleeding.



Nurse: Heavens, Madam, have you been attacked by a dog?

Woman: No, Madam, by another lady!

## ATTENTION, NORDICS!

Those who pride themselves on pigmentation which is accidentally acquired and therefore no legitimate reason for pride, might profitably consider the following squib taken from an Indian paper:

"The inner feeling of the black races is humorously summed up a Panjabi poet in epigrammatic verse, in which he says that whereas a black spot on a white skin is considered a sign of beauty, a white spot on a black skin is regarded as a sign of disease."

"That's Lord Helpless. His family hasn't worked in 700 years." "SOME BUM!"

## BUCOLIC REBUTTAL

A boy left the farm to get a job in the city. He wrote to his brother, who stuck to the farm, telling him of the joys of city life. He said.

"Thursday we autoed out to the country club where we golfed until dark. Then we motored to the beach for the week-end."

The brother on the farm wrote back: "Yesterday we buggied to town and baseballed all afternoon. Then we pokered until morning. Today we muled out to the cornfield and gee-hawed until sundown. Then we suppered and piped for awhile. After that we stair-cased up to our room and bedsteaded until the clock fived."

## LEAD KINDLY LIGHT

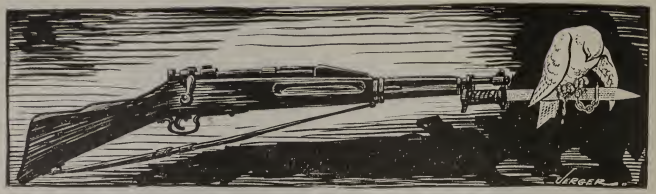
One evening a farmer met his man with a lantern and asked him where he was going. "Courtin', was the reply.

"Courting," said the farmer, "with a lantern? I never took a lantern with me when I went courting."

"Yes," replied the man, "An' look what you got."

## OR WAR PAINT?

Johnnie.—Father, what are cosmetics?



Father.—They are peach preserves.

## YELLOW FAKIR TESTIFIES

J. H. THOMAS: When we are inclined to ignore public opinion it is as well to remember that in industrial warfare your leaders must adopt tactics, whether they like it or not. It is the only way in delicate matters like this. . . . If volunteers, blacklegs, managers, or whoever you like, are keeping the pits clear . . no Government can stand by and allow them to be stopped, whether it be a Socialist, Labor, or any other sort of Government.

JUSTICE DARLING: That ought to be recorded in letters of bronze!

SERGEANT SULLIVAN: It was spoken, my lord, in accents of brass.

# The Business of Making Wars

By JOSEPHINE ELLSWORTH

WE had a world war to end war. Seventy million men were under arms and mobilized to wage that far-reaching conflict, with the Americans taking a very definite position regarding the idealistic phraseology of their schoolmarm standard bearer who styled the anti Teutonic efforts as a war to make the world safe for democracy. Millions of people really believed that they were opposing the Central Allies in the last of wars that were ever to afflict mankind, and that thereafter national differences and enmity growing out of balances of power would be smoothed out by arbitration.

The great war terminated seven years ago and today the standing armies of fifty-nine governments total 6,055,144 men, or a larger number than were armed just prior to the outbreak of the war in 1914. Now these men are not being trained in military operations just for the fun of the thing. They are not being given a form of physical training for the good of their health. They are under arms in readiness for the next war that can not be forestalled much longer. Indeed, only by the utmost efforts and the generally exhausted state of the world powers after the late difference has war been thus far averted.

The most widespread antagonism to military operations on fields of battle is not sufficient to bring about the abolition of warfare, although sentiment is a worthy fulcrum upon which to base the lever that can lift this scourge from the backs of the people. But this lever must be understanding, understanding of the causes of war without which knowledge there is no possibility of attacking the problem intelligently which means straight at the roots.

The number of intelligent people who know that rivalries are the stimuli to warfare is growing, but it is left to the radical to stress the need for first examining the causes of these commercial rivalries. It is no secret that America and her late allies are imperialist governments. But it seems to be beyond the power or the will of liberals who admit commercial rivalries as war's causes to go deep. It is not with fine phrases that colonial expansion is made, but with material wealth, with gold and goods. Whence comes this wealth?

If you look about you in the United States, which is the most prosperous of the nations, you will find that the people are in want. Millions of them are forcibly unemployed, millions more are toiling for the barest subsistence. There are workers without homes, children without shoes, men and women hungry. This is the richest of all lands and in the land where the greatest degree of industrial efficiency is exacted of the working class. Such miseries as one observes and experiences in America are observable to an even greater degree in the imperialist states across the seas. Yet in all of these countries the workers, who are society's only useful members, produce an abundance of food, clothing and shelter.

But these workers produce a surplus value or a profit for the owners of industry which their meager wages will not permit them to buy back. In time this surplus mounts to such size that its reinvestment in domestic industry reaches the point of saturation. In the last thirty years America has been grasping for colonies and for markets in which to sell this surplus robbed from her slaves and to set up in far fields the machinery of exploitation that so well succeeds at home.

All of the world powers are playing the game. There are limits to markets and a definite extent of industrially developed territory as a prize. Capitalism can not exist except by expansion, and the natural outcome is that the contending empires get in each other's way. Wars follow.

Only one class is big enough to end warfare, and that class is great enough to end it because it is sufficiently powerful to end capitalism. As yet its power is not known to itself, its mission is still uncomprehended. But the development of the tools of production has at last reached a point which guarantees plenty to all when once the workers awaken and destroy the power of a minority over the whole race. This destruction can be achieved by no other method than that of seizing the land and the industries and operating them for the welfare of all.

# Sammy's Successor

By L. S. COMMONS

WHEN Samuel Gompers was laid in a grave beside his friends Andrew Carnegie and William Rockefeller in Sleepy Hollow Cemetery, the matter of presidential succession in the American Federation of Labor might have aroused some concern in the breasts of surviving capitalists who had been so greatly dependent on the alliance between themselves and the fallen fakir, and who expressed their genuine grief in the newspapers. There was, however, no cause for protracted anxiety because Sam's successor, Mr. William Green, said that what was good enough for Sam was good enough for him. This, in effect, was a declaration that no structural changes in the Federation would be made and no proposals for such changes even listened to. It meant that unions affiliated with the Federation would be sent in to fight industrially united employers one trade at a time. It meant that the old weapon of the bow and arrow is regarded as sufficiently effective aganst a barrage of heavy artillery and machine gun fire. It signified that radicalism was to be kept down and thrown out and declared by the Federation to be subversive not only of our glorious national institutions, blasphemous and irreligious, destructive of that sacred bond between workers and their bosses, but of the workers' best interests because it seeks to sever this very bond.

**The Good News!**

But why should Mr. Green care about perfecting new weapons when by virtue of his trade union salary and other emoluments he is not a member of the working class? When workers give their officials life-time sinecures with ten to twenty-five thousand dollar salaries per year they have voted these men out of their class. No longer does that official live the life of the worker. He has the means to live as employers do. Presently he makes investments, and becomes a capitalist in fact. The late Warren Stone, who was president of the Locomotve Engineers' Brotherhood, was heavily interested in West Virginia coal mines, and he, as part of a company organized by the union, fought the United Mine Workers in that state. Have they not gone into banking, these unions of labor aristocrats?

In commenting on the meeting to celebrate its second anniversary, the Federation Bank of New York, one of these labor banks, has this to say through the medium of a press sheet sent to labor publications:

"It was a unique occasion in which the stockholders and directors of the bank received the congratulations of President Coolidge, Secretary of the Treasury Mellon and President Green of the American Federation of Labor on the success of their institution."

This bank says that it has resources amounting to $11,078,-000.

The business of banking is one of exploitation and here we have the spectacle of labor unions of the A. F. of L. entering the field. Not much room for solidarity from them! With their resources largely invested in industrial enterprises, factories, mills, mines and the like, we can expect again to witness these unions with banks fighting to reduce wages in the mines or the manufacturing plants where the money is invested. And, so, it is hailed with delight, this anti-union departure in the Federation, by such stalwart friends of labor as the strikebreaking president of this country, and by Mr. Green, who is out to follow in the footsteps of that arch-enemy of the working class, Samuel Gompers.

It is not surprising in this light that Mr. Green recently "opposed" the ten per cent wage cut decreed for the slaves of the American Woolen Company in language that was never excelled even by Sammy himself—and Sammy, you know, was vice-president of the National Civic Federation, the country's leading exponent of class collaboration. It was, of course, Mr. Green's business to protest against the reduction, and he declared the company's action to be "economically and morally wrong." We suppose that the moral tone is meant to convey an idea that it is not nice nor fair to starve the slaves

any more than they are being starved, and Green declares that, "Your action represents the power of force and might." Of course it does, Bill. When did the action of capitalist concerns ever represent anything else?

President Green well knows upon what fundament rests the prestige and the ability of employers, but things are going along all right for him, and he acquits himself by writing whining letters to powerful corporations instead of calling for the united textile workers to strike against encroachment. "There's the rub!" Such organization as exists in the textile industry is not united so far as the workers are concerned. Of course the textile bosses are! They have already posted notices of similar wage cuts on the walls of their mills, following the example of the American Woolen company.

The American Federation of Labor would have, if at all, a host of distinct unions each for itself, with separate contracts, and when one of the unions struck it could fight alone while the other A. F. of L. unionists would work with the strikers if not actually performing the struck work themselves. The history of this organization abounds with such cases and in Chicago at this time there is an A. F. of L. union, the United Garment Workers, whose members are scabbing on the Amagamated Clothing Workers. Green has gone on record favoring the scabbing outfit.

At the time of the first I. W. W. convention Thos. W. Rowe, then president of the American Flint Glass Workers' Union, attended as a delegate and in his speech mentioned that the A. F. of L. had sent scabs to Brooklyn to take the places of members of the A. F. G. W. U. on strike, and that these scabs had done so. He also said that when this treacherous action was protested to the executive board of the A. F. of L. the board said that the procedure was all right, that union men from one locality had been sent to another to fill the complement of union men needed in a factory in this other locality. So it is seen that the Federation was just as bad then as it is now.

The whole history of the American Federation is one showing that trade union divisions are favorable to employers and admit of no labor solidarity. Samuel Gompers spent his long life in perfecting the autocratic machinery by which the officialdom of his organization should continue in power. William Green knows this machinery; he is a part of the machine, and he knows where his bread is buttered. It is high time for the workers to learn in the textile and other industries that their bread will have no butter and the bread itself may do a disappearing act if they wait for letters from Green to their masters charging "immorality" to employers to get them what they need or what they desire.

## *Be Proud, California!*

By HENRY GEORGE WEISS

BE proud, California!
Have ye not reason to be?
San Quentin and Folsom
Are accounted to thee.

Be proud, California!
Thy mountains and plains
Are enhanced by the justice
Of Connors in chains.

Be proud, California!
Of thy Dymond and Coutts,
Thy bosses like Caesars,
Thy judges like brutes.

Be proud, California!
Our praises are loud.
Thou lovely and damned,
We say it—be proud!

# Preamble of the Industrial Workers of the World

The working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

The conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

"The Best Labor Magazine Published"—This Is What Our Readers Say of The

# Industrial Pioneer

¶ This Opinion Is Held By Them Because They Know That The Magazine Is Published In The Interests of The Workers and Is Obliged to Make No Compromises.

¶ Its Purpose Is To Aid In Building The Industrial Union Movement For the Final Assault of The Working Class Against the Wage Slavery that Oppresses Them and For the Everyday Struggle to Improve Their Conditions.

¶ This Magazine, Being Labor's Own, Looks To The Workers For The Support Which Must Be Given It If It Is To Live And Grow.

¶ You Can Give Such Support By Subscribing and By Getting Others To Subscribe. The Renewed Subscriptions of Our Readers Show That They Have Found The Magazine Profitable Reading.

¶ There Is No Greater Cause Than That of Working Class Emancipation. In This Freedom We Are All Directly and Intensely Involved.

¶ Do Not Delay, But Become a Subscriber To The Industrial Pioneer! By Boosting Its Circulation You Are Advancing The Industrial Union Idea and The Growth of Working Class Organization.

# On Being Happy

By ROBERT WHITAKER

How can a man be happy when the
world is so awry?
When strong men beg for work to do,
and unfed millions die?
When little children lift their heads
and plead in vain for bread?
How can a man be happy if he isn't
worse than dead?

What if the fates have favored us and
we have bread to spare;
A decent roof to shelter us, and what
we need to wear;
And friends to love, and work to do,
and joys we cannot tell;
How can a man be happy when his
brothers live in hell?

Alas for those who are content with
preachments, prayers and psalms;
With nicely ordered charities, or with
spasdomic alms;
Alas for creeds, and cults, and schools
, describe them as you will,
That make us self-complacent if we
only have our fill.

It isn't outright wickedness that
wrecks the human race;
It's the shallow, selfish goodness that
we glorify apace;
Our mean self-help philosophies, our
honor and success;
Our skill at being happy when the
world is in distress.

**THE SHIPPING STRIKE.**—As these lines are being written M. T. W. No. 510 of the I. W. W. has voted to strike. The action is for various improvements in the wages and conditions of work among seamen, and in support of the strike of their fellow workers in England, Denmark, Australia, New Zealand, Africa and China. Reports from New York state that a number of boats have been tied up as a result. In Mobile one ship was in the harbor when the strike vote was taken, and immediately the crew was struck. This called forth the ire of the authorities who raided the I. W. W. hall, arresting the secretary and one member.

In the Industrial Solidarity for September 16th, a map of the world shipping routes was printed. This map shows the interdependence of all the points hit by this strike upon one another with their exports and imports. By striking together the seamen in all these countries have augmented their opportunities to gain their demands, and from the present contest we look forward to material improvements.

With such advantages secured by the strike seamen can forge ahead more rapdily in the work of organization. Transportation is a strategic factor in class warfare. With its organization into industrial unions together with the organization of workers in basic industries the workers are in a position of great power. With industrial power we can accomplish all that we desire, and without it we can achieve nothing. Therefore, the strike is an encouraging sign of activity of which there has been a disastrous and disheartening lack among America's working class for several years.

One of the ships that managed to clear an English port after the strike was called was the Majestic. The M. T. W. members were on hand to picket it when it arrived in New York. Incidentally, one of the passengers was Morris Hillquist, erstwhile champion of the downtrodden masses. Morris is an executive of the socialist party in America, and was returning from an international gathering of his party in Europe. When a leading light of the party thinks so little of working class organization as to sail on a struck vessel operated by scabs it is an exhibition of the degeneracy into which the party has fallen. Hillquist, with characteristic modesty, succeeded in eluding the waiting fellow workers who were bent on giving him an ovation.

**A LEWIS PERFORMANCE.** — Since September 1st the anthracite miners have been on strike. Lest the supply of hard coal on hand prove inadequate to the demand, 60,000 tons of anthracite coal have been ordered for the American market from Wales. John L. Lewis, president of the United Mine Workers, in harmony with the spirit of American trade union isolation, has done nothing to try to prevent shipments of this coal. While the commerce of the world continues to increase in interdependent character; while we see unemployment crises hitting the great industrial countries simultaneously; while the dependence of each country on others becomes more strikingly manifest, Lewis, like the late Gompers, seems to see America with a large fence around it. It is the old policy of not securing solidarity of labor wherever needed. When the miners were striking in 1913 in Colorado the Wyoming miners, separated by districts, were working with might and main to fill the orders not being met by Colorado. Now the same activity takes on an international aspect. Such isolation, while Lewis hobnobs with capitalist politicians, may be a paying proposition to him, but the miners certainly lose by it.

To make their strike effective they must get overseas and domestic support in transportation, and issue a strike call to soft coal miners to give their aid in the struggle.

**OUR LITERARY OPPORTUNITY.**—Until we have shaped society to fit our wants and desires we can not expect to develop a proletarian literature. No such literature exists at this time, the workers absorbing the pabulum issued in letters for their consumption, and fully accepting the ethics of their masters. When feudalism was at its ascendancy the literature of the period reflected with striking fidelity the courtly attitude and glorified the virtues of aristocracy. There was no sign of favorable mention of the merchant class which was in existence. Later, this class succeeded to power, and when its system had been established the literature following in its wake paid homage to the bourgeoisie. But always the changed literary character followed the changed social structure. There can be no departure from this law, and almost every book, paper, magazine or moving picture is a tribute to capitalism. With hardly an exception they voice the code of the capitalist and raise up his virtues for general emulation.

But the workers are not without ability to express their thought and already we have an earnest of their coming dominance in the literary realm, just as we have in our industrial unions a promise of their ascendancy in the world of industry. There is always a forerunner of great social change, always men and women stand out with a message of progress and attempt to rouse from their ruinous lethargy the inert mass. In the true sense of the term education and slavery are incompatible. That which passes for education among workers, that which is given to them by their masters, is miseducation.. It is designed to keep them tractable without which quality they are not pliable. A thinking slave is an anomaly, because ruling classes have always taken the greatest pains to keep slavery and ignorance in communion. Multiply the thinking slave and the time nears when a social upheaval is inevitable with the subject class beating all before it for its place in the sun.
